If there is any error in these numbers, the Carter plan gets the best of it, considering the length to which Reps. Stockman and Brown want to be fair. For example, they hold OPEC pricing constant through the 13 years. But obviously, if the United States must substitute for 25 tcf of domestic natural gas, it most likely will have to import the energy equivalent. This increase in demand would permit OPEC to increase its oil price by at least $1 per barrel for all oil. This adds an average of roughly $33 billion to the U.S. import bill during the 13 years, and adds $100 billion to the import bill of Europe, Japan and the Third World. The Stockman-Brown $48 billion estimate charitably ignores these costs.

Even if the increased demand has zero impact on OPEC pricing, it would still mean the United States would have to increase imports of Arab oil by nearly 500,000 bbls. per day when compared to a deregulated scenario. The Stockman-Brown study figures the Carter plan will mean an extra $26 billion in the U.S. import bill over these years even without a price increase.

The Carter people will no doubt want to quibble with these numbers, if they can't find a way of ignoring them altogether. But there is absolutely no logical way deregulation can cost consumers more than the Carter plan. The only way the President's people can defend their position is by sticking to their assumption that there is no gas to be found above $1.75. It is hard to see how any serious person can accept such an assumption. Even the most pessimistic of the three estimates in the ERDA MOPPS study, for example, found twice as much gas at a price of $3.25 than at $1.75.

Mr. Carter is supposed to be good with numbers and logic, and ought to sit down with his own slide rule, taking the administration's gas deregulation position as seriously as the B1 or the neutron bomb. It's inconceivable that a good engineer would make a $48 billion mistake.

Mr. MILFORD. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Texas.

Mr. MILFORD. Mr. Chairman, I would like to associate myself with the remarks of the gentleman from Texas (Mr. COLLINS).

I would also like to add two additional points that I have not heard made here in this debate.

One concerns the studies we have heard so much about. These studies are from the Library of Congress, the Congressional Budget Office and the Federal Power Commission.

It sounds to me like we have a stiuation wherein a Boeing 747 airplane is being flown by bulldozer operators. I do not believe that any of the three agencies that made the studies have the expertise and knowledge about gas and oil to render a meaningful product.

The second point I would like to make is the fact that Texas and other gas producing States have many areas of marginal sands that will produce gas. We call them "marginal sands" because one cannot produce enough gas—at present market prices—to justify developing them.

The bill as now drafted establishes a ceiling price. Whatever that ceiling price might be, its effects will be to immediately shut down all exploration and development of all marginal sands that would come in above that price. Would the gentleman agree with that?

Mr. COLLINS of Texas. That is a very important point that my colleague, Mr. MILFORD, has raised.

Mr. RISENHOOVER. Mr. Chairman, will the gentleman yield?

Mr. COLLINS of Texas. I yield to the gentleman from Oklahoma.

Mr. RISENHOOVER. Mr. Chairman, I would like to say that I could not agree more with the gentleman from Texas (Mr. COLLINS) insofar as the gentleman's concern about the consumers. I know that he is just as concerned for the consumers at home as I am, just as I am for the consumers in Washington, D.C., in New York, or in Massachusetts.

Mr. Chairman, this bill before us is playing right into the hands of the major oil companies, the seven sisters, if you want to refer to them in that light, if we do not include this amendment for deregulation because we are going to eventually, and I believe very quickly, without deregulation, hurt all of the small independent producers who provide a little competition along the line to these seven major oil companies, and those major oil companies will control the entire supply of oil in this country just as they do in other countries, with the exception of Russia and China, which do not make any difference. Then you will see, Mr. Chairman, what happens to the price in terms of electricity as the utility companies convert back over, try to convert to coal, at the expense of the plants that they have now.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. RISENHOOVER, and by unanimous consent, Mr. COLLINS of Texas was allowed to proceed for 1 additional minute.)

Mr. RISENHOOVER. Mr. Chairman, will the gentleman yield further?

Mr. COLLINS of Texas. I yield further to the gentleman from Oklahoma.

Mr. RISENHOOVER. Mr. Chairman, I thank the gentleman.

When the consumers of electricity, which is four times as expensive at the present time, start paying for the capital investment required to convert to coal at the same time they are paying for the plants which are not paid for yet that use natural gas or oil, the price of electricity is going to double again. Without deregulation, those who are concerned about the major oil companies monopolizing this country are playing exactly into their hands approving deregulation and they could not want anything more in the world than continued regulation.

Mr. COLLINS of Texas. I concur with the gentleman and ask everyone to support the Brown amendment, the most important amendment coming in this session to the floor of Congress.

Mr. MOSS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, the amendment before us is, indeed, an extremely important piece of legislation. It is very important, however, that the Members of this body recognize some of the underlying facts relevant to last winter's shortage, a weather-induced shortage. I think that there are some excellent studies available that give us some insight into the nature of that, and I am going to read from such a study. It states:

> In the series of recommendations which follow, we have found that the shortage of supplies is caused in part by the failure of Consolidate Natural Gas Systems and Columbia Gas systems, their pipelines and their subsidiaries, to exact specific performance of contracts for gas from producers.

It continues on:

> The alignment of forces promoting deregulation of the price of natural gas serves as a disincentive for primary supplies of Ohio Gas customers to provide the historic requirements of gas.

A disincentive to supplying the historic requirements of gas.

In fact, one of the contributing causes of the shortage of supply alone of the Columbia Systems lines in Ohio is that the investment in Columbia at the Green Springs, Ohio, plant, which produces synthetic pipeline quality gas, would be a totally unproductive investment without a shortage and/or the curtailment of natural gas. It would follow that if the Columbia Systems historic requirements had been fulfilled, the company would have jeopardized its entire $63 million investment in the Green Springs plant.

Finally, our conclusion is that those pipeline companies, particularly the Columbia Gas Transmission, have placed the historic needs of Ohio secondary to profit motives. In so doing, they have not provided supplies of gas to Ohio companies according to those companies' 1972 base year allocations.

The report is much more full and detailed than that. It is called the Draft Natural Gas Investigations Staff Report and Findings, July 7, 1977, dealing with the shortage which occurred in the Ohio area in this past winter.

I think we ought to look at why we had a shortage, because the remarks of the distinguished gentleman from Ohio (Mr. BROWN) and others on this floor have attributed that to the working of price,

and that, in my opinion, is a cruel hoax. Price was not the reason for the shortage last year. The shortage then was the result of a higher demand due to cold weather, a demand that operated under a dual system never designed to handle the requisite amount of flowing gas. It was even further debilitated because we could not get oil supplies due to the heavy freezing which occurred in a large part of the Nation.

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman yield on that point?

Mr. MOSS. I yield to the gentleman from Texas, of course.

Mr. CHARLES WILSON of Texas. I thank the gentleman for yielding.

I apologize for being redundant, but when we are talking about Ohio shortages, would the gentleman agree with me that perhaps the State law against drilling for gas in Lake Erie could contribute to that?

Mr. MOSS. I have no idea. I am not familiar with that State law. Maybe the gentleman from Texas could enlighten us on that.

But I do know that the shortage we faced last winter was not because of the drilling in Lake Erie. It was because the systems themselves could not handle the demand upon them. As a matter of fact, we had here in Washington, D.C., a 34-percent colder winter than we had ever had before. In Pittsburgh we had a 37-percent colder winter, and in Ohio a 33-percent departure from the norm.

In a bit of corporate publicity by Mobil Oil, not an advocate of any of the things that I normally stand for in the energy field, we do find this observation in one of their ads during the month of January.

The CHAIRMAN. The time of the gentleman from California (Mr. Moss) has expired.

(By unanimous consent, Mr. Moss was allowed to proceed for 2 additional minutes.)

Mr. MOSS. Mr. Chairman, the statistical probability of a winter just 10 percent colder than normal is 1 in 100. Most of our systems are designed to operate within that range, and so to come in here and use the one winter in a century as the predicate upon which to legislate, as I said before, constitutes in this Member's mind a cruel hoax.

Let us look at why we had a failure. We are going to have another difficult period, not because of price but because of the ability of the storage systems to keep enough gas in their systems to deliver it and to rebuild their supplies to take care of this coming winter. There is not that much price signifiance in that last.

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Texas (Mr. WILSON).

Mr. CHARLES WILSON of Texas. Mr. Chairman, I really believe it is important for this House, and I know the gentleman from Ohio (Mr. BROWN), agrees with me 100 percent, to address itself to the attitudes that exist, I do not think among Members of this House, but the attitudes that exist among certain parts of the population and that which exists in Pennsylvania or Ohio, the two States which were the hardest hit by the gas shortage since they had State laws which forbid production of their own reserves.

And it cannot be an antipollution thing because on the same lake on the northern shore a constituent of mine has 100 gas wells.

Mr. MOSS. Mr. Chairman, let me recapture my time, with all due deference to the gentleman. That is not an issue on the House floor. The gentleman may if he wants to, run for the State legislature of Ohio and deal with it there, but we do not deal with it here.

Mr. MOFFETT. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Chairman, the gentleman from Texas has mentioned the attitudes that exist among the public. It is a fact that tens of millions of dollars have been spent to convince the public that deregulation is necessary through oil company ads and gas company ads.

Mr. MOSS. And they have pointed to last winter, which is not at all an honest representation.

Mr. MOFFETT. Second, as the gentleman in the well knows and I think several other people in this Chamber know, the shortage has been used—and I think this is what the gentleman is saying—by some irresponsible proponents of deregulation to get added impetus for deregulation. We hear so much crying and shedding of tears about closed factories and schools as a way of pushing deregulation.

Mr. MOSS. May I say instead of "irresponsible" that we may call it "overenthusiastic."

Mr. MOFFETT. We had schools and businesses closed. It is said we have to accept that and we cannot go to the source of the problems and ask why this Government and the legislators in this Chamber cannot do something to force production where it is known that gas exists and a reasonable profit can be made.

Mr. MOSS. Let me take back my time, because in the State of Texas, as the gentleman knows, we had hearings. There were closed schools and closed businesses in the land of so-called plenty with a free market because they could not get gas.

Mr. MOFFETT. One more point. In spite of all this lobbying, people have come out in the polls nationwide, the most recent one, as 55 percent opposed to deregulation and that poll was taken in the dead of winter.

Mr. ARCHER. Mr. Chairman, I rise in support of the amendment and move to strike the requisite number of words.

Mr. Chairman, I listened intently to the debate earlier which brought in the name of Joe Foy, of Houston, Tex., who is a constituent of mine, and I would like to set the record straight as to some of the comments that were made.

First in the discussions I have had with his people, they do not believe that we will see an overall national price of $4 to $5 per thousand cubic feet but they are concerned about the possibility of an aberration here and there that might go up to $4, concerned only because it would trigger the most-favored-nation clause in Texas' intrastate contracts. The most-favored-nation clause is a provision that provides for an automatic price redetermination or escalation to the highest market price paid at any time.

Roughly one-third of the intrastate contracts in Texas today contain this provision; and if there were a temporary aberration by an interstate line paying $4 per thousand cubic feet to fill a hole in its system, it would have the effect of raising one-third of all the intrastate gas contracts in Texas to $4. That is the fear that Mr. Foy has. It is a fear that is not shared by the majority of producers in the State of Texas, who believe that the price could actually decline as a result of deregulation. In Texas, the intrastate market price of gas did accelerate tremendously and hit the B.t.u. equivalent price of new oil and then began to decline.

Now, my colleague from the adjoining district, the gentleman from Texas (Mr. ECKHARDT) has said we may have suffered with artificially low prices of natural gas in the past. What does the gentleman offer as a solution? Continuation of the same thing. Now the gentleman says that $1.75 is adequate. Twenty years ago the gentleman might have said 20 cents or less was adequate and the gentleman might have said at any point along the line that the FTC was setting an adequate price because of the formula that is in the law.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield, since the gentleman has used my name?

Mr. ARCHER. I will be happy to yield at the end of my statement if I have time.

Mr. Chairman, how is $1.75 per thousand cubic feet an adequate price when the equivalent Btu value in the cost of imported oil is $2.25 per thousand cubic feet?

Here we are, a country that needs to have wise use of natural gas, a premium fuel; but it is more attractive to use gas than oil. We will continue the same economic dislocations in the utilization of gas as has occurred over the last 20 years. Ironically, we have great gas supplies in this country that we could use if we were to eliminate Federal price controls. This has been shown by many, many studies. The suppressed MOPPS study shows in the Rocky Mountain region alone there is over 750 trillion cubic feet of natural gas. It is going to be expensive, it is going to be difficult to get out, but it is the equivalent of 30 years supply.

Talking about last winter, the gentleman from California who just spoke said it was an unprecedented winter and that it will not occur again; but the Federal Power Commission in its report of June 22 this year projected that whereas last winter we were 20 percent short, next winter we will be 23 percent short.

The only way to balance supply and demand is to let the market work, and that means let the price seek its competitive level. The Government cannot do it by price fixing. It cannot effectively or efficiently substitute for the billions of economic decisions made. Historically,

we can go all the way back to Diocletian, to each day by individual consumers and businesses in the marketplace. Historically, we can go all the way back to Diocletian and observe the continual failures of Government efforts at regulating prices.

Mr. Chairman, if we want gas to heat the homes and fuel the businesses of this country, it is essential that we grasp the lesson of history and that we go to deregulation. It is for this reason that I support the amendment.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(By unanimous consent, Mr. ARCHER was allowed to proceed for 1 additional minute.)

Mr. ARCHER. Mr. Chairman, I yield to the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, the gentleman said that 20 years ago I had said that 20 cents was too high. Of course, 20 years ago the price of gas was somewhere, well, I will say 18 years ago, it was somewhere around 14½ cents. It was yielding Texas at 7 percent a tax of about 1 cent.

I said at that time it was too low for Texas, and tried to set a tax on it that would have gotten Texas as much as a penny. I have never said it was too high at that time, nor high enough.

Mr. ARCHER. Well, the gentleman's position today is, and I assume that the gentleman's position has been the same in previous years, that the Government can set a price and that price will be adequate. But, the Government has not set a price that is adequate in the years that we have dealt with the Federal Power Commission under the Natural Gas Act. There is no reason for us to believe that $1.75 is going to be adequate for the future.

Mr. ECKHARDT. If the gentleman will yield further, that is precisely what we are moving away from. But, if we move away from it as fast as the gentleman on the other side of the aisle are asking for, the situation in Texas will be very much like it is described in Forbes magazine for August 1, with a picture of Mr. KRUEGER in it.

The CHAIRMAN. The time of the gentleman from Texas has expired.

(On request of Mr. BROWN of Ohio and by unanimous consent, Mr. ARCHER was allowed to proceed for 1 additional minute.)

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. ARCHER. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. We have had some other experience in the Midwest with setting prices under a previous administration, an administration that was a Republican administration. We set the price of beef and chicken, and the results were that the farmers dumped the chicks into the fire or drowned them, and the beef and the chicken left the supermarket shelves.

The gentleman is talking about price control. This is exactly the same kind of situation except that the first shelf that natural gas leaves has been the interstate shelf, because that is where the price has been set. It did not leave the intrastate shelf, which was the free market shelf, and it is our hope to get all the shelves into the same happy position that the intrastate market was in when we did not have price controls.

Mr. EDWARDS of Oklahoma. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the question before us is very simple. What policy can we adopt that will minimize our imports of energy from abroad and maximize the production of energy and the creation of jobs at home at the cheapest possible cost to the consumer? Now, that is the question the people expect us to answer. I would say to the Members in this Chamber who are about to tie their political futures to this tax program, this so-called energy program, that if they are jumping on board they had better take a life preserver, because without this amendment they will be on a ship full of holes with an engine that will not run.

Before we prevent the market from setting the price of natural gas, be on notice that the case against deregulation is based on two very fundamental misstatements. First, the argument that gradual decontrol of natural gas will not appreciably increase America's domestic gas production. The overwhelming evidence from America's best brains, our most prestigious think tanks, but most importantly our direct experience with unregulated natural gas production, proves precisely the opposite.

Who favors a gradual decontrol of natural gas? Newspapers across the country, from the most conservative to the Washington Post; the most respected economists in the country, from Milton Friedman to Paul Samuelson; the most prestigious intellectual groups, from the American Enterprise Institute to Brookings.

Look at the experience in my own State of Oklahoma, where under the unregulated intrastate market, net reserves have increased by 454 percent in just 5 years, while supplies have steadily decreased for years in the controlled markets around us. Look at Canada, which until recently talked of cutting off deliveries, but now with new reserves from just modestly higher prices is delighted to sell all the gas that this Congress has not allowed Americans to produce for themselves.

Finally, consider the findings of the administration's own top specialists, from ERDA.

They concluded that with only moderately higher prices we would not only find more gas, we would be literally awash in it. We would have enough to last for decades, and then the price of alternative fuels could be forced down.

The second error is made by those who insist on continued controls to protect consumers. The simple truth is that every single cubic foot of natural gas that is not purchased from domestic supplies, because we do not produce it, has to be replaced by more expensive fuels with the added cost being paid directly by consumers.

That is why the Brooklyn Union Gas Co. estimates its customers could save in excess of $10 billion next winter under deregulation.

That is why the Boston Gas Co., which last winter had to purchase up to 40 percent of its fuel from expensive supplemental sources, says its customers would benefit from deregulation.

That is why the Baltimore Gas and Electric Co. has stated that its customers would benefit from deregulation, because they are now paying more for synthetic gas and imported gas than they would for deregulated domestic gas.

Consumers. If this is a regional issue, as we are constantly told it is a regional issue, then deregulation benefits most the consumer in the Northeast and in the Midwest. Those are the people who benefit from deregulation.

To vote today for continued regulation is to force American consumers next winter to pay higher prices for natural gas from Canada, to pay up to $4 for liquefied natural gas from Algeria, to pay up to $5 for synthetic gas. Each of these synthetic fuels is more expensive than deregulated natural gas would be.

To vote today for continued regulation is to force our constituents to stimulate the economies of Canada, Algeria, and all of the OPEC countries, while subsidizing their own inflation and unemployment in this country.

Mr. Chairman, let us try it. If decontrol does not work, this Congress can come back in 2 years and impose new controls. It is not locked in concrete. But we have tried Government controls. We are here today debating this whole energy issue because of the results of that policy of Government controls.

The CHAIRMAN. The time of the gentleman from Oklahoma (Mr. EDWARDS) has expired.

(By unanimous consent, Mr. EDWARDS of Oklahoma was allowed to proceed for 1 additional minute.)

Mr. EDWARDS of Oklahoma. But suddenly the same people, who add hundreds of dollars to the consumer's tax bill every time this Congress meets, claim to fear the specter of an increase in gas prices. And suddenly the great experimenters in this Chamber become the great champions of the status quo.

Mr. Chairman, so far this is just a tax bill. Let us give the American consumer a break. Let us not have more winters of unemployment and hunger. Let us not have more winters of cold homes and closed schools. We need to get the gas in the pipelines, Mr. Chairman, and we can do it by voting for this amendment.

Mr. HUCKABY. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of the amendment before us today.

I would like to address the issue from the point of view of the consumer. Let us look at where a dollar that the consumer pays for natural gas goes. Only 18 cents of that dollar goes to the producer. Eighteen cents. Twenty-seven cents goes to the pipeline. The other 55 cents goes to the utility company.

Mr. Chairman, the issue we are addressing here is that 18 cents, the supply of natural gas that is furnished by the

producers. And it has been suggested here today that the seven major oil companies furnished this supply of natural gas. This is not true. Literally thousands of independent natural gas producers find the majority of new natural gas each year.

But what would happen if the price of natural gas is doubled?

What if it were doubled overnight? I am speaking not only of new gas but all gas.

This would mean only an 18-percent increase to our consumers. But that is not going to happen. That is not what we are addressing here.

We are saying, "Let's allow the marketplace to work for new gas."

New gas only comes on at a rate of about 10 percent per year. It has been suggested here that new gas, if we allowed the marketplace to work, would rise to a price in the neighborhood of $2 to $2.25, which is far less than the 100-percent increase I had suggested earlier. Then the consumers would see very little if any increase as a result of this bill, and yet they would have an abundant supply of natural gas.

The gentleman from Alabama (Mr. FLOWERS) stated yesterday that officials of ERDA testified before his subcommittee and stated that if the price of natural gas were allowed to rise to $3, we would be literally drowned in natural gas, we have a real surplus of natural gas.

Mr. MOFFETT. Mr. Chairman, will the gentleman yield on that point?

Mr. HUCKABY. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Chairman, I think the gentleman, before accepting what the gentleman from Alabama (Mr. FLOWERS) read as gospel, should look at the transcript of the statement made by the gentleman from ERDA.

After that statement was made, I called Mr. Fri, the Administrator of ERDA, and as a matter of fact that gentleman testified in favor of the administration proposal. He then said in response to a question by one of the committee members—and I believe it was the gentleman from Colorado (Mr. WIRTH)—that $3 would give us more than we need in natural gas.

But the fact of the matter is, as the gentleman knows, that we will be at $3 under the administration proposal by 1985, and we will probably be considerably above it. Is that not correct?

Mr. HUCKABY. Mr. Chairman, it is a matter of when we get there. Regardless of what we do today, we are going to have shortages this winter, and most likely we will have shortages the following winter. But if we act today, the winter of 1978–79 should be the last winter this Nation goes through with a shortage of natural gas.

Mr. WIRTH. Mr. Chairman, will the gentleman yield?

Mr. HUCKABY. I yield to the gentleman from Colorado.

Mr. WIRTH. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I am glad the gentleman brought up the testimony presented to the gentleman from Alabama (Mr. FLOWERS), in testimony before his subcommittee. I would like to read that statement.

The question came from the gentleman from Alabama (Mr. FLOWERS) to Mr. Harry Johnson, Deputy Assistant Administrator of ERDA.

Mr. FLOWERS asked this question:

> What if you had in 1985 $3.00 a thousand cubic feet?
>
> Mr. JOHNSON. $3.00? Our analysis would indicate we would have more gas than anybody could ever use.
>
> Mr. WIRTH. Would you say that again?
>
> Mr. JOHNSON. Our analysis would indicate at $3.00 that we would have more gas available than anybody could ever use.
>
> Mr. LUJAN. Natural gas?
>
> Mr. JOHNSON. Natural gas.

Mr. Chairman, I thank the gentleman very much for bringing this to our attention, and I am glad he has made that point clear.

Mr. HUCKABY. Mr. Chairman, I come from a gas-producing region in Louisiana. Let me tell the Members what is happening there and what we are experiencing.

All of the easy stuff has been found. In the 1950's and 1960's it was common to find wells producing 5 million cubic feet a day. That no longer takes place; that is a rare exception. Today we are having to drill 10 wells for every well we drilled back in those years in order to get the same production. We have tighter sands, we have deeper sands, and it costs more to drill.

We are in a situation where fields are not being developed in Louisiana, Texas, and Oklahoma unless they can find an intrastate market for their gas, because it is simply a bad investment at the current price of gas if they have to go into the interstate market. This is happening throughout the gas-producing areas. We have vast reserves of gas there, but the artificially low price of natural gas is holding production down. It is preventing these fields from being developed.

Mr. Chairman, that is why it is imperative that we go ahead today and act.

The CHAIRMAN. The time of the gentleman from Louisiana (Mr. HUCKABY) has expired.

(On request of Mr. GORE and by unanimous consent, Mr. HUCKABY was allowed to proceed for 1 additional minute.)

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. HUCKABY. I yield to the gentleman from Tennessee.

Mr. GORE. Mr. Chairman, I thank the gentleman for yielding, and I compliment him on his excellent statement, even though I disagree with him.

I want to address briefly the peripheral statement raised by the gentleman from Colorado (Mr. WIRTH) and alluded to in his statement concerning the MOPPS study on the price increase.

I have here a letter from the gentleman who testified in that subcommittee hearing. We should make it clear for the RECORD that the question was asked about the relationship between supply and demand in 1985 if one assumes the price of $3. Two points need to be made in response to that.

First, he makes it clear that what he was talking about was that the higher price decreases demand, so that the factors of supply and demand cross.

He said—and I am quoting,

> Nothing in this conclusion or in the information provided the Committee in response to this question related to a specific estimate of the actual increase in natural gas supplies.

The second point is that the response was based on the assumption of a $3 price in 1985.

Let us look at the administration plan. In 1984, under the administration plan, we get a price of $3.01. So if one takes at face value the projections of the gentleman from ERDA, even though he has disowned them, the administration plan is right down the gentleman's alley.

The CHAIRMAN. The time of the gentleman from Louisiana (Mr. HUCKABY) has again expired.

(By unanimous consent, Mr. HUCKABY was allowed to proceed for 1 additional minute.)

Mr. HUCKABY. I would like to point out that that is the heart of this entire energy package. If we increase price by increasing taxes, we will decrease demand.

I say that we need to increase price so that we can increase the supplies out there and put this money back into exploration.

Mr. MOFFETT. Mr. Chairman, will the gentleman yield?

Mr. HUCKABY. I yield to the gentleman from Connecticut.

Mr. MOFFETT. Mr. Chairman, can the gentleman explain to us why, in the face of a 760-percent increase in the last 11 years of new gas prices and a 550-percent in the last 4 years, we have not seen an increase in production but have seen a decrease in production?

Mr. HUCKABY. As I just pointed out, we are drilling almost 10 wells for every well we were drilling 11 years ago to get the same amount of gas.

Mr. MOFFETT. If the gentleman will yield further, can the gentleman tell us about the rate of return for production? Is it so bad that they cannot make a reasonable living and profit on it?

Mr. HUCKABY. In the State of Louisiana one of the largest independents cancelled contracts for offshore exploration because of the fact that he did not see an adequate rate of return.

The CHAIRMAN. The time of the gentleman from Louisiana (Mr. HUCKABY) has expired.

(On request of Mr. STOCKMAN and by unanimous consent, Mr. HUCKABY) was allowed to proceed for 2 additional minutes.)

Mr. STOCKMAN. Mr. Chairman, will the gentleman yield?

Mr. HUCKABY. I yield to the gentleman from Michigan.

Mr. STOCKMAN. Mr. Chairman, it has been said a number of times in the last half hour by the gentleman from Connecticut (Mr. MOFFETT) and the gentleman from Tennessee that the administration's pricing plan allows the price to rise to $3 by 1985, the MOPPS study figure we are talking about; but that is merely an increased projection based on an assumed 7-percent rate of inflation with respect to the $1.75 price.

The fact is that producers are going to be responsive to the real price, not just the inflationary increase that occurs over the next 8 or 10 years. If we look at the schedule for increases in the real price of gas under the administration plan, it reaches only $2.16 by 1985 in 1976 prices. That is a relevant figure.

We are talking about apples and oranges here. If we just assume a 7-, 8-, or 15-percent or even a 20-percent rate of inflation, the administration's price would come up $10 by 1985. The point is that there is very little room in the administration's pricing plan, tied as it is to the total price of domestic oil, including old oil and new oil and the other categories, for the price rise to bring about that responsive supply that the MOPPS study and other sources indicate. Therefore, let us not be confused about the numbers.

Mr. HUCKABY. I thank the gentleman.

Mr. McCORMACK. Mr. Chairman, I move to strike the requisite number of words, and I rise in support of the Brown-Wirth-Krueger amendment.

There are several points I would like to make, and which, I think, have been ignored so far in this debate.

One of them is that any honest critique of the administration's energy plan shows that, in effect, it ignores the potential gap between supply and demand for energy during the next 10 to 25 years.

We now have studies from the General Accounting Office, from the Congressional Budget Office, and from the Office of Technology Assessment, all of which agree that the administration plan would leave a widening gap between supply and demand, and that, by 1985, and depending upon the study, the gap will vary from a low of about 1 million barrels a day oil equivalent, to about 4.5 million barrels a day equivalent. This is in addition to the administration's projected 6 million barrels a day of oil to be imported.

I think this point must be made; and it must be made now, at this time, during this debate. Unfortunately, we often become so engrossed in these arguments about details on some specific point of little consequence that we tend to forget the overall basic problem that this Nation faces. It seems unreal to feel obligated to remind the Members that we are presumably dealing with what we call the "energy crisis," and that the energy crisis has to do with the potential gap between supply and demand in the predictable future.

For instance, there have been comments today about obtaining synthetic gas at various prices. I must advise you that there is going to be no significant increase in the production of synthetic gas in this country, any place at any price, between now and 1985. Whatever there is will make an infinitesimally small contribution to the total supply.

Twice during the last session of Congress this body rejected programs to stimulate and assist in the production of synthetic natural gas. There is almost nothing in the budget for this purpose. Private industry cannot afford to enter this technology on a production level at this time. The leadtime for a single production plant is at least 10 years. Let us not kid ourselves into thinking that we can press some sort of magic button and produce tomorrow, or in the near future, significant quantities of synthetic gas.

I have listened to this debate and I have studied the question of how to regulate, or not regulate, trying to understand all of the arguments and trying to decide how to vote. To me, the overriding factor is that even with the best of circumstances that we can imagine, we are still dealing with the widening gap between supply and demand; and with the impact that it will make on this country in terms of our economy, our vulnerability in foreign policy, and our increased unemployment. This is the reality with which we must deal. We must do so now, and we must do so honestly.

No one can be absolutely certain of what the future will bring under the program advanced by the administration, or the plan as amended by the ad hoc committee, or under the Brown-Krueger-Wirth amendment.

However, Mr. Chairman, if I must choose between them, if I must choose the option I think best for our Nation, then I choose the option which I believe will stimulate the maximum production of gas for this country during the next 10 or 15 years. That option is the Brown-Krueger-Wirth amendment. For this reason I am urging support of that amendment.

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, I would ask if the gentleman from Washington (Mr. McCORMACK) in his calculations has taken into consideration the Eckhardt-Wilson amendment?

Mr. McCORMACK. Yes.

Mr. ECKHARDT. How much additional gas would be produced in your calculations by the Brown-Krueger plan above the Eckhardt-Wilson plan?

Mr. McCORMACK. Mr. Chairman, let me state to the gentleman from Texas, Mr. ECKHARDT, that he knows that I cannot stand here now and give the gentleman numbers with which he would agree, but I think the gentleman knows that the Brown-Krueger-Wirth amendment will produce the most gas for this country.

Mr. ECKHARDT. Regardless of the costs?

Mr. McCORMACK. I do not think the costs will make much difference. I think the testimony shows that today.

Mr. ECKHARDT. Frankly I do not know, either, but I believe the $1.75, graded upward, will produce as much gas as the higher prices. That is our calculation. Of course, everyone can quibble.

Mr. McCORMACK. I agree, everyone can do that, and this is the very problem we face at this time. We keep forgetting that the basic issue in the energy crisis is the gap between supply and demand. I do not believe we should become so absorbed in defending positions for the sake of defending them, or so involved in the details that we forget why we are here.

Mr. TSONGAS. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Massachusetts.

Mr. TSONGAS. Mr. Chairman, I concur with the gentleman's assumption about what is going to happen to our country in the 1980's; it will indeed be severe. I look forward to the gentleman's support of my amendment to the ERDA bill in September.

Mr. McCORMACK. I will give the amendments of the gentleman from Massachusetts every consideration.

The CHAIRMAN. The time of the gentleman from Washington (Mr. McCORMACK) has again expired.

(On request of Mr. GLICKMAN, and by unanimous consent, Mr. McCORMACK was allowed to proceed for an additional 30 seconds.)

Mr. GLICKMAN. Mr. Chairman, will the gentleman yield?

Mr. McCORMACK. I yield to the gentleman from Kansas.

Mr. GLICKMAN. Mr. Chairman, I would like to associate myself with the remarks made by the gentleman from Washington (Mr. McCORMACK).

Mr. Chairman, I rise in support of the Krueger-Brown-Wirth proposal to deregulate new natural gas.

In perspective, perhaps a bit of moderation can be put into play. The polarization of this debate is very evident. Some reflection is therefore necessary. The Krueger-Brown-Wirth amendment will: First, not in itself make us energy independent and is no panacea to the energy crisis, and second, will not provide catastrophic increases in consumer prices that would not otherwise occur.

Similarly, the ad hoc committee proposal, which calls for controls on natural gas pricing, although at increased levels, will also not make us energy independent, nor will it keep prices at low levels for the benefit of the consumer.

In the last analysis, I am not sure that in the long run that there is all that great difference between the two proposals. So where are we? All statistics indicate we are running out of natural gas. Even in my State, the Federal Power Commission recently announced curtailments of new gas deliveries to broad sections of Kansas and Missouri—which will have a devastating effect on the growth and stability of the economy in this area. This curtailment is not being done in anticipation of another cold winter—it is being done because supplies are short and because we are running out of gas.

Therefore, the bottom line in all this debate is the assurance of supplies of natural gas so that this Nation can keep its schools, hospital, and industries going, and so that homes are heated. The Krueger-Brown proposal offer us an opportunity to see if, in fact, increased prices to producers of new gas will produce more gas. If it does, the people win. If it does not, and consumer prices go up dramatically, then controls can always be imposed, and should be imposed, if the deregulation proposal is not fruitful.

This amendment is a little bit like chicken soup. We have all heard about the parable of the sick child, who, when offered some chicken soup, replied to his

mother that "it won't help," then heard his mother respond to him that "it may not help but it sure won't hurt." I have come to the conclusion that the Krueger-Brown-Wirth amendment would not hurt, and could conceivably help very significantly the supply of gas in this country. Yesterday, we heard our distinguished majority leader, Mr. WRIGHT, talk about the "specter" of rising prices under this deregulation proposal. That is obviously a key issue. But so is the "specter" of closed schools, factories, and hospitals because of dwindling gas supplies. It seems that this amendment would do both.

This is not a black or white issue. I do not want anyone to be ripped off by higher gas prices. For that reason, I would have preferred that deregulation of gas and decontrol of oil be coupled with a very substantial windfall profits tax if profits from higher gas and oil prices were not reinvested. That would have seemed to make a great deal of commonsense. Unfortunately, that plan is not being offered here, and the greatest deficiency of the amendment is that it does not provide a mechanism to serve as an incentive for reinvestment. We can only hope that deregulation will provide that incentive.

Mr. ASHLEY. Mr. Chairman, I would like to see if I can secure some idea as to a time limit on this amendment.

Mr. Chairman, I ask unanimous consent that all debate on this amendment conclude at 2:30.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. MOORE. Mr. Chairman, I object.

Mr. WATKINS. Mr. Chairman, further reserving the right to object, many of us have shortened our debate on the amendment that was adopted by voice vote in order to be here at this time to discuss and debate the question of deregulation. I think it would jeopardize our chances for being heard fully if we were to cut off debate on this particular amendment.

Therefore, Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Chair will advise the gentleman from Ohio, Mr. ASHLEY, that considering the number of Members who were standing at the time the time limitation was requested, if that time limit were set at 2:30 p.m., that those Members would be entitled to 3 minutes each.

Mr. KRUEGER. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. ASHLEY. Mr. Chairman, I would ask unanimous consent that all debate on this amendment conclude at 3 o'clock p.m. today.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. ASHBROOK. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. FISHER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise to speak against the Brown amendment and for the ad hoc committee approach. This is an intricate, technical, and economic matter, difficult for many of us to come to a decision on. I have weighed it as carefully as I can. It is not my style to present an advocate's position with all of the arguments lined up on one side or the other.

It does seem to me that the objectives we seek at this critical point in the bill are generally subscribed to. They are: To begin to restore free market pricing for all gas, to protect consumers against unwarranted price increases, to stimulate exploration and development for more gas, and to promote efficiency and conservation in the use of gas, and to promote the substitution of coal and other fuels. Obviously, we have to compromise. We cannot serve all of these objectives to the maximum all at once.

The proposed bill without the Brown amendment strikes me as a good compromise for gas pricing. It would do these things. Not exclusively, not 100 percent, but in the main it would do these things. It would result in some price increase, some definite movement toward freer pricing. New gas with the expanded definition would go to $1.75, with further increases after that, depending upon oil prices, all of which I think would stimulate the development of new gas—not right away, of course. There is hardly anything we can do in this energy field that produces a quick result. We cannot change demand behavior very quickly unless we mandate the prohibition of certain uses, and we cannot produce a supply response quickly for technical reasons. It takes a long time to increase supplies. But I think the ad hoc committee's recommendation would stimulate new supply; it would set in train right away decisions which later on after a few years would surely increase the supply of new gas.

I think the solution of the ad hoc committee would protect consumers from rapid large unjustifiable price increases. It would give assurance to people everywhere that they are not going to be taken by this—ripped-off is the phrase. It is important in terms of public support to give this assurance. In this respect, the ad hoc approach would take us to what the majority leader yesterday referred to as a resting place, an advance toward freer prices, toward stimulating new supply, but a resting place from which later on, if in our wisdom we wish to do so, we can move on toward further deregulation.

So I say, Mr. Chairman, for now, for this year, I believe the ad hoc committee gives us a good compromise position from which we can move later on if conditions warrant it.

I have been torn between two positions on this. First my preference as a professional economist has been to get on with deregulation It is no surprise that most of the economists of the country have been advocating to this body that we move as rapidly as possible to deregulation. But I am also influenced by my feeling of political responsibility toward people generally, including my own constituents, not to go too fast in this direction, out of respect to them as consumers, scores of millions of them.

So I have been torn in these two directions, but out of it I do come down in favor of the ad hoc committee view, the view that is in the bill before us, without the Brown amendment, as representing the best compromise at this time.

Mr. MOORE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I come from Louisiana, which probably most of the Members know and also probably know it produces natural gas. As a matter of fact it produces more gas for the interstate system than any State in the Union, but the thing Members may not know about Louisiana is the fact that our residential consumers use natural gas from the interstate pipelines, just like most of the other States do.

Simply producing more natural gas in Louisiana does not really help the consumers in Louisiana. It does when the gas gets into the interstate system though, just like it helps the constituents of all other Members.

So basically the problem I see is twofold. First we have to produce more natural gas to have it available to consumers and second, we have to get it into the interstate system to do us any good.

I submit the administration proposal and that of the ad hoc committee does not do that, whereas the Brown amendment does. I urge its support. As a result of information presented to the Energy and Power Subcommittee, I have prepared a 5-point summary in support of this amendment.

Part A shows that as early as 1908, at regular intervals ever since, the Federal Government has been saying that we are running out of petroleum, and it is saying now the same thing about natural gas. Part B shows we have information from the Academy of Sciences and the National Science Geological Survey indicating that we have 50 years supply of natural gas we can produce right now, and according to other studies of the Government, we may have 175 to 1,000 years of natural gas from new sources of natural gas that we are not producing from now.

So we do presently have natural gas and it is available for production for a long time to come, just as after every other Government statement we have had oil and gas available ever since the Government has been incorrectly predicting we would run out.

This gas will be produced in direct relationship to price. There definitely is a price response in productivity.

The administration has said that this bill will produce about 1 trillion cubic feet now of natural gas at $1.75 trillion cubic feet, and that any rise in price above that will not produce more. Part C shows this is not true according to recent studies by the Federal Power Commission, FEA, and ERDA. There is a direct price response. As a matter of fact if we will adopt the Brown amendment we will produce about 4 trillion cubic feet more than now.

We had a shortfall this past winter of 3 trillion cubic feet, and this is roughly 3 trillion cubic feet more than the administration bill will produce.

Also, I point out something very interesting. We can produce more natural gas, but with the administration program of having gas sell for the same thing in both

markets, $1.75 in interstate and $1.75 in intrastate, will not get any more gas in the interstate market. Producers who sell in intrastate markets will continue to sell in that market if the price is the same. They do not want to come under interstate regulations for the same price. They will sell into the interstate market for a higher price.

So really the only way to get increased gas into the interstate system is to deregulate the interstate price so that intrastate gas will move more freely into the interstate market.

This conclusion is the result of the testimony of numerous people before our Energy Subcommittee, including Mr. Richard Dunham, Chairman of the Federal Power Commission, as shown in part D.

I have heard remarks on the floor today about the concentration of companies in the production of natural gas in this country. According to the figures from the U.S. Bureau of Mines, there is less concentration in gas production in the United States than in almost any other industry. The top four natural gas producers in this country have about 24 percent of the market whereas the top four have more than this in the telephone, automobile, tire, soap, steel, farm machinery, or periodical industries.

The concentration is far heavier in those industries. As a matter of fact, the top 50 domestic producers of natural gas in this country account for only 64 percent of the market. There are better than 10,000 producers of natural gas in this country. Therefore, the concentration is not anything like people would have us believe. It is less concentrated than almost any industry in this Nation.

So I conclude by saying we have a two-part problem: Producing more gas and, second, getting it into the interstate system to solve our problem. Reallocating the shortages, fixing the prices or providing for emergency purchases only treat the symptoms, not the problem. Nothing is done, unfortunately, in the administrative bill to solve the problem.

The Brown amendment does exactly that by deregulating new natural gas to encourage production which will take place as we have seen from the Government's own studies.

Second, we will see that gas gets out of the natural gas producing areas into the interstate pipelines where it is needed if the interstate price is deregulated.

So I urge passage of the Brown amendment, and I include at this point the five-part summary in full earlier referred to:

SUMMARY

A. There has been Government predictions of a shortage of reserves of oil and gas for many years which were all subsequently proven far too pessimestic:

1. 1908.—Statement: "Maximum future supply of 22.5 billion barrels." (Officials at U.S. Geological Survey.) Fact: 110 billion barrels produced since 1908 with proved and undiscovered resources now estimated at 135 to 223 billion barrels.

2. 1914.—Statement. "Total future production only 5.7 billion barrels." (Official at U.S. Bureau of Mines.) Fact: More than 108 billion barrels produced in the U.S. since 1914.

3. 1920.—Statement: "U.S. needs foreign oil and synthetics; peak domestic production almost reached." (Director of U.S. Geological Survey.) Fact: Production in 1976 almost 7 times 1920 production.

4. 1931.—Statement: "Must import as much foreign oil as possible to save domestic supply." (Secretary of Interior.) Fact: During next 8 years imports were discouraged and 14 billion barrels were found in the U.S.

5. 1939.—Statement: "U.S. oil supplies will last only 13 years." (Radio broadcasts by Interior Department.) Fact: New oil found since 1939 exceeds the 13 years supply known at that time. More than 90 billion barrels of crude oil produced in U.S. since 1939.

6. 1947.—Statement: "Sufficient oil cannot be found in the U.S." (Chief of Petroleum Division, Department of State.) Fact: 4.3 billion barrels found in 1948, largest volume in history and twice our consumption. 86 billion barrels of new crude oil reserves found in U.S. since 1947.

7. 1949.—Statement: "End of U.S. oil supply almost in sight." (Secretary of Interior.) Fact: More than 73 billion barrels of crude oil produced since 1949 with proved and undiscovered resources now estimated at 135 to 223 billion barrels.

8. 1977.—Statement: We are being led to believe that we have little natural gas resources left and little prospect of discovering more. Fact: We have 40 to 50 years proven gas supply and prospects of 175 to 1000 years more.

B. We have sufficient natural gas reserves available for production with existing technology according to Government studies to last 40 to 50 years:

	1976 [1]	Total potential	Total [2] (in Tcf)	Duration of supplies [3]
USGS	228	524–857	752–1085	37–54
National Academy of Sciences	228	648	876	44

[1] Estimated proved reserves.
[2] Total remaining resources.
[3] Years.

(Above does not include resources from coal seams, Devonian shale, Rocky Mountain tight formations, geopressured zones.)

2. Government studies show we have 175 to 1000 years supply in Devonian shale, Rocky Mtn. tight gas formations, geo-pressured zones, etc.—

Natural Gas from Coal Seams (Energy Research & Development Administration, 1976, & Bureau of Mines, 1976): 300–800 Tcf.

Devonian Shale (U.S. Geological Survey, 1976): 500–600 Tcf.

Rocky Mtn. Tight Formation (U.S.G.S., 1976, & Federal Power Commission 1973): 600 Tcf.

Geopressured Resources (National Academy of Sciences, 1976): 3000–50,000 Tcf.

Geopressurized methane (ERDA, MOPPS Status Report, June 3, 1977): 500–1000 Tcf.

3. Industry sources verify the Government sources:

	1976 [1]	Total potential	Total [2] (in Tcf)	Duration of supplies [3]
Exxon base	228	423–1143	651–1371	33–69
Mobil	228	508	736	37
Potential Gas Committee	228	1146	1374	69

[1] Estimated proved reserves.
[2] Total remaining resources.
[3] Years.

(Above does not include resources from coal seams, Devonian shale, Rocky Mountain tight formations, geopressured zones.)

C. Government econometric studies show that deregulation will produce the gas in these reserves:

(Annual production 1985 (in Tcf))

	Reg.	Dereg.	Difference
1. Deregulation of new gas price: Federal Energy Administration (January 1977)	16.6	20.6	4

Federal Power Commission (May 1977) cites historical evidence supporting price supply response.

Energy Research & Development Admin. studies (June 3, 1977, MOPPS Status Report) show that size of U.S. conventional gas resource base varies depending on extent to which producer costs can be recovered. At producer cost of $1.00/Mcf, resource quantity is 120 quads $2.00/Mcf is 275 quads.

(Annual production 1985 (in Tcf))

	Reg.	Dereg.	Difference
2. University studies verify: Institute of Gas Technology [1]	16.2	21.6	5.4
Stanford Research Institute	----	26.4	---
3. Industry studies verify: American Gas Association	16.1	20.0	3.9

[1] University of Illinois.

D. The consensus of the testimony at the hearings was that a regulated price in both inter and intrastate markets would not result in more natural gas in the interstate system. Only deregulation would accomplish this desired end because, if the price is the same, producers will choose a deregulated market over a regulated one.

1. Richard Dunham, Chairman, Federal Power Commission.

2. Honorable Briscoe, Governor of the State of Texas.

3. Honorable Boren, Governor of the State of Oklahoma.

4. Robert Batinovich, President, California Public Utility Commission.

5. Luther Heckman, Chairman, Ohio Public Utilities Commission.

6. Richard O'Shields, President, Interstate Natural Gas Association of America.

7. Robert Hefner, Independent Gas Producers Committee.

8. Charles Allen, geologist, Phillips Petroleum.

9. A. V. Jones, President, Independent Petroleum Association of America.

10. D. K. Davis, Vice President, Independent Petroleum Association of America.

11. David Foster, Natural Gas Supply Committee.

E. Concentration ratio of natural gas producers is dramatically less than concentration ratios of other industres.

1. Top 4 concentration ratios (U.S. Census of Manufacturers, 1972):

[In percent]

Telephone apparatus	94
Motor vehicles	93
Tires and tubes	73
Soaps and detergents	62
Steel	45
Farm machinery	47
Petroleum refining	31
Periodicals	26
Paints	22

2. Top 4 companies' concentration ratio in natural gas production industry is 24.4%.

Top 50 companies' concentration ratio in natural gas production industry is 64.2%.

Top 50 companies—U.S. net natural gas production, 1975

Company	Percent of total U.S. production
Exxon	9.0
Texaco	6.9
Standard Oil of Indiana	4.8
Mobil Oil Corp	3.7
Gulf Oil Corp	3.6
Shell Oil Co	3.5
Atlantic-Richfield Co	2.9
Union Oil of California	2.5
Phillips Petroleum Co	2.4
Sun Oil Co	2.3
Standard Oil of California	2.3
Getty Oil	2.0
Tenneco	1.9
Cities Service Co	1.9
Continental	1.6
Superior Oil	1.4

The CHAIRMAN pro tempore. (Mr. KREBS). The time of the gentleman from Louisiana has expired.

(At the request of Mr. GORE, and by unanimous consent, Mr. MOORE was allowed to proceed for 1 additional minute.)

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Tennessee.

Mr. GORE. Mr. Chairman, the bill offered by the gentleman from Ohio (Mr. BROWN) does not, unfortunately, remove the jurisdiction of the Federal Power Commission under the Natural Gas Act to cover the natural gas companies. By contrast, the President's bill does. It removes all regulation, other than that related to price.

Mr. MOORE. Mr. Chairman, if I can reclaim my time, I know what the gentleman is getting at. The gentleman is disputing the point that only deregulation will get intrastate gas into the interstate system. The point the gentleman is talking about is the emergency purchase procedures. If the price is the market price, wherever it is, the producer will sell it at the highest price, even if it is to the interstate market.

Mr. GORE. Mr. Chairman, if the gentleman will yield further, that is not the point I am addressing. The Natural Gas Act has four jurisdictional bases: Sales in interstate commerce for natural gas, resale transportation of interstate natural gas, natural gas companies who engage in such sales, and natural gas companies that engage in transportation.

As a result of adopting the Brown-Krueger-Wirth amendment, the companies' paperwork burden under the Natural Gas Act would remain in place.

The CHAIRMAN pro tempore. The time of the gentleman from Louisiana has again expired.

(By unanimous consent, Mr. MOORE was allowed to proceed for 1 additional minute.)

Mr. MOORE. Mr. Chairman, I would answer the gentleman by saying that it is the price controls that prevent intrastate gas getting into the interstate system. The testimony we had before our committee was that if the price is the same, everyone who testified before our committee testified it will not go into the interstate system, but it will stay in the intrastate system.

Mr. GORE. Mr. Chairman, if the gentleman will yield further, that is why we deregulate everything except the price. Under section 26 of the Natural Gas Act——

Mr. MOORE. The price is not deregulated and that is the barrier of getting it into the interstate system. It is not deregulated gas. The price stays the same.

The CHAIRMAN pro tempore. The time of the gentleman has again expired.

(At the request of Mr. STEIGER, and by unanimous consent, Mr. MOORE was allowed to proceed for 1 additional minute.)

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. MOORE. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Chairman, if I read the Brown-Krueger-Wirth-Anderson-Edwards-Watkins amendment, you do terminate producer regulation under the natural gas for new onshore natural gas sales. Requirements for producer certification, dedication, rate filing, and abandonment of new natural gas produced and sold from onshore lands would no longer apply.

That is a part of that amendment. It seems to me almost exactly the same way as apparently the administration saying it is part of their amendment.

Mr. MOORE. Mr. Chairman, I certainly agree. The point is, however, not what the gentleman from Tennessee is talking about, the paperwork, but that we have to deregulate the price or no more gas will get out of the intrastate and into the interstate system.

Mr. GORE. Mr. Chairman, will the gentleman yield for a response?

Mr. MOORE. I would yield for a question, not a response.

Mr. WATKINS. Mr. Chairman, I move to strike the last word.

Mr. Chairman, members of the committee, I rise in support of the Krueger-Brown deregulation amendment to H.R. 8444, the National Energy Act. Our past experience with regulation of the interstate natural gas market proves that deregulation is essential. Today I would like to make five major points which prove that deregulation is necessary, workable, and advantageous.

First, there is a large quantity of additional gas that remains to be discovered and produced. The U.S. Geological Survey estimates that total undiscovered natural gas resources in the United States are between 322 trillion and 655 trillion cubic feet. Also according to the USGS, the potential gas reserves in the United States are 3.7 to 5.4 times as large as the reserves currently under production.

The administration's energy plan is based on the premise that there are no significant quantities of natural gas to be discovered. Actually, that assessment is not new—people have been saying that for the past 15 years. But what has happened during this time period? Within the past 10 years the Prudhoe Bay field in Alaska was discovered, the largest proven reserves in North and South America. Within the last 5 years, England brought in the North Sea field, which amounts to two-thirds of the total U.S. proven reserves. And during the past year, Mexico has announced reserves that appear to be larger than any of these

Second, contrary to the claim by the administration, drilling rigs can be produced and made available to meet the exploration effort required to balance supply with demand.

In addition to the new rigs coming on line, more than 50 superdeep rigs are sitting idle at this time because of the artificially low, regulated interstate gas prices. These same rigs could be put to work in the Deep Anadarko Basin, where nearly half of Oklahoma's 122 trillion cubic feet of potential natural gas resources lie, if the interstate prices were deregulated to reflect the free market price of this commodity.

Third, drilling and production are price responsible. During the decade of the 1960's, the real price of oil and gas, adjusted for inflation, declined from $3.40 per barrel of oil equivalent to $2.70. This same period was marked by a drastic reduction in drilling expenditure. However, when the real price of oil and gas began to rise early in the 1970s, and drilling expenditures subsequently doubled between 1971 and 1975.

According to the Federal Energy Administration, the number of gas wells drilled in a five-State area, including Oklahoma, Texas, Louisiana, New Mexico, and Arkansas, increased from 1,884 in 1971 to 4,128 in 1975, an increase of 119 percent. During that same period, footage drilled nearly doubled.

About 58 percent of Oklahoma's natural gas production is delivered to interstate pipelines. While the State's total gas reserves have declined since 1972, the reserves dedicated to the intrastate market have increased. This is because the average wellhead price for intrastate gas in Oklahoma is three times the average wellhead price of interstate gas.

During 1975, interstate dedicated reserves for the Nation as a whole decreased 12.1 trillion cubic feet, while the intrastate reserves rose 3.5 trillion cubic feet. The increase in the intrastate reserves can be attributed to free-market pricing of natural gas versus the regulated pricing of interstate gas.

The Energy Research and Development Administration's market oriented planning study, also known as MOPPS, concluded that the supply of gas is price responsive; however, the administration did its best to suppress this finding until the Wall Street Journal blew the whistle. On July 12 of this year, the Fossil and Nuclear Research, Development and Demonstration Subcommittee of the House Committee on Science and Technology, of which I am a member, held a hearing on MOPPS. Representing ERDA at the hearing were Dr. Phillip C. White, ERDA Assistant Administrator for Fossil Energy, and Dr. Harry R. Johnson, ERDA Deputy Administrator for Planning, Analysis, and Evaluation. I would like to read for the RECORD a portion of the transcript from that hearing:

Mr. FLOWERS. What if you had in 1985 $3 a thousand cubic feet (for natural gas at the wellhead)?

Mr. JOHNSON. $3? Our analysis would indicate we would have more gas available than anybody could ever use . . .

Mr. FLOWERS. Look at the difference a dime per Mcf makes in 1985, between $1.80 and $1.90. That is a tremendous difference.

Mr. WHITE. Given another 50 cents (per Mcf), you could close your gap. It is implicit in that . . .

Mr. JOHNSON. . . . Our demand in the year 1985 is somewhere around 18 trillion standard cubic feet, and the market clearing price using this set of resources would be around $2.25.

In other words, ERDA concluded in its MOPPS study that if the price of natural gas were $2.25 in a deregulated market, by 1985 supply and demand would be balanced. We would not have the shortfalls and curtailments that have plagued us for 3 years, and we would not have the closed schools, industries, and office buildings that we had last winter. All for only $2.25 per Mcf.

Yet, the administration's energy bill, with pricing initially regulated at $1.75, inherently requires such shortfalls, with only two choices:

First, import the additional energy needed, at a tremendous cost to our balance of payments, economy, and national security; or second, allow even more curtailments, forcing our constituents to freeze and putting thousands of people out of work each winter.

Fourth, deregulation would actually reduce the per unit price of energy to many consumers.

This is because the price paid the producer at the wellhead represents only one-fourth to one-third of the average residential bill in the interstate market. Maintenance and amortization costs remain constant, whether the pipeline is full or empty. When the volume of gas being transported through the pipeline declines because of inadequate supplies due to inadequate wellhead prices, gas distribution companies must increase their unit charges to consumers to recover these fixed costs.

It works something like this: Suppose you own a gas distribution company that is capable of delivering 200,000 cubic feet of gas. However, the wellhead price of gas has been regulated at $1 per Mcf. At that price, there is only a supply of 100,000 cubic feet available, so your pipeline runs at only one-half of capacity. The fixed costs of operating your distribution system total $300,000. Therefore, your customers pay $4 per Mcf for gas—$1 per Mcf covers the price paid to the producer at the wellhead, and $3 pays for the prorated share of the fixed costs. Now, suppose Congress decides to deregulate gas prices, and your company can purchase its full 200,000 Mcf requirement of gas from producers for $2 per Mcf, twice what you were paying before. Your pipeline is now running at its full 200,000 Mcf capacity. Your customers would now be paying $3.50 per Mcf—$2 to cover the higher wellhead price, but only $1.50 to cover the pro-rata share of the fixed costs. Thus, although the wellhead price doubled, the cost to the consumer decreased because the pro-rata share of fixed costs were cut in half, due to the increased supply of gas available.

A very similar situation exists in real life, right in New York City. Brooklyn Union Gas Co. is a distribution company which serves New York. It buys its gas from an interstate pipeline that in 1976 paid a maximum of 52 cents per Mcf for new gas at the wellhead. In 1976, Brooklyn Union's customers paid $3.48 per Mcf for their gas, almost seven times the maximum price paid at the wellhead. Two-thirds of the price the customer paid went to Brooklyn Union to pay the amortization costs of its pipeline; about another 10 percent was used to pay the transportation costs between the producing fields and New York City. If Brooklyn Union's pipeline were full of higher priced, deregulated natural gas, the per unit costs to the consumers would actually go down. Last year, Brooklyn Union had to supplement its meager supply by kicking in a synthetic gas plant that cost $4 per Mcf to produce gas. This expense, also, could be eliminated if gas were deregulated and supply matched demand at the equilibrium price.

I want to assure my colleagues that I am not just pulling these figures out of the air. In 1975, the State of Oklahoma commissioned Arthur Young & Co. to study the relationship of gas supply and wellhead prices to consumer costs. That study found that without additional supplies, and I can assure those supplies would not be available without deregulation, in 1985 Brooklyn Union's customers would be paying $4.45 per Mcf. But if Brooklyn Union could keep its pipeline full of gas costing $2.50 per Mcf, its retail price would be $3.98, 47 cents per Mcf cheaper. And since ERDA's Dr. White and Dr. Johnson concluded from their MOPPS study that the wellhead price needed to match supply with demand in 1985 would be $2.25 per Mcf, the price to Brooklyn Union's customers would actually be less than $3.98!

Of course, the administration has submitted various analyses of what deregulation would cost, as have the Library of Congress and others. However, as Mr. KRUEGER has pointed out, all of these analyses are based on faulty premises, and I defer to his arguments on this point. But I would like to remind my colleagues of the study done by Mr. STOCKMAN of Michigan, which indicates that this deregulation proposal would save American consumers $48 billion between now and 1990, as opposed to the language currently in the bill.

Finally, I would like to point to Oklahoma's experience with the unregulated pricing of the intrastate market. More than 93 percent of the natural gas used in Oklahoma is purchased on the intrastate market, where new gas prices have been ranging around $2 per Mcf. Including the old, lower-priced contracts, the average wellhead price for Oklahoma intrastate gas in the first quarter of 1976 was 84 cents per Mcf, compared to the average price of 31.6 cents for Oklahoma gas leaving the State in intrastate pipelines. However, the average Oklahoma consumers pay for gas at the end of the pipeline in 1975 was 79 cents per Mcf, compared to the national average price of $1.29. Thus, although Oklahoma intrastate utilities pay more than twice as much for gas at the wellhead, their customers pay only 62 percent of the national average price.

My fifth and last point is that deregulation would enable supply to match demand, and at the same time promote conservation. This is important, because the administration claims the higher price ceilings contained in H.R. 8444 are designed to promote conservation. In actuality, this bill would roll back the price of new intrastate gas, thus discouraging drilling in this market, which as I said earlier, is presently at an all-time high. At the same time, the prices established by this bill would still be below the replacement cost, and natural gas would still be priced well below other fuels, thus encouraging its wasteful consumption.

However, this deregulation amendment is a conservation measure. If the well head price of natural gas were deregulated and allowed to seek its free market level, it would encourage many industrial consumers to switch to alternative fuels and would make substitute fuels, such as coal gasification, economically practical. And, at the same time, it would encourage drilling and help us close the production gap.

Under the free market, deregulated system, supply would rise and demand would fall until the two cross at an equilibrium price. This has happened in the intrastate market, where, when prices rose to $2.25 per mcf, supply rose rapidly. Supply then began to exceed demand in some locations and prices slipped until they stabilized at $2 per Mcf, the supply-demand equilibrium price for 1976. The same thing would happen in the interstate market.

In summary, I would like to quote from the findings of the Brookings Institution in its study, "Setting National Priorities: the 1978 Budget":

Optional adjustment toward a long-run equilibrium in the natural gas market would affect both production and consumption. Deregulation of natural gas that had not previously been consigned to the interstate

market would be one means to achieve this adjustment. On the supply side, deregulation would prompt new exploration and more intensive development of known reservoirs. The amount of gas marketed would also be increased because the amount wasted, used in the field, or used for producing petroleum would fall owing to its higher value. Finally, decontrol and the rising prices it would induce would encourage the development of synthetic natural gas . . . at rates that would minimize total energy costs to the economy.

. . . Gradual decontrol of natural gas would reduce the cost of energy to the economy, not increase it. In essence, the higher prices and fuel switching occasioned for some consumers would make gas supplies available to those for whom the alternatives are worse. The inefficiencies and inequities of the present system are disguised, but its benefits to some are large and obvious. In contrast, decontrol would bring obvious losses to some but widely dispersed and less readily visible benefits to the economy generally. On the whole, the economy would benefit from the more efficient use of energy and other resources that decontrol would bring.

Mr. Chairman, those are my sentiments. Deregulation would allow supply to match demand, thus ending our tremendous and terrible natural gas shortages. It would also encourage conservation and development of alternative fuels. And finally, it would do so at a price that might actually be cheaper than what many consumers are paying today. For these reasons, I urge my colleagues to join me in voting for the Brown-Krueger amendment.

The CHAIRMAN. The time of the gentleman from Oklahoma (Mr. WATKINS) has expired.

(On request of Mr. GORE and by unanimous consent, Mr. WATKINS was allowed to proceed 3 additional minutes.)

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. WATKINS. I yield to the gentleman from Tennessee.

Mr. GORE. I thank the gentleman for yielding.

Mr. Chairman, the gentleman is talking about the production inside of the State of Oklahoma. I have a report, based on the figures from the American Petroleum Institute, showing that since 1973, marketed natural gas production in the deregulated market of Oklahoma has steadily gone down. To intrastate customers, the supply sold to intrastate customers since 1973 has steadily gone down.

The gentleman talks about the increased availability of prices inside the State of Oklahoma, as compared to the availability in the interstate market. I would also point out that the average prices inside the Oklahoma intrastate market during this year was $1.63, far below the prices proposed by the administration. In January, $1.72; in February, $1.47; in March, $1.68; and so on.

Mr. WIRTH. Mr. Chairman, will the gentleman yield?

Mr. WATKINS. I yield to the gentleman from Colorado.

Mr. WIRTH. I thank the gentleman for yielding.

Mr. Chairman, I think the point the gentleman was making was an attempt to allay the fears of this House thinking that the increase in the wellhead price is going to affect the consumer. If I understand the gentleman, the point is that the wellhead price makes up only about 20 percent or 25 percent paid for natural gas by consumers; is that correct?

Mr. WATKINS. That is correct. If we keep the pipeline full, actually the customers to the north and to the northeast, will be paying less per thousand cubic feet.

Mr. LUKEN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to engage in a colloquy with the gentleman from Michigan (Mr. DINGELL). I wish to obtain from the gentleman from Michigan additional clarification regarding the scope of the authority provided to the Secretary of Agriculture by section 411 of the bill. Specifically, I want to assure myself that under the provisions of section 411, the Secretary of Agriculture is empowered to afford the protection of the priority established by that section to any use of natural gas within the entire food supply system which he determines to be essential to avoid an interruption of that system.

Mr. DINGELL. I can assure the gentleman that such is the intent of the section and such is my understanding of the section's language.

Mr. LUKEN. Thus, I am correct in my understanding that the language of section 411 is intended to be read broadly and the Secretary of Agriculture is directed to consider the entire food supply system, including uses of natural gas in the distribution of food and food products, such as storage.

Mr. DINGELL. That is correct. It was the specific intent of the report of the Ad Hoc Committee on Energy as it relates to section 411 to reaffirm that the Secretary of Agriculture is empowered and directed to identify essential uses of natural gas in the entire food supply system, including food storage and distribution and to afford to such essential uses the protection provided by this section which is consistent with the intent of the Interstate and Foreign Commerce Committee.

Mr. STOCKMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to take this opportunity to address what I think is the single most effective and most important criticism that has been made of this amendment on the general issue of decontrol, because I know it troubles those Members of this body who genuinely want to give this proposal a fair hearing.

Of course, the argument we have been contending with for many months now is that there will be no supply response to decontrol or higher prices. I will have to admit that the critics of our amendment have very effectively and correctly noted that the track record of the last 4 years needs to be taken into account. They have shown that the price for new natural gas has increased by a factor of 3 or 4 times and yet in that 3- or 4-year period natural gas production has actually declined—to be exact, from about 23 trillion cubic feet a year to 19 trillion cubic feet last year.

So the question has been legitimately raised: Will another 30 or 60 or 80 percent increase in price which we might get under decontrol result in anything different from what we have had during the last 4 years?

That is a legitimate question and an important one, and I would suggest that to get the answer to the question we have to recognize one fundamental factor or proposition about the economics of gas, and that is that gas production in the current year is almost totally insensitive to the new gas price during that current year. The variable or the factor which is sensitive to the new price of gas is reserve additions, and I think we can see from the record very clearly and from the statistics that have been published by everyone that reserve additions since 1973, when the price of gas turned around, have been rising very rapidly. In fact, they are being added at a rate today 50 percent above what they were in 1973.

Now, by contrast, if we look at current-year production, we have to recognize that it is determined by two factors which are basically unrelated to the price for new gas in the current year. Those two factors are, No. 1, the ratio of production to the total reserves that we have in inventory, and, No. 2, the rate at which new reserves have been added to our total reserve inventory in the 4 to 7 years prior to the year of production we are looking at.

What I would like to do for the Members of the House is to very briefly document where we were on these two factors, the ratio of production to total reserves and the rate at which new reserves were being added, in previous years I would like to show where we were on those critical factors in 1973 when the price began to turn around.

If we look at the production-to-reserve ratio, we will see we were at rock bottom. Whereas in the 1950's our annual gas production had been 2 or 3 percent of our total reserves, I would point out that it had risen to 4 to 6 percent in the 1960's, and by 1973 we were producing 10 percent of our total reserves every year.

That is our maximum limit. That is as far as we can go, because geologic factors, conservation factors, and even State law prevents us from going beyond that.

The meaning of that is very clear. This means that the easy annual production increases that we were getting in gas during the 1960's could no longer be obtained, because we were at the limit of producibility of our gas.

I would point out to the Members of the House that at the beginning of the mid-1960's our additions in new reserves to our total gas inventory began to decline, but despite that, from 1962 to 1973, actually the production of gas increased from 14 trillion cubic feet to 23 trillion cubic feet. The only reason for that was that we were producing higher and higher ratios of our inventory, and when we hit 1973, we could no longer do that. For that reason, our gas production had to peak out.

Second, let us look at where we were in 1973, when prices began to turn around, in terms of the rate of annual reserve additions in the last 6 or 7 years previous to 1973. We will see that we had an absolute catastrophe.

In 1976 we added about 20 trillion cubic feet of gas to our reserve inventory. By 1973, because of the decline in real price and because of the rising cost of finding new gas, we were only adding 6 trillion cubic feet of gas to our reserves, and we were consuming 23 trillion cubic feet.

The obvious implication of that 70 percent decline is pretty apparent to me, and I think it should be to the Members of this body; and that is that we were depleting our inventory, our reserve of gas, so fast that no matter what happened after 1973 in terms of price and in terms of new reserve additions, production had to decline.

The CHAIRMAN pro tempore (Mr. KREBS). The time of the gentleman from Michigan (Mr. STOCKMAN) has expired.

(On the request of Mr. GORE and by unanimous consent, Mr. STOCKMAN was allowed to proceed for 3 additional minutes.)

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. STOCKMAN. I yield to the gentleman from Tennessee very briefly.

Mr. GORE. Mr. Chairman, I wanted to take issue with the gentleman's statement that reserve additions have increased since 1973.

On page 387 and 388 of the ad hoc committee report we have charts which clearly show—and the source is the American Gas Association, which is certainly not biased in favor of the committee's position, and also the Federal Power Commission. These figures clearly show a steady decline in reserve additions. The aggregate reserve additions over the 5-year period from 1964 to 1969 were 718 trillion cubic feet. From 1970 to 1974 it was only half that amount.

Mr. STOCKMAN. If the gentleman will allow me to reclaim my time, the gentleman is looking at the wrong series of statistics.

The fact is that in 1973 we added 6 trillion cubic feet of gas to our reserves. That was the rock bottom. In the last couple of years we have added 10 trillion cubic feet.

Mr. GORE. Mr. Chairman, will the gentleman yield further?

Mr. STOCKMAN. I will not yield further, because I think there is an important conclusion to be made from this, and that is the point which, I think, was made very effectively a while ago by the gentleman from Virginia. He said that we cannot turn around either supply or demand in a short period of time. Now, because we have lowered our reserve level of gas from 300 trillion cubic feet which we had in the mid-1960's to the very low level of 200 trillion cubic feet in 1973, it is going to take 4 or 5 or 6 years of very large reserve additions before we can even stabilize the level of annual gas production.

The point I am trying to make, Mr. Chairman, is simply that the critics have imposed an unfair and basically an irrelevant test. The true test is if we had not had that increase in price, and if reserve additions had continued to decline after 1973 at the rate that they were in the previous 7 years, then where would we be today?

I think it can be demonstrated that instead of producing 20 trillion cubic feet of gas this year, we would be producing only 17 trillion cubic feet of gas. I think it would be demonstrated that by 1985 we would be producing less than 10 trillion cubic feet of gas, and the whole industry would disappear by 1990.

Mr. Chairman, I think the facts are pretty clear. At the old price, the pre-1973 price of 20 or 30 cents, we were getting almost zero reserve additions. We were just living off the past. At the price of $1.45 to $2 prevailing in the last few years, we are getting about 10 trillion cubic feet of new gas reserves a year. That, too, will mean a continued decline in gas production.

Mr. Chairman, the only way in which we are going to be able to stabilize gas production at 20 trillion cubic feet to keep our homes, hospitals, and process industries going is to increase that reserve addition rate to about 20 trillion cubic feet a year.

The CHAIRMAN pro tempore. The time of the gentleman from Michigan (Mr. STOCKMAN) has expired.

(By unanimous consent, Mr. STOCKMAN was allowed to proceed for 1 additional minute.)

Mr. STOCKMAN. To continue, Mr. Chairman, I would suggest to the House that we should come back up to that level of replenishing our inventory and getting a total reserve of gas large enough to permit us to continue to produce 20 trillion cubic feet a year, which we need if we want to avoid hardship and tremendous economic cost in this country through switching to more costly substitutes.

We cannot get that at $1.75 because the record of the last 3 years is clear that $1.75 will only produce 10 trillion cubic feet a year of additional reserves. That is not enough to keep our production level up.

Mr. Chairman, the MOPPS study and much other information available suggests, and that includes even the third edition of MOPPS, the most conservative edition, that there would be 475 trillion cubic feet of gas at a price up to $3. That is enough to add 20 trillion cubic feet to reserves and produce 20 trillion cubic feet a year for 25 years. That is why we need that price increase. When all is said and done, it is still a far better deal for the consumer and for the economy than having imported oil and synthetic gas priced at $5, or any of the other alternatives available.

Mr. RUNNELS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, and members of the committee, I have heard throughout yesterday and today the word "average" batted around on this floor. It reminds me of the story of a friend of mine who had a set of twin boys. One day I was visiting with my friend, and these little twin boys, one of whom had a set of Gotch eyes, one eye looked thataway and one eye looked thisaway, and the other twin boy's eyes were crossed. And he had been taking them to the eye doctor.

So I said to him "How are your boys' eyes?"

And he said, "On the average, they are perfect."

That is what we are using around here, the word "average."

Mr. Chairman, let me say that I rise in support of the Brown-Krueger-Wirth amendment. I think we are being penny wise and pound foolish. If you will turn to page 180 on this bill you will see that the findings say:

> . . . during the early history of this nation's petroleum industry, natural gas was a byproduct of the production of crude oil, and was not readily marketable . . .

Please remember one thing, that we are talking about a commodity called natural gas. Natural gas, as this bill says, originally was a byproduct of crude oil. Now what caused this huge surplus in American was that many years ago people dug oil wells. In case you do not know, an oil well has only two sources of a drive to get the oil out of the ground. It either has a water drive or a gas drive. If it is a water drive, the water is salt water.

So, throughout the years, because they could market their oil, a man would dig an oil well and then sometimes along with it, he would have gas and that would push the oil out of the ground.

Over the years the only way you can get that gas from that wellhead to your home or your factory in your district was through a pipeline system. You can get the oil from the tank battery to a refinery in a truck.

So, over the years, they have laid thousands of miles of pipeline to get this gas. Back many years ago they handled the gas from an oil well this way. If they did not have someone in that State that was willing to purchase it, they laid a little pipe out from the wellhead, stuck it up in the air away from the wellhead and struck a match and flared the gas.

So, if you went through the country where they produced oil and gas it looked like a Christmas tree at night as the gas was being flared. And that was wrong. We were wasteful in this Nation.

So the oil producing States, their regulatory agencies, said to the oil producers, "You no longer can flare that gas. You must blow that flame out."

Well, about three things happened all at the same time. The first thing that happened with the no-flare order, then the utility companies of this country and the transmission companies of this country grabbed on to an opportunity to tie all of these wells together. Gathering the gas produced by an individual, independent or the major oil companies. Here in this bill we know what happened because on the very next page it is spelled out, it says right here, on page 181:

> (3) the Congress enacted the Natural Gas Act in 1938 to protect consumers and to provide a regulatory structure through which interstate pipelines and natural gas producers could be assured an opportunity to earn a fair rate of return;

The CHAIRMAN pro tempore. The time of the gentleman has expired.

(By unanimous consent, Mr. RUNNELS was allowed to proceed for 4 additional minutes.)

Mr. RUNNELS. Mr. Chairman, that was 39 years ago. Then look at the very next paragraph. In 1954 the Supreme Court held that the Natural Gas Act applied to the wellhead sale of natural gas in interstate commerce. That was 23 years ago—23 years of price controls of natural gas at the wellhead set at a price of 15 cents per 1000 cubic feet of gas.

Let me say to the Members that if Federal controls, through the Federal Power Commission, and price control is the answer to our problem, pray tell me why are we discussing this bill today. We have a shortage for the very reason we are discussing. You cannot be half pregnant, and that is what we are doing in this bill—being half pregnant. We have price controls on an industry that should be going wide open, because this country was built on energy. It was originally wood; next it was coal; then it was oil; then it was oil and gas.

Mr. Chairman, I am saying that we need a new source of energy in America because this is a depletable mineral just like the rest of them. It will come and go in its day. But price controls? We can get out of our trap this year. We can face our voters next winter maybe, but I want the Members to know that in the future and for the good of this country we are doing a disservice by continuing to have price controls, because the source is getting shorter and shorter and shorter.

Remember, we should do two things. We should have maybe a price on that gas produced along with oil, and another price for new gas where they drill strictly a new gas well.

Mr. RISENHOOVER. Mr. Chairman, will the gentleman yield?

Mr. RUNNELS. I yield to the gentleman from Oklahoma.

Mr. RISENHOOVER. I thank the gentleman for yielding.

I think the gentleman has hit on something that the people in the Northeast are sincerely concerned about as to what is going to happen to price. It is their concern—and I share that concern—and the concern of the gentleman from Tennessee, and the gentleman from Indiana, and the gentleman from Connecticut. When they stopped the flaring of those gas wells, and the small companies came in and bought the rights to that gas and started piping it around all over the country before controls, there was gas everywhere. We got it into the system and got it out to the consumers. This was the result of exploration and drilling by independent oil producers.

Mr. RUNNELS. Independent and major.

Mr. RISENHOOVER. And major, but independents were drilling most of the wells.

Mr. RUNNELS. They do a lot of wildcat drilling.

Mr. RISENHOOVER. All right. The reason I say the majors want this bill like it is without deregulation, and people who are scared of the Seven Sisters are playing right into their hands, because what happened when we did away with the depletion allowance? We forced a lot of small independent producers to sell their holdings to major oil companies. Did we not? Did we not lose a lot of those independents? Along with that goes that natural gas. They obtained these leases. They drilled the oil wells. As the price of oil came up, we raised the price on some of it. Now what is going to happen to natural gas if we do not get deregulation here? Then the majors, who control the oil market in the whole world, except less in this country than in other countries, are then going to have control of the natural gas. Would the gentleman agree with that?

Mr. RUNNELS. Let me say that I think we are worrying about something we should not be worrying about. I personally do not see this big ugly major oil company combine that we are talking about. They are here. They are in America, and that is part of America.

The CHAIRMAN pro tempore. The time of the gentleman has expired.

(At the request of Mr. RISENHOOVER, and by unanimous consent, Mr. RUNNELS was allowed to proceed for 2 additional minutes.)

Mr. RUNNELS. We are talking about obscene profits. If we really believe that they are making obscene profits, every one of the Members here makes a darned good salary, and they ought to go buy some of their stock if they think they are making so much money. They ought to get in on it. It is sold every day by stock brokers. You can get in on it. But it is not true compared to other stocks.

Let me finish just quickly about what happened to our natural gas. When the Federal Government set that price at the wellhead at 15 cents a thousand—and, true, our environmentalists were telling industry back East and every place else, "Do not burn coal any more unless you clean it up"—since the Federal Government had set the price at 15 cents a thousand at the wellhead, we converted throughout the United States—and we should have—and they got in on a good deal.

But the good deal is over. It is not as good as it once was. We cannot conserve ourself to an adequate supply nor can we spend ourself to prosperity. It costs more and more to drill deeper and deeper and find less and less. The end product has a price control, but every thing used to drill and produce, such as salaries and supplies has no controls.

Mr. MAHON. Mr. Chairman, will the gentleman yield?

Mr. RUNNELS. I yield to the gentleman from Texas, the chairman of the Appropriations Committee.

Mr. MAHON. Mr. Chairman, the gentleman has spoken very eloquently about the problems before us. Could much of what the gentleman has been saying be summarized as follows: If we are concerned and apprehensive about the consumers, we should deregulate natural gas not so much in the interest of the producers of oil and gas but in the interest of the consumers? It seems to me the gentleman has made an eloquent plea in behalf of the consumers of the Nation. I trust that the deregulation amendment will be adopted.

Mr. RUNNELS. Mr. Chairman, I agree with the gentleman from Texas (Mr. MAHON) wholeheartedly.

I am not talking for the producers. I am talking for the good of all American people, for the jobs that are provided and for an adequate supply, and that is what we need.

Mr. KEMP. Mr. Chairman, will the gentleman yield?

Mr. RUNNELS. I yield to the gentleman from New York (Mr. KEMP).

Mr. KEMP. Mr. Chairman, I want to associate myself with the remarks of the gentleman from New Mexico and those of the gentleman from Texas and thank them for their leadership.

I represent consumers and decontrol is in this interest. The people of the State of New York are paying $4 and $5 Mcf for synthetic natural gas and imported LNG from Algeria plus are paying $2 or $3 Mcf from Canada.

The CHAIRMAN. The time of the gentleman from New Mexico has expired.

(On request of Mr. KEMP, and by unanimous consent, Mr. RUNNELS was allowed to proceed for 1 additional minute.)

Mr. KEMP. Mr. Chairman, if the gentleman will yield further, my friend from New Mexico is talking about production being in the interest of the consumer, I totally agree. As a Representative from a consumer State I want the gentleman to know I become an advocate of decontrolled natural gas when I found the Federal Power Commission a few years ago turning down sales to my State of natural gas on the basis of the fact that they were 25 cents Mcf over the controlled price, the result was we ended up buying it for $4 and $5 Mcf from Algeria or using higher priced SNG at $5 or $6 Mcf. It is absolutely insane.

The gentleman talks about obscene profits. I will tell you what is obscene, it is obscene that we are denying the consumers of the Northeast the adequate supplies of natural gas that they desperately need. Last winter was obscene when shortages occurred, homes went cold and factories and schools closed down.

I commend the gentleman for his remarks and bring to his attention and this body that the interests of the Nation and the Northeast would best be served by deregulation of natural gas.

Mr. RUNNELS. I agree with the gentleman's remarks, and I congratulate Mr. KEMP for understanding the problem and the solution to it, and having the guts to speak out for his people. It is the consumer that is going to pay the price either for high price foreign energy, or no supply. It does not make sense for us to pay $5.25 for old oil produced in America and yet we pay $13.50 for half of our supply to a foreign nation. I urge you to vote for the amendment for the good of our country.

Mr. KEMP. Mr. Chairman, I rise in strong support of this amendment. Offered by a Democrat BOB KRUEGER of Texas and a Republican BUD BROWN of Ohio, it is a bipartisan measure deserving of the support of every Member. It is

clearly in the interest of the consumer for Congress to enact it, and our colleagues do service to all consumers by giving Congress such an opportunity to revise the disastrous Federal controls on natural gas that have caused these shortages.

This amendment seeks to end Federal price controls on new natural gas. Decontrol will bring onto line enough new gas to overcome the projected shortfalls, especially in the winter months, without causing onerous cost increases to the consumer. As a matter of fact, the consumers will pay less under this amendment because the increase in supply will keep the gas companies which supply them from having to rely on synthetic and liquefied natural gases at double or three times the projected decontrolled gas rates. Twenty-five percent of our supply of natural gas in western New York is expensive synthetic and imported natural gas, even No. 2 fuel oil is almost twice the price of these artificial controlled prices. It is a disaster to this country and to the people of the Northeast.

There has never been a reputable study of America's energy problems which did not conclude that it was necessary to deregulate natural gas prices in interstate sales to take any meaningful step toward energy independence.

The administration has released a study through the Executive Office of the President, Energy Policy and Planning, which projects that massive economic cost will be imposed on the American consumer through deregulation of natural gas. Referring to this study, the President called the deregulation of natural gas a $71 billion ripoff of the American consumer.

Only a cursory analysis of the study is required to discover that it is rigged to yield the results the President wants. In fact, if one sought to impute sinister motives to the White House, it would be easy to argue that the study is little more than a fraud used to mislead the American public and the Congress concerning the cost of deregulation.

While numerous criticisms can be made of the data used and the analytical process employed, two principal flaws stand out above all others.

First, the President assumes that raising the price of natural gas from $1.42 per thousand cubic feet to $1.75 per thousand feet will produce a substantial supply response, increasing output by over a trillion cubic feet by 1985. Beyond the $1.75 price proposed by the President, additional increases in price are assumed to have no impact on output. This assumption is implicitly built into the data, and no justification is given. The results, therefore, are rigged since the President's proposed price is assumed to yield all the output response that can be had and higher prices produce no additional response, only additional cost.

If the same output growth, which is assumed to occur between $1.42 per thousand cubic feet price and $1.75 per thousand cubic feet price is projected to higher prices, substantial increases in output are obtained through deregulation.

In fact, by projecting the supplier responsiveness the administration assumes to exist up to $1.75 to the $2.40 range, a 3-trillion-cubic-foot natural gas production increase is produced. It is interesting to note that the large responsiveness produced by projecting the administration's estimates to higher prices yields results that are very similar to the findings of the American Gas Association, the Institute of Gas Technology, the Federal Energy Administration, Stanford Research Institute, and Professor MacAvoy.

Not only does the White House study assume a totally unrealistic relation between price and quantity above the $1.75 price, but it fails to take account of the fact that any increase in the supply of natural gas will displace fuels that in many cases are three times more expensive than natural gas.

For example, the cost of raising the price of natural gas to $1.75 per thousand cubic feet—the President's plan—is assumed to be $4.1 billion in 1985. This figure, however, neglects the fact that by the President's own figures, supply would rise by 1.1 trillion cubic feet in response to this higher price. While the new gas is costing the consumer $4.1 billion, it is displacing fuels that at $6 per million cubic feet cost $6.6 billion. In reality, the consumer is saving over $2 billion per year by 1985.

When the output responsiveness that the administration assumes to exist between $1.42 and $1.75 is projected up to the $2.50 price range, the expected output rises by over 3 trillion cubic feet in 1985. While this 3 trillion cubic feet of natural gas will cost the consumer $7.5 billion, at the current price for alternative fuels, 3 trillion feet of natural gas would displace alternative fuels costing more than twice the price of natural gas. With the simple adaptation of the output responses the administration study, which is used to call deregulation a ripoff, can easily be used to demonstrate the benefit of deregulation to the consumer.

As late as the 1930's, natural gas was still a semi-waste product. Demand was not sufficient to produce a market price which would finance the development of a distribution system for those deposits of natural gas that were found away from existing pipelines in small quantities When natural gas was discovered in remote areas, it was often burned into the atmosphere.

In the post-war period, with growing energy demand and increasing concern about clean air, the demand for natural gas expanded rapidly. Natural gas had two desirable qualities: It was clean burning and it was cheap. We saw the development of what could have become a nationwide distribution system as natural gas production expanded to provide cheap fuel for the post-war growth.

In 1954 all this changed. It changed because the Supreme Court ruled that the Federal Power Commission under the Natural Gas Act of 1938 could regulate the price of gas that was produced within a State but sold to an interstate pipeline.

With this Supreme Court decision, the Federal Power Commission sought to regulate natural gas prices on a field-by-field basis. In 1961 the FPC imposed a price ceiling at the wellhead on interstate sales of natural gas.

By the late 1960's it had become apparent that the reserves committed to interstate commerce and the production of natural gas were not keeping pace with demand. In 1956, 58,000 oil and gas wells were drilled, but by 1971, that number had dropped to 27,000. The number of natural gas producers dropped from 18,000 in 1956 to 4,000 by 1971—a Government-caused concentration. The old truths were still true: water wets, fire burns, and artificially low prices set by Government must cause output to fail and shortages to occur.

As demand for natural gas outstripped supply, potential interstate consumers were prompted to find substitutes. The consumer in the nonproducing States bought fuel oil, liquefied gas from Algeria, and synthetic gas as substitutes for natural gas and paid up to $5.35 per Mcf. In 1972, 89-percent of finished petroleum products imported into the United States consisted of fuel oil and 46-percent of all petroleum imported including crude was fuel oil. In terms of energy yield, fuel oil has on average in the 1970's sold at roughly twice the free market price of natural gas. Our dependence on Arab oil today would be much less if it were not for these natural gas pricing policies.

As I have said, by regulating the price of natural gas at the wellhead, the Federal Power Commission has produced several undesirable effects. It has stifled the development of a cheap and clean-burning domestic fuel. It has produced a higher price to the consumer because he has been forced to rely on more expensive substitutes. And it has produced foreign dependence because the consumer has been forced to make up for the failure of natural gas suppliers to grow by importing petroleum products as substitutes.

In a very real sense, our foreign dependence has not been produced by the failure of American ingenuity to produce oil and gas but by governmental interference, for which we have all paid in higher prices and shortages.

The possibility that the consumer may actually have lost by regulation is amplified by the fact that wellhead prices of natural gas represent only a fractional part of the price consumers pay at the point of consumption. This is especially significant in the Northeast, where 81 percent of the residential gas bill is for pipeline and distribution costs. To the customer of natural gas in the Northeast a doubling of wellhead prices causes only a 20-percent increase in point of use cost. Conversely, any fall-off in natural gas production means that the portion of the pipeline cost that has to be borne by each unit of gas delivered rises.

To gage the benefit or cost to the consumer of FPC regulation on interstate natural gas, it would be necessary to look at total energy consumption and to compare the prices paid under regulation with the prices that would have existed without it.

While deregulation would have allowed the price of natural gas to rise, it would have expanded the supply and displaced fuels that were far more expensive. In 1975 the interstate pipelines serving the

Northeast were 15 percent empty due to the shortage of natural gas produced by FPC price regulation. Thus, the consumer in New York State paid more. The 15-percent of unused pipeline cost the gas consumer $1 billion in added overhead on delivered gas.

There is another way to compare costs. While the interstate price of natural gas has been regulated by the FPC, the intrastate price has generally fluctuated with market prices. With the expansion in the demand for gas in 1972 and 1973, the unregulated price of natural gas rose sharply. The Texas consumer saw the marginal price rise from 75 cents in 1972 to a high of $2.20 in 1975. With the new price incentive, drilling rigs came to Texas from all over the country and even from Canada. In 1971, only 1,056 new wells were drilled, but by 1975, 2,275 new wells were completed.

This expansion in supply drove prices down to $1.76 as the average new price for gas. The Texas consumer had to pay more for gas, but he got more gas at higher prices. The gas he got was still a bargain. According to FPC price projections, the free market price for natural gas in 1975 was 22 percent cheaper than liquefied natural gas, 31 percent cheaper than Alaskan gas, 44 percent cheaper than coal gas, and 46 percent cheaper than synthetic gas.

There is simply no alternative fuel known or planned in America today that is cheaper than the most expensive natural gas produced and sold. And the people and industry of New York State need it. They need cheaper, deregulated gas moving in pipelines, coming up from the Southwest, pipelines which could then assure adequate supply, even in severe winter months. They need increases in gas supply from the Devonian shales underlying the Appalachian States from New York to Mississippi and much of the Midwest which can be most quickly recovered if there is deregulation. And they need the supplies which are underneath New York State itself—especially along the southern tier of counties on the Pennsylvania border.

Finally, Mr. Chairman, the coverup of information about new supplies of natural gas at decontrolled prices is a bigger scandal than "Koreagate." Mr. Schlesinger, our new Energy Secretary, has called our situation a Malthusian crisis, while at the same time denying knowledge of an ERDA study which found that at $3/McF—approximately the same price of Number 2 fuel oil—America would have more than enough natural gas. Mr. WIRTH of Colorado has pointed out, even Brookings Institute studies show increasing supplies as a result of decontrol, and shortages at continued regulation of prices.

When shortages result from continued controls, as they will and always have, the people of America must hold accountable those political leaders who vote today to continue price controls on natural gas.

Mr. GORE. Mr. Chairman, I rise in opposition to the amendment and move to strike the requisite number of words.

Mr. Chairman, we just heard about the effect of this proposed amendment on the consumer. Let us look at it for a moment from the consumer's point of view. If a consumer of natural gas, whether he or she is a residential customer or a business customer, does not like the price that he or she is paying for natural gas, what is he supposed to do? Go out to the side of the house and switch to a different supplier the following day? That is impossible, obviously. By the very structure of this industry it is noncompetitive. The buyers are tied to a single supplier. They are forced to pay the price which is set.

To those who say that there is a free market in energy which would set the price in the absence of a Federal role, I say there is no free market in energy. The price of oil, as everyone knows, is set by a cartel. The price of uranium, we have now discovered, has been secretly set by a cartel behind closed doors.

Indeed, those who favor deregulation make two inconsistent arguments. On the one hand they say a free market will set the price when on the other hand they say it is somehow unfair that the price is any lower than the Btu equivalent price for oil. Those arguments are inconsistent.

The gas industry in this country seeks, through deregulation, to be plugged into the OPEC cartel as a silent member so that they will receive the price increases that are extorted from the American public by the cartel in the Middle East.

Now a lot has been said about the cost of deregulation. Three separate studies have established the costs at very, very high levels. We all know the price is going to go up and it is going to go way up. That is why the original deregulation proposal this year included a wall around the State of Texas to insulate the intrastate customers from the very high, unacceptably high prices which will certainly result from deregulation.

Now, what do we get in return for that cost?

In return we get a promise. We get a promise of vast new supplies.

It is, in my opinion, an ephemeral promise, an illusion, a promise that has been made many times in the past. "If we just get the price to 50 cents," we were told in the past, "we will have all the gas we need." It did not come true. It has not come true each time the price has gone up over the last decade, and the price has increased eightfold over that period of time.

Additions to reserves over that period have continued to go down.

Let us look at the actual figures in the deregulated market. Let us look at what happened in the State of Texas where there have been no Federal regulations. In 1970 in the State of Texas there were 774 gas wells drilled. Last year in response to skyrocketing prices there were 2,443 gas wells drilled. Yet over this same period of time marketed natural gas production in Texas has gone steadily downward.

A deregulated market encourages the use of our drilling capacity in low-risk holes where we do not have the chance of getting the supply response which the Nation needs.

The figures in Oklahoma and Louisiana reflect the same story. The figures for reserve additions throughout the country reflect the same story.

We have, in fact, no shortage of incentive. What we have, if anything, is a shortage of drilling capacity. Last month in this country there were 2,041 drilling rigs active at 100-percent rating. We are expanding at the rate of 200 rigs each year. Both those figures, the 2,000 total and the 200 which are added yearly, are the highest they have been in 15 or 20 years. Even if the price goes up, as it does in the President's bill, the drilling capacity shortage will still be there. The current incentive is perfectly adequate.

It should be pointed out very clearly that what the President is proposing and what the ad hoc committee is proposing is not a continuation of the present regulatory framework. By no means. It makes several critical changes to alleviate problems that do exist. We concede they exist within the present regulatory framework.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

(By unanimous consent, Mr. GORE was allowed to proceed for 3 additional minutes.)

Mr. GORE. Mr. Chairman, the most serious problem with the present regulatory framework is the artificial distinction between the interstate market and the intrastate market. That is why we have had gas diverted from the interstate to the intrastate market. In middle Tennessee it was diverted in a surreptitious manner. Gas which was contracted for at set prices was secretly diverted away from the interstate pipeline into an intrastate subsidiary and then sold to Tennessee at vastly inflated prices during a time of emergency. This distinction which encourages the diversion of supplies to the intrastate market is removed by the President's bill. The interstate market will now have access to supplies of natural gas to which we have not had access in the past.

In addition, the President's bill encourages the use of scarce drilling capacity in the frontier areas of exploration where we have a chance of getting the kind of supply response that the Nation needs.

By contrast, the amendment offered by Messrs. BROWN, KRUEGER, and WIRTH, has many serious defects in it. Those on the Commerce Committee know it was a patchwork, quilt arrangement, put together at the last minute in the Commerce Committee, in an effort to take care of this problem that one Member had and that problem that another Member had. As a result, it is no surprise that it has serious defects in it; one of them is that it does not remove natural gas companies from the regulatory provisions of the Natural Gas Act that applies to companies.

The President's bill removes that paperwork burden and continues the regulation of the price in a sensible manner.

Mr. WAGGONNER. Mr. Chairman, will the gentleman yield?

Mr. GORE. I yield to my friend, the gentleman from Louisiana.

Mr. WAGGONNER. Mr. Chairman, I thank my friend, the gentleman from Tennessee, for yielding.

The gentleman raised the question as to why, even though there are more wells being drilled, especially three to one in the State of Texas, using the gentleman's own figures, gas production is decreasing.

It is simply because the wells which are being drilled today are being drilled in areas where the finds are less productive than was the case with easier, bigger finds. I want to ask the gentleman a question. The gentleman believes in regulation, obviously, because he has taken a position against deregulation in energy.

The gentleman comes from Tennessee, a coal-producing State. Coal has increased in price relatively more than has natural gas or crude oil. Is the gentleman willing to protect the consumer and to exercise those same controls over coal production?

The CHAIRMAN. The time of the gentleman from Tennessee has again expired.

Mr. GORE. Mr. Chairman, I ask unanimous consent to proceed for 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee?

Mr. ASHBROOK. Mr. Chairman, reserving the right to object, the gentleman has had 8 minutes. I would not object except that we are approaching 3 o'clock, and I want to make sure that everybody is going to get 5 minutes. I will not object at this point, but I think from now on we had better object.

Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from Tennessee?

There was no objection.

Mr. GORE. Let me respond to the question. Deregulation has a certain superficial political sex appeal about it because it purports to go back to a free market structure. This is fallacious, because the structure of the natural gas industry is itself noncompetitive. The buyers of natural gas, be they businessmen or homeowners, are tied to a single supplier. What do you do if the price is not to your liking? You have no choice; no choice whatsoever.

Mr. WAGGONNER. Would the gentleman answer my question about coal?

Mr. GORE. I am coming to the answer, and the answer is yes, it should be considered. The structure of the industry is different, but in spite of that fact——

Mr. WAGGONNER. It is more concentrated; is it not?

Mr. GORE. In response to the gentleman's question. I think if the price increases have impacts on the consumer, certainly that is a fit question for exploration.

Mr. WAGGONNER. Well, the gentleman has proved to be a good mugwump. He has got his mug on one side and his wump on the other side.

Mr. GORE. In further response, I would note that I have introduced a bill, which has caused some consternation in the coal industry, asking the Federal Energy Administration to make a study of that exact question. It is on record, and has been filed.

Mr. WATKINS. Mr. Chairman, will the gentleman yield?

Mr. GORE. I yield to the gentleman from Oklahoma.

Mr. WATKINS. A moment ago the gentleman indicated something about drilling capacity. Does he realize that in Oklahoma we are going over five times deeper and hitting a lot more shallow wells?

Mr. GORE. Yes, I am familiar with that. In 1970, the number of rotary rigs active in Oklahoma was 98. Last year, it was 187, double the capacity. Yet, the marketed natural gas production in Oklahoma—a deregulated market—has steadily gone downward.

Mr. WATKINS. The gentleman insinuated a while ago that we secretly pulled away the gas. He is contradicting his own statement.

Mr. MARTIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I strongly support this amendment to decontrol new natural gas. Exploration and drilling may well be at the highest level in a decade, and may well be at the highest level in 17 years, as the President has boasted and others have claimed. Yet, it is still only 60 percent, less than two-thirds, of what it was just 21 years ago, in 1956, when the Federal Power Commission began to control interstate prices of natural gas.

New discoveries are running at the rate of only one-half of what we are consuming. We consume 20 trillion cubic feet a year, but only find 10 trillion. That is the problem. Clearly, we must begin to stimulate this discovery and production, and this amendment is our best way to do just that. There are those who are properly concerned about price impact of decontrol. I want to point out that there is in this amendment a provision to protect the residential customers.

I would like to call upon the gentleman from Texas (Mr. KRUEGER) to explain how these protections would work in this amendment.

Mr. KRUEGER. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Texas.

Mr. KRUEGER. I thank the gentleman for yielding.

Mr. Chairman, there is a protection against prices jumping too rapidly which is given to the residential consumer by assuring that all new gas purchased to fill shortages in a pipeline will be charged to boiler fuel users of natural gas and industrial users, to the extent that they use gas in excess of their base period consumption, until such costs reach 120 percent of the costs of imported crude oil on a Btu basis. This means that all higher cost new gas will be charged first to large industrial boiler users and then to medium and large users using over their base allowance, thus holding residential users harmless.

Mr. MARTIN. In my own State, where we have one pipeline, and it is faced with severe shortages, curtailments last year on the order of 45 percent, if we can resupply that shortage by getting new gas in to that pipeline, under this amendment, it will have that additional cost of that new gas borne initially by industrial customers who are now curtailed. Would not that postpone the impact of deregulation on residential customers in North Carolina and other consumers?

Mr. KRUEGER. Not until old low-cost contracts expire and are gradually replaced by contracts for more recently developed higher-cost wells will the residential user be affected by higher prices for natural gas.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Ohio.

Mr. BROWN of Ohio. Another point needs to be made, and that is even at the higher price, the industrial boiler fuel users would be better off paying the higher price for gas than they would be trying to convert that boiler to coal, which then requires burning in lump form, requires the cleanup procedure, stack scrubbers, and so on, or by converting to oil. And, of course, as the gentleman knows, some of the industrial gas users cannot convert to either oil or coal.

Mr. MARTIN. The gentleman is absolutely correct. In this case, they would be better off to have the natural gas available than to have to pay the higher price for propane or synthetic gas.

Mr. BROWN of Ohio. And if the ad hoc committee version works, they will not be able to move their plant any place where they can get gas unless they have it at deregulated prices.

Mr. KRUEGER. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Texas.

Mr. KRUEGER. I thank the gentleman for yielding.

Mr. Chairman, I observe that the ad hoc committee amendments allocation of so-called 533 sales, the direct industrial sales, which sales kept industries open in the Carolinas last year. This gas would continue to be protected under the Brown-Krueger-Wirth proposal, but it will not be under the present committee bill or under the ad hoc committee bill.

Mr. MARTIN. I appreciate the gentleman pointing that out.

Mr. Chairman, I would ask one further question. Is there now an adverse effect to consumers at the present time, such that, as gas supplies to our industries in North Carolina are curtailed, the fixed costs of paying for the pipeline have to be borne in increasing proportion by the residential customers?

Mr. KRUEGER. The gentleman is correct. And I would observe that what happens when a pipeline is not filled with gas is that the cost goes up to the consumers, because the major costs borne by the consumers are amortization costs.

Mr. MARTIN. We are speaking about residential users?

Mr. KRUEGER. I am speaking about residential users. They are having to pay that higher cost because the pipelines are not filled. Under deregulation, those pipe-

lines are refilled, and we can expect the price to consumers to go down.

The Wall Street Journal had an editorial on this very recently, and there is a recent editorial by the Boston Globe as to why deregulation is in the interest of New England. They pointed out the same thing.

The CHAIRMAN. The time of the gentleman from North Carolina (Mr. MARTIN) has expired.

(On request of Mr. ECKHARDT and by unanimous consent, Mr. MARTIN was allowed to proceed for 1 additional minute.)

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, I wish to correct one thing, and I believe the gentleman in the well will confirm this; 533 gas is not in any way changed in the ad hoc committee's bill. It is treated the same way as it is under existing law.

There is one other thing I would like to add.

Mr. BROWN of Ohio. Mr. Chairman, will the gentleman yield?

Mr. MARTIN. Mr. Chairman, before the gentleman from Texas (Mr. ECKHARDT) proceeds, I will yield to the gentleman from Ohio (Mr. BROWN) on the point the gentleman just made.

Mr. BROWN of Ohio. Mr. Chairman, 533 gas is available for allocation under the proposal of the ad hoc committee and the proposal of the Committee on Interstate and Foreign Commerce, unless I misread this very badly. If I have, the gentleman can point it out to me.

Mr. KRUEGER. Mr. Chairman, that is found on page 47 of the committee report. It is in the third paragraph, and if I might be allowed, I will read it.

Mr. MARTIN. Mr. Chairman, if I may be allowed to control the time, I will yield to the gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. Mr. Chairman, on page 47, in the third paragraph, of the committee report on this bill, the language is as follows:

> The expansion of the scope of the Emergency Natural Gas Act to intrastate natural gas supplies by this legislation greatly expands the pool of natural gas subject to allocation. As a result, the prospect of 533 natural gas being allocated away from a high priority industrial user is diminished. Therefore, no exemption of 533 natural gas is necessary since this natural gas would normally be expected to be reallocated last. The Committee intends that the expanded allocation authority provided by extension and expansion of the Emergency Natural Gas Act of 1977 should be exercised in a manner which looks to the end-use priority of the user whose supplies are subject to allocation.

So, Mr. Chairman, the emergency purchases that saved North Carolina the last time would not be protected under the ad hoc committee bill. There would be authority presumably to allocate gas from, say, the gentleman's congressional district or my congressional district, if we want to give that authority to a Federal administrator.

The CHAIRMAN. The time of the gentleman from North Carolina (Mr. MARTIN) has expired.

(By unanimous consent, Mr. MARTIN was allowed to proceed for 2 additional minutes.)

Mr. ECKHARDT. Mr. Chairman, will the gentleman yield further?

Mr. MARTIN. I yield to the gentleman from Texas.

Mr. ECKHARDT. Mr. Chairman, I would like to ask this question of the gentleman in the well:

Is it not true, however, that at least with respect to Texas, residential users bear the same burden as industrial users, that there is not the protection from increased gas prices with the increase first falling on industrial users, but that is designed in Texas so that the residential users bear the increase just like the industrial users?

Mr. MARTIN. Mr. Chairman, I will say to the gentleman that that is a non sequitur, because he is comparing an intrastate situation with an interstate situation.

We need this section 533 in North Carolina, because otherwise our industries are not able to get access to gas which is available to industries in the State of Texas.

I want to thank the gentleman from Texas (Mr. KRUEGER) and his colleagues for incorporating this protective cushion in this amendment. In North Carolina no one really wants to pay more for gas or for anything else, but we know, from 3 years' experience with worse and worse gas shortages, that far worse than the prices of a free market are the shortages that result from an arbitrarily controlled market.

We may not want to pay more, but we want no more shortages.

I will admit that I am from a consumer State. There are no oil wells or gas wells in my District in the State of North Carolina. The obvious reason for that is because no oil or gas has been found in North Carolina. Our gas is in Texas, in Louisiana, and in Oklahoma. We will benefit in our consumer State if by deregulation we allow ourselves to have access to the market for gas from the producing States.

Therefore, Mr. Chairman, I support this amendment that has been drafted by my four colleagues, the gentlemen from the States of Ohio, Illinois, Texas, and Colorado.

Mr. ASHLEY. Mr. Chairman, I would like to attempt to get some idea as to a time limitation.

Therefore, Mr. Chairman, I ask unanimous consent that all debate on this amendment conclude at 3 o'clock p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. ASHBROOK. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. ASHLEY. Mr. Chairman, I ask unanimous consent that all debate on this amendment conclude at 3:30 o'clock p.m.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. ASHBROOK. Mr. Chairman, reserving the right to object, could we get an indication as to how much time that would mean for Members who have not spoken?

Most of us have been sitting here while certain Members have been allowed to speak for 10, 12, and 15 minutes. Are we now to be denied the opportunity to speak for even 5 minutes?

The CHAIRMAN. The Chair observes about 30 Members standing. That would mean that about 2½ minutes would be alloted to those who have requested time.

Mr. ASHBROOK. Then, Mr. Chairman, I must object.

The CHAIRMAN. Objection is heard.

Mr. ASHLEY. Mr. Chairman, I move that all debate on this amendment conclude at 3:30 o'clock p.m.

The CHAIRMAN. The question is on the motion offered by the gentleman from Ohio (Mr. ASHLEY).

The question was taken; and on a division (demanded by Mr. ASHBROOK) there were—ayes 45, noes 11.

So the motion was agreed to.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. ECKHARDT. Mr. Chairman, I ask unanimous consent to be permitted to yield my time to the gentleman from Texas (Mr. CHARLES WILSON).

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. ASHBROOK. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

The Chair recognizes the gentleman from Texas (Mr. ECKHARDT).

Mr. CHARLES WILSON of Texas. Mr. Chairman, will the gentleman yield?

Mr. ECKHARDT. I yield to the gentleman from Texas.

Mr. CHARLES WILSON of Texas. Mr. Chairman, it is, of course, with a great deal of reluctance that I, of all people, would rise to oppose this particular amendment in which I honestly feel there is great merit. However, I also feel, as I said last night, that it is incumbent upon this House for Members to make personal sacrifices in order to achieve some degree of a national policy in regard to energy. I think that it is also incumbent upon this House to try to prove to the American people that we can, indeed, come to grips with and, indeed, formulate a national energy policy that is fair and rational.

In addition to that, Mr. Chairman, I think that it is important for those of us in the majority party, since it is a Democrat who occupies the White House, to try to show a certain degree of unanimity among ourselves.

In that respect, I want to say that those who favor more regulation than I do have been very fair and have kept the faith with me throughout all of these procedures.

I want to commend the Speaker for the part that he has played in trying to keep a compromise together. I think it is in the interests of the House and in the interests of all of the Members to show maturity and unanimity and as much cooperation and willingness to sacrifice regional interests as possible.

For that reason, Mr. Chairman, I support the ad hoc committee in its entirety and oppose the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I ask unanimous consent to be permitted to yield my time to the gentleman from Michigan (Mr. DINGELL).

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. ASHBROOK. Yes, Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. OTTINGER. Mr. Chairman, I yield back the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. MILFORD).

Mr. MILFORD. Mr. Chairman, I yield to the gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would like to say initially that it seems to me that one of the things we have not addressed in any of this debate on natural gas policy is the fact that this present bill expects very substantial taxes to be imposed on all industrial users of natural gas. The administration wants taxes on the use of natural gas so high that they would drive the price of it in a very short period of time to the level of fuel oil to induce displacement.

What we need to recognize, if we are concerned about this country's balance-of-payment position and if we are concerned about this country's competitiveness with other nations is that as a result of those taxes that the ability of industry in our country to compete effectively with foreign industry, with other nations, is going to be lessened in that process and industry will not get any new natural gas supplies.

On the other hand, if we go with the Brown-Krueger deregulation amendment, we will bring on substantial new energy supplies, as the studies and reports show, and as the MOPPS study shows, and as the Brookings Institution indicates and what will happen is that our industry will bc far better able to compete with the industries of other nations. Currently, we are able to compete in foreign countries because we have much lower energy costs than France or Germany or the other nations we try to compete with.

However, if we impose the administration's tax on natural gas, which is the largest single source for energy used by industries in this country, over half the industries in this country use natural gas, and as we impose those taxes we will make the Nation less competitive.

On the other hand, if we vote for deregulation and new gas supplies, we will add to the competitiveness of our own industry in the world markets, and that means jobs for Americans. Sc I urge you to vote for the Brown-Krueger amendment which means we are voting for jobs.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. Mr. Chairman, I appreciate the gentleman from Texas (Mr. MILFORD) yielding to me during his time, and I appreciate this opportunity to continue further.

Mr. Chairman, I would like to observe that there have at various times been exercises in what we might call the new demagoguery in politics, the recent gathering of so-called scientific studies.

Mr. Chairman, once upon a time I was a dean of arts and sciences in a university, and I must say that the quality of the research that comes out of the Congressional Research Service on energy policies would flunk a freshman course, as would the new people who work for the Federal Energy Administration.

I should like to cite just a few errors in assumption in one of their recent studies. One of their studies led to the claim of a $71 billion ripoff, but what has really happened is that someone has ripped off the intelligence of the people who put together this study, because those people did not understand, for example, that there was nothing in the present bill that would cause old contracts to be renegotiated. The same terms would exist as had always existed; therefore, there is a $17½ billion error as a result of a false assumption.

Second, there was the statement that all new offshore gas would sell for $2.40. If they had read the bill they would have seen that gas would be regulated offshore for 5 years in the neighborhood of $1.95. We should not long tolerate this new demagoguery that would lead us into a lack of awareness that deregulation saves money.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. MAHON).

Mr. MAHON. Mr. Chairman, I rise in support of the Brown-Krueger-Wirth amendment, and I will yield to the gentleman from Texas (Mr. KRUEGER) but first I want to say again that in my opinion if this House is serious in wishing to make substantial progress toward solving the natural gas problem we must adopt the Brown-Krueger-Wirth amendment. Our natural gas problem arose as a result of Government regulation established years ago. No adequate solution is possible in my view unless we move toward deregulation. It is urgent that the amendment be agreed to.

Mr. KRUEGER. I thank the distinguished Chairman for yielding.

If we do not maximize our own Nation's energy supplies, it will mean a substantial alteration in Middle-Eastern policy. Anyone, I think, who is seriously concerned, for example, about support of Israel has got to recognize that one of the greatest threats to Israel is the increased power of the Middle Eastern OPEC countries. The surest way of lessening the power of those OPEC nations is to maximize our own energy production so that we are less subject to the imports from those nations. Right now we import twice as much petroleum from the Middle Eastern OPEC countries as we did 4 years ago when the Arab embargo took place. Therefore, for international as well as for national reasons it is important that we heed the ERDA study that indicates, as the gentleman from Colorado (Mr. WIRTH) indicated, that we will have natural gas beyond our expectations if we deregulate.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. ASHBROOK).

Mr. ASHBROOK. I wonder if I could have the attention of my friend and colleague, the gentleman from Texas (Mr. ECKHARDT). I would like to propound one question. I guess one of the things I have felt as I listened to this debate, not being an expert, is the difference in our philosophies. I guess I am considered somewhat conservative, so, therefore, I am on the side of deregulation. I try to think what I would do if I were a liberal. I guess the thing I cannot understand is if I thought decontrol was so bad, and if I were opposed to deregulation, why I would not advocate total regulation of natural gas. The inconsistency seems to be very apparent. Liberals believe in controls and regulations but only control interstate commerce. If I believed in controls I think I would at least be consistent enough to demand controls of both interstate and intrastate natural gas.

Could my colleague respond?

Mr. ECKHARDT. If the gentleman will yield, I guess I am not so much of a true believer as the gentleman is. I am something of a pragmatist. I think the objective is to get more gas but not to unduly blow the economy.

Mr. ASHBROOK. I guess I cannot help but wonder if I were to take your position that decontrol is bad and that control and regulation is necessary, why I would not then, with some consistency, say it must be advocated over all segments of the natural gas industry.

Mr. ECKHARDT. May I say that I think our problem is usually the path from here to there. There is no utopia. There is no golden age. But we must move away from strict regulation and toward some reasonable encouragement of gas production, but not at the inordinate expense of the economy.

Mr. ASHBROOK. I thank the gentleman.

Mr. Chairman, I disagree with the entire thrust of this bill. There is an overemphasis on taxing and Federal controls rather than providing incentives to increase development of our energy supplies.

One area of particular concern is in regard to natural gas. I have consistently supported natural gas deregulation. I believe deregulation offers the best way of meeting our long term energy needs.

Since 1954 the Federal Government has kept the price of natural gas at artificially low levels. This has encouraged consumption while discouraging exploration. Despite increasing demand, exploratory drilling for natural gas dropped more than 50 percent between 1954 and 1970. As a result, demand for natural gas far outstripped supply.

In fact, because of the Federal price controls natural gas production has actually been decreasing for the past several years. From a high of 22.7 Tcf. in 1972, production fell to 19.5 Tcf. in 1976. We are simply not finding gas fast enough to replace the amount we use.

Ohio has been a particular victim of this ridiculous regulatory policy. During the past winter Ohioans suffered a natural gas shortage of crisis proportions. Factories were shut down, schools were closed and residential consumers were threatened with cutbacks. Hundreds of thousands were thrown out of work.

Despite all this the bill before us would continue the same discredited policy of Federal price controls that has helped create our present energy shortage. New gas would have a $1.75 ceiling per million Btu's. In addition, Federal price controls would be extended to intrastate as well as interstate gas.

This would only worsen the problem. The price level established in the bill would be insufficient to encourage exploration and development of new natural gas. Furthermore, extending controls to the previously unregulated intrastate market would also restrict the discovery and production of new gas reserves.

Deregulation, however, would mean more natural gas for everyone. Higher wellhead prices would boost U.S. supplies and provide our citizens with the large additional supplies of new gas we must have in the years ahead.

Why is this so? Every price increase makes it economically feasible to develop certain gas reserves which could not be developed beforehand. Consequently deregulation would spur not only large gas finds but make possible the development of countless small deposits of gas. This adds up to more gas for America.

We can no longer afford to continue the foolish regulatory policy that has helped create our energy mess. We must allow a profit incentive to develop our natural gas reserves. If we do, then natural gas will again be in sufficient supply. Otherwise the gas we need will remain in the ground.

Critics of deregulation complain that it will lead to higher gas prices. Yes, the price of gas will rise. I have always believed, however, that American consumers are better served by an adequate supply of natural gas at reasonable prices than by a scarcity of natural gas at low government-regulated prices. After all, we cannot keep our businesses and factories going and our citizens employed without energy. Nor can we even keep our houses warm.

Moreover, any discussion of additional costs resulting from gas deregulation must also take into account the additional costs of substitute fuels and increased pipeline charges which would result if price controls are not lifted. In large measure we would be forced to turn to expensive imported oil to meet our energy shortfall. It has been estimated that because of the negative impact on gas production resulting from this bill U.S. consumers between now and 1990 would spend an extra $26 to $40 billion on imported crude oil. All in all, over the next 13 years American consumers might have to spend as much as $48 billion more for energy than they would pay if price controls on new gas were not in effect.

I would also remind my colleagues that the intrastate price of new gas is in the $2 range. This is a far cry from the $1.75 proposed in the bill. In other words, for those who are selling gas in the intrastate market, the $1.75 figure amounts to a price rollback.

We should leave the price of natural gas to the free market. This is the only way of assuring adequate supplies for the future. The intrastate market in the gas producing States, for example, which has been free of price controls, has been far more successful at balancing supply and demand.

Although the gas is higher priced, at least it has been available to meet the needs of the people within that market.

This situation has caused some companies to relocate their businesses. Companies are moving from areas of gas shortage to areas where natural gas is available.

Price controls have created this unfortunate situation. Failure to lift price controls will lead to further dislocations and gas shortfalls.

We must not kid ourselves on this point. The Congress cannot legislatively mandate the production of cheap natural gas in abundant quantities. Despite all the liberal rhetoric, Government controls do not create supplies.

Controls do, however, create shortages. It has been estimated that passage of this bill would result in a 20 percent drop in production than would occur with deregulation of new gas prices. This certainly is no service to the American consumer.

I urge a vote for more natural gas. I urge the deregulation of new natural gas.

The CHAIRMAN. The Chair recognizes the gentleman from Illinois (Mr. McCLORY).

Mr. McCLORY. Mr. Chairman, I rise in strong support of the Brown-Krueger amendment. I speak as a Midwesterner, an area which is supplied in substantial amount by natural gas. In this great area of northeastern Illinois, we depend substantially upon supplies of gas from Texas and Oklahoma. People's Gas Light and Coke Co., and its subsidiaries do a fantastic job of anticipating the needs for gas in this area for the future. But in anticipating the needs, these distributors need additional supplies of gas. They have acquired coal mines in North Dakota in order that they can engage in coal gasification. They are working to receive natural gas from Alaska. But deregulation of gas at the well head will provide much of the additional supplies needed for the consumers. It is the retail suppliers of gas and the consumers themselves whose interests it seems to me I speak for when I say I am in strong support of deregulation in order to provide the inducements for greater production of gas to supply the needs of the consumers of gas in Illinois and throughout the Nation.

Mr. McCLORY. Mr. Chairman, the Brown amendment to deregulate the price of new natural gas will serve to protect the consumer from higher prices for new natural gas and also protect the consumer from continuing winter natural gas shortages.

The so-called compromise measure passed by the Ad Hoc Energy Committee effects only two changes: It revises the definition of the term "new gas," making this category slightly larger, and it allows the initial price of this new gas to go to $1.75 the first year, as opposed to the $1.60 level under the administration plan. Unfortunately, this $1.75 price is still substantially less than the almost $2 average interstate gas price—thus the ad hoc committee price constitutes a roll-back from current prices.

Mr. Chairman, if this bill is enacted without the Brown amendment, it is estimated that over the next 13 years, Americans will have to pay an additional $48 billion more for energy than they would pay if Federal price controls were removed. Indeed, the disincentive to natural gas production resulting from this bill could cause U.S. consumers to pay $2¢ to $40 billion more on imported crude oil within the next 13 years—when they could have been using domestic natural gas.

By contrast, the Brown amendment would remove counterproductive controls from new natural gas, thus providing a real incentive for new exploration and development of supplies of gas which are needed—if we are to even approach energy self-sufficiency in this country.

The root of the problem, of course, is the declining production of natural gas in the United States over the past 5 years. Since 1973, natural gas production has declined annually by approximately 4 trillion cubic feet, or nearly 20 percent from the 1972 level. As a result, the substitution of expensive alternate energy sources, such as imported oil, has cost the American consumer dearly—and will continue to do so until Federal controls are lifted from new gas. There are other costs associated with decreased gas production, but suffice it to say that the administration and the ad hoc committee have omitted literally hundreds of billions of dollars in hidden costs from their estimates on the ad hoc gas provision.

The Brown amendment, on the other hand, will result in the production of 25 trillion cubic feet more gas by 1990 than will the ad hoc proposal. This fact, coupled with decreased consumer costs over the same period, should persuade my colleagues to support the Republican position.

Besides increasing domestic production and conservation and reducing dependence on oil imports, the Republican position recognizes that Federal price controls—the only commodities in this country under price control—have been the major barrier to the development of and exploration for new natural gas resources. Natural gas price controls cause substantial shortages and will continue to do so if we do not end them now. Deregulation of new natural gas prices provides us the best means of achieving supply-demand balance in the future. Marginal industrial users will change to alternate fuels. Substitute supplies will be stimulated.

We need only look to the situation in the intrastate natural gas market to find proof that where prices are unregulated new and additional supplies of gas have been found. Now we are faced with an administration bill that would extend Federal prices controls to this market—

and create shortages. Consumers will pay more because the alternative, petroleum imports, will cost more than deregulated gas.

Integral to the deregulation bill is a windfall profits tax—though most producers would plow these profits back into further exploration and development rather than allow 48 percent of their profits to be taxed anyway.

To deregulate the wellhead price of new natural gas is in the best interests of the American people. It will be ultimately more economical than alternatives and will reduce our reliance on imported petroleum.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania (Mr. ERTEL).

Mr. ERTEL. If I may have the attention of the gentleman from Ohio (Mr. ASHLEY) I would like to address a question to him. Being from a coal-producing State and also from a consuming State, what, in fact, would deregulation do as far as the coal conversion program, changing from natural gas to coal, if in fact deregulation lets the price of natural gas go up? Would that not in fact enhance the coal conversion program, which is part of this bill? I wonder if the gentleman from Ohio (Mr. ASHLEY) can answer that.

Mr. ASHLEY. If the gentleman will yield, I can give it a try, but I think for the purposes of the gentleman from Pennsylvania it might be more instructive if, with his permission, I should defer to the gentleman from Michigan (Mr. DINGELL) who is essentially the author of the bill.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. ERTEL. I yield to the gentleman from Michigan.

Mr. DINGELL. I thank the gentleman for yielding.

If it were not for the oil and gas-consumption taxes in the bill, the gentleman from Pennsylvania might well be correct. Let me explain why deregulation would work at cross-purposes with the user taxes in the bill in such a way that coal conversion might actually be discouraged by deregulation.

Remember that the user tax on natural gas is designed to bring the industrial and utility cost of gas to specified levels related to the equivalent price of No. 2 fuel oil. The key fact is that the higher the price, the more the user pays for his gas, the smaller will be his tax obligation.

But this tax is a cornerstone of the President's coal conversion program. All of a user's tax obligation is effectively rebated to that user if the rebate is used to purchase coal-burning equipment. This tax therefore operates as a strong incentive, a strong carrot for coal-burning investment.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. Mr. Chairman, under deregulation, the higher price of natural gas would no doubt encourage some coal conversion. But the potential of industrial users to take advantage of tax rebates, thereby lessening their cost of conversion, would be lost. In effect, the money then would go to the seller of natural gas. Under the tax proposal, it would go toward coal conversion through rebates to the user, and that would have a significant benefit from the standpoint of achieving coal conversion to the maximum extent possible.

Mr. ERTEL. Mr. Chairman, I thank the gentleman from Michigan for an answer.

I think the gentleman from Colorado (Mr. WIRTH) might have a different answer.

Mr. WIRTH. No. I think the gentleman is quite correct.

Mr. DINGELL. Mr. Chairman, I do not yield to the gentleman. I reserve the balance of my time.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan (Mr. STOCKMAN).

Mr. STOCKMAN. Mr. Chairman, I think one thing needs to be made clear and that is the administration's own study makes it clear the $1.75 price even with the escalation provided will lead to a declining supply of natural gas. Over the next 10 years it will be down to 16 million cubic feet a year and by 1990 it will be down to 10 million cubic feet. What that means is we will have no natural gas for industry in this country—it will all go to households.

The biggest project going on in Saudi Arabia today is an attempt to take advantage of the natural gas they are flaring off at the present time. They are building gathering lines, gas processing plants, and so on, and investing in their natural gas industry. That means if we do not insure adequate supplies of natural gas over the next 10 years in this country, we will be importing our manufacturing gas and synthetics, and we will be importing petrochemical feedstocks from Saudi Arabia not at $3.00/Mcf—but at $20/Mcf in feedstock and processed form.

We have to worry about the next 20 to 30 years about the viability of our processes and feedstocks industries and we must have an adequate supply of natural gas, which we will not have with the proposals before us.

The CHAIRMAN. The Chair recognizes the gentleman from Oklahoma (Mr. RISENHOOVER).

Mr. RISENHOOVER. Mr. Chairman, I rise in support of the Brown-Krueger-Wirth amendment.

I want to clarify one statement I was making in talking with the gentleman from New Mexico (Mr. RUNNELS) earlier when he had the floor. I do not mean to be unjustly critical of the major oil companies in this country, but the point I am trying to make is that if we do not deregulate natural gas, what is going to be affected of course is the supply, but also we are talking about competition and the effect on the market price, and also we should consider what happens when we have a monopoly situation.

What is happening to the small independent producers we heard about from the gentleman from New Mexico. Also the gentleman from Louisiana (Mr. HUCKABY) was saying that the small independent producers have had to drop out of drilling offshore simply because they cannot attract the additional investment capital they need in order to explore the Outer Continental Shelf. They will have to go to greater depths than they have had to do in years past. And in the Anadarko Basin an independent producer is going down in one well to a little over 15,000 feet. For that independent driller to get his capital investment returned would take something like 50 to 60 years at the present prices. The independents cannot afford those costs at today's prices.

What is going to happen in the near future is that only the majors will have the means to go to those depths and the supply will be restricted.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. MOORHEAD).

Mr. MOORHEAD of California. Mr. Chairman, I rise in strong support of the Brown amendment. As most of us know, only about 15 percent of the price that we pay as a consumer comes from the actual cost of the gas at the wellhead. The rest is in transportation and in other costs

If we do not have enough natural gas, we will have to pay for LNG. We will have to pay additional costs for transportation if the pipelines are less than full.

It is important to our country that we have enough natural gas for our people's use. If we do have, the cost for each of us will be less than it would be if we are living in a time of shortages.

I do not think that this program as it has been put before us by the ad hoc committee will provide the gas we need as a nation. I think we need decontrol to have the gas we need and the prices we want to pay for the future. I think if we want to move forward with the Nation and keep our plants and factories open and have enough gas for use in our homes, we will have to go to decontrol, and the sooner the better.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. STEIGER).

Mr. STEIGER. Mr. Chairman, I ask unanimous consent to yield my time to the gentleman from Ohio (Mr. BROWN).

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

Mr. OTTINGER. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. STEIGER. Mr. Chairman, I have been remarkably restrained on this whole amendment. I have not said a word. I really was hoping I could escape having to say any words on this; but since the gentleman objected, I suppose I have no choice.

Mr. Chairman, when all is said and done, I have heard about charts and graphs, we have had Mcf's, bbl's, Btu's and all throughout this debate. It is all fascinating and all exceedingly interesting and esoteric; but when we get down to the bottom line, we have to answer whether the present policy works, and the answer is clearly, no. It does not work. It has not worked and the tragedy is that

we should be debating this at all. If we had gone ahead and done this before and had Eisenhower not vetoed this, the controls would not exist. The present policy works against the American consumer, works against the American worker, and works against the best interests of this country. If we are ever going to change our national energy policy, which this bill is designed to do, we will not do it by rejecting the Brown-Krueger-Wirth-Anderson amendment. We will continue the present bankrupt policy and that would be shortsighted and wrong.

Mr. Chairman, I urge adoption of the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. HALL).

Mr. HALL. Mr. Chairman, I yield to the gentleman from Texas (Mr. KRUEGER).

Mr. KRUEGER. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, I would like to make one particular observation at this time to follow the very fine statement by the gentleman from Wisconsin, and that is, it is time to face up to the situation. We can talk as long as we want, just looking to the date of the next election. We can ignore, the fact that a Harris poll this last February 1977, indicated a 50 to 24 percent approval for deregulation.

We can take the instant and cowardly way and refuse to address the question.

I am reminded by some of the partial truths we have heard here of the quotation from Shakespeare when one of his characters says:

> Tis strange, and oftentimes to win us to our harm, the instruments of darkness tell us truths, win us with honest trifles, to betray us in deepest consequence.

I think we are being betrayed in deepest consequence if we go along with yet another Federal regulatory policy.

What we need to do is grasp the nettle firmly and recognize it is important that we have to make the decisions we will otherwise have to make, 2, 4, 6, 8, or 10 years along the line, to get us the energy we need.

This is a time that will take guts to make the best possible choice.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. HAGEDORN).

Mr. HAGEDORN. Mr. Chairman, I rise in strong support of the amendment of the gentleman from Ohio (Mr. BROWN). This amendment would remove Federal price controls from "new" gas beginning on April 30, 1978, with "new" gas defined to include gas sold or delivered in interstate commerce for the first time on or after April 20, 1977, and gas flowing from genuinely new wells and reservoirs.

Passage of the Brown amendment will do more both to conserve energy and to encourage new energy production than the rest of this bill put together. Unless our country is prepared to permanently pursue no growth policies, and is content to concern itself forevermore simply with allocating and rearranging shortages, there have got to be efforts made to increase long-term supplies.

The premise, of course, of this bill is that this cannot be done. According to Press Secretary Jody Powell, President Carter believes that:

> Even if we increased the price of oil to provide an additional $20 per barrel, there would be little, if any, increase in production. The same is true of natural gas.

This premise is refuted not only by a commonsensical understanding of the marketplace, but by repeated studies which have been done by disinterested parties. Even the much doctored MOPPS study done by ERDA concluded that a 55-year supply of natural gas could be projected at prices of $3.25/Mcf. Using extremely cautious estimates, the gentleman from Ohio (Mr. BROWN) and our colleague from Michigan (Mr. STOCKMAN) have demonstrated that deregulation could produce an additional 25 trillion cubic feet of gas over the next 13 years.

Other studies have predicted average annual increases of 6 percent to 8 percent in natural gas supplies following deregulation. Unless one is prepared to accept that the administration has perfect knowledge about the geological resources of this planet, he should be reluctant to commit this Nation to an energy policy which will prove disastrous if the seers in the White House are wrong.

As the Brown-Stockman study also demonstrates, natural gas deregulation also offers the maximum protection to consumers. The continuation of Federal wellhead controls will, in the long run, reduce the amount of supplies available to consumers while causing the price on these supplies to rise higher than under deregulation. There are two reasons for this: First, substitute energy forms will have to fill the gap caused by natural gas shortages. The price of natural gas, on a per-BTU basis, is nearly 80 percent below the price of electricity, 46 percent below the price of heating oil, and 70 percent below the price of manufactured synthetic gas and imported liquefied natural gas. Gas consumers who find themselves curtailed and forced to seek out alternatives in these price ranges will not likely be appreciative of the efforts of self-styled consumer advocates so determined to prevent even the most modest increases in the price of natural gas.

Second, the fixed costs involved in the transportation and distribution of natural gas, representing nearly 82 percent of the overall price of gas, will have to rise sharply when gas shortages force them to operate with greater unused capacity. For every cubic foot that the thousands of miles of pipeline in this country are short of full capacity, the remaining gas bears a higher proportionate transportation burden. The gas consumer who is no longer in existence because of gas shortages is also no longer available to assist in underwriting the massive capital costs of the pipeline companies.

Mr. Chairman, I have heard a great deal about sacrifice from this administration. I agree with the administration that the American people are fully prepared to sacrifice over the short term for the long-term benefit of the country. The bill that the White House has given us, however, calls for nothing less than perpetual sacrifice with no hope that this sacrifice will ever bear fruit. The Brown amendment offers an alternative. At the cost of slight and gradual short-term increases in the cost of natural gas, we can set in motion policies certain to bring us greater supplies of domestic energy. The substantial reduction in Federal bureaucracy and intrusion in the private sector that the amendment will bring is another happy by-product of the amendment currently before us.

I strongly urge my colleagues to adopt the Brown amendment and put an abrupt end to the crisis that the policies contained in this bill have brought about in the first place.

The CHAIRMAN. The Chair recognizes the gentleman from California (Mr. ROUSSELOT).

Mr. ROUSSELOT. Mr. Chairman, I have listened with great interest for these several days the debate in "deregulation." I think the best quote I can use as to why we should have decontrol comes from Jimmy Carter himself. In his letter of October 19, 1976, to Governor Boren of Oklahoma, candidate-for-President Carter said:

> To increase our domestic production, I have proposed three important steps.

This is October 1976. This is not a quote from way in the past. This statement relates to the production of gas. Mr. Carter continues:

> First, I will work with the Congress, as the Ford administration has been unable to do, to deregulate new natural gas. The decontrol of producers prices for new natural gas would provide an incentive for new exploration and would help our nation's oil and gas operators attract needed capital.

Additionally Mr. Carter stated:

> Deregulation of new gas would encourage sales in the interstate market and help lessen the prospect of shortages in the nonproducing states which rely on interstate supplies.

That statement is right today. It was right when the—the President-to-be, campaigning for President—made this important statement in October at a key time in the campaign. I think we should follow through on the wisdom of that statement and vote for the Brown-Krueger amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Massachusetts (Mr. MARKEY).

Mr. MARKEY. Mr. Chairman, I rise in opposition to the Krueger-Brown-Wirth amendment. I think one of the things all of us, especially those that come from consuming States, have to remember as we look at this entire issue is, basically, what we are talking about here is taking a gamble. We are gambling that, if we give the gas-producing States this unlimited increases, that there will be a commensurate increase in the amount of gas which is available to those of us in energy-consuming States that depend upon them to produce it for us.

Since 1965, there has been an increase from 13.5 cents to $1.42 per Mcf in the production of natural gas. But, at the same time, there has been a consistent decrease in the production of natural

gas in this country. Now, many people would say, "Well, if we had known that there was going to be the type of increase that would give us the type of incentive to develop, we would have and could have." Yet in 1971 at the time the price was increased from 13.5 cents to 26 cents per Mcf (in the south Louisiana decision) Louisiana producers of gas said, "If we receive this increase it will be sufficient incentive to secure new supplies for America until 1977."

So much for assurances of increased supplies. Mr. Chairman, it is clear that we must not take this foolish gamble with the welfare and economy of our country. We must defeat the Krueger-Brown-Wirth amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. PICKLE).

Mr. PICKLE. Mr. Chairman, I rise in support of the Brown-Krueger-Wirth amendment, which is a moderated, graduated decontrolled measure. I think everybody in this House understands that a deal has been cut to pass the new gas definition and, thus, be able to defeat the Brown-Krueger amendment. That deal may still hold, and that may well be the result, although I hope not. I think, though, that the people from the gas-producing States have given up a great deal in exchange for mighty little, in the event that this amendment fails.

Mr. Chairman, I would hope that the amendment prevails. Surely every Member in this House would understand that those of us from a gas-producing State, whose industries over the years have been built solely on gas and oil, must be very vigilant in trying to protect the supply of our natural gas. And now we object to the fact that States such as New York, Massachusetts, and others, would come in and take our gas, or attempt to do so.

The committee says this is not an attempt to allocate gas. I raised this question with Secretary Schlesinger, who said,

> I have not proposed allocation of your State gas. We do not intend it, and we are not going to do it at all.

Yet in places in this bill this question is very much open. Our State has every right to retain our own supply. The Members should understand that we are not trying to be sectional. We must protect our State interest, and we have every right to do it. The amendment before us (Brown-Krueger) is the fairest approach to accomplish this. It is time for us to get more production—all over the country. We must say to the North and to the East, "Go ye into the Atlantic and drill your own wells."

The CHAIRMAN. The Chair recognizes the gentleman from Connecticut (Mr. MOFFETT).

Mr. MOFFETT. Mr. Chairman, I would say to my friend from Texas that it is unfortunate that we gloss over the fact that the Occidental refinery in New England, for example, was stopped by the major oil companies and not by anyone else. It would be irresponsible for this House to vote deregulation, leaving so many questions unanswered. Totally irresponsible. What are those questions?

No. 1, why do we have a 760-percent increase in new natural gas prices over the last 11 years, with a decrease not an increase in production? It is a question which remains unanswered.

Second, why do we have so much concentration of power in the industry, with very little competition and no attempt to do anything about the horizontal situation, the intrusion into not only coal and uranium, but other kinds of fuels?

Third, what about under-reporting of reserves by the AGA, which has been documented?

Fourth, what about withholding? Has there been withholding or has there not been? I am not sure there has been a great deal of withholding, but there has been a reasonable amount of evidence generated by committees of this Congress to at least raise a serious question.

Fifth, what about rising costs of production? In a study by the Oklahoma legislature they put the actual cost of production in the 35- to 60-cent category.

Finally, how about the consumer impact?

I agree with the gentleman from Texas that there are great questions about all of these studies and their effects. There is enough of a question, a serious question, about the multibillion dollar consumer impact that we should not go forward with deregulation.

The Carter proposal and the proposal I am supporting do not answer all of these questions either, but it does answer more of the questions.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. HUCKABY).

Mr. HUCKABY. Mr. Chairman, I rise in support of the amendment.

Mr. MARTIN. Let me also remind you of the point made by the gentleman from California (Mr. MOORHEAD). Most of the cost of gas in consumer States is the fixed pipeline cost distribution system and administrative cost. As long as we have shortages in the pipeline, industries are unable to buy their share of gas and pay their share of the pipeline cost. When we begin to get gas back into the pipeline for industrial customers, they can help share those fixed costs which in North Carolina the residential customers have had to bear alone because industries cculd not get any gas.

Furthermore, we must be clear that no one is proposing to deregulate pipelines or distributors. They are regulated of necessity because they are monopoly utilities. This amendment does not deregulate them. It only deregulates the highly competitive producers who drill the wells.

The CHAIRMAN. The Chair recognizes the gentleman from Louisiana (Mr. WAGGONNER).

Mr. WAGGONNER. Mr. Chairman, when the President proposed his energy bill in this Chamber to the Nation, he held out some hope and created hope in the minds of too many Americans, I fear, that he had the answer to our energy problem.

After seeing and analyzing the President's proposal, I can only conclude that that dream will not be fulfilled, and will not be achieved, because by and large, this energy bill consists of taxation and excessive regulation.

We are told that we cannot deregulate new natural gas as this amendment proposes, because there is an imbalance in supply and demand. I would submit that the only way to get rid of that imbalance is to deregulate. It cannot be accomplished in any other way.

Mr. Chairman, the gentleman from Wisconsin (Mr. STEIGER) eloquently said earlier that the choice was to continue doing what we are doing or to deregulate. No one here would take the position that to continue regulation, to continue what we are doing, is in any way resolving the problem. It is making the problem worse.

But what is the problem? Why is it that we are not deregulating? I do not think we are going to vote, much to my disappointment, to deregulate, as this amendment proposes today.

The gentleman from Virginia (Mr. FISHER) put it in proper perspective when he said that as a professional economist, he was torn between two points of view. As an economist, he thought he ought to get on with deregulation, but in considering his political responsibility—and he stated the situation pretty well—he thought he had to think about the consumers and compromise.

Mr. Chairman, I submit that except for political considerations almost everybody here would be for deregulation; and we must get on with deregulation. The new reservoir definition will not do the job. Do not play politics with something this important.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. GAMMAGE).

Mr. GAMMAGE. Mr. Chairman, I rise in support of the amendment.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. BROWN).

Mr. BROWN of Ohio. Mr. Chairman, the amendment I have offered in conjunction with the gentleman from Texas (Mr. KRUEGER), the gentleman from Colorado (Mr. WIRTH), and with Mr. ANDERSON is designed to produce added supplies of natural gas for industrial jobs and American homeowners.

There were such adequate supplies in the intrastate market last year in spite of the cold weather because that market did not have price controls, a bankrupt policy which has for years created growing shortages in the price-controlled interstate market.

Gas in the adequately supplied intrastate market last winter sold for about $2, but we could not buy it at that price in the interstate market last winter. We paid $4.20 for synthetic gas or $6 for imported liquidified natural gas or $3 for Btu equivalent oil or $11 for electricity, all because of a discredited Federal control policy advertised as "consumer protection." Thanks, but no thanks.

We have been protected to the point that we are freezing to death. Let us get out of the rut of shortages. Let us try a system that works.

There must be something wrong with the Carter ad hoc plan.

The Brookings Institution and American enterprise both condemn it. Econo-

mist Paul Samuelson and Milton Friedman both condemn it. The GAO and CBO both condemn it, and former President Ford and former candidate Carter also condemned it and preferred deregulation.

Let us try terminating Federal price controls and see if that will not solve both our supply problem and our price problem and perhaps put behind us this political nettle, as someone called it, that we have had to look at and try to handle for the past several years.

Let us try a new, better scheme than that which has been presented to us by the Carter ad hoc approach.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota (Mr. VENTO).

Mr. VENTO. Mr. Chairman, I rise in opposition to the Brown amendment which would deregulate the price of natural gas. The ad hoc committee approach provides a new standard for identification of new natural gas and sets $1.75 per 1,000 cubic foot and is a generous support and tremendous encouragement for possible domestic development of natural gas.

Deregulation is itself a misnomer. By disengaging the decisionmaking of the Federal Government regarding the wellhead price, we would not embrace a free market system; rather we would permit even greater impact of the market system by action of the Organization of Petroleum Producing Countries and the major multinational energy grants.

What is 1,000 cubic feet of natural gas worth—an extremely difficult question to answer because we are trying to define the price of a nonreplaceable resource. Today with regulation, the FPC on interstate gas guarantees at the point of sale a 15- to 20-percent return on investment, which in years past, although a low price, by today's standards commanded investment and development of natural gas.

Historically, this resource has been used to fill needs and feed the ever-growing appetite of American energy consumption. It was reasonable in cost and available with negligible environmental effects.

Today, we properly review its use and qualify preferential use and compel priorities with positive steps to address the limitations on available supply.

In 1973, we had available 25 trillion cubic feet of natural gas—about 2 trillion imported—at a price of 53 cents per million cubic feet.

In 1976, with an almost tripled price—to $1.45 per million cubic feet—the available natural gas fell to 23 trillion cubic feet with about the same amount imported.

That price increase which far outstripped inflation—and is really a major contributor to our recent inflationary experience—demonstrates decisively the fallacious relationship between price and its potential to increase production. To say the least, it is really inadequate.

We have a responsibility in this Congress to play a role in the determinations of energy policy and the impact on our economy.

Natural gas is an energy supply that is limited. It is finite. There is not an endless supply.

Some geological sources suggest that we have peaked out, reached maximum production. The production statistics and data verify their contention. Others would argue a price limitation is what we are interpreting from this same data.

Nevertheless, comments by proponents today will lament the more difficult process that producers face, "easy to locate and drill natural gas is almost all discovered." Their very statements agree with the "peak out" projections, yet the drums beat the echo of deregulation and raise what I characterize as false hopes.

Defeat the Brown amendment and continue the positive development of energy policy without the consumer-paid price of windfall earnings for natural gas producers leveraged by OPEC-induced price increases.

We must be mindful of the priority use of natural gas and its wide range of application as a fertilizer in the production of synthetics and eventually, face conserving for these uses. It, indeed, may be too valuable to burn.

This legislation is part of the foundation, not the total resolution of our energy decisions. Natural gas is a component that the Federal Government will be concerned with in a variety of ways—the leasing of public reserves, diligence of production, the common carrier role—all point up the need to continue our role in the primary pricing of natural gas. Rejection of the Brown amendment would be positive action by Congress to this end.

Mr. WRIGHT. Mr. Chairman, will the gentleman yield?

Mr. VENTO. I yield to the gentleman from Texas.

Mr. WRIGHT. Mr. Chairman, I thank the gentleman for yielding.

Having achieved the general compromise agreement embodied in the ad hoc committee amendment, I am going to vote against the Brown amendment.

As the gentleman from Ohio (Mr. BROWN) is aware, I suggested to him some weeks ago that a good solution to this problem might be a phased deregulation which would terminate the control of wellhead gas prices over a period of 4 or 5 years. It seemed to me that a resolution of that kind might provide light at the end of the tunnel sufficient to assist small independent explorers to secure the capital necessary to go out into the field and drill in the search for new reserves.

I still believe that decontrol of wellhead prices should be our goal, in an economy of sufficiency. The President says that this is his goal.

Why, then, you might reasonably ask, shall I vote against the sudden decontrol of new gas prices next April, as the Brown amendment would provide?

For one thing, we already have provided some very useful incentives to assist in finding the supplies that are so vitally necessary to the future of our country.

This bill contains assurances that the small independents will enjoy the same intangible drilling costs that have been assured to their corporate competitors.

We have adopted the new definition on what constitutes a new reservoir, or new natural gas.

The CHAIRMAN. The Chair recognizes the gentleman from Tennessee (Mr. GORE).

Mr. GORE. Mr. Chairman, I yield to the majority leader, the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. Mr. Chairman, I thank the gentleman for yielding to me.

This new definition of which I spoke will make it possible for a good many of the people in the drilling business to find new supplies.

In addition, we have provided an assured price of $1.75, which is, I think, a very acceptable price at the present time, and one which will generate additional exploration.

Also, it is possible that this committee, and I know not, may adopt a plowback feature. If it does that, there would be still another incentive for exploration.

But, Mr. Chairman, all of these incentives combined—indeed even immediate deregulation if it were adopted—would take a great deal of time, 4, 5, 6, or 7 years actually to supply the fuel that we seek to add to the Nation's inventory.

The question we now must face is what most likely will happen in the interim, in the next 2, 3, or 4 years before new discoveries can be located and brought on stream? This is what disturbs me about the prospect of immediate deregulation.

It seems to me that, whatever we set in motion this year, the shortfalls we already have seen in the interstate markets are going to be exacerbated in the short-term future. We may well face the probability that next winter, unless it is exceptionally benign, will confront the country with gas shortages perhaps even more severe than those that beset us last winter. And the winter following that, if the Federal Power Commission's estimates are accurate, may produce shortages even more severe than next winter.

According to the Federal Power Commission findings, the 50 national gas pipelines that move in interstate commerce will be severely affected.

The CHAIRMAN. The time of the gentleman has expired.

The Chair now recognizes the gentleman from North Carolina (Mr. NEAL).

Mr. NEAL. Mr. Chairman, I yield to the majority leader, the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. I thank the gentleman for yielding.

According to data on file at the Federal Power Commission, during the year April 1976 until April 1977, the shortfall of actual availability of natural gas to the 50 interstate pipelines was 23 percent below their commitments. That is why we had the shortages last winter. The gas just simply was not there. The anticipated shortfall for the present year extending from April 1977 through March 1978—next March—is an additional shortfall of some 26½ percent, an even more severe one.

What happens then if one-fourth of the supplies that these pipelines have committed themselves to deliver are not available, and we have sudden price deregulation? I expect we would find these 50 pipelines, under the demand-driven competition, putting unward pressures on gas prices in a frantic effort on the part of each to get a bigger share of the available gas for its own customers.

The Arkansas-Louisiana Gas Co. is expected to face, for example, a 43-percent shortfall. The Eastern Shore Natural Gas Co., a relatively small one, is expected to have a 50-percent shortfall. The Trans-Continental Gas Pipeline Corp., a big one, faces a likely 45 percent shortage. United Gas Pipeline Co., another large one, may face a 50-percent shortage.

Now, if shortages of that magnitude should, as I fear, generate this sudden upward price pressure in a newly decontrolled market, what does that do to our tentative revival in our economy? The effect could be drastically depressive. Just stop and think how pervasive is petroleum, and particularly natural gas, in almost everything we buy and use.

The CHAIRMAN. The time of the gentleman has expired.

The Chair recognizes the gentleman from Michigan (Mr. BRODHEAD).

Mr. BRODHEAD. Mr. Chairman, I yield to the majority leader.

Mr. WRIGHT. I thank the gentleman for yielding.

Natural gas is pervasive in all we do. Look around you. The upholstery on the chairs on which you are sitting is petroleum. The carpeting below our feet is petroleum. The suit I am wearing is made of natural gas. From the time you get up in the morning and brush your teeth with a plastic toothbrush with nylon bristles until you go to bed at night clad in pajamas made of a miracle fiber, you are using natural gas and petroleum in a hundred ways.

We have begun a tentative revival of this economy. So far it has been extremely salutary. In the first 6 months of this year we have added 2,200,000 new jobs. We have reduced unemployment by almost 1 full percentage point. Public confidence and business confidence have revived. Business investment in new plant and equipment is 16 percent higher in the second quarter of this year than it was in the last quarter of the previous year. Housing starts are up by 18 percent. But if we impact this economic revival with a sudden increase in natural gas prices, for so pervasive a commodity in our way of living, we could stall out this recovery.

So I think it wiser that we try as best we can to go the route that the ad hoc committee recommended, providing these incentives which are vitally necessary to our future supplies in the hope that we can move, as the President says he wants to move, toward eventual decontrol at a time when revived exploration hopefully will have produced a revival in supply, the intense competition for short supplies with its upward pressure on price will be less.

The CHAIRMAN. The time of the gentleman has expired.

The Chair recognizes the gentleman from Michigan (Mr. KILDEE).

Mr. KILDEE. Mr. Chairman, I yield to the majority leader.

Mr. WRIGHT. I thank the gentleman for yielding.

Mr. HAGEDORN. Mr. Chairman, will the gentleman yield?

Mr. WRIGHT. I yield to the gentleman from Minnesota.

Mr. HAGEDORN. I thank the gentleman for yielding.

Is it not true, I will ask the majority leader, that perhaps if we had higher energy prices, the gentleman would be wearing a wool suit instead of a suit made from hydrocarbons, and he might be wearing cotton underwear or pajamas—if he wears pajamas to bed—instead of synthetic fibers? Is that not what we ought to do, is get back to natural resources?

Mr. WRIGHT. I think the gentleman is basically correct, and there are certain provisions in this bill to encourage conservation of this scarce fuel and diversions to other sources.

That, however, is not enough. We have not demonstrated the sense of urgency that we really should demonstrate. Conservation is not enough. Conservation is just the first step. If we have not sense enough to use that time to bring on more supplies—and I speak not only of conventional supplies such as more gas and oil, but also synthetic supplies, coal gasification and liquefaction, which shamefully we failed to do last year, and in the long run solar energy and nuclear power—if we do not do those things, we are just postponing the day when we are going to run out. We must do two things: use less, and produce more. If we do not do the latter, we will sentence the country to a long-term decline in its standard of living.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. WRIGHT. I yield to the gentleman from Texas.

Mr. PICKLE. I thank the gentleman for yielding.

Would not the gentleman in the well admit in all fairness that the amendment pending is not a full deregulation bill in the sense that we have had in the past, that it is a modified deregulation bill, that it is for new gas; and, indeed, the amendment pending is not as strenuous as the amendment the gentleman supported in recent years?

The CHAIRMAN. The time of the gentleman has expired.

The Chair recognizes the gentleman from Indiana (Mr. SHARP).

Mr. SHARP. Mr. Chairman, I yield to the majority leader.

Mr. WRIGHT. I thank the gentleman for yielding.

The gentleman from Texas (Mr. PICKLE), my dear friend, is eminently correct. I have in the past supported deregulation bills, and I support long-term deregulation now. If a conference report should recommend a gradual and intelligently phased deregulation, I could support that. I supported the Harris bill in 1955 that passed the House by six votes. I think it demonstrable that over these 20 years the Government's well-intentioned attempts to control wellhead price have, indeed, decreased exploration and thus contributed to the shortage.

But I would say to the gentleman that I believe these things we have provided in this bill in the way of incentives will move us in the direction of more exploration, hopefully of more discoveries and therefore more supplies.

I believe it would be preferable at the present time if we can go forward with the national program and support the bill before us which would achieve stability, predictability, and some semblance of a national consensus of an energy policy, rather than being quarrelsome and divisive.

Mr. PICKLE. Mr. Chairman, if the gentleman will yield, I appreciate the gentleman yielding. I think it helps the debate.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. WRIGHT).

Mr. WRIGHT. I thank the Chair.

I shall not belabor the point. I appreciate the sincerity and the deep conviction of people who earnestly believe that deregulation next April is in the best interest of the country. I certainly do not accuse them of being callous to the needs of the people.

But I am deeply concerned about the impact of sudden deregulation at a time when we are certain to be short, even though that shortage may have been to some degree caused by well-intended regulation, and I think the best course under these circumstances is to try to phase out regulation in such a way that it does not have an adverse effect on the economy and set us back at a time when our economy at least is moving forward.

Mr. RONCALIO. Mr. Chairman, will gentleman yield?

Mr. WRIGHT. I yield to the gentleman from Wyoming.

Mr. RONCALIO. Mr. Chairman, I rise to commend our majority leader. I respect his courage and leadership.

This is a great step toward unification and meeting the needs of all the people of this Nation. After searching all the needs of the people in my beloved State, I am going to support this position, the position the gentleman has recommended.

The CHAIRMAN. The Chair recognizes the gentleman from Texas (Mr. WHITE).

Mr. WHITE. Mr. Chairman, I have a district that produces gas. I will tell the Members of some of my own fears. I do not commend myself to this body as an expert, but I have seen the oil and gas rigs disassembled and moved to other parts of the world, because there has been insufficient incentive to drill and produce new oil and gas.

I think it is time we bit the bullet now. Deregulation is the only feasible answer. What I really fear is this: If we pass this bill presently without the Krueger amendment, and then do not get the production necessary to blunt the energy crisis, in a few years some will come back to say what we really need to do is nationalize the industry, which would be an absolute disaster.

Now is the time to face the problem. Now is the time to deregulate. We could then see how this works. If it does not,

then this Congress has the power to roll back the prices, if there is inordinate profit. After all, the Krueger-Brown amendment calls only for partial deregulation.

Let us give it a chance. This is a chance to solve this crisis.

Others have spoken with greater eloquence and knowledge but I am speaking for my people who have passed on to me their experience.

The CHAIRMAN. The Chair recognizes the gentleman from Ohio (Mr. ASHLEY).

Mr. ASHLEY. Mr. Chairman, I yield my time to the distinguished Speaker of the House of Representatives.

Mr. O'NEILL. Mr. Chairman, there is no question that this Nation needs an energy policy. That was agreed upon earlier in the year. I can remember meeting with the minority leader, the gentleman from Arizona, Mr. JOHN RHODES, and talking with him about an ad hoc committee, talking about the fact that it is impossible to put a policy together if we have the legislation going to different committees and being reported as individual bills as in the past. If we did that there would be nitpicking and logrolling. We agreed on a solution: Let us have an ad hoc committee. Let us not strip the committees of their rights but rather send the bill to the standing committees and then have them report to an ad hoc committee.

That we have done. We have been talking about this legislation for 3 days. There are 113 different legislative initiatives that form a national energy policy.

We have debated the issue of deregulation so many times and so hotly through the years.

In trying to avoid bitterness, we got a group together—a group of those who had been for deregulation and those who had been opposed to deregulation. We had them sit down. They talked to the independents around the Nation, to those who, spending their own money, search out and look for gas.

They came up with an agreement. That agreement passed the House today by voice vote. So it is now in the bill. What does it do? It increases the price of natural gas from $1.44 to $1.75, a 31-cent increase, which the Supreme Court had determined was a just and reasonable price; furthermore, the administration has the discretion to provide an incentive price. By every indication the price of natural gas will provide the most generous incentive price anywhere in the world.

The CHAIRMAN. The Chair recognizes the distinguished Speaker of the House, the gentleman from Massachusetts (Mr. O'NEILL).

Mr. O'NEILL. Now, we come to the Brown-Krueger amendment. Let us consider the consequences of the deregulation of natural gas. Let us consider the added cost to the consumer. The cost to the consumer over and above the ad hoc committee amendment would be $53 billion to $79 billion between now and the year 1985. The Library of Congress says that the figure is $120 billion—that the consumer will pay $120 billion more than under the ad hoc committee amendment.

The bill allows higher prices for more costly production; the administration is given discretion to permit higher prices along the line.

Now, what about this amendment? If we pass this according to the Library of Congress, it is going to cost the average family $260 more a year from 1978 through 1985.

Now, I am fearful about this entire legislation. All of us appreciate the fact that we need a national energy policy. I am fearful that if this amendment is adopted, this bill will not pass. I am wondering what America will think. America is watching this legislation more than it has watched any legislation in years.

Will the House fail? Can the House act? Can the House put together an energy policy? Those are the questions.

The question now comes down to this. On one side are the people of America, the independent producers, the little man from Texas or Oklahoma or Louisiana, who invests his money and truly goes out and looks for new gas. On the other side is big oil and gas. Never have I ever seen such an influx of lobbyists in this town as from big oil on this amendment.

I believe this bill will go down, if the Krueger-Brown amendment is adopted. I think it would be wrong. I think it would be an injustice to this country.

I say to you, look at your conscience. Do you want to go home on Saturday of this week and say that the Congress has failed? As between the people and the independent gas producers working together on one side and big oil on the other. Where do you core down?

Believe me, the future of America in 1985, the economy of this country, the defense of this Nation, are at stake. This is at the heart of this bill.

I ask you to vote down the Krueger-Brown amendment.

The CHAIRMAN. All time has expired.

The question is on the amendment offered by the gentleman from Ohio (Mr. BROWN).

The question was taken; and the Chairman announced that he was in doubt.

RECORDED VOTE

Mr. BROWN of Ohio. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 199, noes 227, not voting 7, as follows:

[Roll No. 499]

AYES—199

Abdnor	Brown, Mich.	Conable

NOT VOTING—7

Badillo	Flippo	Teague
Burke, Mass.	McKinney	
Dent	Murtha	

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Burke of Massachusetts against.

Mr. SCHEUER changed his vote from "aye" to "no."

So the amendment was rejected.

The result of the vote was announced as above recorded.

Mr. BIAGGI. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I ask unanimous consent to be permitted to speak out of order.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

Mr. BAUMAN. Reserving the right to object, Mr. Chairman, may we know what the purpose is?

Mr. BIAGGI. Mr. Chairman, if the gentleman will yield, I will be delighted to respond. I am asking for permission to speak out of order because on this day Archbishop Makarios of Cyprus passed away. I would like, for the record, to make some appropriate comments.

PARLIAMENTARY INQUIRY

Mr. BAUMAN. Mr. Chairman, I have a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. BAUMAN. Mr. Chairman, is this request in order under the rule which allows no amendments and no Members the opportunity to offer any changes in the bill?

The CHAIRMAN. The Chair will respond that by unanimous consent, it would be in order to speak out of order.

Mr. BAUMAN. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. Is there objection to the request of the gentleman from New York?

There was no objection.

TRIBUTE TO ARCHBISHOP MAKARIOS

Mr. BIAGGI. Mr. Chairman, today the Greek community is in mourning, one of their great leaders is dead. Archbishop Makarios, the only President Cyprus has known since its independence, succumbed early today to the effects of his second major heart attack in 4 months.

For the Greek Cypriot population, Archbishop Makarios was more than just their leader—he symbolized their hopes for the future. It is the 75-percent Greek population of Cyprus which has endured tragedy since the 1974 invasion of the island by Turkey. Hundreds of thousands are refugees, thousands are separated from their families, and some 2,000 Greek Cypriots are still officially listed as missing since the invasion.

For the Greek Cypriots, the death of Archbishop Makarios is a severe blow to their hopes of achieving an early peace. He was a dogged advocate of peace for Cyprus, committed to a peace which would maintain the territorial integrity of the island. He was highly regarded as a world leader, known as an apostle of universal peace.

The key to a great leader is his ability to inspire others. Archbishop Makarios epitomized this type of leader. His unique position as the religious and political leader of Cyprus, earned him the love and respect of the Greek Cyriot population. He was a man of the people. He was born the son of a poor shepherd. He entered the Orthodox Church, and by the time that Cyurus was ready to achieve independence, Makarios had assumed a prominent position in the religious community of Cyprus. His election as President came as no surprise.

The durability of his rule was based on the fact that he never lost touch with the people. They related to him. He was both a visible and vigorous leader. He ruled firmly, but with compassion for the needs of the people of Cyprus. He was an outspoken foe of discrimination.

The life of Archbishop Makarios may have ended, but the legacy he has created will endure for years to come. I have already expressed my condolences directly to Archbishop Iakouos, Archbishop of the Greek Orthodox Archdiocese of North and South America, as well as to Fr. John Povlos, pastor of St. Demetrios Church in my district. I express my condolences to the Greek American community in my district, which is the largest community outside of Greece. I share their grief and that of the millions of others who loved and respected Archbishop Makarios.

The CHAIRMAN. If there are no further amendments to part IV, the Clerk will designate the heading of the part now pending.

The Clerk read as follows:

Page 217, line 22, Part V—Public Utility Regulatory Policies.

(Part V reads as follows:)

PART V—PUBLIC UTILITY REGULATORY POLICIES

Chapter 1—GENERAL PROVISIONS

SEC. 501. PURPOSES.

The purposes of this part are—

(1) to increase the efficiency of generation, transmission, and distribution of electric power through encouragement of competition, through incentives for efficiency, and through prescription of reliability standards;

(2) to establish national minimum standards for electric ratemaking to encourage efficient use of electric energy to—

(A) insure that electric utility rates are designed to encourage energy conservation by minimizing (i) energy consumption and (ii) the need for new generating capacity,

(B) provide for reasonable rates to electric consumers, and

(C) assure that States which implement rate reforms are not placed at a competitive economic disadvantage by reason of the failure of other States to implement such reforms; and

(3) to provide for greater consumer representation in regulatory proceedings, to provide notice procedures respecting termination of service to electric consumers, and to provide technical and financial assistance to State regulatory authorities.

SEC. 502. DEFINITIONS.

As used in this part:

(1) The term "Administrator" means the Administrator of the Federal Energy Administration.

(2) The term "Commission" means the Federal Power Commission.

(3) The term "electric consumer" means any person, State agency, or Federal agency, to which electric energy is sold other than for purposes of resale.

(4) The term "electric utility" means any person, State agency, or Federal agency, which sells electric energy.

(5) (A) The term "State regulated electric utility" means any electric utility other than a nonregulated utility as defined in subparagraph (B).

(B) The term "nonregulated utility" means a nonregulated public system or a nonregulated cooperative. Such term does not include an electric utility with respect to which the Tennesee Valley Authority has ratemaking authority.

(C) The term "nonregulated public system" means an electric utility which is a State agency or Federal agency unless a State regulatory authority has substantially the same ratemaking authority respecting the rates of such utility as such authority has with respect to other electric utilities subject to its jurisdiction.

(D) The term "nonregulated cooperative" means a private cooperatively organized electric utility unless a State regulatory authority has substantially the same ratemaking authority respecting the rates of such utility as such authority has with respect to other electric utilities subject to its jurisdiction.

(6) The term "Federal agency" means any agency or instrumentality of the United States, but does not include the District of Columbia.

(7) The term "rate" means any (A) price, rate, charge, or classification made, demanded, observed, or received with respect to sale of electric energy to an electric consumer, (B) any rule, regulation, or practice respecting any such rate, charge, or classification, and (C) any contract pertaining to the sale of electric energy to an electric consumer.

(8) The term "ratemaking authority" means authority to fix, modify, approve, or disapprove rates.

(9) The term "rate schedule" means the designation of the rates which an electric utility charges for electric energy.

(10) The term "sale" includes an exchange of, or a charge for transmission of, electric energy.

(11) The term "State" means a State or the District of Columbia.

(12) The term "State agency" means a State, political subdivision thereof, or any agency or instrumentality of either.

(13) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electric energy by any electric utility (other than by such State agency), and, in the case of an electric utility with respect to which the Tennessee Valley Authority has ratemaking authority, such term means the Tennessee Valley Authority.

(14) The term "bulk power facility" means a bulk power generating facility or a bulk power transmission facility.

(15) The term "bulk power generating facility" means electric generating equipment (and associated facilities) designed for, or capable of, operation at a single site with an aggregated capacity of 200 megawatts or more.

(16) The term "bulk power transmission facility" means an electric transmission line (and associated facilities) designed for, or capable of, operation at a nominal voltage of 200 kilovolts or more, between phase conductors for alternating current or between poles for direct current.

(17) The terms "evidentiary hearing" and "evidentiary proceeding" mean (A) in the case of a State agency, a proceeding (i) which includes notice to, and an opportunity for, participants to present direct and rebuttal evidence and to cross-examine witnesses, and a written decision based upon evidence appearing in a written record of the proceeding, and (ii) which is subject to judicial review; and (B) in the case of a Federal agency, a proceeding conducted in accordance with section 556 of title 5, United States Code.

(18) The term "class" means with respect to electric consumers, any group of such consumers who have similar characteristics of electric energy use, such as—

(A) the nature of requirements placed by such group upon the system of the electric utility, and

(B) the amount of kilowatt demand and kilowatt-hour requirements placed by such group upon the system of the electric utility.

SEC. 503. APPLICATION TO FEDERAL POWER ACT.

Section 3 of the Federal Power Act is amended by inserting "(a)" after "SEC. 3." and by adding the following at the end thereof:

"(b) For purposes of this Act, the terms 'bulk power facility', 'bulk power generating facility', 'evidentiary hearing' and 'evidentiary proceeding' have the same meaning as when used in part V of title I of the National Energy Act.".

SEC. 504. ADVISORY COMMITTEE.

(a) ESTABLISHMENT AND COMPOSITION.—There is established a Utility Advisory Committee (hereinafter in this section referred to as the "Committee") to advise the Commission respecting its duties and functions under chapter 2 of this part, sections 541 through 546 of this Act, and chapters 4 and 5 of this part, and to advise the Administrator respecting his duties and functions under subpart A of part I and part VI of this title. The Committee shall be composed of at least 12 members appointed by the President as follows:

(1) at least 3 representing utilities (one representing publicly owned utilities, one representing privately owned utilities, and one representing nonregulated cooperatives);

(2) at least 5 representing State regulatory authorities from different parts of the country;

(3) at least 3 representing consumers of utilities (at least one from groups of residential consumers, at least one from groups of commercial consumers, and at least one from industrial consumers); and

(4) at least one representing conservation organizations.

A vacancy in the Committee shall be filled in the manner in which the original appointment was made.

(b) TERMS.—Members of the Committee shall serve for terms of 2 years.

(c) PAY AND TRAVEL EXPENSES.—While away from their homes or regular places of business in the performance of services for the Committee, members of the Committee shall be allowed travel expenses, including per diem in lieu of subsistence, in the same manner as persons employed intermittently in the Government service are allowed expenses under section 5703(b) of title 5 of the United States Code.

(d) AUTHORIZATION.—There are authorized to be appropriated not more than $50,000 in each of the fiscal years 1978, 1979, and 1980 to carry out the provisions of this section. No other amounts are authorized to be appropriated unless specifically provided by law enacted after the date of the enactment of this Act.

Chapter 2—IMPROVING EFFICIENCY OF USE OF ELECTRICITY

Subchapter A—General Provisions

SEC. 505. COVERAGE.

(a) APPLICATION OF CHAPTER.—The requirements of this chapter do not apply to sales of electricity by an electric utility—

(1) in any calendar year beginning less than 2 years after the date of enactment of this Act, or

(2)(A) in any calendar year beginning 2 years or more after the date of enactment of this Act but less than 7 years after such date of enactment unless such sales of electric energy by such utility during the second preceding calendar year exceeded 750 million kilowatt-hours, or

(B) in any calendar year beginning 7 or more years after such date of enactment unless sales of electric energy by such utility during the second preceding calendar year exceeded 200 million kilowatt-hours.

Except in the case of section 515 (relating to prohibition against special nonaggregate inclusions) and section 536(c) (relating to contracts by Federal agencies) the requirements of this chapter apply only to sales of electric energy for purposes other than resale.

(b) EXTENSION.—Upon application to the Commission by an electric utility, and for good cause shown, the Commission may provide that the 2-year period specified in subsection (a) may be extended for one additional period of not more than 2 years with respect to such utility.

Subchapter B—National Minimum Standards for State Regulated Electric Utility Rate Regulation

SEC. 511. MINIMUM STANDARDS FOR RATES OF SERVICE.

(a) MINIMUM STANDARDS FOR RATES.—Each State regulated electric utility shall, in making sales of electric energy subject to this chapter, comply with the following minimum standards respecting the rates at which such energy is sold:

(1) Except to the extent permitted under subsection (b), rates for providing electric service to each electric consumer (or class thereof) shall be designed, to the maximum extent practicable, to reflect the costs of providing electric service to such consumer (or class). For purposes of carrying out this paragraph, the rate per kilowatt, or per kilowatt-hour, for electric service during any period to any electric consumer (or class thereof) shall not decrease as kilowatt, or kilowatt-hour, consumption by such consumer increases during such period except to the extent that such utility shows in an evidentiary hearing that such decrease reflects the decrease in such cost of providing electric service to such consumer (or class) as such consumption increases during such period.

(2)(A) The rates for providing electric service to each class of electric consumers shall be on a time-of-day basis which reflects the costs of providing electric service to such electric consumers unless such rates have been determined (in an evidentiary hearing by the State regulatory authority, or the Commission in any case in which such authority has not assumed responsibility under section 531) not to be cost-effective with respect to such class.

(B) The rates for providing electric service to each class of electric consumers shall be on a seasonal basis which reflects the costs of providing service to such consumers unless such rates have been determined (in an evidentiary hearing by the State regulatory authority, or the Commission in any case in which such authority has not assumed responsibility under section 531) not to be cost-effective with respect to such class.

(C) A rate for a class of electric consumers shall be treated as cost-effective for purposes of subparagraph (A) only if the long-run benefits of such rate are likely to exceed the metering costs associated with the implementation of such rates.

(D) If any time-of-day rate has been determined not to be cost-effective under subparagraph (A) for any class of consumers, each electric utility shall offer such rate to each consumer in such class willing to pay the costs of metering associated with such rate.

(E) Each electric utility shall offer each electric consumer (or class thereof) an interruptible rate which reflects the cost of providing interruptible service to such customers.

(3) The Commission may prescribe voluntary guidelines respecting the terms and conditions of any rate offered under subparagraphs (A), (B), and (E) of paragraph (2) and the types of load management systems and terms and conditions of rates offered under section 521.

(4) For purposes of this section, costs of providing electric service shall be determined as provided in section 532.

(b) LOWER RATES.—(1) No provision of this title shall prevent an electric utility, a State regulatory authority, or other State agency from fixing, approving, or allowing to go into effect a rate for electric energy for essential needs of residential electric consumers (as defined by the State regulatory authority) which is lower than that otherwise required by paragraph (1) of subsection (a).

(2) A State regulatory authority which has enforcement responsibility may, upon application of any electric consumer, prescribe a temporary exception pursuant to which an electric utility rate schedule which does not comply with the requirements of subsection (a) will be fixed, approved, or allowed to go into effect, with respect to such consumer. Any such exception shall comply with the following requirements:

(A) such exception may apply only to the type of use and amount of use of electric energy as does not exceed the amount the electric consumer used prior to the date of enactment of this Act;

(B) the electric consumer who applies for such exception demonstrates to such State regulatory authority in an evidentiary hearing that such exception is necessary to avoid significant economic hardship to such consumer; and

(C) such exception does not remain in effect more than 5 years after the date of enactment of this Act.

(c) GATHERING INFORMATION ON COSTS OF SERVICE.—(1) Each State regulated electric utility shall gather information under such rules promulgated by the Commission as the Commission determines necessary to allow State regulatory authorities (and other persons) to determine the costs associated with providing electric service. For purposes of this section and section 532 (relating to determination of costs of service), such rules shall include requiring the gathering of the following information—

(A) the costs of serving each electric consumer class and of serving different consumption patterns within such class, based on voltage level and time of use; and

(B) representative daily kilowatt demand load curves for all electric consumer classes combined, and representative daily kilowatt demand load curves for each electric consumer class for which there is a separate rate; and

(C) annual capital, operating, and maintenance costs—

(i) for transmission, and distribution services of such utility, and

(ii) for each generating unit to meet kilowatt demand on such electric utility.

Such rules shall provide that information required to be gathered under this subsection shall be presented in such categories and such detail as may be necessary to carry out the purposes of this subsection.

(2) The Commission within 180 days after the date of enactment of this Act, shall, by rule, prescribe the methods, procedure, and format to be employed by electric utilities in gathering the information described in this subsection. Such a rule may provide for the exemption by the Commission of an electric utility or class of electric utilities from gathering all or part of such information, if such utility shows and the Commission finds, after public notice and opportunity for the presentation of written data, views, and arguments (and so states in such rule) that gathering such information is not likely to further the purposes of this chapter. The Commission shall periodically review such finding and may revise such rule.

(3) Not later than 2 years after the date of enactment of this Act, and every 2 years thereafter, each electric utility shall file with—

(1) the Commission, and

(2) any State regulatory authority which has rate-making authority for such utility the information gathered pursuant to this section (if such information is not otherwise required to be filed with such authority), and publish or otherwise make such information available to the public, in such form and manner as the Commission shall prescribe. In addition, each electric utility shall publish or make such information available to the public, in such form and manner as the Commission shall prescribe, not later than 60 days prior to the commencement of any hearing on an application for any rate increase.

SEC. 512. MINIMUM STANDARDS RESPECTING ADVERTISING

(a) RECOVERY OF EXPENSES.—For purposes of rate determinations, no rate of a State regulated electric utility shall be determined to be in compliance with this subchapter if such utility recovers from its electric consumers through such rate any direct or indirect expenditure by such utility—

(1) for promotional advertising, or

(2) for political or institutional advertising.

(b) CERTAIN ADVERTISING NOT COVERED.—Subsection (a) shall not apply to—

(1) advertising which informs electric consumers how they can conserve electric energy or can reduce peak demand for electric energy,

(2) notices required by law or regulation,

(3) public information regarding service interruptions, safety measures, or emergency conditions,

(4) advertising concerning employment opportunities with such utility, and

(5) public distribution or explanation of existing or proposed rate schedules, or hearings thereon.

(c) DEFINITIONS.—For purposes of this section—

(1) The term "advertising" means the commercial use, by an electric utility, of any media, including newspaper, printed matter, radio, and television, in order to transmit a message to a substantial number of members of the public or to such utility's electric consumers.

(2) The term "institutional advertising" means any advertising which is designed to create, enhance, or sustain an electric utility's public image or goodwill with the general public or such utility's electric consumers.

(3) The term "political advertising" means any advertising for the purpose of influencing public opinion with respect to any legislative, administrative, or electoral matter, or with respect to any controversial issue of public importance.

(4) The term "promotional advertising" means any advertising for the purpose of inducing the public to select or use the service or additional service of an electric utility or to select or install any appliance or equipment designed to use such utility's service.

SEC. 513. MINIMUM STANDARDS RESPECTING POLLUTION CONTROL COSTS.

(a) RECOVERY OF COSTS.—Each State regulated electric utility may recover from its electric consumers the reasonable costs incurred by such electric utility for any pollution control facility.

(b) DEFINITION.—For purposes of this section, the term "pollution control facility" means a facility which is used to remove, alter, dispose of, or store pollutants, contaminants, waste, or heat.

SEC. 514. AUTOMATIC ADJUSTMENT CLAUSES.

(a) PROHIBITION.—Except as otherwise provided in subsection (b), no increase in any rate may be made by any State regulated electric utility unless—

(1) opportunity for consideration of the lawfulness of such increase in an evidentiary hearing is afforded prior to the date such increase takes effect,

(2) such rate increase is pursuant to an automatic adjustment clause which has been determined by the State regulatory authority (or the Commission as provided in section 531), after evidentiary hearing, to effectively provide incentives for efficient use of resources (including, in the case of fuel, incentives for economical purchase and use of fuel) and to be necessary to enable such utility to meet its immediate short-term financial obligations, or

(3) such increase reflects an increase in the cost of electric power purchased from a centrally dispatched power pool (as defined in section 202(b)(4)(B) of the Federal Power Act).

(b) INTERIM RATES.—The prohibition contained in subsection (a) shall not apply to interim rates which take effect subject to a later determination of the amount of such rates and to a requirement of refund of any overcharge with interest.

(c) REVIEW OF CLAUSE.—(1) No automatic adjustment clause shall be treated as meeting the requirements of subsection (a)(2) unless the rate schedule containing such clause is reviewed by the State regulatory authority having ratemaking authority with respect to such utility (or by the Federal Power Commission as provided in section 531) not less often than every 2 years to insure the maximum economies in those operations and purchases which affect such rates. No such automatic adjustment clause may be treated as meeting such requirements for any period in excess of 4 years after such clause has been reviewed in an evidentiary hearing unless such clause is again reviewed in such an evidentiary hearing before the expiration of such period and the State regulatory authority makes the finding required under subsection (a)(2).

(2) In making a review under this subsection, the reviewing authority shall examine and, if appropriate, cause to be audited the practices of such utility relating to expenses subject to an automatic adjustment clause. Each such utility shall provide reports on such practices as required by such authority, which shall be made available to the public, and shall contain such information as such authority may require to implement the purposes of this subsection (including a disclosure of any ownership or corporate relationship between such utility and the seller of fuel or other items).

(d) DEFFINITION.—As used in this section, the term "automatic adjustment clause" means a provision of a rate schedule which provides, without prior evidentiary hearing, for increases and decreases in rates reflecting increases and decreases in the amount of operating expenses (not including any expense attributable to the imposition of any tax under section 4991 of the Internal Revenue Code of 1954).

SEC. 515. PROHIBITION AGAINST SPECIAL NONAGGREGATE INCLUSIONS.

(a) The rates of any electric utility which is a State utility agency shall, consistent with section 511(a), be based on the total costs of—

(1) all electric energy generated by all facilities of the entire system of such utility; and

(2) all electric energy purchased by such utility which is sold by such utility.

(b) The term "State utility agency" means an agency of a State (not including any political subdivision or agency thereof) which is an electric utility.

SEC. 516. RELATIONSHIP TO OTHER APPLICABLE LAW.

Nothing in this subchapter shall be construed as authorizing or requiring the recovery by an electric utility of revenues, or of a rate of return, in excess of the amount of revenues or a rate of return determined to be lawful under otherwise applicable State or Federal law.

SEC. 517. SOLAR, WIND, AND SMALL ELECTRIC GENERATING SYSTEMS.

Each State regulated electric utility shall—

(1) within 2 years after the date of enactment of this Act, include in the rates for the sale of electric power by such utility—

(A) rates which do not discriminate against the use of solar electric generating systems, including electric generating systems which use wind power, and other small electric generating systems of 15,000 kilowatts of capacity, or less, and

(B) rates and conditions under which excess power generated by such systems may equitably be sold to such utility except that such rates and conditions shall not require such utility to purchase electric energy from any such system during any period at any rate which exceeds the highest cost at which such utility generates electric energy, or purchases electric energy from any other source, during such period; and

(2) take such other steps as may be prescribed by the State regulatory authority, by rule, in order to prevent any other unreasonable discriminatory practice (as defined by the Commission) against such systems, or the regulated utilities to which such systems sell, or from which such systems purchase, electric power.

Subchapter C—Other Requirements for State Regulated Electric Utilities

SEC. 521. LOAD MANAGEMENT TECHNIQUES.

(a) PRACTICABLE AND COST EFFECTIVE TECHNIQUES.—Each State regulated electric utility shall—

(1) offer to its electric consumers such alternative load management techniques which have been determined (as provided in section 533) to be practicable and cost-effective; and

(2) submit, as a part of any application for a rate increase, an analysis of the cost-effectiveness of such other load management techniques as have been identified under section 553(2)(A) prior to 1 year before the date of application.

(b) DEFINITIONS.—For purposes of this section:

(1) The term "load management technique" means any technique (other than a rate described in section 511(a)(2)) to re-

duce maximum kilowatt demand on the electric utility or the maximum kilowatt demand of an electric consumer, including ripple or radio control mechanisms, energy storage devices, interrupted or interruptible electric service, load-limiting devices.

(2) A load management technique is cost-effective if—

(A) such technique is likely to reduce maximum kilowatt demand on the electric utility or the maximum kilowatt demand of an electric consumer, and

(B) the long-run benefits of such reduction are likely to exceed the long-run costs associated with implementation of such technique.

SEC. 522. STANDARDS FOR INFORMATION TO CONSUMERS.

(a) PROPOSED RATE SCHEDULES.—Each State regulated electric utility shall transmit to each of its electric consumers—

(1) not later than 60 days after the date of commencement of service or 90 days after this title takes effect with respect to such utility, whichever last occurs, and

(2) not later than 30 days (60 days in the case of a utility which uses a bimonthly billing system) after such utility's application for any change in a rate schedule applicable to such consumer,

a clear and simple statement of the existing and any proposed rate schedule applicable to such consumer.

(b) EXISTING RATE SCHEDULES.—Each such State regulated electric utility shall transmit to each of its electric consumers not less than once each year a brief, clear, and simple summary of the existing rate schedules applicable to each of the major classes of its electric consumers, and identification of any classes whose rates are not summarized. Such summary may be transmitted together with such consumer's billing or in such other manner as the utility deems appropriate.

(c) STATEMENT OF CONSUMPTION.—Unless such information is otherwise provided as part of a bill for electric service (or in any other manner which has been determined by the State regulatory authority (or the Commission as provided in section 531) to be adequate to make such information available to the consumer), on request of an electric consumer of such an electric utility, such utility shall transmit to such consumer a clear and simple statement of the actual consumption (or degree-day adjusted consumption) of electric energy for each billing period during the prior year (except when such consumption data is not reasonably ascertainable by the utility.

SEC. 523. MINIMUM PROCEDURES FOR TERMINATION OF ELECTRIC SERVICE

No State-regulated electric utility may terminate electric service to any consumer of electric energy except pursuant to procedures prescribed by the State regulatory authority (or the Commission, in any case in which such authority has not assumed responsibility as provided in section 531). Such procedures shall be prescribed by such authority (or Commission) not later than 30 days following assumption of enforcement responsibility and shall—

(1) provide that no electric service to an electric consumer may be terminated until reasonable prior notice (including notice of rights and remedies) has been given to such consumer and such consumer has had a reasonable opportunity (at least 15 days before any such termination) to contest the proposed termination in an impartial hearing in which such consumer has had the opportunity to dispute the reasons for such termination and opportunity to establish whether or not a deferred payment plan for any amounts owed is reasonable, and

(2) provide that no electric service to a residential electric consumer may be terminated on account of nonpayment for electric service during any period where termination of service would be especially dangerous to health, as determined by the State regulatory authority (or the Commission in any case in which such authority has not assumed responsibility as provided in section 533) if such consumer establishes in an impartial hearing that such consumer is unable to pay for such electric service without undue hardship.

Such procedures shall also include special provisions for elderly and handicapped consumers to assure that such consumers are made aware of, and are able to avail themselves of, their rights (as provided in this section). No electric service may be terminated before the procedures required under this section have been completed.

Subchapter D—Nonregulated Utilities

SEC. 526. REQUIREMENTS.

(a) APPLICATION OF SUBCHAPTERS B AND C.—The provisions of subchapters B and C (other than section 521, relating to load management techniques, and, in the case of nonregulated cooperatives, section 521, 512, relating to advertising, and 514, relating to automatic adjustment clauses) shall apply to each nonregulated utility in the same manner as such provisions apply to each State regulated electric utility, except that any action required to be taken by a State regulatotry authority under such provision shall, in the case of a nonregulated utility, be taken by such utility.

(b) LOAD MANAGEMENT.—Each nonregulated utility shall consider alternative load management techniques (as defined in section 521(b)) and shall promptly implement those which are practicable and cost effective (within the meaning of section 521(b)(2)).

(c) COSTS OF SERVICE.—Each nonregulated utility shall establish and utilize methods for determining cost of service in accordance with section 532.

Subchapter E—Requirements Applicable to State Regulatory Authorities

SEC. 531. COMPLIANCE DETERMINATION AUTHORITY FOR STATE REGULATED ELECTRIC UTILITIES.

(a) DETERMINATION BY STATE.—A State regulatory authority which has ratemaking authority with respect to an electric utility may determine whether or not such utility is in compliance with the requiremements of subchapters B and C if—

(1) such authority notifies the Commission (at such time, and in such manner, as the Commission shall prescribe by rule) that such authority assumes such responsibility with repect to such utility and certifies that it has adequate authority to carry out the requirements applicable to such authority under this chapter.

(2) such authority makes such determination of compliance by an electric utility with the requirements of subchapters B and C in an evidentiary hearing, and

(3) complies with the requirements applicable to such authority under this chapter.

(b) DETERMINATION BY COMMISSION.—If such State regulatory authority has not complied with subsection (a) or if such authority withdraws its assumption of responsibility under subsection (a), the Commission shall, upon the application of any State regulated electric utility, determine in an evidentiary hearing whether or not such utility is in compliance with such requirements and shall carry out the requirements of this subchapter, until such time as such State regulatory authority notifies the Commission that it assumes such responsibility and certifies that it has adequate authority to carry out the requirements of this subchapter.

(c) COMMISSION REVIEW OF ENFORCEMENT.—Not later than 2 years after the date of enactment of this Act (and every 2 years thereafter), each State regulatory authority which has assumed responsibility under this chapter shall submit to the Commission a report (containing such information as the Commission by rule may require), describing the extent to which such authority has implemented the requirements of this part.

(2) If upon complaint to the Commission, or upon the Commission's own motion, and after notice and an evidentiary hearing, the Commission finds that any utility or utilities regulated by a State regulatory authority that has assumed responsibility pursuant to subsection (a) hereof exhibit a pattern of noncompliance with any requirement of subchapter B or C, the Commission shall publish such finding which shall be prima facie evidence in any court that the rates of such utility or utilities are not in compliance with such requirement under subchapter B or C of this chapter. The preceding sentence shall not apply in any case in which the Commission has not made any such finding or in any case in which the Commission, after notice and an evidentiary hearing, has reversed any such finding.

(3) The absence of any finding by the Commission under paragraph (2) shall not be treated in any court or administrative proceeding as a finding by the Commission that the rates of any utility regulated by any State regulatory authority are in compliance with the requirements of subchapters B and C.

SEC. 532. DETERMINATION OF COSTS OF SERVICE.

(a) METHODS TO DETERMINE COSTS OF SERVICE.—(1) Each State regulatory authority which has assumed responsibility under section 531 shall prescribe methods for determining costs associated with providing electric service to electric consumers (and classes thereof) by each electric utility over which it has ratemaking authority. The Commission shall prescribe such methods for each State regulated utility with respect to which no such assumption has been made.

(2) Such methods shall, to the maximum extent practicable and to the extent consistent with section 516, reflect differences in cost-incurrence, for each electric consumer (or class thereof), attributable to daily and seasonal time of use of service. In prescribing such methods, there shall be taken into account the extent to which total costs to an electric utility are likely to change if—

(A) capacity is added to meet peak demand relative to base demand, and

(B) additional kilowatt-hours of electric energy are delivered to electric consumers.

(b) FINDINGS REQUIRED.—A State regulatory authority which has assumed responsibility under section 531 (or the Commission in the case of an electric utility with respect to which no such assumption has been made) may not make a determination of compliance with section 511 unless—

(1) such authority (or the Commission, as the case may be) has made findings of fact respecting—

(A) the factors which cause changes in the daily and seasonal peakloads of such utility and of the electric consumer classes served by such utility;

(B) the costs of serving each electric consumer class and of serving different consumption patterns within such class, based on voltage level and time of use; and

(2) such authority (or Commission, as the case may be) bases the determination of such compliance on such findings and on the methods prescribed under paragraph (1) of subsection (a).

(c) LOWER RATES.—In the case of any electric utility which does not have a lower rate as described in setcion 511(b)(1) in effect on the date 2 years after the date of the enactment of this Act, the State regulatory authority (or the Commission in any case in which such authority has not assumed responsibility under section 531) shall determine, after an evidentiary hearing, whether

or not such a rate should be implemented by such utility.

SEC. 533. ALTERNATIVE LOAD MANAGEMENT TECHNIQUES.

Each State regulatory authority which has assumed responsibility under section 531 (or the Commission in any case in which such authority has not assumed such responsibility) shall consider in an evidentiary hearing, initially within 2 years of the date of enactment of this Act and thereafter no less often than once during each subsequent 2-year period, alternative load management techniques for purposes of carrying out the requirements of section 521.

SEC. 534. MASTER METERING.

The Commission shall prescribe rules requiring each State regulatory authority which has assumed responsibility under section 531 to prohibit or restrict the use of such bulk or master meters in buildings as it deems necessary to carry out the purposes of this chapter. Such rules shall provide that in determining whether or not to prohibit or restrict such meters in any building, such authority shall consider the potential energy savings of central heating, cooling, and domestic hot water systems in buildings in which the output of such systems to separate units is measured separately and charged to such units. Such rules may apply to buildings construction of which commenced less than 1 year after the date of promulgation thereof only to the extent the Commission determines that such application is economically feasible.

SEC. 535. PARTICIPATION IN REGULATORY PROCEEDINGS BY STATES AND BY ELECTRIC CONSUMERS.

(a) INTERVENTION.—Any electric consumer or State agency may intervene as of right as a party in any evidentiary hearing or other proceeding of a State regulatory authority which has assumed the authority to make determinations under this chapter (or of the Commission in any case in which the State authority has not assumed such authority) if such hearing or other proceeding affects such consumer or State agency and relates to the determination of compliance with the requirements of this chapter.

(b) COMPENSATION FOR COSTS OF PARTICIPATION.—(1)(A) Unless an alternative means for assuring electric consumer representation is adopted in accordance with paragraph (2), if an electric consumer (who is a person described in paragraph (2)) of an electric utility prevails in a ratemaking proceeding before a State regulatory authority (or before the Commission where responsibility has not been assumed by such authority under section 531) in which such consumer has alleged that any rate proposed by an electric utility is not in compliance with any requirement of subchapter B or C, such utility shall be liable to compensate such consumer for reasonable attorneys' fees, expert witness fees, and other reasonable costs of preparing for, and participation in, such proceeding (including fees and costs in obtaining judicial review of such proceeding). Such consumer may collect such fees and costs from such utility in a civil action in any court of competent jurisdiction, unless such State regulatory authority (or the Commission, as the case may be) has adopted a reasonable procedure pursuant to which such authority—

(i) determines the amount of such fees and costs, and

(ii) includes an award of such fees and costs in its order in the proceeding.

(B) For purposes of subparagraph (A), an electric consumer shall be deemed to have prevailed in a proceeding if such consumer's participation in the proceeding substantially contributed to disapproval or modification of a rate proposed by an electric utility on grounds that the rate did not comply with any requirement of subchapter B or C.

(C) A State regulatory authority (or the Commission, as the case may be) may prescribe reasonable requirements that persons with the same or similar interests have a common legal representative in the proceeding, as a condition of receiving fees and costs under subparagraph (A).

(2) Paragraph (1) shall not apply to proceedings before a State regulatory authority if the State or such authority has provided an alternative means for providing adequate compensation to persons—

(A) who have, or represent, an interest (i) which would not otherwise be adequately represented in ratemaking proceedings, and (ii) representation of which is necessary for a fair determination in the proceeding, and

(B) who are unable effectively to participate in such proceeding because such persons cannot afford to pay reasonable attorneys' fees, expert witness' fees, and other reasonable costs of preparing for, and participating in, such proceeding (including fees and costs of obtaining judicial review of such proceeding).

(c) TRANSCRIPTS.—Each electric utility shall make available at cost of reproduction to parties in a proceeding before a State regulatory authority transcripts of such proceeding.

Subchapter F—Enforcement and Review

SEC. 536. PROHIBITIONS.

(a) STATE REGULATED UTILITIES.—Except for an increase referred to in section 514(a)(2) or (3), no State-regulated electric utility may increase any rate at which it sells electric energy unless such utility has been determined to be in compliance with the requirements of subchapters B and C. Such determination shall be made as provided in sections 531 and 532 at the proceeding at which such rate is fixed, modified, or approved by the State regulatory authority (or by the Commission in any case in which the State has not assumed responsibility as provided in section 531).

(b) NONREGULATED UTILITIES.—(1) Except for an increase referred to in section 514(a)(2) or (3), no nonregulated public system (as defined in section 502(5)(C)) may increase any rate at which it sells electric energy unless such system has determined that it meets the requirements of subchapter D.

(2) No nonregulated cooperative (as defined in section 502(5)(D)) may violate the requirements of this chapter made applicable under subchapter D.

(c) CONTRACTS BY FEDERAL AGENCIES.—No contract between a Federal agency and an electric utility for sale of electric energy by such Federal agency for purposes of resale may contain any provision inconsistent with the requirements of this chapter. Any such inconsistent provision shall be null and void. This subsection shall apply notwithstanding section 505(a)(2) (relating to volume of electric energy sold).

SEC. 537. ENFORCEMENT.

(a) INJUNCTIONS.—Upon petition of any Federal agency, or State agency referred to in section 535(a), the appropriate United States district court shall have jurisdiction to enjoin an electric utility from violating any prohibition contained in section 536. Each electric consumer of an electric utility (1) who may not maintain an action against such utility in a State court or (2) who is a consumer of a nonregulated public system which is a Federal agency may petition the United States district court to enjoin such utility from violating any such prohibition.

(b) NONREGULATED COOPERATIVES.—Any person who is a member of a nonregulated cooperative may bring a civil action in the appropriate United States district court against such cooperative for purposes of obtaining enforcement of the requirements of the prohibition contained in section 536(b)(2) if such action may not be brought by such person against such cooperative in a State or local court.

SEC. 538. JUDICIAL REVIEW.

(a) COMMISSION OR STATE AGENCIES.—The Commission or any State agency referred to in section 535(a) may obtain review of any determination referred to in section 536 made by a State regulatory authority or a nonregulated public system by commencing a civil action in the United States court of appeals for any circuit in which such authority or system is located. Such court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code.

(b) UTILITIES AND CONSUMERS.—(1) Any electric utility with respect to which a determination referred to in section 536 has been made or any electric consumer of such a utility may obtain review of such determination by commencing a civil action in the United States court of appeals for any circuit in which such authority or system is located if such determination was made—

(A) by a nonregulated public system which is a Federal agency,

(B) by a State regulatory authority or nonregulated public system whose determination is not reviewable by a State court of competent jurisdiction, or

(C) by a State regulatory authority or nonregulated public system whose determination is reviewable by such a court in a review proceeding in which—

(i) the Commission may not intervene as a matter of right, or

(ii) the court does not treat any finding under section 531(a) as prima facie evidence of noncompliance with the provisions of this chapter.

(2) Any Federal agency which is an electric consumer of an electric utility with respect to which a determination referred to in section 536 has been made may obtain a review of such determination by commencing a civil action in the United States Court of Appeals for any circuit in which such authority or system is located. Such court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code.

(3) Except as provided in subsection (c), nothing in this subsection or section 537 shall be construed to prohibit any electric consumer or electric utility from obtaining review in any State court of competent jurisdiction in the case of any determination referred to in section 536 made by a State regulatory authority or nonregulated public system which is a State agency, or to affect the jurisdiction of the United States Supreme Court to review any decision of a State court on writ of certiorari in accordance with section 1257 of title 28, United States Code.

(c) REMOVAL.—In the case of any action brought by the Commission or a State agency under subsection (a) or by a Federal agency under subsection (b)(2), the court may order that any action respecting the same matter brought by any electric consumer or electric utility in a State court shall be removed to, and consolidated with, the action brought under subsection (a) or (b)(2) if such removal and consolidation will result in a more expeditious determination of such actions.

(b) FEDERAL COURTS.—Nothwithstanding any other provision of law, no opportunity for review of a determination of compliance with the provisions of this chapter in the courts of the United States shall be available except as provided in this chapter.

Chapter 3—IMPROVING EFFICIENCY OF, AND PRESERVING COMPETITION IN, GENERATION AND TRANSMISSION OF ELECTRICITY

SEC. 541. INTERCONNECTION, POOLING, WHEELING, AND CENTRAL DISPATCH.

(a) REGIONAL DISTRICTS.—Section 202(a) of the Federal Power Act is amended:

(1) by striking the word "voluntary" from the first sentence; and

(2) by inserting "for the purpose of assuring the goals set forth in this part and to assure maximum competitive opportunities for the purchase and sale of electric energy at wholesale at the lowest possible cost" immediately after "districts" in the third sentence.

(b) Section 202(b) of such Act is amended to read as follows:

"(b)(1) Whenever the Commission, on its own motion or upon application of any State commission or any electric utility or the owner or operator of any qualifying cogeneration facility (as defined in section 546(b)(2) of the National Energy Act), and after public notice and notice to each State commission and electric utility directly affected and after evidentiary hearing, finds it necessary or appropriate in the public interest, it shall by order direct an electric utility to—

"(A) establish physical connection of its transmission facilities with the facilities of any other electric utility or qualify cogenerator, or

"(B)(i) sell or deliver energy to or exchange energy with,

"(ii) provide pooling for,

"(iii) provide wheeling, or otherwise transmit energy for, or

"(iv) otherwise coordinate with,

such utility or cogenerator. For purposes of this paragraph, the term 'wheeling' means transmission of electric energy among electric utilities and qualifying cogeneration facility (as defined in section 546(b)(2) of the National Energy Act), but such term does not include the transmission of electric energy to an ultimate consumer (other than to a qualifying cogenerator for purposes of providing backup power, as determined by the Commission).

"(2) No order may be issued under subparagraph (A) of paragraph (1) unless the Commission determines that—

"(A) such order will benefit consumers of an electric utility by reducing costs of supplying electric energy to such consumers or will otherwise provide public benefits in assuring that supplies of electric energy are generally made available with greater economy and with regard to the proper utilization and conservation of natural resources, and

"(B) no utility subject to such order or consumers of such utility will suffer economic hardship thereby.

The Commission may not issue an order under paragraph (1) upon application of any electric utility or the owner or operator of any qualifying cogeneration facility to direct an electric utility to establish physical connection or to provide wheeling services unless the electric utility or qualifying cogeneration facility which makes an application for such connection or wheeling demonstrates to the Commission that such electric utility or owner or operator of any qulafiying cogeneration facility is ready, willing, and able to provide reimbursement reasonably due for the cost (including capital and operating costs) incurred by the electric utility of owner which is requested to make physical connection or to wheel electric energy.

"(3) Whenever the Commission, on its own motion or upon application of any electric utility within a regional district established under this Act, and after public notice and notice to each State commission and electric utility directly affected and after evidentiary hearing, finds such action necessary or appropriate in the public interest it may by order direct any electric utility owning or operating any bulk power transmission facility located (in whole or in part) within such district to increase the transmission capacity of such facility.

"(4)(A) With respect to each regional district established under this Act in which a centrally dispatched power pool is not operating, upon its own motion or upon application the Commission shall commence a proceeding to determine whether requiring operation of such a power pool in such area is technologically and economically feasible and in the public interest. To the extent that the Commission determines, after public notice and notice to each State commission and after evidentiary hearing, that operation of such a pool is technologically and economically feasible and in the public interest, the Commission shall by order require operation of such a pool.

"(B) For purposes of subparagraph (A), the term 'centrally dispatched power pool' means—

"(i) a power pool which utilizes a central dispatch system for all generation facilities (other than cogeneration facilities which are not required to be included as provided under regulations under section 546(a)(2) of the National Energy Act) in a regional district and in which, to the extent technologically and economically feasible as determined by the Commission, each electric utility which owns or operates a bulk power generation facility in such region participates, or

"(ii) an exchange or other system which the Commission determines is more effective or substantially as effective as a power pool referred to in clause (i) in assuring the most economical utilization of generation and transmission facilities in such area.

"(C) For purposes of subparagraph (B), the term 'central dispatch system' means a centrally coordinated system for controlling the generation and transmission of electric power in an area which system is designed to obtain the most economical utilization of generation and transmission facilities in such area.

"(5) The Commission shall prescribe the terms and conditions of the arrangement to be made between the persons affected by any order under this subsection, including the apportionment of cost between them and the compensation or reimbursement reasonably due to any of them if the parties fail to agree to such terms and conditions.

"(6) The Commission shall have no authority under this subsection to compel the enlargement of generating facilities for purposes of this subsection, nor to compel an electric utility to take any action under paragraph (1) if the Commission determines that to do so would impair the ability of the electric utility to render adequate service to its customers.".

(c) APPLICATION OF FEDERAL POWER ACT.—(1) The first sentence of section 201(b) of such Act is amended by inserting "(other than sections 202(b), relating to interconnection, pooling, wheeling, and central dispatch, and 205(k), relating to unfair competition)" after "Part" and by adding the following at the end thereof: "The provisions of sections 202(b) and 205(k) shall apply to the electric utilities and other persons specified therein.".

(2) Section 201(e) of such Act is amended by inserting "(other than facilities subject to such jurisdiction solely by reason of section 202(b) and 205(k))" after "Part.".

SEC. 542. CONTINUANCE OF SERVICE.

(a) CONTINUANCE OF SERVICE.—Section 202 of the Federal Power Act is amended by inserting the following new subsection at the end thereof:

"(g) In order to insure continuity of service to retail and wholesale customers, the Commission—

"(1) shall require, by rule, each public utility to report promptly any anticipated shortage of electric energy which would affect such utility's capability of serving its wholesale customers,

"(2) shall require, by order, such utility to accommodate such shortage in a manner which affects the retail customers of the utility and the retail customers of such utility's wholesale customers in a nondiscriminatory manner, and which gives due consideration to public health and safety,

"(3) shall require, by order, such connection of facilities and such generation, sale, delivery, exchange, or transmission of electric energy, pooling, wheeling, or other transmission service or other coordination as in its judgment will best serve the public interest, and

"(4) shall, by rule, require each public utility to submit contingency plans respecting electricity supply shortages.

No order may be issued under this paragraph, except after evidentiary hearing.".

(b) "CONFORMING AMENDMENT.—The last sentence of section 202(c) of such Act is amended by striking out "affected by such order" and inserting in lieu thereof "affected by any order under this subsection or subsection (g)".

SEC. 543. CONSIDERATION OF PROPOSED RATE INCREASE.

(a) NEW SCHEDULES.—(1) Section 205(e) of the Federal Power Act is amended by striking out "(e) whenever" and inserting in lieu thereof the following: "(e) Except as otherwise provided in subsection (f) in the case of proposed rate increases, whenever".

(2) Section 205 is amended by adding the following new subsection at the end thereof:

"(f)(1) Whenever any such new schedule contains a change in any rate, charge, classification, or service, or any rule, regulation, or contract relating thereto, which results in any increase in the charges to any customer for electric energy, 30 days before filing such schedule, the public utility shall provide notice of such schedule to the Commission and to each customer which purchases electric energy for resale from the public utility.

"(2) The Commission may, upon its own initiative, and shall, upon complaint, enter into an evidentiary hearing concerning the lawfulness of such schedule and shall suspend the operation of such schedule and defer the use of such rate, charge, classification, or service until a lawful schedule is established by final order of the Commission based upon the record of such evidentiary hearing. The last sentence of subsection (e) shall apply to any hearing referred to in this subsection.

"(3) The Commission upon its own initiative or upon application of any person, shall determine whether or not to require such public utility to furnish additional relevant data or information to support any such new schedule. In any case in which the Commission determines that a decision with respect to the application of such utility requires additional relevant data or information, except for a period determined by the Commission (not in excess of 14 days, or 21 days in case of the first determination), the time after such determination and before such utility furnishes such additional data or information shall be added to the 10-month and 12-month periods referred to in this subsection and subsection (d)(2).

"(4) The Commission shall render a decision with respect to such new schedule within 10 months of the original filing of such schedule. If the Commission fails to issue a final order within such period, it shall immediately notify the President of the Senate, the Speaker of the House of Representatives, and the Chairmen of the appropriate Committees of the House and Senate of such failure, and shall cease to have authority under this subsection with respect to such schedule.

"(5) In any case in which the Commission has not completed the evidentiary hearing within the 10-month period, the Chairman of the Commission shall continue and complete such hearing concerning the lawfulness of such schedule. In any case in which the Commission has not issued a final order within such 10-month period, the Chairman shall

issue a final order thereon within 12 months from the original filing of such new schedule. The same provisions of law as apply to any hearing conducted or final order issued by the Commission under this subsection shall apply to any hearing conducted or final order issued by the Chairman under this subsection and the Chairman shall have the same authority as the Commission with respect to any such hearing or order. An order of the Chairman under this subsection shall be based upon the record of the hearing conducted under this subsection. A final order of the Chairman with respect to such schedule shall be treated for purposes of this Act as a final order of the Commission.

"(6) No schedule to which this subsection applies may take effect unless established by a final order under this subsection.

"(7) Notwithstanding section 3147, for purposes of this subsection, the term 'person' includes any State or political subdivision thereof or any agency or instrumentality thereof.

"(g) For purposes of this section, the term 'lawful', with respect to a new schedule filed by a public utility under subsection (d), means just, reasonable, and otherwise lawful. Such schedule shall not be considered lawful if differences between such utility's wholesale rates under such schedule and its retail rates are unreasonable or anticompetitive.".

(b) CERTAIN NEW SCHEDULES PROHIBITED.—Section 205(d) of such Act is amended by inserting "(1)" after "(d)" and by adding at the end thereof the following:

"(2) A public utility may not file a new schedule which seeks to increase a rate to any customer for electric energy or power, which rate is the subject of a prior schedule which is pending before the Commission but which has not taken final effect, or any amendment to such pending schedule (other than a technical or clerical amendment), unless such prior schedule was filed 10 months or more before the filing of such new schedule.".

(c) EFFECTIVE DATE.—The amendments made by this section shall apply only with respect to schedules filed after the date of the enactment of this Act under section 205(d) of the Federal Power Act.

SEC. 544. AUTOMATIC ADJUSTMENT CLAUSES.

(a) AUTOMATIC ADJUSTMENT CLAUSES.—Section 205 of the Federal Power Act is amended by adding the following at the end thereof:

"(h)(1) Except as otherwise provided in paragraph (2) of this subsection, the Commission may not allow to go into effect any increase in any rate of any public utility unless—

"(A) opportunity for consideration of such increase in an evidentiary hearing is afforded prior to the date such increase takes effect,

"(B) such rate increase is pursuant to an automatic adjustment clause which the Commission has determined, after evidentiary hearing, effectively provides incentives for efficient use of resources (including, in the case of fuel, incentives for economical purchase and use of fuel) and is necessary to enable such utility to meet its immediate short-term financial obligations, or

"(C) such increase reflects an increase in the cost of electric power purchased from a centrally dispatched power pool (as defined in section 202(b)(4)(B)).

"(2) The prohibition contained in paragraph (1) shall not apply to interim rates which take effect under subsection (e)(1)(B).

"(3)(A) If a rate schedule of a public utility contains an automatic adjustment clause, the Commission shall review such schedule not less often than every two years to insure the maximum economies in those operations and purchases which affect such rates. No such automatic adjustment clause may be effective for any period in excess of 4 years after such clause has been reviewed by the Commission in an evidentiary hearing unless such clause is again reviewed in such an evidentiary hearing before the expiration of such period and the Commission makes the finding required under paragraph (1)(B).

"(B) In making a review under subparagraph (A), the Commission shall examine and, if appropriate, cause to be audited the practices of such public utility subject to an automatic adjustment clause. Each public utility shall provide such reports on such practices as may be required by the Commission, which shall be made available to the public, and shall contain such information as the Commission shall require to implement the purposes of this subsection (including a disclosure of any ownership, corporate relationships, and other legal or financial relationships between the utility and the seller of such fuel or other items).

"(C) Any purchaser of electric energy for resale which purchases electric energy subject to such adjustment clause may examine the records of the public utility pertaining thereto from whch it purchases electric energy to insure compliance with applicable schedules and Commission rules.

"(i) On its own motion or upon complaint, the Commission shall, after affording an opportunity for evidentiary hearing, issue an order directing a public utility to cease or modify any practice which does not result in the most economical purchase and use of fuel or other items.

"(j) As used in this section the term 'automatic adjustment clause' means a provision of a rate schedule which provides, without prior evidentiary hearing, for increases and decreases in rates reflecting increases and decreases in the amount of operating expenses (not including any expense attributable to the imposition of any tax under section 4991 of the Internal Revenue Code of 1954).".

(b) EFFECTIVE DATE.—The amendments made by this section shall take effect on the date one year after the date of enactment of this Act with respect to public utilities which file a schedule containing any rate increase after the expiration of such one year period.

SEC. 545. ELECTRIC UTILITY RELIABILITY.

(a) RELIABILITY RULES.—(1) Not later than 2 years after the date of enactment of this Act, after consultation with representatives of State regulatory authorities, and after a reasonable opportunity for interested persons to submit oral and written data, views, and arguments, the Commission shall prescribe rules respecting electric utility reliability.

(2) The Commission shall base such rules on the availability of electric energy to a consumer at the point of use. The Commission shall, in prescribing such rules require a level of reliability—

(A) sufficient to meet the demonstrated public need; and

(B) not in excess of that which is cost-effective (except where necessary for purposes of subparagraph (A)),

as determined by the Commission.

(3) The Commission, in prescribing such rules, shall—

(A) give consideration to the technological feasibility, energy conservation, and environmental impact of such standards;

(B) minimize capital costs and operational and maintenance expenses related to such standards;

(C) recognize different requirements of reliability of different consumers due to use, need, alternative sources, location, and other matters;

(D) provide that the relationships between the reliability of generating, transmission, and distribution equipment and operating and maintenance procedures are consistent with the reliability of the entire electric system; and

(E) consider the availability of emergency electric energy from nonutility sources.

(4) Such rules may require minimum standards of quality in the purchase, construction, operation, and maintenance of bulk power facilities.

(5) Not less often than every 5 years, the Commission shall review and, after consultation with representatives of State regulatory authorities and after a reasonable opportunity for the presentation of oral and written data, views, and arguments, make appropriate amendments in such rules.

(b) IMPLEMENTATION RULES.—The Commission, after consultation with representatives of State regulatory authorities, and after a reasonable opportunity for interested persons to submit oral as well as written data, views, and arguments, shall prescribe such rules (and may issue orders and take such other action) as may be necessary or appropriate to assure implementation of subsection (a). Such rules (and other actions) under this subsection may include—

(1) sampling, testing, and other quality control requirements applicable to facilities (or components thereof) to which rules under subsection (a) apply, and

(2) provisions, relating to performance warranties and measure of damages, which shall be included by electric utilities in contracts between such utilities and their suppliers.

(c) ENFORCEMENT.—For the purpose of enforcement, a rule, order, or other action under this section shall be treated as a rule or order under the Federal Power Act.

(d) DELEGATION TO STATES.—The Commission may authorize (on such terms and conditions as it determines appropriate) any State regulatory authority to exercise any part of the Commission's authority under subsection (b) if the Commission determines that such State authority has the capability to effectively exercise such authority within its jurisdiction.

SEC. 546. COGENERATION.

(a) COGENERATION RULES.—Not later than 1 year after the date of enactment of this Act, the Commission shall, after consultation with representatives of State regulatory authorities, and after a reasonable opportunity for other interested persons to submit oral as well as written data, views, and arguments, prescribe rules requiring electric utilities to offer to sell electric energy to the owner or operator of a qualifying cogeneration facility and to offer to purchase electric energy from such owner or operator. Such rules shall insure that rates for such sales and purchases are just, reasonable, in the public interest, and do not discriminate against cogeneration. Such rules shall include—

(1) rules for allocating costs of a qualifying cogeneration facility between those incurred in generating electric energy and those incurred in generating other forms of energy;

(2) rules respecting the interconnection of a qualifying cogeneration facility to the distribution system of any electric utility or to a centrally dispatched power pool as defined in section 202(b)(4)(B) of the Federal Power Act;

(3) rules respecting the responsibility of the owner or operator of a qualifying cogeneration facility during periods of electric shortage;

(4) rules respecting the minimum reliability standards for the qualifying cogeneration facility; and

(5) rules which specify the reliability of emergency electric energy service available to the qualifying cogeneration facilities.

Such rules may not (A) require an electric utility to purchase electric energy from a qualifying cogeneration facility during any period at a rate which exceeds the highest cost at which such utility generates electric energy, or purchases electric energy from any other source, during such period, or (B) au-

thorize such cogeneration facility to make any sale for purposes other than resale.

(b) DEFINITIONS.—For purposes of this section:

(1) The term "cogeneration facility" means a facility which produces—

(A) electric energy and

(B) other forms of useful energy (such as steam or heat) which is, or will be, used for industrial, commercial, or space heating purposes.

(2) The term "qualifying cogeneration facility" means a cogeneration facility which the Commission determines—

(A) meets such requirements respecting minimum size and fuel efficiency as the Commission, by rule, prescribes; and

(B) in the case of a cogeneration facility which is not owned by a utility and which is, or will be, directly connected to an electric utility, the owner or operator of such facility has offered such utility an opportunity to construct and operate such facility on terms acceptable to such owner or operator.

(c) ENFORCEMENT.—For the purposes of enforcement, a rule under this section shall be treated as a rule under the Federal Power Act.

(d) DELEGATION TO STATES.—The Commission may authorize (on such terms and conditions as it determines appropriate) any State regulatory authority to exercise any part of the Commission's authority under this section if the Commission determines that such State regulatory authority has the capability of effectively exercising such authority within its jurisdiction.

(e) EXEMPTION FROM FEDERAL POWER ACT.—Not later than 1 year after the date of enactment of this Act, the Commission shall, after consultation with representatives of State regulatory authorities, prescribe rules exempting qualifying cogenerators in whole or part from the Federal Power Act, the Public Utility Holding Company Act, and from State laws and regulations respecting electric utility regulation, if the Commission determines such exemption is necessary to carry out the purposes of this part. No such exemption shall be modified, except for good cause shown, with respect to any such cogenerator after such exemption takes effect with respect to such cogenerator.

SEC. 547. INTERLOCKING DIRECTORATES.

(a) PROHIBITIONS.—Section 305(b) of the Federal Power Act is amended by—

(1) striking out "After six months from the date on which this Part takes effect," and inserting in lieu thereof: "(1) Except as provided in paragraph (2),";

(2) striking out "or director of any bank, trust company, banking association, or firm that is authorized by law to underwrite or participate in the marketing of securities of a public utility," and inserting in lieu thereof ", director, partner, appointee, or representative of—

"(A) any bank, trust company, banking association, or firm that is authorized by law to underwrite or participate in the marketing of securities of a public utility, or any investment bank, bank holding company, mutual savings bank, savings and loan association, foreign bank or subsidiary thereof doing business in the United States, insurance company, or any other organization primarily engaged in the business of providing financial services or credit,";

(3) striking out "or officer or director of any company supplying electrical equipment to such public utility," and inserting in lieu thereof:

"(B) any company, firm, or organization which produces or supplies electrical equipment or coal, natural gas, oil, nuclear material or other fuel, for the use of public utilities;

"(C) a company, firm, or organization which, during any of the three immediately preceding calendar years, was one of the 20 largest purchasers of electric energy sold by such public utility (or by any public utility which is part of the same holding company system), or

"(D) any company, firm, or organization which is controlled by any company, firm or organization referred to above;"; and

(4) striking out the last sentence thereof and substituting the following:

"(2) Paragraph (1) shall not prohibit any person from holding any position with more than one company which is a part of a holding company system, any company of which is a registered holding company.

"(3) No authorization of the Commission under paragraph (1) of this subsection may be used as a defense to any action brought under section 8 of the Clayton Act.

"(4) For purposes of this subsection—

"(A) the term 'public utility' includes any company which is a part of a holding company system which includes a registered holding company, unless no company in such system is an electric utility, and

"(B) the terms 'holding company', 'registered holding company', and 'holding company system' have the same meaning as when used in the Public Utility Holding Company Act of 1935.".

(b) EFFECTIVE DATE.—The amendments made by this section shall take effect on the date 1 year after the date of the enactment of this Act except that no person to whom such amendments apply and who was not covered by section 305 as in effect immediately before the date of the enactment of this Act shall be treated as holding a position in violation of section 305(b) during the 6-month period after the effective date of such amendments if, during such period, he applies to the Commission for an authorization under paragraph (1) of such section 305(b) during such 6-month period.

SEC. 548. PRESERVATION OF COMPETITION.

(a) GENERAL AUTHORITY OF COMMISSION.—Section 205 of the Federal Power Act (as amended by section 544 of this Act) is further amended by adding at the end thereof the following:

"(k) Whenever the Commission determines on its own initiative or upon complaint, after affording an opportunity for evidentiary hearing, that an electric utility is engaging in any unfair method of competition, or that an electric utility has filed any contract, agreement, tariff, or schedule which would result in an unfair method of competition, it shall issue an order prohibiting any such unfair method of competition, or reject such a filing.".

(b) NEW BULK POWER FACILITIES.—Section 202 of such Act is amended by adding at the end thereof the following new subsection:

"(h)(1) If any bulk power facility is proposed to be constructed in any regional district, any electric utility may apply to the Commission for an order under paragraph (3) if such utility is engaged in the generation, transmission, or sale of electric energy within the regional district in which such facility is proposed to be constructed. This subsection shall not apply to a utilization or production facility required to be licensed under section 103 of the Atomic Energy Act of 1954.

"(2) Whenever an application is received under paragraph (1), it shall be transmitted to the Attorney General, who shall, within a reasonable period of time (but not to exceed 60 days), advise the Commission as to whether (absent an order under this subsection) the ownership or use of such facility may create or maintain a situation inconsistent with the antitrust laws (as defined in section 549 of the National Energy Act).

"(3) If the Commission, after giving consideration to the advice of the Attorney General and after public notice and an opportunity for the submission of written data, views, and comments, determines that such ownership or use is likely to create or maintain a situation inconsistent with such laws, the Commission shall issue an order conditioning the construction of such facility on compliance with such requiremnts as it determines appropriate to prevent or remedy such a situation (including providing for joint ownership of such facility). The Attorney General may participate as a party to any proceeding concerning such application.

"(4) The Commission may prescribe such rules as it determines appropriate to carry out this subsection.".

SEC. 549. APPLICABILITY OF ANTITRUST LAWS.

(a) APPLICATION.—Nothing contained in this chapter or the amendments made thereby shall—

(1) be deemed to convey to any person immunity from civil or criminal liability, or to create defenses to actions, under the antitrust laws, or

(2) restrict any authority the Commission may have under the Federal Power Act to regulate unfair methods of competition.

(b) DEFINITION.—For purposes of this section, the term "antitrust laws" includes—

(1) the Sherman Act (15 U.S.C. 1, and following);

(2) the Clayton Act (15 U.S.C. 12, and following);

(3) the Federal Trade Commission Act (15 U.S.C. 41, and following);

(4) the Wilson Tariff Act (15 U.S.C. 8 and 9); and

(5) the Act of June 19, 1936, chapter 592 (15 U.S.C. 13, 13a, 13b, and 21A).

Chapter 4—CONSUMER REPRESENTATION AND ASSISTANCE TO STATE AGENCIES

SEC. 551. FINANCIAL ASSISTANCE FOR STATE AGENCIES AND FOR CONSUMER REPRESENTATION.

(a) GRANTS.—Title II of the Energy Conservation and Production Act is amended by striking out section 203 and inserting in lieu thereof the following:

"ESTABLISHMENT OF PROGRAM

"SEC. 203. (a) The Administrator is authorized, in accordance with the provisions of this title, to make grants to State utility regulatory commissions—

"(1) for purposes of section 203A (relating to staffing);

"(2) for purposes of section 205(d) (relating to participation in proceedings); and

"(3) for purposes of section 204(1)(B) (relating to innovative rate structures).

"(b) No grant shall be made under this title unless an application therefor has been submitted to the Administrator in such form and manner as the Administrator may require. The Administrator may not approve an application of a State agency unless such authority assures the Administrator that funds made available under this title will be in addition to, and not in substitution for, funds made available to such State agency from other sources.

"(c) No grant may be made under this title after September 30, 1980.

"GRANTS TO IMPROVE STAFFING

"SEC. 203A. The Administrator may make grants to assist any State utility regulatory commission in improving its staff capacity to effectively regulate electric utilities. No grant may be made under this section unless the Administrator determines that such State utility regulatory commission—

"(1) requires additional staff in order to effectively carry out its regulatory authority, and

"(2) agrees to institute a system for assessing and collecting fees in a just and equitable manner from every electric utility subject to its jurisdiction, or otherwise secures the funds, to maintain the additional staff made possible under such grant following expiration of the grant.".

(b) FUNDING FOR INNOVATIVE RATE STRUCTURES.—Section 204(1)(B) of such Act is amended by inserting the following before the comma at the end thereof: "which encourage the development and operation of innovative rate structures which encourage

conservation, are equitable and nondiscriminatory among the various classes of electric consumers, promote the efficient use of electric energy, and comply with the requirements of chapter 2 of part V of the National Energy Act".

(c) PARTICIPATION IN PROCEEDINGS.—(1) Section 204(2) of such Act is amended by inserting "or nonregulated public system (as defined in section 502 of the National Energy Act)" before "which relates".

(2) Section 205 of such Act is amended by adding the following new subsection at the end thereof:

"(d) The Administrator may make grants to State utility regulatory authorities to provide for the establishment and operation of programs which meet the requirements of 537(b)(2) of the National Energy Act (respecting participation in proceedings) and which meet such other requirements as the Administrator shall prescribe by rule.".

(d) AUTHORIZATIONS.—Section 207 of such Act is amended to read as follows:

"AUTHORIZATION OF APPROPRIATIONS

"SEC. 207. There are authorized to be appropriated—

"(1) not to exceed $40,000,000 in any fiscal year for grants under section 203A (relating to staffing);

"(2) not to exceed $5,000,000 in any fiscal year for grants under section 205(d) (relating to participation in proceedings); and

"(3) not to exceed $5,000,000 in any fiscal year for grants under section 204(1)(B) (relating to innovative rate structures).".

(e) ALLOTMENTS.—Such title II of such Act is amended by adding the following new section at the end thereof:

"ALLOTMENT OF SUMS

"SEC. 208. (a) In each fiscal year the Administrator shall allot the sums appropriated under this title equitably among the States on the basis of population, except that—

"(1) no State which qualifies for a grant under section 203A (relating to staffing) or section 204(1)(B) (relating to innovative rate structures) may receive less than one-half percent or more than 5 percent of amounts appropriated for grants under section 203A (relating to staffing) or section 204(1)(B) (relating to innovative rate structures), respectively, for any fiscal year; and

"(2) no State which qualifies for a grant under section 205(d) (relating to participation in proceedings) may receive less than 1 percent or more than 3 percent of amounts appropriated for grants under such section for any fiscal year.

"(b) The Administrator may withhold any part or all of any grant under this title if such Administrator finds that the State regulatory authority or other person is not carrying out the program as described in the application or has violated assurances contained in the application.".

(f) CONFORMING AMENDMENTS.—The table of contents for title II of such Act is amended by striking out the item relating to section 203 and inserting in lieu thereof the following:

"Sec. 203. Establishment of program.
"Sec. 203A. Grants to improve staffing."

S53. 552. REPRESENTATION OF CONSUMER INTERESTS BEFORE FEDERAL POWER COMMISSION.

The Federal Power Act is amended by redesignating sections 319 and 320 as 320 and 321, respectively, and by inserting the following new section after section 318:

"OFFICE OF PUBLIC COUNSEL

"SEC. 319. (a)(1) There shall be established, within sixty days after the date of enactment of this section, an independent office in the Commission to be known as the Office of Public Counsel (hereinafter in this sectio referred to as the 'Office').

"(2)(A) The Office shall be administered by a Director. The Director shall be appointed by the President, by and with the advice and consent of the Senate.

"(B) The term of office of the Director shall be 4 years. The Director shall be responsible for the discharge of the functions and duties of the Office. He shall be appointed and compensated (without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, classification, and General Schedule pay rates) at a rate not in excess of the maximum rate prescribed for GS–18 of the General Schedule under section 5332 of title 5 of the United States Code.

"(3) The Director may appoint, fix the compensation, and assign the duties of employees of such Office, and he may procure temporary and intermittent services to the same extent as is authorized under section 3109 of title 5, United States Code. Each bureau, office, or other entity of the Commission and each department, agency, and instrumentality of the executive branch of the Federal Government and each independent regulatory agency of the United States shall provide the Office with such information and data as it requests. The Director is authorized to enter into, without regard to section 3709 of the Revised Statutes of the United States (41 U.S.C. 5), such contracts, leases, cooperative agreements, or other transactions as may be necessary in the conduct of his functions and duties.

"(4) In addition to any other duties and responsibilities prescribed by law, the Office—

"(A) shall have standing to become a party to any proceeding, formal or informal, which is before the Commission;

"(B) may petition the Commission for the initiation of proceedings on any matter within the jurisdiction of the Commission;

"(C) may seek judicial review of any Commission action, to the same extent such review is authorized by law for any person;

"(D) shall solicit, study, evaluate, and present before the Commission in any proceeding, formal or informal, the views of those States and political subdivisions thereof and consumers of electric energy affected by proceedings before the Commission, whenever the Director determines, for whatever reason (such as size or location), that such State or political subdivision or consumer might not otherwise be adequately represented before the Commission in the course of such proceedings; and

"(E) shall evaluate and represent, before the Commission and before other Federal agencies (when their policies and activities significantly affect public utility matters subject to the jurisdiction of the Commission) and by other means assist the representation of the interest of States and political subdivisions thereof and consumers of electric energy in safe, efficient, reliable, and economical electric utility services.

"(5) The budget requests and budget estimates of the Office of Public Counsel shall be submitted concurrently to the Congress and to the President.

"(6) There are authorized to be appropriated to the Office of Public Counsel for the purpose of carrying out the provisions of this subsection not to exceed $500,000 for the fiscal year 1978, not to exceed $2,000,000 for the fiscal year 1979, not to exceed $2,200,000 for the fiscal year 1980, and not to exceed $2,400,000 for the fiscal year 1981.

"(b)(1) The Director of the Office may, pursuant to rules prescribed by him, provide compensation for reasonable attorneys fees, expert witness fees, and other costs of participating in any proceeding before the Commission to any person—

"(A) who has, or represents, an interest (i) which would not otherwise be adequately represented in such proceeding, and (ii) representation of which is necessary for a fair determination of the proceeding taken as a whole, and

"(B) who is unable effectively to participate in such proceeding because such person cannot afford to pay costs of preparing or making oral presentations, conducting cross-examination, and making rebuttal submissions in such proceeding.

"(2) The aggregate amount of compensation paid to all persons in any fiscal year under this subsection may not exceed $2,000,000.".

SEC. 553. RESPONSIBILITIES OF ADMINISTRATOR.

The Administrator, for the purpose of carrying out his functions under title II of the Energy Conservation and Production Act, shall—

(1) publish a list identifying the State regulatory authorities and nonregulated utilities to which the provisions of chapter 2 of part V are applicable;

(2) inform, on a continuing basis, the State regulatory authorities and nonregulated utilities identified pursuant to paragraph (1) with respect to—

(A) the identification (for purposes of section 521 of the National Energy Act) and development of load management techniques, including the results of experiments in load management;

(B) developments and innovations in electric utility ratemaking throughout the United States, including the results of experiments in rate structure and rate reform;

(C) methods for determining cost of service under section 532; and

(D) any other data or information which the Administrator determines to be of assistance in carrying out the provisions of chapter 2; and

(3) State agency having responsibility with respect to planning and siting of bulk power facilities such technical assistance (including assistance in developing demand forecasting methods and in using techniques for choosing the desired degree of reliability) as he determines is appropriate; and

(4) provide on a formal or informal basis such appropriate technical assistance as is requested by a State regulatory authority, electric utility, or nonregulated utility.

Chapter 5—NATURAL GAS UTILITIES

Subchapter A—General Provisions

SEC. 561. FINDINGS.

The Congress finds that improvements in gas utility rate design and other improvements in the policies applicable to such utilities have great potential for reducing the cost of gas utility services to consumers and current and projected shortages of capital, and for encouraging energy conservation.

SEC. 562. DEFINITIONS.

As used in this chapter:

(1) The term "gas consumer" means any person, State agency, or Federal agency to which natural gas is sold other than for purposes of resale.

(2) The term "gas utility" means any person, Federal agency, or State agency which sells natural gas.

(3) The term "natural gas" shall have the same meaning as such term has under section 2 of the Natural Gas Act.

(4) The terms "State-regulated gas utility", "nonregulated utility", "evidentiary hearing" and "evidentiary proceeding", "nonregulated public system", "nonregulated cooperative", "rate", "rate schedule", "sale", and "State regulatory authority" shall have the same meaning as such terms have under section 502; except that the term "gas" shall be substituted for "electric" and "electric energy" wherever those terms appear in section 502.

Subchapter B—Requirements for Gas Utilities

SEC. 566: COVERAGE.

The requirements of this subchapter (other than section 567) apply only to sales of natural gas by a gas utility for purposes other

than resale in a calendar year beginning two or more years after the date of the enactment of this Act; except that such requirements of section 569 shall not apply to a gas utility in any calendar year unless such sales by such utility exceeded 10 billion cubic feet of gas during (1) the second preceding calendar year or (2) any calendar year after 1975 but before such second preceding calendar year.

SEC. 567. GAS UTILITY RATE DESIGN PROPOSALS.

(a) STUDY.—(1) The Administrator, in consultation with the Commission, with the participation of representatives of the State regulatory commissions, gas utilities, and gas consumers, shall study and report to Congress on gas utility rate design. Such study shall address the effect (both separately and in combination) of the following factors upon the items listed in paragraph (2): incremental pricing; marginal cost pricing; end user gas consumption taxes; wellhead natural gas pricing policies; demand-commodity rate design; declining block rates; interruptible service; seasonal rate differentials; and end user rate schedules.

(2) The study under paragraph (1) shall address the effect (both separately and in combination) of the factors listed in paragraph (1) upon the following:

(A) natural gas pipeline and local distribution company load factors;

(B) rates to each class of user, including residential, commercial, and industrial users;

(C) the change in total costs resulting from such designs (including capital and operating costs) to gas consumers or classes thereof;

(D) demand for, and consumption of, natural gas;

(E) end use profiles of natural gas pipelines and local distribution companies; and

(F) competition with alternative fuels.

(b) PROPOSALS.—Based upon the study prepared pursuant to subsection (a), the Administrator shall develop proposals to improve gas utility rate design and to encourage conservation of natural gas. Such proposals shall include recommendations of the Commission, if any.

(c) TRANSMISSION TO CONGRESS.—The proposals prepared under subsection (b) shall be transmitted to each House of Congress not later than twelve months after the date of enactment of this Act for review and such further action as the Congress may direct by law. Such proposals shall be accompanied by an analysis of—

(1) the projected savings (if any) in consumption of natural gas, and other energy resources,

(2) changes (if any) in the cost of natural gas to consumers, which are likely to result from the implementation nationally of each of the proposals published under this subsection, and

(3) the effects of other provisions of this Act on gas utility rate structures.

SEC. 568. MINIMUM STANDARDS RESPECTING ADVERTISING.

(a) RECOVERY OF EXPENSES.—For purposes of rate determinations, no rate of a State-regulated gas utility which makes sales of natural gas subject to this chapter shall be determined to be in compliance with this subchapter if such utility recovers through such rate from its natural gas consumers any direct or indirect expenditure by such utility—

(1) for promotional advertisting, or

(2) for political or institutional advertising.

(b) CERTAIN ADVERTISING NOT COVERED.—Subsection (a) shall not apply to—

(1) advertising which informs natural gas consumers how they can conserve natural gas,

(2) notices required by law or regulation,

(3) public information regarding service interruptions, safety measures, or emergency conditions,

(4) advertising concerning employment opportunities with such utility, and

(5) public distribution or explanation of existing or proposed rate schedules, or hearings thereon.

(c) DEFINITONS.—For purposes of this section:

(1) The term "advertising" means the commercial use, by a gas utility, of any media, including newspaper, printed matter, radio, and television in order to transmit a message to a substantial number of members of the public or to such utility's natural gas consumers.

(2) The term "institutional advertising" means any advertising which is designed to create enhance, or sustain a gas utility's public image or goodwill with the general public or such utility's natural gas consumers.

(3) The term "political advertising" means any advertising for the purpose of influencing public opinion with respect to any legislative, administrative, or electoral matter, or with respect to any controversial issue of public importance.

(4) The term "promotional advertising" means any advertising for the purpose of inducing the public to select or use the service or additional service of a gas utility or to select or install any appliance or equipment designed to use such utility's service.

SEC. 569. MINIMUM PROCEDURES FOR TERMINATION OF GAS SERVICE.

No State-regulated gas utility which makes sales of natural gas subject to this subchapter may terminate natural gas service to any consumer of natural gas based upon nonpayment for such service, except pursuant to procedures prescribed by the State regulatory authority (or the Commission, in any case in which such authority has not assumed responsibility as provided in section 583). Such procedures shall be prescribed by such authority (or Commission) not later than 30 days following assumption of enforcement responsibility and shall—

(1) provide that no natural gas service to a consumer may be terminated based upon nonpayment for such service until reasonable prior notice (including notice of rights and remedies) has been given to such consumer and such consumer has had a reasonable opportunity (at least 15 days before any such termination) to contest the proposed termination in an impartial hearing in which such consumer has had the opportunity to dispute the reasons for such termination and opportunity to establish whether or not a deferred payment plan for any amounts owed is reasonable, and

(2) provide that no natural gas service to a residential consumer may be terminated on account of non-payment for natural gas service during any period where termination of service would be especially dangerous to health, as determined by the State regulatory authority (or the Commission in any case in which such authority has not assumed responsibility as provided in section 583) if such consumer establishes in an impartial hearing that such consumer is unable to pay for such natural gas service without undue hardship.

Such procedures shall also include special provisions for elderly and handicapped consumers to assure that such consumers are made aware of, and are able to avail themselves of, their rights (as provided in this section). No natural gas service may be terminated based upon nonpayment for such service before the procedures required under this section have been completed.

SEC. 570. NONREGULATED UTILITIES.

The requirements of this subchapter (other than section 568 in the case of nonregulated cooperatives) shall apply to each nonregulated utility in the same manner as such requirements apply to each State-regulated gas utility, except that any action required to be taken by a State regulatory authority under such provision shall, in the case of a nonregulated utility, be taken by such utility.

Subchapter C—Administration, Enforcement, Review

SEC. 581. PROHIBITIONS.

(a) STATE-REGULATED UTILITIES.—No State-regulated gas utility subject to this subchapter may increase any rate at which it sells natural gas (other than pursuant to a purchased gas adjustment clause applicable to the rates and charges of such utility) unless such utility has been determined to be in compliance with the requirements of subchapter A. Such determination shall be made as provided in section 583 at the proceeding at which such rate is fixed, modified, or approved by the State regulatory authority (or by the Commission after such proceeding in any case in which the State has not assumed responsibility as provided in section 583).

(b) NONREGULATED UTILITIES.—(1) No nonregulated public system (as defined in section 561) may increase any rate at which it sells natural gas (other than pursuant to a purchased gas adjustment clause applicable to the rates and charges of such utility) unless such system has determined that it meets the requirements of subchapter A.

(2) No nonregulated cooperative (as defined in section 561) may violate any applicable requirement of subchapter A.

SEC. 582. ENFORCEMENT.

(a) INJUNCTIONS.—Upon petition of any Federal agency or affected State agency, the appropriate United States district court shall have jurisdiction to enjoin a gas utility from violating any prohibition contained in section 581. Each natural gas consumer of a gas utility (1) who may not maintain an action against such utility in a State court or (2) who is a consumer of a nonregulated public system which is a Federal agency may petition the United States district court to enjoin such utility from violating any such prohibition.

(b) NONREGULATED COOPERATIVES.—Any person who is a member of a nonregulated cooperative may bring a civil action in the appropriate United States district court against such cooperative for purposes of obtaining enforcement of the requirements of the prohibition contained in section 581 if such action may not be brought by such person against such cooperative in a State or local court.

SEC. 583. COMPLIANCE DETERMINATION AUTHORITY FOR STATE REGULATED GAS UTILITIES

(a) DETERMINATION BY STATE.—A State regulatory authority which has ratemaking authority with respect to a gas utility may determine whether or not such utility is in compliance with the requirements of section 581 if—

(1) such authority notifies the Commission (at such time, and in such manner, as the Commission shall prescribe by rule) that such authority assumes such responsibility with respect to such utility and certifies that it has adequate authority to carry out the requirements applicable to such authority under this chapter.

(2) such authority makes such determination of compliance by a gas utility with the requirements of this chapter applicable to such utility in an evidentiary hearing, and

(3) such authority complies with the requirement contained in subsection (c)(1).

(b) DETERMINATION BY COMMISSION.—If such State regulatory authority has not complied with paragraphs (1) through (3) of subsection (a) with respect to any utility or any determination or if such authority withdraws its assumption of responsibility under subsection (a), the Commission shall, upon the application of any State-regulated gas

utility, determine in an evidentiary proceeding whether or not such utility is in compliance with such requirements until such time as such State regulatory authority notifies the Commission that it assumes such responsibility.

(c) COMMISSION REVIEW OF ENFORCEMENT.—(1) Not later than 2 years after the date of enactment of this Act (and every 2 years thereafter), each State regulatory authority which has assumed responsibility under this chapter shall submit to the Commission a report (containing such information as the Commission by rule may require), describing the extent to which such authority has implemented the requirements of this part.

(2) If upon complaint to the Commission, or upon the Commission's own motion, and after notice and an evidentiary hearing, the Commission finds that any utilities regulated by a State regulatory authority that has assumed responsibility pursuant to subsection (a) hereof exhibit a pattern of noncompliance with subchapter A, the Commission shall publish such finding which shall be prima facie evidence in any court that the rates of such utilities are not in compliance with section 581.

(3) The absence of any finding by the Commission under paragraph (2) shall not be treated in any court or administrative proceeding as a finding by the Commission that the rates of any utility regulated by any State regulatory authority are in compliance with section 581.

SEC. 584. JUDICIAL REVIEW.

(a) STATE OR FEDERAL AGENCIES.—The Commission, or any affected State agency may obtain review of any determination referred to in section 581 made by a State regulatory authority or a nonregulated public system by commencing a civil action in the United States court of appeals for any circuit in which such authority or system is located. Such court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code.

(b) UTILITIES AND CONSUMERS.—(1) Any gas utility or natural gas consumer of a gas utility with respect to which a determination referred to in section 581 has been made may obtain review of such determination by commencing a civil action in the United States court of appeals for any circuit in which such authority or system is located if such determination was made by a State regulatory authority in a review proceeding in which—

(A) the Commission may not intervene as a matter of right, or

(B) the court does not treat any finding under section 583(c) as prima facie evidence of noncompliance with the provisions of section 581.

Such court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code.

(2) Any Federal agency which is a natural gas consumer of a gas utility with respect to which a determination referred to in section 583 has been made may obtain a review of such determination by commencing a civil action in the United States Court of Appeals for any circuit in which such authority or system is located. Such court shall have jurisdiction to review such determination in accordance with chapter 7 of title 5, United States Code.

(3) Except as provided in subsection (c), nothing in this subsection or section 582 shall be construed to prohibit any consumer from obtaining review in any State court of competent jurisdiction in the case of any determination referred to in section 581 made by a State regulatory authority or nonregulated public system which is a State agency, or to affect the jurisdiction of the United States Supreme Court to review any decision of a State court on writ of certiorari in accordance with section 1257 of title 28, United States Code.

(c) REMOVAL.—In the case of any action brought by the Commission or a State under subsection (a) or by a Federal agency under subsection (b)(2), the court may order that any action respecting the same matter brought by any natural gas consumer in a State court shall be removed to, and consolidated with, the action brought under subsection (a) or (b)(2) where such removal and consolidation will result in a more expeditious determination of such actions.

(d) FEDERAL COURTS.—Notwithstanding any other provision of law, no opportunity for review in the courts of the United States shall be available except as provided in this chapter.

Chapter 6—SMALL HYDROELECTRIC POWER PROJECTS

SEC. 586. INCENTIVE PROGRAM.

Part I of the Federal Power Act is amended by adding at the end thereof the following new section:

"SEC. 30. (a) The Congress declares that, because of the increasing shortages of natural gas and petroleum, and the urgent need to develop environmentally acceptable sources of electric energy to meet the needs of the Nation, the public interest requires the rapid development of the hydroelectric potential of the numerous existing dams on the Nation's waterways which are not being used to generate electric power where such development is technologically feasible, economically beneficial, and not environmentally harmful.

"(b) The Commission shall establish a program to—

"(1) encourage municipalities, electric cooperatives, industrial development agencies, nonprofit organizations, and other persons to undertake the development of small hydroelectric projects in connection with existing dams which are not being used to generate electric power, and

"(2) use simple and expeditious licensing procedures under this Act for such projects in connection with such existing dams in such manner as the Commission deems appropriate, consistent with the applicable provisions of law.

"(c)(1) The Commission is authorized to make grants (and commitments to grant) of up to 50 percent of the project costs of any small hydroelectric project which the Commission finds—

"(A) will be construed in connection with any existing dam,

"(B) has received all necessary licenses and other required Federal, State, and local approvals,

"(C) will provide useful information as to the technical and economic feasibility of—

"(i) the generation of electric energy by such projects, and,

"(ii) the use of energy produced by such projects,

"(D) will have no significant adverse environmental effects, including effects on fish and wildlife, on recreational use of water, and on stream flow, and

"(E) will not have a significant adverse effect on any other use of the water used by such project.

"(2) In making grants under this subsection, the Commission shall give priority to any such project proposed by any municipality, electric cooperative, industrial development agency or nonprofit organization, or by any person other than a utility. An applicant other than an applicant entitled to priority under the first sentence of this paragraph which proposes such projects or participates jointly with any other person in such projects may receive grants under this section only on a finding by the Commission that no other similar project can carry out the purposes of paragraph (1) and that the proposed project cannot be reasonably carried out by any municipality, electric cooperative, industrial development agency, nonprofit agency, nonprofit organization, or person other than such a utility.

"(d)(1) The Commission is authorized to make loans to any municipality, electric cooperative, industrial development agency, nonprofit organization, or person other than a utility, of up to 50 percent of the project costs of a small hydroelectric project which meets the requirements of subsection (c)(1)(A), (B), (D), and (E) of this section. The Commission may make loans to a person or an industrial development agency only upon a finding that the operation of the project will result in substantially increasing employment or preventing a substantial loss of employment in the area to be served by the project.

"(2) The Commission shall give preference to applicants under this section who do not have available alternative financing which the Commission deems appropriate to carry out the project.

"(3) Every loan made pursuant to this subsection shall bear interest at the discount or interest rate used at the time the loan is made for water resources planning projects under section 80 of the Water Resources Development Act of 1974 (42 U.S.C. 1962–17(a)) and shall be for a term not less than twenty-five years and not more than fifty years, as the Commission deems appropriate.

"(4) Amounts repaid under loans made pursuant to this subsection shall be deposited into the Treasury as miscellaneous receipts.

"(e) The Commission shall encourage applicants for licenses for small hydroelectric power projects to make use of public funds and other assistance for the design and construction of fish and wildlife facilities which may be required in connection with any development of such project.

"(f) In making grants and loans under this section and in issuing licenses for small hydroelectric power projects, the Commission shall encourage joint participation, to the extent permitted by law, by those eligible to receive grants or loans under this section.

"(g) Nothing in this section shall be construed to preclude licensees of small hydroelectric power projects from entering into contracts to sell electric energy to (1) any person for such person's consumption, or (2) any utility for resale under such terms and conditions as the Commission may approve.

"(h) Notwithstanding any other provision of Federal, State, or local law, licensees of small hydroelectric power projects shall not be charged for the water used to operate such small hydroelectric power project licensed under this Act except to the extent that such water is consumed by such project or results in costs being imposed on the supplier of such water, or, upon a finding by the Commission that such charge is necessary or appropriate in the public interest.

"(i) Every licensee of a small hydroelectric power project licensed pursuant to this Act shall furnish the Commission with such information as the Commission may require regarding equipment and services proposed to be used in the design, construction, and operation of such projects and the Commission shall have the right to forbid the use in such project of any such equipment or services it finds inappropriate for such project by reason of cost, performance, or failure to carry out the purposes of this section. The Commission may make public information it obtains under this subsection, other than information which may not be released pursuant to section 1905 of title 18, United States Code.

"(j) In the case of projects receiving both grants and loans under this section, the total amount of Federal funds expended for such

project shall not exceed 75 percent of the total project cost.

"(k) Before issuing any license under this Act for the construction or operation of any small hydroelectric power project (whether or not in connection with an existing dam) the Commission—

"(1) shall assess the safety of existing structures in any proposed project (including possible consequences associated with failure of such structure), and

"(2) shall consult with the Council on Environmental Protection Agency, and the Department of Interior with respect to the environmental effects of such project.

Nothing in this subsection shall be deemed to exempt such project from any requirement applicable to any such project under the National Environmental Policy Act, the Fish and Wildlife Coordination Act, the Endangered Species Act, or any other provision of Federal law.

"(l) Nothing in this section authorizes the grant or loan of funds, or simple and expeditious licensing, for construction of any new dam or other impoundment.

"(m) There is hereby authorized to be appropriated for each of the fiscal years ending September 30, 1978, September 30, 1979, and September 30, 1980—

"(1) $50,000,000 for grants made pursuant to subsection (c); and

"(2) $50,000,000 for loans made pursuant to subsection (d), such funds to remain available until expended.

"(n) For purposes of this section, the term—

"(1) 'small hydroelectric power project' means any project of not more than twenty thousand horsepower (or fifteen thousand kilowatts) of installed capacity;

"(2) 'electric cooperative' means any cooperative association eligible to receive loans under section 4 of the Rural Electrification Act of 1936 (7 U.S.C. 904);

"(3) 'industrial development agency' means any agency which is permitted to issue obligations the interest on which is excludable from gross income under section 103 of the Internal Revenue Code of 1954;

"(4) 'project costs' means the cost of all facilities and services used in the design and construction of a project;

"(5) 'utility' means any person engaged in transmission, or distribution, or both, of electric energy for profit;

"(6) 'nonprofit organization' means any organization described in section 501(c)(3) or 501(c)(4) of the Internal Revenue Code of 1954 and exempt from tax under section 501(a) of such Code (but only with respect to a trade or business carried on by such organization which is not an unrelated trade or business, determined by applying section 513(a) to such organization);

"(7) 'existing dam' means any dam, the construction of which was completed on or before April 20, 1977, and which does not require any dam construction or enlargement (other than repairs or reconstruction) in connection with the installation of any small hydroelectric power project.".

SEC. 587. LICENSE CHARGES.

Section 10(e) of the Federal Power Act is amended by inserting before the period at the end thereof the following: ": *Provided further*, That, for licenses involving a Government dam issued subsequent to December 31, 1975, the annual charge shall be no more than $1 for each kilowatt of installed capacity".

SEC. 588. TRANSFERS OF AUTHORITY.

Notwithstanding section 4 of this Act, if the Federal Power Commission is terminated, any reference (other than a reference respecting licensing) in this chapter (or any amendment made therein) to the Federal Power Commission shall be deemed to be a reference to the officer, department, agency, or commission in which the principal functions of the Federal Energy Administration are vested, transferred, or delegated pursuant to law.

The CHAIRMAN. The Clerk will designate the page and the line number of the ad hoc committee amendment to part V.

The Clerk read as follows:

Ad hoc committee amendment: Page 248, delete the language stricken on lines 17 and 18.

(The ad hoc committee amendment reads as follows:)

Page 248, lines 17 and 18, strike: "(who is a person described in paragraph (2))".

Mr. ASHLEY. Mr. Chairman, I rise in support of the ad hoc committee amendment.

At this time I will yield to the noted gentleman from Arizona (Mr. UDALL) for an explanation of the amendment.

Mr. UDALL. Mr. Chairman, in this bill the committee has written requirements that will conserve energy and we are laying down guide lines for the State utilities commissions.

Part of the mechanism for carrying this policy out is to have participation by consumers.

This is a part of the engine by which we will reach the conservation goals which the committee seeks to reach.

The bill as originally written had a "catch 22" in it. All this simple amendment does is to straighten out that "catch 22" to provide that a consumer who intervenes in the proceeding could receive costs, attorneys' fees, and necessary costs if he showed that unless those costs were provided for him he could not successfully participate. Well, obviously, if you had won that case you would not meet that description that you were not able to effectively participate, and there would be no reason to reimburse.

All this one sentence amendment says on page 249 is that:

Such procedure may require that as a condition of receiving such award such consumer demonstrate in a preliminary proceeding that, but for the ability to receive such award if he prevails, such consumer may be unable effectively to participate in such proceeding.

This amendment was overwhelmingly adopted by the ad hoc committee and I hope it will be adopted by the committee here today.

The CHAIRMAN. The Chair recognizes the gentleman from Wisconsin (Mr. STEIGER).

Mr. STEIGER. Mr. Chairman, I thank the Chair for his understanding and patience.

The Committee on Interstate and Foreign Commerce on which, thank heavens, I do not serve, adopted a version of this section which required that a consumer establish that he or she could not afford to pay reasonable attorney's fees, expert witnesses' fees, and other reasonable costs of participating in a State regulatory proceeding on electric rates before—and I underline the word "before"—the consumer could be awarded reimbursement for expenses.

I must say I thought that was reasonably fair, because only someone who is unable to afford participation should be able to receive reimbursement. I do not think we want someone who is relatively wealthy to be reimbursed. The ad hoc committee, however, through the amendment of the distinguished gentleman from Arizona adopted an amendment which would make such a means test discretionary, depending upon whether the individual State regulatory authority established such a requirement.

If the Federal Government is going to intrude upon State regulatory authority jurisdiction and mandate the reimbursement of consumer interveners by electric utilities. I think it should insure that such program is equitable to all parties involved. Because of that, I think the ad hoc committee amendment, Mr. Chairman, is not as good as the original Committee on Interstate and Foreign Commerce position, and I, thus, am in opposition to the Udall amendment.

Mr. SYMMS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to ask the author of the amendment, the gentleman from Arizona (Mr. UDALL) a question. We had this same similar amendment with respect to the Nuclear Regulatory Commission in the Interior Committee, and, in my judgment, the Interior Committee in their wisdom turned down the intervener funding.

Who would be eligible to get the money?

Mr. UDALL. If the gentleman will yield, this is not quite the same situation we had for intervener funding. The committee on this bill has apparently decided that there will be funding for interveners. The question is on what terms and under what conditions. It is discretionary, and I emphasize in the bill that it is discretionary. They do not have to make such an award, but it says the procedure may require that an award be given.

Mr. SYMMS. What I am trying to follow is for what purpose does the gentleman envision that people are going to be interveners? Would it be on rate fights? Is that what the Chairman said?

Mr. UDALL. Yes. The bill mandates the State Utilities Commissions to set the kinds of rates that will give us energy conservation, and in those proceedings one of the mechanisms to see that we get the intent of the bill carried out is some encouragement for consumers to participate in these proceedings.

Mr. SYMMS. Is there a protection in this procedure in the bill and in the gentleman's amendment that says if these people are otherwise able to pay their way, they are not eligible? We found out in the Interior Committee that the Sierra Club and other "fat cat" environmental groups, would be able to qualify for funding.

Mr. UDALL. Yes. It says unless they have this kind of help, they would be unable to participate in such proceedings. It is not intended to provide funding for "fat cats."

Mr. SYMMS. I thank the gentleman very much.

The CHAIRMAN. The question is on the amendment of the ad hoc committee.

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 74, noes 29.

Mr. ASHBROOK. Mr. Chairman, I demand a recorded vote.

A recorded vote was refused.

So the ad hoc committee amendment was agreed to.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and the line number of the next ad hoc committee amendment to part V.

The Clerk read as follows:

Ad hoc committee amendment: Page 249, insert the matter printed in italics on lines 14 through 18.

(The ad hoc committee amendment reads as follows:)

Page 249, following line 13, insert: "Such procedure may require that as a condition of receiving such award such consumer demonstrate in a preliminary proceeding that, but for the ability to receive such award if he prevails, such consumer may be unable effectively to participate in such proceeding."

Mr. DINGELL. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I yield to my friend, the gentleman from Illinois (Mr. RUSSO) for the purpose of permitting him to ask a question for my response.

Mr. RUSSO. Mr. Chairman, I thank the gentleman from Michigan for yielding.

Page 103 of the Commerce Committee's report describes the meaning of the term "first sale." I think there appears to be some confusion in the term "in an arms-length transaction." Can the gentleman give us an explanation of that particular definition?

Mr. DINGELL. Yes.

The Commerce Committee report explained the term "first sale" as "the first transfer of natural gas for value." The phrase "in an arms-length transaction" was included as a printing error in the printed report. The phrase incorrectly suggests that first sales between affiliated companies are not to be included within the natural gas pricing provisions of the legislation. The intent of the committee is to establish a uniform national pricing system for natural gas which eliminates the distortions created by the simultaneous existence of regulated and unregulated first sales. The exclusion of first sales between affiliated companies from the natural gas pricing provisions of the legislation would frustrate this intent by preserving a bifurcated natural gas pricing system. The erroneously included phrase was deleted in reprinting the Commerce Committee report in the appendix to the ad hoc committee report in order to remove any doubts regarding the proper scope of the natural gas pricing provisions of the legislation.

Mr. RUSSO. I thank the gentleman from Michigan.

The CHAIRMAN. The question is on the amendment of the ad hoc committee to part V.

The ad hoc committee amendment was agreed to.

AD HOC COMMITTEE AMENDMENT

The CHAIRMAN. The Clerk will designate the page and the line number of the next ad hoc committee amendment to part V.

The Clerk read as follows:

Ad hoc committee amendment: Page 274, strike the matter beginning on page 274, line 16 through page 277, line 7, and insert the matter beginning on page 277, line 8 through page 280, line 17.

(The ad hoc committee amendment reads as follows:)

Page 274, line 16, strike:

"(a) PROHIBITIONS.—Section 305(b) of the Federal Power Act is amended by—

(1) striking out "After six months from the date on which this Part takes effect," and inserting in lieu thereof: "(1) Except as provided in paragraph (2),";

(2) striking out "or director of any bank, trust company, banking association, or firm that is authorized by law to underwrite or participate in the marketing of securities of a public utility," and inserting in lieu thereof ", director, partner, appointee, or representative of—

"(A) any bank, trust company, banking association, or firm that is authorized by law to underwrite or participate in the marketing of securities of a public utility, or any investment bank, bank holding company, mutual savings bank, savings and loan association, foreign bank or subsidiary thereof doing business in the United States, insurance company, or any other organization primarily engaged in the business of providing financial services or credit,";

(3) striking out "or officer or director of any company supplying electrical equipment to such public utility," and inserting in lieu thereof:

"(B) any company, firm, or organization which produces or supplies electrical equipment or coal, natural gas, oil, nuclear material or other fuel, for the use of public utilities;

"(C) a company, firm, or organization which, during any of the three immediately preceding calendar years, was one of the 20 largest purchasers of electric energy sold by such public utility (or by any public utility which is part of the same holding company system), or

"(D) any company, firm, or organization which is controlled by any company, firm or organization referred to above;"; and

(4) striking out the last sentence thereof and substituting the following:

"(2) Paragraph (1) shall not prohibit any person from holding any position with more than one company which is a part of a holding company system, any company of which is a registered holding company.

"(3) No authorization of the Commission under paragraph (1) of this subsection may be used as a defense to any action brought under section 8 of the Clayton Act.

"(4) For purposes of this subsection—

"(A) the term 'public utility' includes any company which is a part of a holding company system which includes a registered holding company, unless no company in such system is an electric utility, and

"(B) the terms 'holding company', 'registered holding company', and 'holding company system' have the same meaning as when used in the Public Utility Holding Company Act of 1935.".

(b) EFFECTIVE DATE.—The amendments made by this section shall take effect on the date 1 year after the date of the enactment of this Act except that no person to whom such amendments apply and who was not covered by section 305 as in effect immediately before the date of the enactment of this Act shall be treated as holding a position in violation of section 305(b) during the 6 month period after the effective date of such amendments if, during such period, he applies to the Commission for an authorization under paragraph (1) of such section 305(b) during such 6-month period.

And insert:

"(a) DISCLOSURE.—Section 305 of the Federal Power Act is amended by adding the following new subsection at the end thereof:

"(c)(1) On the date one year after the date of enactment of this subsection, and annually thereafter, any person who is an officer or director of a public utility and who holds the position of officer, director, partner, appointee, or representative of any entity listed in paragraph (2) shall file with the Commission, in such form and manner as the Commission shall prescribe, a written statement concerning all such positions held by such person. Such statement shall be available to the public.

"(2) The entities referred to in paragraph (1) are as follows—

"(A) any investment bank, bank holding company, foreign bank or subsidiary thereof doing business in the United States, insurance company, or any other organization primarily engaged in the business of providing financial services or credit (other than a bank-referred to in subsection (b), a mutual savings bank, or a savings and loan association;

"(B) any company or organization that is authorized by law to underwrite or participate in the marketing of securities of a public utility;

"(C) any company, firm, or organization which produces or supplies electrical equipment or coal, natural gas, oil, nuclear material, or other fuel, for the use of public utilities;

"(D) a company, firm, or organization which during any of the 3 immediately preceding calendar years, was one of the 20 largest purchasers of electric energy sold by such public utility (or by any public utility which is part of the same holding company system),

"(E) any entity referred to in subsection (b), and

"(F) any company, firm, or organization which is controlled by any company, firm, or organization referred to in this paragraph.

"(3) For purposes of this subsection and subsection (d)—

"(A) the term 'public utility' includes any company which is a part of a holding company system which includes a registered holding company, unless no company in such system is an electric utility and

"(B) the terms 'holding company', 'registered holding company', and 'holding company system' have the same meaning as when used in the Public Utility Holding Company Act of 1935.".

(b) PROHIBITIONS.—(1) Such section 305 is amended by adding the following new subsection at the end thereof:

"(d)(1) Except as provided in paragraph (2), if the Commission finds after notice and opportunity for public hearing, that it adversely affects the public interest for an officer or director of a public utility to hold the position referred to in subsection (c)(1), it shall be unlawful for such officer or director to hold the position with respect to which such finding has been made. Such finding may be made—

"(A) on an individual basis,

"(B) in the case of entities referred to in subsection (c)(2)(A), on the basis of the extent of interests held by such entities in utilities, or

"(C) in the case of entities refererd to in subsection (c)(2)(C), on the basis of the amount of equipment or fuel supplied to public utilities.

"(2) Paragraph (1) shall not—

"(A) apply in any case in which subsection (b) applies, or

"(B) prohibit any individual from holding any position with more than one company system, any company of which is a registered holding company.

"(3) The Commission may, by rule or order, exempt any individual within a class or category covered by a finding under subparagraph (B) or (C) of paragraph (1) from the prohibition contained in such paragraph if it finds, upon a showing in such form and manner as may be prescribed by the Commission, that neither the public nor private interests will be adversely affected thereby.

"(4) No authorization under subsection (b), the failure of the Commission to act under paragraph (1) of this subsection, nor any exemption under paragraph (3) of this subsection may be used as a defense to any action brought under section 8 of the Clayton Act.".

(2) The amendments made by this subsection shall not apply to any person before the date 2 years after the date of the enactment of this Act.

Mr. DINGELL. Mr. Chairman, I rise for the purpose of supporting the amendment.

Mr. Chairman, the amendment adopted by the ad hoc committee reverses the burden of proof for persons who hold positions with the public utilities and with certain financial institutions, producers of energy, and suppliers of equipment used by utilities and the 20 largest customers of said utilities. These persons would be required to disclose certain information relative to the holdings of both these positions but would not—I repeat, would not—be required to get prior approval from the Federal Power Commission to hold those positions. Rather the Federal Power Commission would have to hold a hearing and give notice before restricting this activity.

My colleagues should know that this is a modest expansion on existing law. Under existing law persons covered under the conflict of interest and disclosure sections are the following: Officers and directors of banks, trust companies, bank associations, or firms authorized to underwrite or participate in underwriting securities of public utilities.

Second, firms supplying electrical equipment to the utility in question. The amendment adds new coverage, principally to the banks and insurance companies (but not savings and loan associations and mutual savings banks), producers of fuels and suppliers of equipment and the 20 largest customers.

Different treatment would be afforded to the second category brought in under new coverage. It would not be a violation of the Federal Power Act for them to be on both boards, unless after notice and opporutnity for hearing, the Federal Power Commission finds that it adversely affects the public interest for them so to do. Disclosure to the Federal Power Commission of information on holding dual positions would be required.

Our purpose here is to expand slightly and sensibly the prohibitions against holding dual positions on boards of directors, something that I think is very much in the public interest.

Mr. Chairman, I urge my colleagues to support the amendment.

Mr. STEIGER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I know it will come as a surprise to the committee, but I rise in support of this amendment. The gentleman from Michigan (Mr. DINGELL) has done an excellent job of describing the decision of the ad hoc committtee to reverse the presumption that was contained in the Commerce Committee reported bill.

I think the amendment as we have before us is a good faith effort on the part of the members of the ad hoc committee, and particularly the gentleman from Michigan, the chairman of the subcommittee, to deal with what would otherwise have been a serious problem.

Mr. Chairman, the Commerce Committee bill amends section 305 of the Federal Power Act by adding certain entities to which the present prohibition on the holding of the position of officer or director of one of these entities and a position as officer or director of a public utility would apply. These additional entities included certain types of banks, equipment or fuel suppliers, and the 20 largest purchasers of electric energy sold by the utility. The Commerce Committee reported bill made the holding of the position of director, officer, partner, appointee or representative of one of these entities and the holding of the position of director or officer of a public utility a violation of the Federal Power Act unless the Commission authorized the holding of such positions upon a showing that "neither public nor private interests will be adversely affected."

The ad hoc committee amendment would strike the Commerce provisions and insert new language which would require annual reporting to the FPC by persons holding the potentially conflicting positions. On the basis of this information the FPC may make a finding that the holding of the two positions adversely affects the public interest. The finding may be made either on an individual or on a category basis related to the extent of interests held by such entities in public utilities or related to the amount of equipment or fuel supplied. And this finding can be made only after notice and the opportunity for a public hearing. If the FPC prohibits the holding of dual positions on a category basis, an individual can still come forward and petition for an exemption from the prohibition by showing no conflict of interest.

Mr. Chairman, this amendment is an improvement because it reverses the presumption in the Commerce bill that the person holding the two potentially conflicting interests is guilty until proven innocent. The Subcommittee on Energy and Power received no testimony as to abuses in this area. Certainly, the FPC should have to find a conflicting interest adverse to the public interest before an individual can be prohibited from serving on the public utility's board.

I urge my colleagues to vote for this amendment.

Mr. PICKLE. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I want to ask the gentleman from Michigan about this interlocking directory question. As I understand the amendment that is pending it would say that the Federal Power Commission could prohibit a director of a public utility from holding a position on the board of directors of a bank or a fuel supplier to the utility or one of the utility's largest customers.

Let me pose this question. In my district there are two publicly owned utilities, one is the Lower Colorado River Authority, appointed by the Governor, and as such a State agency. The other utility is the city of Austin, which owns its own municipal system.

The language here says "directors of a bank or fuel supplier to the utilities or one of the utility's 20 largest customers." I want to ask the gentleman, would the city of Austin come under this proviso as a publicly owned utility?

Mr. DINGELL. Mr. Chairman, if the gentleman will yield, the language with regard to which boards of directors are covered can be found in the definition in existing law of term "public utility."

Let me read that definition. It is in part II of the Federal Power Act, section 201(e) of the statute. It says:

The term "public utility" when used in this part or in the part next following means any person who owns or operates facilities subject to the jurisdiction of the commission under this part.

Mr. PICKLE. I would take it, then, that the city of Austin would be one of those utilities so affected, is that correct?

Mr. DINGELL. The city of Austin might qualify were they to serve as directors on the bank in addition to the utility.

Mr. PICKLE. I do not understand your answer. Let me take it a step further. Suppose that a gentleman wanted to run for the city council of Austin. The city council is the board of directors of the publicly owned utility. Would they have to go to the Federal Power Commission to get permission for anybody to run as a member of that board?

Mr. DINGELL. First of all, the answer is that he does not own, so he therefore——

Mr. PICKLE. But he is a member of that board. I am not trying to be technical, but I say that this is a fundamental question.

Mr. DINGELL. I am trying to answer the gentleman, if the gentleman will permit.

First of all, the public utility must fall in under the coverage of section 201(b), which states the following:

The provisions of this Part shall apply to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce.

I would suspect, given that language, that the utility to which the gentleman refers, since it is a municipal utility of the city of Austin, would not fall in under the prohibition.

My judgment at this moment would be that it would not apply to the municipal utility of the city of Austin.

Mr. PICKLE. The gentleman would understand my concern, if any municipally owned utility would be so restricted, that no one could serve on the

city council, or the LCRA, who happened to be a director of a bank, and it would be a great unfairness to the individual's constitutional rights.

Mr. DINGELL. First of all, it is my view that it does not apply to city council. It may apply to the members of the board which run the municipal utility if the municipal utility was run by a board of directors appointed by the mayor and the utility is subject to the jurisdiction of the Federal Power Act.

The CHAIRMAN. The time of the gentleman from Texas (Mr. PICKLE) has expired.

Mr. PICKLE. Mr. Chairman, I ask unanimous consent to proceed for 5 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Texas?

Mr. ASHBROOK. Mr. Chairman, reserving the right to object, some of us could not even get 2 minutes on the previous amendment. I am going to object to any extension of time.

The CHAIRMAN. Objection is heard.

Mr. OTTINGER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I yield to the gentleman from Michigan (Mr. DINGELL).

Mr. DINGELL. In further response to the gentleman from Texas, the way the statute has been interpreted over the years—and what we do here is just an amplification of the existing statute authority—is that the prohibition applied only to those banks which were also engaged in underwriting of stock issues of public utilities. I would doubt that they were so. I would further point out that in most instances the waiver of the Federal Power Commission was rather routine.

I would anticipate that in this instance, there would be little hardship, even if it were interpreted against the city of Austin and the bank, in the case the gentleman refers to. I do not think that that would be the case.

Mr. OTTINGER. I would just also advise the gentleman that, at any rate, they do not have to go for permission. The way this is constructed, the Federal Power Commission has the burden of going after anybody they feel is in conflict. There is no advance permission required.

Mr. PICKLE. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from Texas.

Mr. PICKLE. Mr. Chairman, the Federal Power Commission would have the right to say to some businessman who happened to be on the bank board that he could not serve on either the city council or on a State agency, such as the River Authority.

I will say to the gentleman that, with respect to a State agency, those people are appointed by the Governor. And the Governor ought not to have to come to the Federal Power Commission to get clearance or even to have the burden of proof shifted before he can serve on a board. I think there is a fundamental question here that was not intended but is wrongly retained.

Mr. MURPHY of Illinois. Mr. Chairman, will the gentleman yield?

Mr. OTTINGER. I yield to the gentleman from Illinois.

Mr. MURPHY of Illinois. Mr. Chairman, in Chicago we have a situation where, for the first time, a black man serves on one of the major utility boards in America. He is also the chairman of a black bank, and he is also on the board of directors of the Metropolitan Life Insurance Co. of New York. Would he be prohibited from serving on the board of Edison and Company?

Mr. OTTINGER. He would not automatically be prohibited. He would only be prohibited if the Federal Power Commission determined it was a conflict of interest.

Mr. MURPHY of Illinois. How long a procedure does the gentleman envision for these gentlemen to go down and make application and get approval?

Mr. OTTINGER. No application is required. The amendment requires the Federal Power Commission to initiate any action against the individual, and the FPC must carry the burden of proof with respect to any conflict of interest.

Mr. MURPHY of Illinois. So the Federal Power Commission is the moving party?

Mr. OTTINGER. That is correct.

Mr. MURPHY of Illinois. And the members of the board do not have to do anything of their own volition?

Mr. OTTINGER. That is correct, until one is removed. If we defeat this amendment, then we go back to the much more harsh provision that would put the burden of proof on the applicant.

Mr. MURPHY of Illinois. The moving party is the Federal Power Commission, not the director or the board itself?

Mr. OTTINGER. That is correct. And that is the change the ad hoc committee made. I prefer the original language, but in view of accommodating the overall scheme of the bill I will support the amendment. But I prefer the harsher conflict-of-interest provisions that were contained in the original bill that would be effectuated were the ad hoc committee amendment to be defeated.

Mr. MURPHY of Illinois. I thank the gentleman.

Mr. CHARLES WILSON of Texas. Mr. Chairman, I move to strike the requisite number of words, and I would like to engage the chairman of the Subcommittee on Energy and Power in a colloquy.

Mr. Chairman, I would simply like to observe for the record that, among the high costs for which a producer may be entitled to special relief under section 409 of the act would be the cost of producing so-called sour gas. Sour gas is gas which, when produced, contains a high volume of hydrogen sulfide. The costs attributable to production of this gas are historically higher because of its adverse affect on drilling materials, and further, in order to be salable, this gas must be treated for removal of this hydrogen sulfide, and this treatment involves the construction of highly sophisticated and expensive facilities. I think it only fair that any producer willing to incur the expenses associated with this kind of production be accorded the right to recover his full costs, including a return on his capital investment. While section 409 of the act need not be specifically amended to so provide, I would ask my distinguished colleague, the gentlemen from Michigan, if he agrees with me that these producers should be given consideration in this regard from the commission.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. CHARLES WILSON of Texas. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I want to begin by agreeing with my good friend that there are certain higher costs attributable to sour gas to which the gentleman has referred and the production thereof. It is my hope that this discussion will help make clear that section 409 is indeed intended to cover the higher costs associated with and incurred by producers who undertake to perform the processing functions of sour gas by things like removal of hydrogen sulfide and similar impurities.

Mr. CHARLES WILSON of Texas. I thank the gentleman.

Mr. MOSS. Is my understanding correct that the term "interested person" in section 621(e), together with the definition of the term "person" in section 602, would allow a State regulatory authority or other State energy agency—as designated by the Governor of such State to present its expert views to the administrator with respect to orders or rules imposing a prohibition or granting an exemption (or permit) under this part?

Mr. DINGELL. Yes.

Mr. MOSS. Am I further correct in understanding that through the vehicle of this subsection, an avenue of consultation will be opened between the Administrator and appropriate State agencies so that such agencies may inform the Federal regulatory process through the sharing of their expertise with respect to State energy forecasts, plans, and projections?

Mr. DINGELL. Yes. Indeed, I would hope and expect that the FEA keep in close contact with the States in the administration of this program.

Mr. TUCKER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to engage the appropriate members of the ad hoc committee in colloquy as to the intention of the committee under subsection (c) relating to the definition of the words, "public utility," on line 13 of page 277 and the definition of the words, "any entity," on line 15 of page 277.

Specifically, I am interested in whether either or both of those descriptions would include the officers of members of the board of directors of a public utility holding company, and if so, which.

I am referring to page 277, paragraph (c)(1) under "Disclosure."

Let us deal first with the words, "public utility." Does that include members of the board of directors of a public utility holding company?

Mr. STEIGER. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. I yield to the gentleman from Wisconsin.

Mr. STEIGER. Mr. Chairman, let us go to page 278, lines 22 through 25. Does that not provide an answer to that question?

Mr. TUCKER. No, it does not. That says:

The term 'public utility' includes any company which is a part of a holding company system which includes a registered holding company . . .

Mr. STEIGER. Then we have the definition of the term, "holding company," on page 279.

Is there some hidden word missing in that definition?

Mr. TUCKER. Yes, I think there is.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. TUCKER. I would be happy to yield to the chairman of the subcommittee.

Mr. DINGELL. Mr. Chairman, I think, for the answer to the question, we have to go to page 279 of the bill, specifically, line 22, subparagraph (c)(2). That language is as follows:

Paragraph (1) shall not—

(a) apply in any case in which subsection (b) applies, or

(b) prohibit any individual from holding any position with more than one company system, any company of which is a registered holding company.

Mr. TUCKER. Therefore, the answer to my question is that the members of the board of directors of a public utility holding company would not be precluded from serving on the board of directors of a public utility within that holding company system?

Mr. DINGELL. I believe that is correct.

Mr. TUCKER. And the same would be true as to the board of directors of any other entity listed in subparagraph (2)?

Mr. DINGELL. I think, as to the first one, it is true. As to the second one, it is my belief that they could be barred from serving as an officer of a bank or other company in accordance with the provisions, as they would be affected were they to be simply the officers of any other utility.

Mr. TUCKER. So, such officers might be subject to a finding that their joint service on both the board of directors of a public utility holding company and the board of directors of any other entity listed in paragraph (2), on page 277 might be against the public interest?

Mr. DINGELL. That is correct.

Mr. TUCKER. They would be subject to such a finding?

Mr. DINGELL. That is correct, even though they could not be barred from serving on both the holding company's board of directors and a subsidiary company's board.

Mr. TUCKER. Mr. Chairman, I thank the gentleman for his response.

The CHAIRMAN. The question is on the amendment of ad hoc committee to part V.

The question was taken; and on a division (demanded by Mr. BAUMAN) there were—ayes 40, noes 1.

So the ad hoc committee amendment was agreed to.

AD HOC COMMITTEE AMENDMENT

The Clerk will designate the page and the line numbers of the next ad hoc committee amendment to part V.

The clerk read as follows:

Ad hoc committee amendment: Insert the matter beginning on page 313, line 19, through page 315, line 5.

(The ad hoc committee amendment reads as follows:)

Ad hoc committee amendment: Insert the matter beginning on page 313, line 19, through page 315, line 5, as follows:

SEC. 589. CONDUIT HYDROELECTRIC FACILITIES.

Part I of the Federal Power Act is amended by adding the following new section at the end thereof:

"SEC. 31. (a) Except as provided in subsection (b) or (c), the Commission shall grant an exemption from the requirements of this part, including any license requirements contained in this part, to any facility (not including any dam or other impoundment) constructed, operated, or maintained for the generation of electric power which the Commission determines, by rule or order—

"(1) is located on non-Federal lands, and

"(2) utilizes for such generation only the hydroelectric potential of a manmade conduit, which is operated for the distribution of water for agricultural, municipal, or industrial consumption and not primarily for the generation of electricity.

"(b) The Commission shall not grant any exemption under subsection (a) to any facility the installed capacity of which exceeds 15 megawatts.

"(c) In making the determination under subsection (a), the Commission shall consult with the United States Fish and Wildlife Service and the State agency exercising administration over the fish and wildlife resources of the State in which the facility is or will be located, in the manner provided by the Fish and Wildlife Coordination Act (16 U.S.C. 661, et seq.), and shall include in any such exemption—

"(1) such terms and conditions as the Fish and Wildlife Service and the State agency each determine are appropriate to prevent loss of, or damage to, such resources and to otherwise carry out the purposes of such Act, and

"(2) such terms and conditions as the Commission deems appropriate to insure that such facility continues to comply with the provisions of this section and the terms and conditions included in any such exemption.

"(d) Any violation of a term or condition of any exemption granted under subsection (a) shall constitute a violation of a rule or order of the Commission under this Act."

Mr. MOFFETT. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I would like to ask the distinguished chairman of the Energy and Power Subcommittee of the Interstate and Foreign Commerce Committee, the subcommittee on which I serve and the subcommittee to which was referred much of this bill, a question concerning an amendment made to part 5 in the Subcommittee on Energy and Power. This amendment was adopted by the subcommittee and retained in the bill through the full committee and the ad hoc committee.

The language states that:

In prescribing such methods, there shall be taken into account the extent to which total costs to an electric utility are likely to change if—

(A) capacity is added to meet peak demand relative to base demand, and

(B) additional kilowatt-hours of electric energy are delivered to electric consumers.

When this amendment was offered, the sponsor, Mr. STOCKMAN of Michigan stated and I quote from page 10–47 of the transcript of June 15, 1977:

What it does is provide some direction in the formation of these minimum standards to take into account marginal cost ideas, because after all, that is the whole thrust of our national energy plan.

However, we have written the language in such a way that it is clear that this isn't an ironclad mandate for full-blown marginal cost pricing to be imposed on every state regulatory commission, and on every utility around the country, because there are some very difficult problems of implementation and what we are saying is use the marginal cost idea but apply to each circumstance to the degree that is realistic and feasible and can be accommodated with other needs of the rate design of the utility system.

I would like to ask the chairman of the subcommittee, Mr. DINGELL, if he agrees with the understanding.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. MOFFETT. I yield to the gentleman from Michigan.

Mr. DINGELL. I find in the language quoted a proper expression of the intent of the subcommittee in adopting this amendment.

Mr. MOFFETT. I thank the distinguished chairman of the subcommittee for that comment.

Mr. STEIGER. Mr. Chairman, I move to strike the requisite number of words.

I, under the advice of expert staff counsel, find myself in a most difficult situation.

The colloquy that just took place was read at a pace that my ears found difficult to follow closely, but I would want the record to show that on page 146 of the report of the Committee on Interstate and Foreign Commerce the following language appears:

The committee carefully chose the phrase "take into account"; this section is not intended to be a mandate to a State regulatory authority to follow any specific costing methodology for determining cost of service. However, the committee feels that the matters specified in paragraph (2)(A) and (B) are factors to be taken into serious consideration in determining costs of service, especially with respect to time of day, interruptible, and seasonal rates. State utility commissions and utilities should apply the conclusions of taking these factors into account in a manner best calculated to fulfill the purposes of the national energy plan.

I believe that that report language is a clear definition of that question, is it not, I ask the distinguished chairman of the subcommittee?

Mr. DINGELL. Mr. Chairman, if the gentleman will yield, the statement made by myself in response to the question of the gentleman from Connecticut (Mr. MOFFETT) in our colloquy and the statement just read from the report of the committee by the gentleman from Wisconsin (Mr. STEIGER) are not in any respect inconsistent. I read them as being fully consistent.

I want the gentleman to understand that we are trying to establish legislative history in a rational fashion. The principles of marginal pricing will be among the factors considered in the ratemaking processes. That is the whole purpose of the language read by the gentleman from Wisconsin (Mr. STEIGER) and of the comments of the gentleman from Connecticut (Mr. MOFFETT).

Mr. STEIGER. I thank the chairman of the subcommittee.

Mr. DINGELL. If the gentleman will permit me one further comment, it is not the intention or plan that marginal pricing practices are required by this bill to be the only ones considered. That would be wrong.

Furthermore, the basic action in applying these will be taken by the State regulatory agencies.

Mr. STEIGER. I thank the chairman for that clarification.

Mr. OTTINGER. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the matter before us is section 589, conduit hydroelectric facilities, added by ad hoc committee amendment.

I rise in strong opposition to this ad hoc committee amendment and I do so for four reasons.

First, Mr. Chairman, it creates an unprecedented, unwarranted, and dangerous exemption from the Federal Power Commission's authority over hydroelectric power.

Second, it interferes with two cases now pending before the Federal Power Commission, a fact that was not known to the ad hoc committee at the time of its consideration of the amendment.

Third, the provisions, which could be very far reaching, were not the subject of hearings. Indeed, the amendment was rejected both in the Subcommittee on Energy Power and the full Committee on Interstate and Foreign Commerce in part on the grounds that no hearings had been held to determine the extent of the exemption and who might be adversely affected.

And, fourth, it is a "special interest" provisions. Indeed, it is not the type of an amendment that belongs in a national energy bill or in any other act of Congress. It has no national objective. It is a narrow effort to serve the interests of one water district in one State, not even of an entire State, mind you, but just one water district in one State. That is bad law.

Not only that, but it seeks to serve the interests of that water district by predeciding a case which is currently under consideration in the Federal Power Commission. This amendment would remove the case of a particular water district from the Commission's jurisdiction and foreclose any orderly consideration and subsequent judicial review.

This is bad lawmaking. It is something that Congress has ever been reluctant to do.

The water district that would benefit from this amendment is the Metropolitan Water District of Southern California. The case that it would so precipitously remove from the Federal Power Commission's jurisdiction is FPC docket No. E9555.

In their haste to promote this narrow interest, the proponents of this amendment have driven a wedge deep into the power act itself by exempting all similar "conduits" from the licensing requirements of the act. No reason has been demonstrated for such an exemption.

The proposed amendment is in direct conflict with the Commission's broad authority to license hydroelectric projects under section 4(e) of the act, as pointed out in the supplemental views of the gentleman from Michigan, Mr. JOHN D. DINGELL, the chairman of the Subcommittee on Energy and Power and a member of the ad hoc committee, opposing the amendment and describing its mischief.

Also pointed out in Mr. DINGELL's views:

The Commission by law must often license a complete project consisting of various project works, i.e., dam, reservoir, conduit, powerhouse, and so forth.

This is clearly the case with the metropolitan water district project being removed from the jurisdiction of the Federal Power Commission: allowing the rest of the project to remain under the jurisdiction of the Federal Power Commission, and only the conduit portion to be exempt. Removing one part of a large project, conduits, from FPC jurisdiction is fundamentally censored.

The full text of the Dingell views follows:

[From the report of the Ad Hoc Committee on Energy, H. Rept. 95-543]

X. SUPPLEMENTAL VIEWS OF THE HON. JOHN D. DINGELL

The committee adopted an amendment to part I of the Federal Power Act which authorizes the Federal Power Commission to grant exemptions from the license requirements of the act. At the time, I expressed concern about the amendment, but did not oppose it. In fact, I amended it to make the Fish and Wildlife Coordination Act applicable to any such exemption.

Since then, I have learned that this amendment might affect one and possibly two matters pending before the Federal Power Commission. One such case involves contested applications for relicensing of a canal project located in California. One of the parties to that case is the Secretary of the Interior in his capacity as Trustee for several bands of Indians. The other parties are the Escondido Mutual Water Company, the Vista Irrigation District, and San Diego Gas and Electric Company. An initial decision on the contested applications was issued by the Administrative Law Judge on June 1, 1977 in favor of the Water Company and the Vista District.

That decision is not yet final. The FPC must still act. The Commission may not agree with the Administrative law judge's decision that the operation "is not power project licensable under the Federal Power Act." Yet this amendment would, in effect, reach that conclusion and exempt the project from the Federal Power Act.

The second proceeding involves the Metropolitan Water District of Southern California (MWD) case, in which that District has proposed to install a number of generating units along a conduit. The case concerns the issue of FPC jurisdiction over proposed hydropower facilities in Southern California. The water is transported from the Colorado River on the California-Arizona border via the Colorado River aqueduct. MWD plans to build, operate, and maintain hydropower plants at locations along its water delivery system. By running water through hydroelectric turbines, energy can be converted to electrical power to be consumed by MWD or sold wherever possible.

There follows some staff comments of the FPC, dated July 27, 1977, concerning the effect of this amendment on this case:

"The following are comments relating to the proposed amendment to Section 31(a) through (c) of H.R. 8444 offered by Congressman Moorhead of California. The proposed amendment is similar to draft legislation by former Senator Tunney and reviewed by the Commission in 1976, except that the bill includes a parenthetical phrase "(not including any dam or other impoundment)". The proposed amendment is principally for the benefit of the Metropolitan Water District of Los Angeles which is contesting jurisdiction over proposed hydroelectric power plants utilizing the City's domestic water supply conduits. The proposed amendment is in direct conflict with the Commission's broad authority to license hydroelectric projects under Section 4(e) of the Act that meet the "comprehensive development" test of Section 10(a) of the Act and the definition of a project under Section 3 of the Act. The Commission by law must license a complete project consisting of various project works, i.e., dam, reservoir, conduit, powerhouse etc. A complete project may, for example, consist of facilities constructed by a prospective licensee and the Federal Government. Since Congress retains jurisdiction over all Federally constructed facilities, the Commission would license all remaining non-Federally constructed project works. If it is determined that a complete project does include municipally-owned conduits or other facilities, the proposed amendment would conflict with the intent of the Federal Power Act. The proposed amendment would severely alter the Commission's jurisdiction and confuse the interpretation of the Act as determined by the Congress and the courts.

"In addition, the language of the amendment is sufficiently confusing so as to suggest that if a project occupies both Federal and non-Federal lands, the Commission may only license those facilities on non-Federal lands that do not fall within the definition of exempted facilities as defined in the proposed new Section 31. This would apply, for instance, to projects similar to the California Aqueduct Project No. 2426, and the City and County of Denver Project No. 2204. Project No. 2204 is particularly applicable because the installed capacity is 3 MW, well below the 15 MW limit included in the proposed Section 31.

"The proposed amendment further assumes that each power plant may be a single project. This, in fact, may not be so as is the case in the California Aqueduct Project No. 2426. A single project may consist of several developments that, in the aggregate, have a total installed capacity far exceeding 15 MW and, as such, would not be excepted under the proposed amendment. A project may consist of one or more developments that are hydraulically connected or interdependent e.g., utilizes some source of water supply.

"In the case of Metropolitan Water District, it is noted that the water supply originates at FPC licensed dams and reservoirs (Orovill Project No. 2100), and Federally constructed dams and reservoirs (Colorado River Projects)."

Quite clearly, this amendment seeks to prejudge a matter that is pending before the FPC of which I was unaware when it was considered. In addition, the FPC staff points out a number of technical problems with the amendment.

After close scrutiny of this amendment since the committee action, I now believe that it is a bad precedent, and only for extraordinary reasons, which have not been demonstrated in this instance to my satisfaction, should Congress intervene in a proceeding pending before a regulatory body like the FPC.

Mr. OTTINGER. Despite an informal survey conducted by the representatives of the metropolitan water district themselves, the fact is that we have no clear idea of what the ultimate effect of the amendment would be in removing projects from the jurisdiction of the Federal Power Commission. There were no hearings on the provision to permit those who might be affected to be heard.

It is significant to note that the Metro-

politan Water District of Southern California is seeking relief from a problem which is of its own making. The district elected not to apply to the Federal Power Commission for a license but, instead, to challenge the authority of the FPC to license their project and thus subjected themselves to the hearing process from which they now ask Congress to relieve them. Had they accepted the FPC jurisdiction and merely sought a license, I have been told by the FPC staff that the issue would long since have been decided and they would have received their license.

Even now, if they accept the authority of the Federal Power Commission, the issue can be promptly decided without this unusual and ill-advised congressional intervention in due process. The Federal Power Commission has provided and expedited procedure to handle such small projects.

My staff and I tried to work out a more limited amendment with the Metropolitan Water District of Southern California that would have solved their problem and avoided the defects of this amendment. They have, however, insisted upon this "all or nothing" approach of attempting to adopt this amendment.

The administration, which originally supported this amendment in the ad hoc committee, upon hearing of the interference it introduces into the proceedings before the Federal Power Commission, now opposes it.

For all the above reasons, this amendment is clearly bad law and sets a bad precedent. I urge the Committee to reject the amendment.

Mr. MOORHEAD of California. Mr. Chairman, I move to strike the last word.

Mr. Chairman, the amendment that we are considering here today was the Republican amendment to the ad hoc committee bill. I believe it is the only one of substance that was successful, and it gives the bill a little bipartisan effect. But the amendment is not a partisan amendment. It is an amendment that will provide energy for the people of the United States. The amendment was not considered before the subcommittee. I put it over at the request of the chairman who said he would help me in the full committee if I did, because there was a time problem. In the full committee it was held nongermane, but it was germane in the ad hoc committee. So the ad hoc committee was the first time that it could have been voted on. I want to thank my Democratic and Republican friends for their unanimous support of the amendment before the ad hoc committee.

Actually what the amendment does is it exempts from FPC licensing requirements small hydroelectric plants in conduits where the generation of electricity is incidental to other conduit uses such as municipal, industrial, and agricultural water supply. Basically, the interests that would be benefited are the publicly owned water systems in many of the States of the United States. For that reason the legislation is supported by the National Water Resources Association, by the Democratic administration in the State of California, by the Electronic Institute, and by most other agencies having knowledge in this particular field.

The language and intent of this amendment defines the term "small hydroelectric facility" as one which has a capacity of not to exceed 15 megawatts at one particular site. Only those facilities in conduit systems where the primary purpose of the system is not the generation of electric power would be exempted. This exemption would only apply to nonutilities, that is, water distribution systems like water districts producing energy as a natural side effect of its primary purpose which is the distribution of water.

I made the amendments in the ad hoc committee that were requested by the Carter administration in order to make them neutral on the legislation. I, in good faith, made those amendments in compliance with their desire in order to get their neutrality. I do not think that they have changed their position. They have been fully informed, because I know there is a little opposition from the FPC that does not like to lose any power whatsoever. I cannot help that. If we waited for them, we would wait forever.

There is no chance economically of a small generating plant of this kind to be able to actually get a license and be effective within a reasonable period of time. At the present time the waiting period for a license is 6 years, and there are hundreds of these applications that are waiting for determination. Admittedly, this amendment, if adopted, would not provide billions of barrels of oil or electricity, but it would provide the equivalent of 6 million barrels of oil a year that we would not otherwise have.

It would save us $84 million a year. The electricity that would be saved would be the equivalent of more than half of the capacity of one Hoover Dam. It is vital to the American people to find some sources of energy where it is available and to make use of whatever resources we may have. If this legislation is adopted, under this amendment California will be able to save 200 megawatts of electricity; Idaho, 200; New York, 114; Pennsylvania, 100; Washington, 50; and Wyoming and Nevada, 10 each; Colorado, less than 10; and other States have some potential.

Many people have commented upon the inefficiency of the FPC.

The CHAIRMAN. The time of the gentleman from California has expired.

Mr. MOORHEAD of California. Mr. Chairman, I ask unanimous consent that I may proceed for 3 additional minutes.

Mr. ASHBROOK. Mr Chairman, reserving the right to object, will the gentleman make the request for 2 minutes.

Mr. MOORHEAD of California. I will take what I can get.

Mr. ASHBROOK. Mr. Chairman, I withdraw my reservation of objection.

The CHAIRMAN. The gentleman from California is recognized for 2 additional minutes.

Mr. MOORHEAD of California. Mr. Chairman, as we move forward with the problems we have before us I would like to quote our President on this particular subject. He said:

> We can rediscover the ingenuity and the efficiency which have made our Nation prosper, rather than deepening our dependence on insecure imports and increasingly expensive conventional energy supplies. We can rediscover small-scale, more creative ways of satisfying our needs. If we are successful, we can protect jobs, the environment and the basic American standard of living, not only for ourselves but also for our children and grandchildren.

Let us then as Members of Congress take this opportunity to let inventive, small-scale, creative ways satisfy our energy needs for many years.

I ask for an "aye" vote on the grounds that the amendment before us will improve America's balance of trade. It will give us energy we will not get but for this amendment. We are wasting energy in the conduits of America. Let us get that energy and put it to work for us. It is environmentally clean. It cannot do any harm to the people of this Nation. It is necessary. Let us take advantage of it.

Mr. MOFFETT. Mr. Chairman, I move to strike the last word.

I yield to the gentleman from New York (Mr. OTTINGER).

Mr. OTTINGER. Mr. Chairman, I would just like to point out in response to the statements of the gentleman from California (Mr. MOORHEAD) that I am all for putting generators in conduits and there is nothing under existing law which would prevent generators going into conduits.

The question is whether we want or need legislation granting an exemption from FPC jurisdiction to do that, especially a special interest provision which affects a pending case in FPC of California. I think that is unsound and unwise.

All those great savings the gentleman pointed out as advisable from putting generators in conduits would not be attributable to the passage of his amendment. They would be attributable to putting the generators in the conduits, which can be done without any amendment.

Mr. MOORHEAD of California. Mr. Chairman, will the gentleman yield?

Mr. MOFFETT. I yield to the gentleman from California.

Mr. MOORHEAD of California. Mr. Chairman, we did not have really an opportunity to check out everything in the letter the gentleman sent around, and I did check into one of the cases cited. The generators were shown above the 15 megawatt level and obviously not included. There was one situation which went to a Federal land area which obviously would not be included. The Espodido case had been settled.

As I said, I did not have time to check out everything but most of the things the gentleman cited were just not true.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. MOFFETT. I yield to the gentleman from New York.

Mr. OTTINGER. Mr. Chairman, I would like to point out that this is fundamentally unsound. In fact the metropolitan water district case involved a part of a bigger system which is clearly subject to Federal Power Commission license jurisdiction. To exempt just the conduit part of the project does not make sense. It does not make sense for us to inter-

vene in the pending FPC case involving this matter, either.

I would like to quote a letter from John F. O'Leary, Administrator, Federal Energy Administration, to Mr. JOHN DINGELL, chairman, Subcommittee on Energy and Power, which says:

FEDERAL ENERGY ADMINISTRATION,
Washington, D.C.

Mr. JOHN D. DINGELL,
Chairman, Subcommittee on Energy and Power, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: This letter is in reply to a question from your staff regarding the Administration's position on exemptions of certain hydroelectric facilities from regulation under Part V, Title 1 of H.R. 8444 dealing with public utility regulation policies.

The Administration has evaluated that proposal subsequent to Ad Hoc Committee action and opposes the amendment. In our view, the amendment may well be unnecessary because the Commission may have adequate authority under existing law to exempt facilities of the type in question from licensing if such exemption is in the public interest. Moreover, we are concerned about the possible overbreadth of the exemption: it may be interpreted as applying to a much wider range of facilities than those which were described in the Ad Hoc Committee debate. Finally, a statutory exemption would preclude Commission consideration of wide variety of ancillary issues which relate to regulation of water flow and environmental protection.

If we can be of further assistance, please let us know.

Sincerely,

JOHN F. O'LEARY,
Administrator.

Mr. Chairman, I urge defeat of the amendment.

Mr. LAGOMARSINO. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in support of this amendment.

In the district of the gentleman from California (Mr. GOLDWATER), which adjoins mine, there is a potential project of the type the amendment addresses near the community of Castaic. It is located in an underground pipeline on non-Federal lands.

The city of Santa Barbara in my district is contemplating a similar project. We have heard a lot of rhetoric about reducing Government redtape. We have heard a lot of rhetoric about reducing our dependence on foreign oil. We have heard a lot of rhetoric about producing environmentally clean energy.

So far little has been done on any of these fronts. It seems to me that here is a chance to take a small step toward meeting all three of these objectives, and I commend my colleague, the gentleman from California (Mr. MOORHEAD) and the ad hoc committee, for advancing this amendment.

Mr. Chairman, there are a couple points I would like to clear up in colloquy with the gentleman from California (Mr. MOORHEAD).

First, is the gentleman's amendment designed in any way to enlarge the FPC jurisdiction?

Mr. MOORHEAD of California. Mr. Chairman, if the gentleman will yield, the answer is no.

Mr. LAGOMARSINO. Let me be specific. It is my understanding that although certain other conditions must be met, generally speaking hydroelectric facilities in impoundments that are not located on navigable waterways or tributaries thereto are not covered by the Federal Power Act. There are such impoundments in my district and others and maybe some day they could be utilized to generate electricity. Would the gentleman's amendment have the effect of including some impoundments under FPC jurisdiction?

Mr. MOORHEAD of California. Definitely not. Under my amendment, if certain facilities, such as the gentleman describes, are currently exempt from FPC licensing requirements, they would continue to be exempt. All my amendment does is extend the exemption to hydroelectric generating facilities located in a man-made conduit which has the primary function of transporting water for other uses.

I might also say, the total jurisdiction has not been taken away from the FPC, because under the amendment that the Carter administration asked the committee to make, the FPC has to make a determination that the primary purpose is not generating electricity, but is in conjunction with the transport of water.

Mr. LAGOMARSINO. I note that section C of the amendment requires conformance with the Fish and Wildlife Coordination Act. In connection with the facilities referred to in section A, does the gentleman expect that there will be a significant impact on fish or wildlife, and does the gentleman think that these requirements would act as impediments to the installation of the facilities?

Mr. MOORHEAD of California. In response to both parts of the gentleman's question, let me say that I agreed to include section C upon a request by the distinguished chairman of the Subcommittee on Energy and Power, the gentleman from Michigan (Mr. DINGELL). I do not foresee a large problem here. In the first place, the impact of installing hydroelectric facilities in conduits on fish and wildlife would be insignificant. There are no fish in the pipelines of the metropolitan water district of southern California, because if there were, they would come out of the water faucet or else plug it up. So fish are screened from entering the pipeline system. The same holds true for any municipal system.

The same holds true for wildlife. Most of these facilities are in populated areas, and the construction would involve no more than digging a hole, replacing or bypassing a pressure relief valve, and then covering up the hole to the original contour.

In answering the last question, it is not my intent, nor do I think it is the intent of my distinguished colleague, the gentleman from Michigan (Mr. DINGELL), that compliance with the Fish and Wildlife Coordination Act should give the Fish and Wildlife Service, or State and game agencies, or the FPC, a means of harassing or impeding those who wish to install such facilities. If there are legitimate fish and wildlife problems that must be mitigated, then certainly I think they should be.

Beyond that, my intent is to facilitate getting these environmentally clean projects in operation and the energy to the people.

Mr. LAGOMARSINO. I thank the gentleman. I urge an aye vote on the amendment.

Mr. SISK. Mr. Chairman, I move to strike the last word.

Mr. Chairman, first let me admit that I am not an expert in connection with this, but it was called to my attention recently. It is a very important exemption for literally thousands of people in connection with small operations such as farms, ranches and so forth, who impound small amounts of water or even small irrigation districts which impound water, and as the water flows downhill, going wherever it is going, they put a wheel in the stream and it generates some electricity which they may use for home use and within the system itself.

The language of the Moorhead amendment makes it very clear that the exemption would not apply to any projects in excess of 15 megawatts, so under no circumstance are we talking about any project of any size. I would certainly hope that we use all the means of creating and developing all the energy we possibly can.

We have used these kinds of projects by the hundreds for the last 75 years in California, and the foothill areas particularly, where we impound water and allow it to flow downhill to irrigate crops in the summertime.

I just think it would be unfortunate if, after the ad hoc committee has considered this and voted on it and put it in the bill, that then an attempt would be made to strike it out merely because there are those people who think birds and bees are worth more than human beings has suddenly activated opposition in the last few hours. I have no idea why, but some letters have been sent up here from downtown. It does not indicate the concern for people I have. Some who put the welfare of fish before people—I like fish, and I am going fishing a little later on, but I question whether they should be put ahead of the benefits of people, and particularly the beneficial use for power.

So, I urge adoption of the amendment.

Mr. OTTINGER. Mr. Chairman, will the gentleman yield?

Mr. SISK. I yield to the gentleman from New York.

Mr. OTTINGER. I would just like to point out to my good friend that this is not something generated by environmental groups. It has no environmental consequence as far as I know. I think small hydroelectric projects on streams or small conduits are splendid but they are presently permitted under the Federal Power Act. There is no problem there. Projects involving generation of less than one thousand horsepower are already exempt and the FPC has broad exemption powers.

We are talking here about a special interest provision for the metropolitan district project. There is no reason to declare this special exemption.

Mr. SISK. Let me say to my colleague from New York that I am not carrying the ball for metropolitan water districts because they are well able to take care of their own burden because they are well

financed and well operated. I am talking about the hundreds of individuals throughout the West who are dependent upon small water projects. Here again, if in fact they are exempt, the language would do no harm, but it does give assurance to those people who have gone out to develop their own power that they can continue doing that without the necessity of going to the Federal Power Commission.

Mr. Chairman, I would hope that the amendment would be adopted.

The CHAIRMAN. The question is on the amendment of the ad hoc committee to part V.

The question was taken; and on a division (demanded by Mr. OTTINGER) there were—ayes 43, noes 5.

So the ad hoc committee was agreed to.

AMENDMENT OFFERED BY MR. FLOWERS

Mr. FLOWERS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. FLOWERS: Strike section 548 beginning at line 18 on page 280 through line 13 on page 282, and renumber subsequent sections accordingly.

Mr. FLOWERS. Mr. Chairman, it is not surprising that we in the House of Representatives find ourselves in disagreement over many specific provisions of the energy bill. After all, we come from different backgrounds, we represent different geographic regions and we possess different political philosophies.

But I think that from the beginning there should be no real disagreement over the general need for an energy policy—a policy that will encourage the conservation and production of energy.

So it is a bit surprising to me that as we near the end of our consideration, we find in this bill certain provisions which seem to do nothing to either conserve or produce energy. In fact, some of these provisions, in my view, run counter to the intent of this legislation.

I am particularly concerned about section 548—a section which President Carter did not include in his original energy package and a section which would be deleted by the amendment I am offering here today.

Section 548 provides that each time an electric utility company wants to expand its generating capacity, that company would be subject to an anti-trust review by the Justice Department. The results of that investigation would then be turned over to the Federal Power Commission, which could take as much time as it wanted before making a determination.

At present such an antitrust review is required only when a nuclear powerplant is being proposed. This new section would provide for similar reviews for conventional fossil-fired electric generating plants, hydroelectric plants and even transmission lines.

It puzzles me, Mr. Chairman, that we are seeking to build in new delays into the construction process just at the time when we need the additional generating capacity as quickly as we can get it.

It puzzles me, too, that we are seeking to make it more difficult and more costly to build fossil-fired generating plants just at the time when we are encouraging utility companies to use coal.

H.R. 8444 is a bill supposedly aimed at encouraging the conservation and production of energy. Why, then, should we include section 548—a section whose provisions would clearly inhibit the production of electric power?

The construction delays of which I speak affect the utility companies first, of course, bringing about great expense and uncertainty. But eventually there is a ripple effect. Construction workers are laid off or not hired in the first place. Consumers find their electric bills going up because the utility company is forced to import expensive power to meet demand. And the economy of an entire State could be damaged if there is not enough electricity available to permit industrial expansion.

Even 7/10 under the existing regulatory process, it takes from 7 to 10 years to build a fossil-fired plant. But if we add another layer of bureaucracy—together with a lengthy process of hearings and appeals—who knows how long it will take to build a plant?

Some who support section 548 may imply that the nonnuclear activities of utility companies are not now covered by antitrust law, but that is simply not the case. The Federal Power Act gave the FPC the responsibility to deal with antitrust issues, and the Supreme Court reaffirmed the FPC's antitrust power in a 1973 decision.

Some supporters of section 548 also argue that if nuclear plants are subject to a certain kind of review process, then fossil-fired plants should be, too. But this argument ignores the great differences between these two forms of power and does not take into account the special role of the Federal Government in the development of nuclear power.

By the way, I have not heard anyone promoting the present antitrust process in the nuclear area as a good model to follow. If section 548 remains in the bill and its provisions are enforced with the same degree of speed and efficiency as the current law affecting nuclear plants, we will all be in trouble.

I know firsthand of a case involving an electric utility company in my State. This company first applied for permission to build a nuclear powerplant in 1969—a full year before the 1970 amendments to the Atomic Energy Act which established the antitrust review process.

Construction by the company was "grandfathered" in under these amendments, while the Justice Department's antitrust review proceeding for this one plant has dragged on for 7 years with no end in sight. Tens of thousands of pages of testimony and exhibits have been presented and nearly 200 days of hearings have been held but the issue still is not resolved.

The result is that this massive powerplant stands completed but unused. In the meantime, the company is spending nearly $2 million a week to buy power that otherwise would come from the plant. Obviously, this delay is costing Alabama consumers dearly. I do not know which situation would be less costly—not to have constructed the plant—or to have constructed it under these circumstances.

Section 548, Mr. Chairman, essentially puts the Federal Government into the business of passing judgment on the construction of every powerplant in America—as if Washington did not have enough to do already.

The potential increased workload for the Federal Power Commission and the Justice Department boggles the mind. In just the next 5 years alone, utility companies in the United States plan to put into operation 145 new fossil-fired plants and 50 new nuclear plants. So if this section had been law when these plants were proposed, the Justice Department would have been four times as busy in this area as it was.

What this section mandates is a substantial change in the enforcement procedures of the Justice Department—in direct contradiction to the wishes of the President as stated in the national energy plan he submitted to the Congress.

The President's plan states that the Federal Trade Commission and the Justice Department will continue their programs of enforcement of antitrust laws affecting energy industries, and those programs, Mr. Chairman, involve the selecting of test cases.

I think that section 548 could end up being more a hindrance than a help to effective antitrust enforcement. If the people at the Justice Department have to spend their time looking into the details of every powerplant to be built in this country, then I fear that major antitrust cases—the real blockbuster kind—would not get the attention they deserve.

Mr. Chairman, I think the case against section 548 is overwhelming. If we allow this section to remain in the energy bill, we will mandate long delays in the construction of powerplants, we will slow down energy production, we will sentence our people to paying even more for electricity, we will create unemployment in the construction industry and we will overburden our regulatory system. I urge my colleagues to support this amendment deleting section 548. Thank you.

Mr. ASHLEY. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, it is with considerable reluctance that I rise in opposition to this amendment, because the gentleman from Alabama (Mr. FLOWERS), aside from being a good friend of mine, has been an enormously valuable member of the Ad Hoc Committee on Energy.

I must say that in my capacity as chairman of the Ad Hoc Committee on Energy, Mr. Chairman, that this matter was considered by the committee at considerable length. The amendment offered by the gentleman was rejected by a very close vote, 18 to 21, and it was on the basis of that close vote that the amendment very properly is being considered at this time.

My opposition to the amendment when it was considered in committee and at this time, I am bound to say, is predicated on the position of the Department of Justice, which strikes me as being persuasive in the matter.

I would like at this time, Mr. Chairman, to cite a letter of recent date over

the signature of John H. Shenefield, Acting Assistant Attorney General of the Antitrust Division. The letter reads as follows:

DEPARTMENT OF JUSTICE,
Washington, D.C.

Hon. JOHN D. DINGELL,
Chairman, Subcommittee on Energy and Power, Committee on Interstate and Foreign Commerce, House of Representatives, Washington, D.C.

DEAR MR. CHAIRMAN: You have requested the views of the Department of Justice on a motion to strike Section 548 of H.R. 8444, a bill to establish a comprehensive national energy policy.

Section 548 would permit the Federal Power Commission (or its successor regulatory body) to determine and prohibit unfair methods of competition by electric utilities. Further it would authorize the FPC to review proposals to construct nonnuclear bulk power facilities of substantial size to determine whether the ownership or use of a facility would likely create or maintain a situation inconsistent with the antitrust laws and to condition construction of the facility appropriately to prevent or remedy such a situation.

In our opinion it would be most unfortunate were this salutary preconstruction antitrust review procedure stricken from a bill designed to "increase the efficiency of generation, transmission, and distribution of electric power through encouragement of competition . . . ." In my previous testimony on this subject, I indicated that similar prelicensing antitrust review at the Nuclear Regulatory Commission has been extremely successful in insuring that anticompetitive situations are not permitted to develop or continue with the construction and operation of nuclear generating facilities.

We strongly urge that you counsel your colleagues against elimination of this significant procompetitive provision.

Sincerely yours,

JOHN H. SHENEFIELD,
Acting Assistant Attorney General Antitrust Division.

It is for these reasons, Mr. Chairman, that the ad hoc committee was constrained to reject the amendment of the gentleman from Alabama (Mr. FLOWERS) when it was considered some few days ago; and it is this which prompts me at this time to oppose the gentleman's amendment.

Mr. McCLORY. Mr. Chairman, I rise in support of the amendment.

As the ranking member of the Subcommittee on Monopolies and Commercial Law, the Antitrust Subcommittee, of the Committee on the Judiciary, I certainly do not need to apologize for my credentials in support of improved antitrust legislation and for having supported the comprehensive antitrust bill in the last Congress, including the new concept of parens patriae. The provisions of that legislation also provided for civil investigative demand—CID's—and other improvements in the antitrust laws.

Mr. Chairman, I can assure the Members that I support strong antitrust laws and the effective enforcement of the antitrust laws.

We are dealing here today with the subject of energy, and we are trying to provide more productive sources of energy for our country and for the consumers of America. It seems to me that we should be very hesitant about throwing roadblocks or providing obstacles in attempting to attain this goal.

I hope and would expect that with respect to any substantial plant expansion the Antitrust Division would have information and could get information. They could utilize the civil investigative demands—CID's—for which we have provided. Of course, information is freely available as between the various agencies of the great bureaucracy. However, to require with respect to every substantial expansion of a utility that it would have to, first of all, wait and then be confronted with the suggestion that here is an antitrust violation or prospective antitrust violation would seem to me to be inconsistent with what we are trying to do.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, the gentleman stated that this involves every substantial expansion of a utility.

This refers to 200 megawatts, I want the gentleman to know; and that is not a small expansion. That was a very large increase in generating capacity.

Mr. McCLORY. Mr. Chairman, I thank the gentleman for his comments.

When I mentioned the substantial expansion, I intended it to be what the legislation involves.

Public utility electric generating is big business, and we are talking about regulated monopolies. We are not talking about fly-by-night competitive organizations that just go out and suddenly decide that they are going to develop an electric-generating plant. We are talking about large utilities which are going to expand their plants to provide for increased needs, substantial needs, to meet utility demands. Therefore, to force a utility into a position where it has to be suspect before it even gets permission from the Federal Power Commission to expand its generating capacity would seem to me to be suggesting—and I think it is commonplace in some areas—that somehow or other there is something evil and something that is contrary to the interests of the American consumer going on with respect to the large utilities and their expansion.

My golly, Mr. Chairman, what we need is the expansion of our utilities so as to provide greatly increased sources of energy. It seems to me that perhaps what we are doing here today is not so much helping to solve our energy problem, but we are helping to create the problem. The problem is right here. Let us not throw in more obstacles, more road blocks, more requirements, more 60 day delays, delays which have plagued the utilities in recent years. I believe those delays account for the shortages that have occurred, including, I would suggest, the blackouts.

I would say that in the area from which I come that the public utilities have done a fantastic job of anticipating the needs of the public. I do not want to stifle their efforts to meet the needs of our people or the ability of the utilities to provide gas and electricity, all of the needs we have as consumers of energy.

So, Mr. Chairman, I am hopeful that the amendment offered by the gentleman from Alabama (Mr. FLOWERS), will be approved and we can move forward to other parts of this legislation.

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Tennessee.

Mr. GORE. Mr. Chairman, I thank the gentleman from Illinois for yielding to me. I would like to address the statement the gentleman made that every construction will have to be reviewed. Let me point out that under the bill there is no review until and unless a utility within the region feels that there is an anticompetitive threat because of the planned construction, and files a complaint with the Department of Justice. Only then would there be a review.

As a result, there would be very few reviews triggered under this provision.

Mr. McCLORY. Mr. Chairman, as I understand, during the 60-day period, there would be a delay. It is the delays that I think are hampering and which satisfy none of our needs for energy. It is the delay that I am trying to correct.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. DINGELL and by unanimous consent, Mr. MCCLORY was allowed to proceed for 2 additional minutes.)

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I thank the gentleman from Illinois for yielding to me.

Let me say for the benefit of the gentleman from Illinois (Mr. MCCLORY), Mr Chairman, that under this statute, under the Atomic Energy Act, 180 days are allowed for review and the period for review runs contemporaneously with the process of the application and the construction work which goes on. There is no delay.

I repeat, there is no delay. As a matter of fact, the biggest delays in these areas come from labor problems, from equipment delays, and from environmentalists' complaints.

All we are seeking to have done here is a review of the antitrust questions of the sales of bulk power.

The gentleman from Illinois and all of us want to see competition come into play. That is the issue in question. And then it will be done only at the request of a utility in the region which feels it is adversely affected in connection with the sale of bulk power.

Mr. McCLORY. Mr. Chairman, I think I understand what is involved, because it says that whenever an application is received it shall be transmitted to the Attorney General, and then there is a 60-day delay. It is that delay in the development of a new or expanded generating facility that we wish to avoid.

This was not in the original bill.

The CHAIRMAN. The time of the gentleman has expired.

(On request of Mr. GARY A. MYERS, and by unanimous consent, Mr. MCCLORY was allowed to proceed for 1 additional minute.)

Mr. GARY A. MYERS. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Pennsylvania.

Mr. GARY A. MYERS. Mr. Chairman, it seems to me that maybe what we are trying to answer in this proposal is the ever-pending question of who regulates the regulators. This appears to be an attempt to have super regulation of the other regulatory bodies that are already overseeing the expansion and application of power generation for the general public.

Is that not actually what we want to have and not the superseding regulator?

Mr. McCLORY. That is the question it involves, it involves another agency of the Government, and another review, and another delay. It would seem to me that if any public utilities violate the law, then we want to have the situation corrected and we want the offense prosecuted. But, to require or attempt to have another delay it seems to me would be unconscionable and is not logical. This section was not embodied in the original bill recommended by President Carter that was brought to us. I believe we should drop it from the bill.

I would urge again support of the gentleman's amendment.

Mr. MURPHY of Illinois. Mr. Chairman, will the gentleman yield?

Mr. McCLORY. I yield to the gentleman from Illinois.

Mr. MURPHY of Illinois. Mr. Chairman, I would ask the gentleman from Illinois (Mr. McCLORY) if it is not the truth that the proposal lost in the Committee on Interstate and Foreign Commerce and then it won by a show of hands of 14 members voting in the ad hoc committee?

Mr. McCLORY. I believe the gentleman is correct.

The CHAIRMAN. The time of the gentleman has again expired.

Mr. GORE. Mr. Chairman, I move to strike the requisite number of words to speak against the amendment.

Mr. Chairman, I will be brief in speaking against this amendment. First, I want to correct the record. This amendment was defeated in the Commerce Committee. It was allowed on the floor by the Committee on Rules, but in the Commerce Committee it was defeated.

Mr. FLOWERS. Mr. Chairman, will the gentleman yield?

Mr. GORE. I yield to the gentleman from Alabama.

Mr. FLOWERS. I thank the gentleman for yielding.

Was not the amendment approved in the subcommittee? The section was reinstituted in the full committee.

Mr. GORE. That is correct. In the full committee the amendment was defeated.

Mr. FLOWERS. But it was a very close vote.

Mr. DINGELL. Mr. Chairman, will the gentleman yield?

Mr. GORE. I yield to the gentleman from Michigan, the chairman of the subcommittee.

Mr. DINGELL. I thank the gentleman for yielding.

I will say to my good friend, the gentleman from Alabama, that I was there. Just to start to help things along, let me observe that it was not in the bill as sent by the White House. It was put in in the committee print. It was in the subcommittee print. It was taken out by the subcommittee. It was put in in the full committee. It was kept in in the ad hoc committee, and it is now here on the floor.

Mr. GORE. Reclaiming my time, the chairman of the subcommittee is correct. I was the author of the amendment in the full committee, and it did pass there. What this seeks to do is to extend antitrust protection and review to the siting of very large generating powerplants in this country. Part of the problem with energy in this country is the distribution of generating capacity. We have had a history of anticompetitive practices within the electric power industry.

What are some of these practices? In some instances we have requirements in power contracts that a utility buy all of its power from one supplier, or none at all. In other instances we have had provisions requiring that a utility not "wheel" electricity, that is, move electricity from one boundary of its jurisdiction to another for a third utility. In other instances we have had refusals to coordinate with utilities unless they grant territorial concessions to the big power supplier within their area.

This antitrust review, I say again, is only triggered upon a complaint filed by a utility within the region where the generating powerplant is proposed to be built. It provides for antitrust review. If we want to remove the application of the antitrust laws here and eliminate the possibility of antitrust review of new powerplants, then vote in favor of this amendment.

But I am a strong supporter of the antitrust laws and I think that they have been a good thing in this country. I think that they need to be extended and strengthened. We need this antitrust review.

There is another reason to support it. I come from an area where we have public power, but this is not a public power-private power issue—not at all. Twenty-nine percent of the investor-owned utilities purchase their power totally from another big power supplier. They are defenseless in many instances when they have these contracts with the only big power supplier in their area. In 1937 there were 1,404 investor-owned utilities in this country. Ten years ago there were 405. Last year there were 376. The number is going down, and the trend shows that we are moving toward the time when we will have fewer and fewer suppliers of energy in this country. We need this provision now to prevent that problem from occurring in the future.

Mr. BROYHILL. Mr. Chairman, I move to strike the last word.

Mr. Chairman, I want to take this opportunity to engage in a colloquy with the gentleman from Illinois (Mr. MADIGAN) and the gentleman from Michigan (Mr. DINGELL), and I hope Members will permit me to take a moment or two to ask a question or two about another part of the bill, because I have been involved in other committee activities in the last day or so, and also we do not have opportunity for amendment and this is the only chance we have to ask questions.

I rise out of concern for the provision in part II, title I, respecting the use of recoverable materials by industry. One of the purposes of this section is to encourage the use of recoverable materials within the industry that produced those materials. That is commendable. There are industries that produce materials such as aluminum and steel, that can recycle those materials they produce. Four industries are singled out in this section. One of them is the textile industry.

After considerable investigation of this, I find virtually no waste recoverable material is created in the manufacture of cloth or yarn that could be recycled within that industry. I wonder if the gentleman from Illinois, the author of that amendment could perhaps comment as to what his real intent was in including this section in the bill.

Mr. MADIGAN. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from Illinois (Mr. MADIGAN).

Mr. MADIGAN. Mr. Chairman, I thank the gentleman from North Carolina for yielding.

As the author of the section on recycling that the gentleman refers to, I would say I have no intention of legislating and I had no intention of legislating requirements which would serve no purpose. It is my intention that our resources recovery efforts should be directed to the industries which can use the recyclable materials in their own industrial processes and to a substantial degree. Certainly it would be proper, and if this is the thrust of the gentleman's comments, for the conferees between the House and the Senate to take a very close look at this to insure that it properly applies to the textile industry.

I appreciate the comments of the gentleman from North Carolina and thank the gentleman for his comments.

Mr. BROYHILL. I thank the gentleman.

I wonder if I could have some comment on this from the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I would be glad to respond if the gentleman will yield.

Mr. BROYHILL. I yield to the gentleman from Michigan.

Mr. DINGELL. Mr. Chairman, I thank the gentleman for his comments. I am aware of his concern.

As my colleague, the gentleman from Illinois, has indicated, the provision was offered by the gentleman from Illinois (Mr. MADIGAN) who had a very strong interest in it and who handled the amendment very well. I supported his effort on recycling materials and I recognize the urgency of that undertaking. The four industries were selected because it was believed at that time they had the greatest potential for the use of recoverable materials.

I intend to ask, in response to my friend, the gentleman from North Carolina, that the Federal Administrator

advise us about this matter when we will consider this information in the conference.

I want to make it clear that I have no interest in creating unnecessary paperwork for no benefit. I believe in that I am concurred in by my friend, the gentleman from Illinois (Mr. MADIGAN), and if redress of this matter is necessary I assure the gentleman from North Carolina we will do so.

Mr. BROYHILL. I thank the gentleman very much.

I am sure it was not the intention of the chairman of the Subcommittee on Energy and Power or of the author of the amendment, the gentleman from Illinois, to burden an industry which has little or no need to recycle its materials because it does not use those in its processes.

Mr. PREYER. Mr. Chairman, will the gentleman yield?

Mr. BROYHILL. I yield to the gentleman from North Carolina (Mr. PREYER).

Mr. PREYER. Mr. Chairman, I join the gentleman from North Carolina (Mr. BROYHILL) in his comments on the fact that there is practically no recoverable waste where a textile mill product is concerned. I believe it would be a mistake to include this in section 241 and it would only result in burdensome reporting.

I thank the gentleman from Illinois and the gentleman from Michigan for their consideration.

Mr. Chairman, I have asked a lot of questions about this provision and its effect on the textile industry. As a result of my investigation, I find that there is virtually no recoverable waste material created in the manufacturing of textile mill products which can be recycled by that industry in the manufacturing of textile mill products as envisioned in section 241 of H.R. 6831. The "findings" in that section state that it is designed to conserve energy in major energy-consuming industries where recovered materials are utilized in their manufacturing operations.

Those usable wastes which result from textile mill products manufacturing are used outside of the textile industry for such things as paper and allied products, apparel manufacturing, furniture, and cosmetics.

The Federal Government classifies textile mill products in SIC 22. This SIC classification covers products from yarn through finished fabrics.

In the manufacturing of yarn, some cotton with a staple length too short to use for yarn and lint become waste materials. These materials are sold for various types of stuffing for everything from furniture to coffins. Other waste lint is frequently donated to charitable organizations for pillow stuffing. None of these uses are in SIC 22.

In the manufacturing of fabric, a commodity known as "selvage" is created when the fabric is trimmed. These are small, narrow, generally ragged pieces of material. These are baled and sold to the "rag" market. One use within the textile industry is to weave small bathmats. This is an extremely small type of operation, which would not be subject to the target and reporting under the proposed new program. Some selvage is used for cleaning cloths. This use, also is outside SIC 22.

Some rags and cotton linters are used in manufacturing paper, but that accounts for less than 1 percent of the paper market and it is used in SIC 26, not SIC 22. This is a specialized and declining market where, even in the paper industry, there is little expectation that rag use will increase significantly.

Wool grease is produced in the processing of wool. That grease is combined with alcohol to make lanolin, all of which is sold to the pharmaceutical industry. None is used in SIC 22.

Some wool is reused to manufacture suits. This is a specialized market, with only about six manufacturers. Of the 11.6 billion pounds of fiber consumed by U.S. manufacturers in 1976 only 122 million pounds were wool. That amount is wool for all purposes. The reuse suit market would be an infinitesimal fraction of that. None of the used wool fabric manufacturers would be subject to the reporting program under the definitions in section 374 of EPCA.

Some comber noils from extra long staple cotton can and are being blended with short staple cotton in open end spinning. The bagging from a bale of cotton is sometimes used for carpet backing. Card strips and clearer waste from spinning can and is being used for mattress ticking, this, likewise, is a very small volume use. Some cotton linters and waste are used in mattress batting or stuffing. This is not recycling, but utilization of lower grade products which are a byproduct.

I have been able to determine that a small amount of polyvinyl alcohol is recovered and recycled in certain textile finishing processes under certain conditions in a limited number of plants. However, this would be insignificant at best.

Because of the fact that there is practically no recoverable waste where the textile mill products industry is concerned, the inclusion of textiles in section 241 is in error. It would impose a burdensome target reporting program on an industry which of necessity would have a ridiculously low target and no known potential for improvement, even with the help of tax incentives.

Title II of H.R. 6831 provides for a special 10-percent investment credit in addition to the regular investment tax credit in connection with the purchase of "recycling equipment," defined as "equipment which is used exclusively in the recycling of solid waste and to sort and prepare solid waste for recycling." The textile industry has no idea what type of equipment could be purchased to enhance solid waste recovery and reuse in the textile mill products industry, even if the tax credit were 100 percent.

Yet, section 241 of title I would impose a mandatory data collecting and reporting program on the textile industry. The only voluntary aspect of the program is that there is no requirement to meet the industry target.

Mr. Chairman, I know from personal observation that the textile industry does not oppose realistic and meaningful energy conservation reporting programs. The American Textile Manufacturers Institute pioneered the energy efficiency reporting program and the ATMI program set the pattern for the voluntary program which eventually became the basis for the EPCA target program. The ATMI energy efficiency measurement program is widely recognized in Government and industry as a model program.

The EPCA target for the textile industry cost the FEA in excess of $125,000 in addition to staff time required to conduct a public hearing, written comment evaluation, and promulgation of regulations.

The new proposed program would be another burdensome paperwork project imposed on the industry and would require an additional bureaucracy to administer a target program, which could be expected to produce minimum results where textiles are concerned.

The solid waste of the textile industry is utilized outside of SIC 22 in the form of byproducts sold to other industries.

Mr. DINGELL. Mr. Chairman, I rise in opposition to the amendment offered by my good friend.

Mr. Chairman, there is a good deal of misunderstanding about the amendment. First of all it relates to bulk power sales, not to the retail sales of electric utilities. Second of all, it is triggered not by a citizen complaint or a lawsuit but it is triggered by a complaint of an electric utility in the region who might claim that he is being foreclosed from the ability to participate in the generation of electric power.

Now, it has been pointed out by the able gentleman from Tennessee that the number of private utilities in this country are in a substantial and real decline. This tends to eliminate the availability of bulk power from competing sources. There are large numbers of utilities in the United States that have no generating power facilities of their own, but exist and serve their customers solely with power which is bought on the marketplace.

Now, the comment was made with regard to delay. I think that is one question which merits consideration. Delay here is not a real peril. A delay would not occur, in my view, because a review would be going on at a time other processes were going forward; the site permits, right-of-way permits for lines, EPA permits with regard to air pollution and air and water access and things of that kind; so it should be plain there is really no possibility for delay.

As a matter of fact, it should be apparent to all that if we really want delay in the construction of these plants, let the plant begin and then let them get hit with an antitrust suit; then they will see some genuine delay that will curl the hair of all here present.

That is not what we want. We want to have this review, which would take place at a time earlier.

It should be observed that under similar legislation enacted at a time earlier, statistical experience on this kind of review does exist under the Atomic Energy

Act, which has a similar provision. Under that provision, the Justice Department, as of July 29, 1977, reviewed 89 applications. In 16 of these, it recommended hearings be held on anticompetitive problems, but only three of these resulted in full blown hearings.

It should be noted that under the Atomic Energy Act, the Justice Department is given 180 days for this review. Under the legislation before us, we give the Justice Department 60 days, one-third of the time, and it should be noted that the Justice Department reviews in this instance only on complaint, not upon its own motion.

Now, let us talk about the grandfather situation that my good friend, the gentleman from Alabama, refers to. The Alabama Power Company was involved in certain anticompetitive practices, the principal of which was the refusal of that company to coordinate its bulk power system with the Alabama Power Cooperative. Also involved was a demand by Alabama Power for concessions in territorial allocation.

I do not think this is the kind of thing we want to foreclose by denying the kind of opportunity for a brief review while other applications are pending.

Mr. Chairman, I yield to the gentleman from Pennsylvania (Mr. GARY A. MYERS).

Mr. GARY A. MYERS. Mr. Chairman, I thank the gentleman for yielding.

Mr. Chairman, the gentleman implied a very important aspect of the provision in the bill if the amendment is not adopted.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

(At the request of Mr. GARY A. MYERS, and by unanimous consent, Mr. DINGELL was allowed to proceed for an additional 3 minutes.)

Mr. GARY A. MYERS. Mr. Chairman, if the gentleman will continue to yield, is the gentleman suggesting that the provision by providing so in the act here that if a competitor does not raise the antitrust issue within this time frame that it precludes his opportunity to exercise that option once that construction begins?

Mr. DINGELL. Mr. Chairman, I do not believe that is necessarily the case, because it would be their preference that the antitrust question would be raised prior to the time that the construction begins, for reasons that both my friend, the gentleman from Pennsylvania, and I can clearly understand.

As the gentleman well knows, long before the digging commences there are a whole series of permits from State, Federal, and local agencies, and a 60-day antitrust review would not unduly prejudice anything. As a matter of fact, there are delays much more important which come from other things such as equipment supply, labor difficulties, environmental and citizens suits which might arise.

Mr. GARY A. MYERS. But the truth of the matter is that those same delays could occur even with this provision.

Mr. DINGELL. They might occur when the company was unprepared by the right review, which this makes possible. This actually is therapeutic in preventing misfortune from striking the company.

Mr. FLOWERS. Mr. Chairman, will the gentleman yield?

Mr. DINGELL. I yield to the gentleman from Alabama.

Mr. FLOWERS. I do not think companies regard this as quite as therapeutic as the distinguished chairman says it is. I think what he said is that there is already so much delay written into government, there is so much redtape and regulation that even this additional substantial amount will not do that much harm.

Let me say to my friend from Michigan—and I admire his work—but I just cannot agree with him on this section. There is an absolute horror story in the situation that I made reference to and what the gentleman made reference to. I do not think that either one of us has been able to tell the whole story in the short time we have here, but my point is that this is a potential for further delay.

All of the antitrust laws that are on the books are still on the books. They can be utilized. We can have this and still have the court proceedings. There is not anything this circumvents, that this heads off. It does not put a lid on anything. It adds another level of redtape and delay. It is not just for competitors, but for any electric utility.

Mr. DINGELL. If the gentleman will permit, I want this observed, that this causes no delay but, in the case of Alabama Power, it caused a remarkable change in their viewpoint toward the cooperative when they had a similar review. As a matter of fact, it was found that earlier they were engaged in the practice of having a dual rate system to the jeopardy of a number of smaller electrical utilities in the area. Most of the delays in the case the gentleman has referred to started from the Alabama Power's wanting them.

The CHAIRMAN. The time of the gentleman from Michigan (Mr. DINGELL) has expired.

Mr. FLOWERS. Mr. Chairman, I ask unanimous consent that the gentleman from Michigan (Mr. DINGELL) be granted 2 additional minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Alabama?

Mr. ASHBROOK. Mr. Chairman, I object.

The CHAIRMAN. Objection is heard.

Mr. BROWN of Ohio. Mr. Chairman, I move to strike the requisite number of words.

First off, Mr. Chairman, let me observe for the Members present that in Ohio we have several plants that have been built that serve investor-owned utilities, cooperative utility distribution systems, and municipal utilities all at the same time. So, we have this kind of combined generating plant capacity on a voluntary basis that apparenty the authors of this section would like to encourage through the imposition of bureaucratic meddling from the Justice Department and the Federal Power Commission.

But, I rise in opposition to the section and in support of the Flowers amendment. It seems to me that section 548 is not desirable because it will delay the construction of generating capacity. Nobody, I think, can argue that generating capacity delays are not to be sought in this bill if we are trying to produce a bill to produce energy. The subcommittee, I might say to the gentleman from Illinois, deleted section 548, which deals with the preservation of competition, on a 12 to 10 vote, but the full committee reinserted the section.

At that time the proxy votes were all pretty well in line on the majority side, and it was through the leadership of our chairman—who I want now to sit back and relax and just listen to me for a few minutes because he had a long night with a sick conference report last night—that section 548 was reinserted in the full committee.

The problem with this provision, which now is in the bill, is that it would permit the Federal Power Commission and the Justice Department to delay a utility's planned construction, even though neither the Commission nor the Department now has certifying authority with respect to construction of fossil fuel fired generating units and it would permit Justice and the FPC to exact commitments prior to construction, such as selling parts of generating capacity to other parties.

Let me read some of the language. On page 282, line 6, it says:

> . . . with such requirements as it determines appropriate to prevent or remedy such a situation (including providing for joint ownership of such facility.)

That clearly is an invitation in legislative language for these two agencies to get in and just say, "Now, you will be all right, provided you do this." If we want them to do it, why do we not just mandate it? Why do we give the authority to the agencies—we do not know who will be making this determination here—to say, "Well, you can go ahead and build the plant if you do this, that, or the other," or whatever is the whimsical idea of what the agency thinks is right.

The FPC and the Justice Department do not presently have authority to compel such action in return for permission to go forward. If the FPC and the Justice Department are to be given an additional role in the certification process, which I do not believe to be desirable, it should be done by clear statutory direction by the Congress, with procedural safeguards, and not in some indirect way of administrative or judicial interpretation which permits the extension of bureaucratic power for the sake of the exercise of that bureaucratic power alone.

And that is what we are doing. Talk about sloppy legislation. Is this the same Congress that a couple of years ago was saying that we did not want the executive branch to start making all of the rules for us, that we want to tell them what they are to do and what they are not to do?

And now we write the language like this, which says, "We want you to review these things whenever anybody builds a new powerplant. Take your time if you wish." We do not say, "Take your time," but we do say, "You can review the whole process and then say what is appropriate to remedy whatever situation you find that may be at fault here."

If that again is not an invitation to bureaucratic interpretation of what is right and wrong, I have never heard of it.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. BROWN) has expired.

(On request of Mr. MCCLORY, and by unanimous consent, Mr. BROWN of Ohio was allowed to proceed for 1 additional minute.)

Mr. MCCLORY. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Illinois.

Mr. MCCLORY. I thank the gentleman for yielding.

Mr. Chairman, I just want to point out, in line with what the gentleman has said, there are specific authorities in that section that the Commission may prescribe as it determines appropriate to carry out this subsection. They want to make sure they have the right to carry out rules and regulations, to amplify and expand the authority they have here. That is going to be even more mischievous than the language itself.

The CHAIRMAN. The time of the gentleman from Ohio (Mr. BROWN) has expired.

(By unanimous consent, Mr. BROWN of Ohio was allowed to proceed for 2 additional minutes.)

Mr. BROWN of Ohio. Mr. Chairman, I would just say to the gentleman from Illinois that I hope the Members know what is at stake here. There are the distribution companies and utilities which do not want to build the generating capacity themselves. They want somebody else to build it, so that then when it is built they can say, "Well, now, we want to buy from you. We want you to build enough to take care of us."

So they are not committing their utility or their customers to the necessity of paying for that plant. That is what is at stake. If we think that ought to be done, if we think we ought to give somebody a free ride, that is something else. Let us take the case of the last guy waiting at a bus stop. If the bus is going that way anyway, why should he have to pay? If we want to say, "That guy deserves a free ride, but all the other people on the bus have to pay," we ought to put that in the law and say that since the bus is going his way, he gets on free.

Frankly, I do not think that is desirable, and I do not think we ought to put that in the law. I think some of my friends on the other side of the aisle do not think it would be desirable either, and they might not get a majority vote for that approach. So what we have now is an opportunity for the same thing to be accomplished bureaucratically.

Mr. Chairman, I do not think that is desirable, and the gentleman from Alabama (Mr. FLOWERS) is quite right in saying it should be stricken.

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. BROWN of Ohio. I yield to the gentleman from Tennessee.

Mr. GORE. Mr. Chairman, I thank the gentleman for yielding.

No one is proposing that any utility should be given a free ride.

Mr. BROWN of Ohio. No, not directly.

Mr. GORE. The gentleman is quite correct in stating that some distribution companies are not large enough to construct their own facilities for increased generating capacity.

Mr. BROWN of Ohio. If that is true, why, then, do they not combine, as they do in Ohio, with the other companies that are going to build facilities? They can put their capital in, too, the same as the other companies that are going to build the facilities.

Mr. GORE. That is precisely the result that is expected through this legislation.

Mr. BROWN of Ohio. That is the purpose of it, then, is it not?

Mr. GORE. The purpose is to encourage the sharing of generating capacity so there will be a constant supply of energy.

Mr. BROWN of Ohio. Mr. Chairman, I would say to the gentleman that it is not to encourage that but to force a whim or a bureaucratic decision on other utilities and their customers.

Mr. GORE. No; I do not believe that to be correct.

Mr. BROWN of Ohio. Why do we not do it directly, then, if that is what we want to do?

Mr. GORE. Mr. Chairman, will the gentleman yield further?

Mr. BROWN of Ohio. I yield to the gentleman from Tennessee.

Mr. GORE. Mr. Chairman, this action only comes on the complaint of a utility in a region in which an anticompetitive result will occur if they are not given the opportunity to share in the costs as well as the benefits of additional generating capacity in order to better serve its customers.

Mr. BROWN of Ohio. It comes only if the utility says, "I want a free ride." The utility goes to the Justice Department and the FPC and says, "Give me a free ride."

The question we must ask ourselves is: Do we want to leave it up to the FPC and Justice to make that decision?

Mr. Chairman, the real danger is that such a provision would cause delays in the construction of facilities necessary to provide adequate supplies of electric energy to meet the demands of the public. Thus, the burden which would be created by section 548 would aim toward defeating the basic purpose of the national energy legislation, that is, assurance of the timely development of energy resources necessary to meet the needs of the nation.

Proponents of section 548 argue that it would not cause any undue delay because the Justice Department would have only 60 days to make its review. However, there is no time limit whatsoever on the Federal Power Commission in making its determination. In fact, section 548 provides that after receiving the Attorney General's advice, the FPC shall launch its own proceeding, including "public notice and an opportunity for written data, views and comments." Experience with the FPC on other matters indicates that there is little hope for speedy and expeditious action. Instead, there is every likelihood that the utility applicant will wait for many months and years while the bureaucratic process rolls on.

I urge my colleagues to support the Flowers amendment.

Mr. STEERS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I would like to make an inquiry of the gentleman from Michigan (Mr. DINGELL), if he will allow me to ask a couple of questions.

Mr. DINGELL. If the gentleman will permit and if he will yield, I will be delighted to try to respond.

Mr. STEERS. Mr. Chairman, I believe I heard the gentleman indicate the point that in many, many instances there would be no possibility of a delay because, first of all, this cannot be triggered unless there is another public utility or another complainant who would raise the question. Is that not correct?

Mr. DINGELL. Mr. Chairman, if the gentleman will yield, the answer is that the gentleman is correct, except that the complainant would have to be a utility.

Mr. STEERS. Why does it say, then, "whenever the Commission determines on its own initiative or upon complaint. . . ."?

Mr. DINGELL. Mr. Chairman, if the gentleman will permit me to answer, that is a different section in the bill. That refers to other parts of the legislation and is not a subject of the preservation of competition section.

Mr. STEERS. I am reading from section 548. That language appears at line 24, on page 280.

Mr. DINGELL. The gentleman is in the wrong subsection. There are two subsections here. There is section 548(a), which is the general authority of commission section, and then there is the section 548(b) relating to new bulk power facilities. The reference there is to subsection (h)(1) of section 202 of the Federal Power Act.

Which one of those subsections is the gentleman reading?

Mr. STEERS. I am reading from (a), which refers to adding a new section (k).

If I understand the gentleman correctly, then, he is saying that this states the general authority of the Commission. This section says, "whenever the Commission determines on its own initiative . . ." By that language, then, could that not result in a delay?

Mr. DINGELL. Mr. Chairman, for the benefit of my friend, let me say that can be done under present law now, and the Supreme Court has already passed on this. That is in connection with rate cases, not construction of facilities, I would point out to the gentleman.

Mr. STEERS. Mr. Chairman, my other question relates to utilities, and I understand there are some that do not have to go to the Federal Power Commission.

The point I am making—and I am asking a question really, because I am not sure I am right—is this: It says on page 281 at line 19, as follows: "(but not to exceed 60 days) . . ."

My question is if one does not have to go to the Federal Power Commission, is that not an additional 60 days since there are no 180 days that will run contemporaneously?

Mr. DINGELL. Let me respond to the gentleman in this way: That is concurrent with other actions that go on in the Commission, not in succession with other actions. Furthermore, these plans are filed prior to the time the construction actually starts.

Mr. STEERS. But suppose, if I may interrupt, that the utility has nothing

filed with the Federal Power Commission. The gentleman says that it goes on during other action.

Mr. DINGELL. There is no triggering of the section if there is no proposal to construct new bulk power facilities before the Commission.

Mr. STEERS. No, but suppose it has been triggered by the complaint of, say, another municipality or utility?

Mr. DINGELL. That can take place only if there is a proposal to construct new bulk power facilities before the Commission.

Mr. STEERS. Then the gentleman is saying that if the utility has no construction permit application binding, the 60-day delay cannot occur; is that correct?

Mr. DINGELL. The 60-day delay does not occur if there are no proposed plans. The provision with regard to competition and the review of antitrust matters under these sections does not come into operation.

Mr. STEERS. Mr. Chairman, I thank the gentleman.

Mr. DINGELL. If the gentleman will yield further, I want to thank the gentleman because he has elucidated much of the controversy that appears to exist here.

Mr. WIGGINS. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, a long time ago it used to be lawful to engage in any conduct, commercial or private, unless it was explicity against the law. That maximized our freedom. We would pretty well do whatever we wished unless the law made it illegal to do so.

However, in recent years, we have been moving in a different direction. It is now not enough that one should be in violation of the law. Now we are asking Government to take a look at our conduct prospectively and make a determination as to whether our plans—and now I quote those exquisitely vague words in the bill—"may create or maintain a situation inconsistent with the anti-trust laws."

Mr. Chairman, that kind of review is required by this act. One complains to the Commission, and the Commission seeks the views of the Attorney General with respect to particular conduct, namely, a business decision to construct, and asks the Attorney General to make such a determination.

Of course, if he makes a determination that one is violating the law, his remedy is to proceed promptly against the alleged violator under the existing antitrust laws.

If he makes a determination that one is apt to violate the law, there are injunctive remedies available. But that is not the determination to be made here. He is asked to second guess a business decision to become involved in the business decision to construct bulk-power facilities on the basis of a determination by him that one's conduct may create or maintain a situation which is inconsistent with the antitrust laws, as defined.

Mr. Chairman, what do the Members suppose the Attorney General is going to do if given that responsibility? He may well decide that one's business judgment is not sound in his view. He may well decide that it would be more consistent with the spirit of the antitrust laws if there were joint ownership of a bulk-power facility. He may interpose his judgment in many ways. Mr. Chairman, that is not good policy.

A person in this country still should be permitted to engage in conduct unless it is against the law, and Government ought to keep its hands off unless it is against the law.

If we wish to prohibit the construction of one-owner bulk-power facilities in a region, then we ought to make it against the law to do so. However, we do not do that in this bill. No, we simply invite the Attorney General to sit on the board of directors and grant him a veto over the board's business judgments.

Mr. Chairman, the amendment of the gentleman from Alabama (Mr. FLOWERS) is a worthy amendment; and it is entitled to the support of this body.

The language contained in this bill is not unique. It merely reflects a growing trend in other legislative areas to have prior review by the Attorney General with respect to the antitrust laws.

That is not good policy. People should not have to go to a police agency to expose their plans and ask for an advisory opinion as to whether or not it may be inconsistent with the law. If you do that, the chief of police, or, in this case, the Attorney General, will surely give his advice. He will say that the plan is all right, but—and then make some suggestions which, of course, one is afraid to disregard.

I hope that the Members recognize the importance of the amendment and will support the gentleman from Alabama (Mr. FLOWERS) in his motion to strike section 548 of the bill.

Mr. GORE. Mr. Chairman, will the gentleman yield?

Mr. WIGGINS. I yield to the gentleman from Tennessee.

Mr. GORE. Mr. Chairman, just briefly in response to the gentleman's reference that this is perhaps not a fit subject for antitrust, or for actions under the antitrust law, let me point out that in FPC versus Conway Corp., the Supreme Court there said that:

> The exercise by the Commission of powers otherwise within its jurisdiction "clearly carries with it the responsibility to consider, in appropriate circumstances, the anticompetitive effects of regulated aspects of interstate utility operations pursuant to . . . directives contained in the law . . ."

I thank the gentleman for yielding.

Mr. WIGGINS. Mr. Chairman, I recognize that this is not a new or novel theory. I am simply suggesting that we not extend it.

Let me make a final observation on what is done under the heading of "preservation of competition." Bear in mind what is proposed to be done. A person wants to go into competition, he wants to build a bulk power facility, and, in the name of "preservation of competition" he may not be permitted to do it.

Mr. FOUNTAIN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I do not know that I can add much to what has already been said by those who have offered their support to the amendment offered by the gentleman from Alabama (Mr. FLOWERS) but, Mr. Chairman, I would like to concur in the substance of everything that has been said in support of the amendment, which I believe is an appropriate amendment. It is looked upon by many utilities and, I might say, the International Brotherhood of Electrical Workers, as another indication of the extent to which the Congress is willing to legislate more and more harassment against those who are trying to meet public needs.

Let us take or further look at the language of section 548 and see how far it goes.

Mr. Chairman, reviews similar to the one to be established under section 548 are now conducted for each proposed nuclear plant, but section 548 would provide for reviews for conventional fossil-fired electric generating plants, hydroelectric plants, and even transmission lines.

In the case of nuclear plants the rationale was that utilization of nuclear energy was originally a monopoly in the hands of the Federal Government. Thus, an anticipatory antitrust review was ingrafted into the licensing procedures for nuclear plants to supplement conventional procedures for applying the antitrust laws. Experience has shown that the antitrust proceedings under the Atomic Energy Act have been lengthy and complex, and have resulted in delays in the construction or the operation of plants which were needed to provide adequate supplies of electricity in the areas which such plants were designed to serve.

With respect to generation and transmission facilities, to which section 548 would apply, the rationale which supported the antitrust review for nuclear plants is not applicable. Technology for such facilities was not developed at Government expense, and the Federal Government is not turning over to private enterprise a technology which it had developed and controlled. Importing the anticipatory antitrust review is unnecessary with respect to such facilities in view of the conventional antitrust procedures which are available for application to the electric utility industry. Providing for such review would be tantamount to requiring an antitrust review before a steel company built a new steel mill or before a car manufacturer expanded its production capability.

The real danger is that such a provision would cause delays in the construction of facilities necessary to provide adequate supplies of electric energy to meet the demands of the public. Thus, the burden which would be created by section 548 would aim toward defeating the basic purpose of the national energy legislation, that is, assurance of the timely development of energy resources necessary to meet the needs of the nation.

Proponents of section 548 argue that it would not cause any undue delay because the Justice Department would have only 60 days to make its review. However, there is no time limit whatsoever on the Federal Power Commission in making its determination. In fact, section 548 provides that after receiving the Attorney General's advice, the FPC shall launch its own proceeding, including

"public notice and an opportunity for written data, views and comments." Experience that the utilities in my State have had with the FPC on other matters indicates that there is little hope for speedy and expeditious action. Instead, there is every likelihood—certainly a possibility, and that is dangerous—that the utility applicant will wait for many months and years while the bureaucratic process rolls on.

As a related point, section 548 would necessitate a substantial increase in the Federal bureaucracy. Neither the Justice Department nor the FPC currently have the staff to carry out the responsibilities that would be imposed upon them by this anticipatory antitrust review provision applicable to every new generation and transmission facility. At a time when there is agreement that too many local decisions are made by the bureaucrats in Washington, section 548 would add still another layer of Federal regulation delaying construction of needed energy facilities.

I would like to conclude by saying that I have a telegram, as I am sure most of the Members do, from Mr. Charles H. Pillard, international president of the International Brotherhood of Electrical Workers, which reads as follows:

The International Brotherhood of Electrical Workers opposes section 548 of H.R. 8444 and urges you to support Representative Walter Flowers amendment to strike this section during floor consideration. Section 548 permits the Federal Power Commission to conduct anti-trust review of proposed utility plans for constructing coal or oil fired generating plants or transmission facilities. State regulatory commissions—not FPC—has certifying authority over utility construction and section 548 with its numerous lengthy hearing procedures adds but another layer of red tape and will result in unnecessary delay of vitally needed power facilities. Such delay will lead to the postponement or complete loss of thousands of vitally needed jobs for members of IBEW and other building and construction trades unions. Section 548 was deleted in subcommittee on an amendment by Representative John Murphy (D., N.Y.) but reinstated by the full committee. This section is onerous to all union labor and we urge you to strike it from this legislation.

Mr. Chairman, I think the amendment of the distinguished gentleman from Alabama is a proper one and should therefore be adopted.

This union is opposed to the legislation, and I hope that the committee will accept the amendment offered by the gentleman from Alabama.

Mr. SAWYER. Mr. Chairman, I move to strike the last word.

I just want to make a very brief observation, and that is I have listened now for a very considerable length of time to an argument that centers over a potential of delays of 60 days, and whatnot. If the Members would take a look at section 623 which allows citizen suits to be brought without regard to the amount involved or their damage, and without regard to citizenship, to get preliminary relief and to get their attorneys' fees and expenses paid, if they do not like something, or claim anything virtually in the way of construction or otherwise is illegal, they will think what we are talking about here is de minimus. I may say that I have already had two environmentalists' highly activists groups from my district call and want copies of this section. They are already gearing up on it. So I would just say that I am not impressed with either defenders of the delay arguments or the affirmative arguments here when we look at the havoc that is going to be wrought by section 623.

Mr. STOCKMAN. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I am somewhat perplexed by this amendment. I am inclined to think it unnecessary. I am wondering if I may engage the attention of the gentleman from Michigan, the chairman of the subcommittee, so we can get some indication of the true intent.

As I understand this section, the Attorney General would make a finding of anticompetitive impact and the Commission would then order a remedy. But the problem I have with the wording is that the remedy is open ended. It says, "as he deems appropriate." I am wondering if the gentleman could indicate to me and to the House and for the legislative history of this section, whether there is any intention here that the remedy might involve allowing, say, a municipal power system to come into a bulk power facility on a 10 or 15 percent share at a cost that would be lower than the market cost or the true investment cost. Is there an intent to subsidize or to provide the opportunity to enter into some kind of jointly owned power producing facility at a cost that is lower than the actual cost of building and constructing that facility, or is this merely an intent to provide access if that complaining municipal power system feels it does not have an opportunity to participate on a market cost basis.

Mr. DINGELL. Mr. Chairman, I think the gentleman has put his finger on some of the concerns expressed by my colleagues. He has expressed it most eloquently.

I would point out the gentleman also has stated clearly the intent. We are not intending that anybody be harassed or cause a delay. They can buy in.

Mr. STOCKMAN. So it is the intent, to clarify or to reiterate, that they would have to buy in on a market cost basis.

Mr. DINGELL. Most emphatically.

Mr. STOCKMAN. If that is the indication, I think the amendment is unnecessary. We have heard a lot of talk about competition and regulation. Let us remember this section of the bill affects the electric utility industry and by definition the utilities are monopolies. In all the decisions the utilities make, whether it is on rates or customers they serve, or the facilities they build, those decisions are determined by regulatory commissions either at the State level or in some instances by the Federal Power Commission.

So the question here is whether this will improve the rationality and effectiveness of the regulatory process, and I think it will, because frankly I would rather see the small, municipal utilities, which basically are in the business of selling and distributing power, not in generating it, buy into joint production facilities where they do have the very large, efficient, central generating plants than to have the small utilities be forced into building very small plants of their own which would really result in generating high-cost power for the customers.

So I think the Flowers amendment is unnecessary. I urge it be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Alabama (Mr. FLOWERS).

The question was taken; and on a division (demanded by Mr. DINGELL) there were—ayes 45, noes 19.

RECORDED VOTE

Mr. DINGELL. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 257, noes 160, answered "present" 1, not voting 15, as follows:

[Roll No. 500]

ANSWERED "PRESENT"—1

Edwards, Calif.

NOT VOTING—15

Anderson, Ill.	Goldwater	McCloskey
Badillo	Jacobs	McKinney
Burke, Mass.	Keys	Murtha
Dent	Koch	Railsback
Flippo	Krueger	Teague

The Clerk announced the following pairs:

On this vote:

Mr. Jacobs for, with Mr. Edwards of California against.

Mr. Burke of Massachusetts for, with Mr. Badillo against.

Mr. Teague for, with Mr. Koch against.

Messrs. VANIK, LEGGETT, BRODHEAD, KASTENMEIER, CAVANAUGH, PRESSLER, BAUCUS, and MATHIS changed their vote from "aye" to "no."

Mr. SMITH of Iowa changed his vote from "no" to "aye."

Mr. EDWARDS of California. Mr. Speaker, I have a live pair with the gentleman from Indiana (Mr. JACOBS). If he were present he would have voted "aye." I voted "no." I withdraw my vote and vote "present."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The Clerk will designate the heading of the part now pending.

The Clerk read as follows:

Page 315, line 6; Part VI—Conversion From Natural Gas and Petroleum to Coal and Other Fuel Resources.

(Part VI reads as follows:)

PART VI—CONVERSION FROM NATURAL GAS AND PETROLEUM TO COAL AND OTHER FUEL RESOURCES

Subpart A—General Provisions

SEC. 601. FINDINGS AND STATEMENT OF PURPOSES.

(a) The Congress finds that the protection of public health and welfare, the preservation of natural security, and the regulation of interstate commerce require the establishment of a program for the expanded use, consistent with applicable environmental requirements, of coal and other fuels as primary energy sources for existing and new electric powerplants and major fuel-burning installations.

(b) The purposes of this part, which shall be carried out in a manner consistent with applicable environmental requirements, are—

(1) to reduce the importation of petroleum and increase the Nation's capability to use indigenous energy resources of the United States to the extent such reduction and use are in the best interests of the United States;

(2) to conserve natural gas and petroleum for uses other than as a boiler fuel or for the generation of electricity and to conserve such resources for the benefit of present and future generations;

(3) to encourage and foster the greater use of coal and other fuels, in lieu of natural gas and petroleum as a primary energy source for existing and new electric powerplants and major fuel-burning installations, and for other purposes;

(4) to encourage the use of synthetic gas derived from coal and, to the extent permitted by this part, to encourage the use of synthetic gas derived from coal mixed with natural gas;

(5) to prohibit or, as appropriate, minimize the use of natural gas and petroleum as a primary energy source for existing and new electric powerplants, major fuel-burning installations, and for other purposes;

(6) to require the improvement or modernization of existing and new electric powerplants and major fuel-burning installations, which utilize natural gas or petroleum as a primary energy source and which cannot utilize coal or other fuels, in order to conserve natural gas and petroleum;

(7) to require that existing and new electric powerplants and major fuel-burning installations which utilize petroleum, coal, or other fuels pursuant to this part comply with applicable environmental requirements;

(8) to insure that all Federal agencies utilize their authorities fully in furtherance of the purposes of this part by carrying out programs designed to prohibit or discourage the use of natural gas and petroleum as a primary energy source and by taking such action as lies within their authorities to maximize the efficient use of energy and conserve natural gas and petroleum in programs funded or carried out by such agencies;

(9) to insure that adequate supplies of natural gas are available for essential agricultural uses, including crop drying, seed drying, irrigation, fertilizer production, and production of essential fertilizer ingredients for such uses; and

(10) to reduce the United States' vulnerability to energy supply interruptions.

SEC. 602. DEFINITIONS.

For the purposes of this part—

(1) The term "Administrator" means the Administrator of the Federal Energy Administration.

(2) The term "person" means any individual, corporation, company, partnership, association, firm, institution, society, trust, joint venture, or joint stock company, or any State, the District of Columbia, Puerto Rico, and any territory or possession of the United States, or any agency or instrumentality thereof.

(3) The term "natural gas" means—

(A) natural gas, as defined in section 2(5) of the Natural Gas Act, other than—

(i) natural gas which is commercially unmarketable (either by reason of quality or quantity) as determined under rules prescribed by the Administrator; and

(ii) natural gas which is produced by the user from a well the maximum efficient production rate of which is less than 250 million Btu's per day;

(B) liquid petroleum gas; and

(C) synthetic gas derived from crude oil.

(4) The term "petroleum" means crude oil, residual fuel oil, and products derived from crude oil other than—

(A) synthetic gas derived from crude oil;

(B) liquid petroleum gas; and

(C) liquid, solid, or gaseous waste byproducts of refinery operations which are commercially unmarketable, as determined under rules prescribed by the Administrator.

(5) The term "coal" means anthracite and bituminous coal and lignite.

(6) The term "other fuels" means electricity or any fuel (other than coal, natural gas, or petroleum) and includes—

(A) petroleum coke, uranium, biomass, wood, and renewable and geothermal energy sources;

(B) synthetic gas derived from coal; and

(C) liquid, solid, or gaseous waste byproducts of refinery operations which are commercially unmarketable, as determined under rules prescribed by the Administrator.

(7) The terms "electric powerplant" and "powerplant" mean any electric generating unit, including a gas turbine or a combined cycle unit, which produces electric power for purposes of sale or exchange and—

(A) has the design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 100 million Btu's per hour or greater; or

(B) is a combination, of two or more electric generating units (excluding, if determined appropriate by rule by the Administrator, any such unit not having a design capability to consume any fuel (or mixture or combination thereof) at a fuel heat input rate of less than 100 million Btu's per hour) which are located at the same site and which in the aggregate have a design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 250 million Btu's per hour or greater.

Such terms do not include any such unit subject to the licensing jurisdiction of the Nuclear Regulatory Commission.

(8) The term "new electric powerplant" means—

(A) any electric powerplant (other than a peakload powerplant) the onsite construction or replacement of which, in accordance with final drawings or an equivalent design document approved by the State regulatory authority, had not commenced on or before April 20, 1977; or

(B) a peakload powerplant (i) the construction or acquisition of which, in whole or in part, had not been contracted for on or before April 20, 1977, or (ii) if contracted for on or before such date, the construction or acquisition of which could not be canceled, rescheduled, or modified without—

(I) adversely affecting electric system reliability (as determined by the Administrator after consultation with the Federal Power Commission and the appropriate State regulatory authority), or

(II) incurring significant financial penalty (as determined under rules prescribed by the Administrator).

(9) The term "existing electric powerplant" means any electric powerplant other than a new electric powerplant.

(10) The terms "major fuel-burning installation" and "installation" mean a unit, other than an electric powerplant, consisting of a boiler, gas turbine unit, combined cycle unit, or internal combustion engine which—

(A) has a design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 100 million Btu's per hour or greater; or

(B) is a combination, of two or more such units (excluding, if determined appropriate by the Administrator, any such unit having a design capability to consume any fuel (or mixture or combination thereof) at a fuel heat input rate of less than 100 million Btu's per hour) which are located at the same site and which in the aggregate have a design capability of consuming such fuel at a fuel heat input rate of 250 million Btu's per hour or greater.

(11) The term "new major fuel-burning installation" means any major fuel-burning installation—

(A) the construction or acquisition of which, in whole or in part, had not been contracted for, on or before April 20, 1977; or

(B) if contracted for on or before such date, the construction or acquisition of which could be canceled, rescheduled, or modified without incurring significant financial penalty (as determined under rules prescribed by the Administrator).

(12) The term "existing major fuel-burning installation" means any installation—

(A) which is not a new major fuel-burning installation, and

(B) which has the design capability of consuming any fuel (or mixture or combination thereof) at a fuel heat input rate of 300 million Btu's per hour or greater.

The provisions of subparagraph (B) shall not apply to exclude any installation from being considered an existing major fuel-burning installation if the Administrator finds, by order, that it is technically and financially feasible (as determined under rules prescribed by the Administrator), in view of the remaining useful life of such installation, for such installation to comply with the prohibitions to which such installation would be subject if it were treated as an existing major fuel-burning installation.

(13) The term "primary energy source" means the fuel or fuels used by an existing or new electric powerplant or major fuel-burning installation or the use of which by such powerplant or installation is technically feasible, except it does not include, as determined under rules prescribed by the Administrator—

(A) the minimum amounts of fuel required for boiler startup, testing, flame stabilization, and control uses, and

(B) the minimum amounts of fuel required to alleviate or prevent unanticipated equipment outages and emergencies directly affecting the health, safety, or welfare which would result from electric power outages.

(14) The term "site limitations" means, when used with respect to any powerplant or installation, specific limitations associated with a particular site which relate to the use of coal or other fuels as a primary energy source for such powerplant or installation, such as—

(A) inaccessibility to coal or other fuels;

(B) lack of transportation facilities for coal or other fuels;

(C) lack of adequate facilities for the handling and storage of coal or other fuels;

(D) lack of adequate means for the disposal of wastes from such powerplant or installation; and

(E) lack of an adequate and reliable supply of water for use in compliance with applicable environmental requirements.

(15) The term "applicable environmental requirements" includes—

(A) any Federal, State, or local government law, standard, limitation, or other requirement (including any final order of any Federal or State court) applicable to emissions of environmental pollutants (including air and water pollutants) or disposal of solid waste residues resulting from the use of coal or other fuels or natural gas or petroleum as a primary energy source or from the operation of air pollution control equipment in connection with such use; and

(B) any standard, limitation, or other requirement established by, or pursuant to, the Clean Air Act, the Federal Water Pollution Control Act, the Solid Waste Disposal Act, or the National Environmental Policy Act of 1969.

(16) The term "peakload powerplant" means a powerplant the generation of which in kilowatt hours does not exceed, for any 12-month period, such powerplant's design capacity multiplied by 1,500 hours. Not later than 90 days after the date of the enactment of this Act, the Federal Power Commission shall prescribe rules under which a powerplant's design capacity may be determined for purposes of this paragraph.

(17) The term "cost", unless the context indicates otherwise, means total costs (both operating and capital) incurred over the estimated useful life of an electric powerplant or major fuel-burning installation, discounted to present value, as determined by the Administrator in consultation with the State regulatory authority or other State agency, as appropriate. In the case of an electric powerplant, such costs shall take into account any change required in the use of existing electric powerplants in the relevant dispatching system and other economic factors which are included in planning for the production, transmission, and distribution of electric power within such system.

(18) The term "Btu" means British thermal unit.

(19) The term "Mcf" means, when used with respect to natural gas, 1,000 cubic feet of natural gas.

(20) The term "qualifying cogeneration facility" shall have the same meaning as given such term in section 546(b).

(21) The term "State regulatory authority" means any State agency which has ratemaking authority with respect to the sale of electricity by any electric utility.

(22) The term "electric utility" means any person or Federal agency which sells electric power.

(23) The term "Federal agency" has the same meaning as is given the term "agency" in section 551(1) of title 5, United States Code.

SEC. 603. EFFECT ON ENVIRONMENTAL REQUIREMENTS.

Except as provided in section 631, nothing in this part shall be construed as permitting any existing or new electric powerplant or major fuel-burning installation to delay or avoid compliance with applicable environmental requirements.

SEC. 604. TERRITORIAL APPLICATION.

The provisions of this part shall apply in all the States, Puerto Rico, and the territories and possessions of the United States, except that the provisions of sections 611, 612, and 613 shall only apply to powerplants and installations situated on lands within the contiguous 48 States, Alaska, and the District of Columbia.

Subpart BM—Prohibitions; Exemptions

SEC. 611. NEW ELECTRIC POWERPLANTS.

(a) No new electric powerplant shall use natural gas as a primary energy source.

(b) No new electric powerplant shall use petroleum as a primary energy source.

(c) Any person who proposes to use petroleum or natural gas, or both, as a primary energy source for a new electric powerplant may file a petition with the Administrator requesting an exemption for such powerplant from the prohibition of such use under subsections (a) and (b).

(d) The Administrator, after consideration of a petition filed under subsection (c) for a temporary exemption and any comments thereon, shall grant such exemption, by order, for such period as the Administrator determines appropriate if he finds that the petitioner has demonstrated that for the period of the proposed exemption—

(1) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels as a primary energy source, it is likely such supply will not be available to such powerplant;

(2) despite diligent good faith efforts, site limitations exist which cannot reasonably be expected to be overcome;

(3) the prohibitions of subsections (a) and (b) could not be satisfied without violating applicable environmental requirements; or

(4) the issuance of such exemption furthers the purposes of this part.

No exemption under this subsection, including any extensions or renewals thereof, may exceed a period of 5 years' duration.

(e) After consideration of a petition filed under subsection (c) requesting a permanent exemption and any comments thereon, the Administrator shall grant such permanent exemption, by order, if he finds that the petitioner has demonstrated that—

(1) there is no site at which—

(A) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels as a primary energy source, it is likely that such supply will be available at a cost (taking into account associated facilities for the transportation and utilization of such fuel) which, based upon the best practicable estimates, does not substantially exceed the costs, as determined by rule by the Administrator, of using petroleum derived from imported crude oil as a primary energy source during the useful life of the powerplant;

(B) despite diligent good faith efforts, site limitations would permit the location of a powerplant using coal or other fuel as a primary energy source;

(C) the prohibitions of subsections (a) and (b) could be satisfied without violating applicable environmental requirements; and

(D) the required use of coal or other fuels would allow the petitioner to obtain adequate capital for the financing of such powerplant; or

(2) the issuance of such exemption furthers the purposes of this part.

(f) Before the Administrator grants any petition for an exemption under subsection (d) or (e), the Administrator shall submit a copy of the petition to the Federal Power Commission for the purpose of the Commission's certifying that there is no alternative supply of electric power which can be obtained without impairing reliability of service.

(g) In the case of any petition for a permanent exemption from the prohibitions of subsection (b) applicable to a new electric powerplant, the Administrator shall grant such exemption, by order, if the petitioner certifies that such powerplant is to be constructed and operated solely as a peakload powerplant.

(h) If the appropriate State regulatory authority has not approved a powerplant for which a petition for an exemption has been filed under subsection (c), such exemption may not take effect until the Administrator has determined that approval by such State regulatory authority has occurred.

(i) Any new electric powerplant issued an order before the effective date of this part pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974 shall, notwithstanding the provisions of such section 2(c), be subject to the provisions of this part, except that if such order became final before such date, the preceding provisions of this section shall not apply to such powerplant. Nothing in this subsec-

tion shall be construed to affect the validity of any such final order or to require the Administrator to reissue any such order.

SEC. 612. NEW MAJOR FUEL-BURNING INSTALLATIONS.

(a)(1) No new major fuel-burning installation which is a boiler shall use natural gas or petroleum, or both, as a primary energy source.

(2)(A) The Administrator may, by rule, prohibit categories (identified in such rule) of new major fuel-burning installations, other than boilers, from using natural gas or petroleum, or both, as a primary energy source. In identifying categories of new major fuel-burning installations pursuant to this subparagraph, the Administrator shall take into account any special circumstances or characteristics of each category of such installations (such as the technical feasibility of burning coal or other fuels and the size or location of such installations). Any such rule shall not apply in the case of any new major fuel-burning installation subject to such rule pending a resolution of any petition for an exemption for such installation which may be filed with the Administrator not later than 60 days after such rule is published under section 621(g).

(B) The Administrator may, by order, prohibit any new major fuel-burning installation, other than a boiler, from using natural gas or petroleum, or both, as a primary energy source if such installation is not, at the time of the issuance of such order, in a category identified in a rule prescribed under subparagraph (A). The Administrator shall not issue an order under this subparagraph to any installation if it is demonstrated that such installation would have been granted an exemption, if such prohibition had been established by rule pursuant to subparagraph (A) rather than by order pursuant to this subparagraph.

(b) Any person who proposes to use petroleum or natural gas, or both, as a primary energy source for any new major fuel-burning installation may file a petition with the Administrator requesting an exemption for such installation from the prohibitions of subsection (a)(1) or (2)(A).

(c)(1) The Administrator, after consideration of a petition for a temporary exemption from the prohibitions of subsection (a)(1) or (2)(A) and any comments thereon, shall grant such exemption, by order, for such period as the Administrator determines appropriate, if he finds that the petitioner has demonstrated that for the period of the proposed exemption—

(A) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels, it is likely such supply will not be available to such installation;

(B) despite diligent good faith efforts, site limitations exist which cannot reasonably be expected to be overcome;

(C) the prohibitions of subsection (a)(1) or (2)(A) could not be satisfied without violating applicable environmental requirements;

(D)(i) such installation is not technically capable of using coal; and

(ii) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of synthetic fuels derived from coal, such supply will not be available to such installation and the petitioner has a contract or other similar arrangement binding on the petitioner and the supplier of such fuels to provide such a supply at the end of the period of the proposed exemption; or

(E) the issuance of such exemption furthers the purposes of this part.

(2) No exemption under paragraph (1), including any extensions or renewals thereof, may exceed a period of 5 years' duration, except that any exemption based on subparagraph (1)(D) may, upon petition, be extended an additional period of 5 years. Notwithstanding the preceding provisions, any exemption based on subparagraph (1)(D) may not be effective after December 31, 1994.

(d)(1) After consideration of a petition requesting a permanent exemption from the prohibitions of subsection (a)(1) or (2)(A) and any comments thereon, the Administrator shall grant such permanent exemption, by order, if he finds that the petitioner has demonstrated that—

(A) there is no site proposed by the petitioner at which—

(i) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply for coal or other fuel, it is likely that such supply will be available at a cost (taking into account associated facilities for the transportation and utilization of such fuel) which, based upon the best practicable estimates, does not substantially exceed the costs, as determined by rule by the Administrator, of using petroleum derived from imported crude oil as a primary energy source during the useful life of the installation;

(ii) despite diligent good faith efforts, site limitations would permit the location of an installation using coal or other fuels as a primary energy source;

(iii) the prohibitions of subsection (a)(1) or (2)(A) could be satisfied without violating applicable environmental requirements; and

(iv) the required use of coal or other fuels would allow the petitioner to obtain adequate capital for the financing of such installation;

(B) the issuance of such exemption furthers the purposes of this part; or

(C) in the case of any installation other than a boiler—

(i) the use of a primary energy source, other than natural gas or petroleum, is technically infeasible; and

(ii) a substitute heat source is not possible due to process requirements.

(2) The Administrator, upon the filing of a petition, may, by order, grant a permanent exemption from any prohibition under subsection (a)(1) or (2)(A) applicable to a new major fuel-burning installation, if the petitioner certifies that—

(A) such installation uses, or proposes to use, a mixture or combination of petroleum or natural gas and other fuels as a primary energy soruce, and

(B) the petroleum or natural gas used in such combination or mixture will not exceed, during any 12-calendar-month period, 25 percent of the total Btu heat input of the primary energy sources of such installation or a greater percentage which is the minimum percentage needed to maintain fuel efficiency of such mixture or combination, as determined under rules prescribed by the Administrator.

(e) Any new major fuel-burning installation issued an order before the effective date of this part pursuant to section 2(c) of the Energy Supply and Environmental Coordination Act of 1974 shall, notwithstanding the provisions of such section 2(c), be subject to the provisions of this part, except that if such order became final before such date, the preceding provisions of this section shall not apply to such installation. Nothing in this subsection shall be construed to affect the validity of any such order or to require the Administrator to reissue any such order.

SEC. 613. EXISTING ELECTRIC POWERPLANTS AND EXISTING MAJOR FUEL-BURNING INSTALLATIONS.

(a)(1) No existing electric powerplant—

(A) shall use natural gas as a primary energy source on or after January 1, 1990;

(B) if such powerplant used petroleum as a primary energy source on or before April 20, 1977, shall convert to the use of natural gas as a primary energy source; or

(C) shall use natural gas as a primary energy source in greater proportions than the average yearly proportion of natural gas which—

(i) such powerplant used as a primary energy source in calendar years 1974 through 1976, or

(ii) if such powerplant began operations on or after January 1, 1974, such powerplant used as a primary energy source during the first two calendar years of its operation.

(2) The Administrator may prohibit any existing electric powerplant from using petroleum or natural gas, or both, as a primary energy source, if—

(A) such powerplant had on April 20, 1977, or thereafter acquires, the technical capability to use coal or other fuels as a primary energy source; and

(B) the use by such powerplant of coal or other fuels as a primary energy source is financially feasible (as determined under rules prescribed by the Administrator).

(3) In the case of any existing electric powerplant in which it is technically and financially feasible (as determined under rules prescribed by the Administrator) to use—

(A) a mixture of coal or other fuels and petroleum as a primary energy source, or

(B) a combination of coal or other fuels and petroleum or natural gas as primary energy sources,

the Administrator may prohibit, by order, such powerplant from using petroleum or natural gas, or both, in amounts in excess of the minimum amount necessary to maintain fuel efficiency of such mixture or such combination.

(b)(1) The Administrator may prohibit any existing major fuel-burning installation from using petroleum or natural gas, or both, as a primary energy source, if—

(A) such installation had, on April 20, 1977, or thereafter acquires, the technical capability to use coal or other fuels as a primary energy source; and

(B) the use by such installation of coal or other fuels as a primary energy source is financially feasible (as determined under rules prescribed by the Administrator).

(2) In the case of any major fuel-burning installation in which it is technically and financially feasible (as determined under rules prescribed by the Administrator) to use—

(A) a mixture of coal or other fuels and petroleum as a primary energy source, or

(B) a combination of coal or other fuels and petroleum or natural gas as primary energy sources,

the Administrator may prohibit, by order, such installation from using petroleum or natural gas, or both, in amounts in excess of the minimum amounts necessary to maintain fuel efficiency of such mixture or such combination.

(c)(1) The prohibitions under subsection (a)(2) and subsection (b)(1) shall be established—

(A) by rule, in the case of powerplants or installations in a category of powerplants or installations, respectively, identified by the Administrator in such rule, or

(B) by order, in the case of any powerplant or installation which is not, at the time the proposed order is issued, within any such category.

(2) In prescribing any rule under paragraph (1)(A), the Administrator shall take into account any special circumstances or characteristics of each category of powerplants or installations (such as the technical feasibility of burning coal or other fuels and the size, age, or location of such powerplants or installations). Any such rule shall not apply in the case of any existing electric powerplant or major fuel-burning installation subject to such rule pending a resolution of any petition for any exemption for such powerplant or installation which may be filed with the Administrator not later than 60 days after such rule is published under section 621(g).

(d)(1) Any person who proposes to use natural gas or petroleum as a primary energy source for any existing powerplant or major fuel-burning installation, and such use would be prohibited under subsection (a)(1) or under any rule prescribed under subsection (a)(2) or subsection (b)(1), may file a petition with the Administrator requesting a temporary or permanent exemption for such powerplant or installation from such prohibition. The prohibition of subsection (a)(1)(A) shall be stayed with respect to any existing powerplant, pending a resolution of any petition for any exemption from such prohibition which is filed at any time after the effective date of this part, but at least one year before the date such prohibition first takes effect.

(2) The Administrator, after consideration of a petition for an exemption from a prohibition under subsection (a) (1) or (2) or subsection (b)(1) and any comments thereon, shall grant such exemption, by order, for such period as the Administrator determines appropriate if he finds that the petitioner has demonstrated that for the period of the proposed exemption—

(A) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of coal or other fuels as a primary energy source, it is likely such supply will not be available to such powerplant or installation at a cost (taking into account associated facilities for the transportation and utilization of such fuel) which, based upon the best practicable estimates, does not substantially exceed the costs, as determined by rule by the Administrator, of using petroleum derived from imported crude oil as a primary energy source during the useful life of the powerplant or installation;

(B) natural gas will be used as a primary energy source by the petitioner in a powerplant which is a peakload powerplant (determined only with regard to its usage of natural gas);

(C) despite diligent good faith efforts, site limitations exist which cannot reasonably be expected to be overcome;

(D) such prohibition could not be satisfied without violating applicable environmental requirements;

(E) in the case of an existing major fuel-burning installation—

(i) such installation is not technically capable of using coal; and

(ii) despite diligent good faith efforts to obtain a contract or other arrangements for an adequate and reliable supply of synthetic fuels derived from coal, such supply will not be available to such installation and the petitioner has a contract or other similar arrangement binding on the petitioner and the supplier of such fuels to provide such a supply at the end of the period of the proposed exemption;

(F) the issuance of such exemption furthers the purposes of this part;

(G) in the case of an existing major fuel-burning installation, the use of a primary energy source other than petroleum or natural gas is technically infeasible, and a substitute heat source is not possible due to process requirements; or

(H) in the case of an existing electric powerplant, the Federal Power Commission has certified that there is no alternative electric power supply which can be obtained without impairing reliability of service.

(3) The Administrator upon the filing of a petition, may, by order, grant a permanent exemption from any prohibition under subsection (b) applicable to an existing major fuel-burning installation, if the petitioner certifies that—

(A) such installation uses, or proposes to use, a mixture or combination of petroleum or natural gas and any other fuels as a primary energy source, and

(B) the petroleum or natural gas used in such combination or mixture will not exceed, during any 12-calendar-month period, 25 percent of the total Btu heat input of the primary energy sources of such installation or a greater percentage which is the minimum percentage needed to maintain fuel efficiency of such mixture or combination, as determined under rules prescribed by the Administrator.

(4) If a petition is filed with the Administrator for a permanent exemption from the prohibitions of subsection (a)(1)(B) for the use of liquefied natural gas by a powerplant as a primary energy source, the Administrator shall grant such exemption, by order, if the Administrator of the Environmental Protection Agency has certified that the use of coal by such powerplant as a primary energy source would not comply with applicable environmental requirements.

(5) No exemption (other than a permanent exemption) under this subsection, including any extensions or renewals thereof, may exceed a period of 5 years' duration, except that—

(A) any exemption based on paragraph (2)(E) may, upon petition, be extended an additional period of 5 years, but such exemption shall not be effective after December 31, 1994; and

(B) an exemption based on paragraph (2)(B) shall not be effective after December 31, 1994.

(6) The Administrator shall not issue an order under subsection (b) to any powerplant or installation if it is demonstrated that such powerplant or installation would have been granted an exemption if such prohibition had been established by rule pursuant to subsection (c)(1)(A) rather than by order pursuant to subsection (c)(1)(B).

(e) Upon publication of any proposed order under subsection (a) or (b) in the case of any existing major fuel-burning installation or upon the receipt of any exemption under this section, the Administrator shall request the Federal Trade Commission to evaluate the impact of the proposed order or a denial of the proposed exemption on competition and provide to the Administrator, within 120 days of receipt of such request, written views and recommendations, if any, concerning such impact. Any such views or recommendations shall be available to the public. The Administrator shall consider such views and recommendations in issuing any such order or exemption.

(f)(1) Notwithstanding any other provision of law, no proposed order under subsection (a) or (b) (or modification thereof) which may result in the use of coal as a primary energy source may be issued—

(A) until the Administrator of the Environmental Protection Agency notifies the Administrator under section 119(d)(1)(B) of the Clean Air Act, or

(B) if such notification is not given, until the date which the Administrator of the Environmental Protection Agency certifies, pursuant to section 119(d)(1)(B) of such Act, is the earliest date which the powerplant or installation will be able to comply with all applicable requirements of section 119 of such Act.

(2) Such order (or modification) shall not be effective during any period certified by the Administrator of the Environmental Protection Agency under section 119(d)(3)(B) of such Act. Notice or certification pursuant to this subsection shall be provided within 270 days of the date the Administrator of the Environmental Protection Agency receives notice of such proposed order (or modification).

(g) The provisions of this section shall not apply to any powerplant or installation for which an order issued pursuant to section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 before the effective date of this part is pending or final or which, on review, was held unlawful and set aside on the merits. Nothing in this subsection shall be construed to affect the validity of any such order or be construed to require the Administrator to reissue any such order.

(h) The Administrator shall, by rule, require that existing electric powerplants which, on or after April 20, 1977, uses a mixture or combination of petroleum and coal or other fuels as a primary energy source may not increase their use of petroleum as a primary energy source unless a permit is issued by the Administrator authorizing such increased use of petroleum. Such permit shall be issued if—

(1) the Administrator finds that the petitioner has (A) demonstrated that the powerplant cannot comply with the requirements of the Clean Air Act, including any applicable implementation plan, as defined in section 110(d) of the Clean Air Act, without the issuance of a permit and (B) established the duration of the need for increased petroleum to comply with such plan; and

(2) the appropriate State regulatory authority, as determined by the Administrator, has certified to the Administrator that the increased use of petroleum by such powerplant is necessary to permit the powerplant to comply with such implementation plan.

Such permit shall be issued only for such period as the Administrator determines a need for such increased use of petroleum.

(i) In making a determination of financial feasibility under this section, the Administrator shall take into account costs, as defined in section 602(17).

SEC. 614. SUPPLEMENTAL NATURAL GAS BOILER FUEL CONVERSION AUTHORITY.

(a) The Administrator may, by rule, prohibit the use of natural gas as a primary energy source in any existing boiler (other than a major fuel-burning installation) if the Administrator determines that—

(1) such boiler is used to produce steam for space heating purposes;

(2) such boiler had the capability on or before April 20, 1977, to use petroleum as a primary energy source;

(3) such boiler consumes 50 Mcf or more of natural gas per day on a peak day; and

(4) such prohibition is consistent with the purposes of this part.

(b) The Administrator may, by rule, prohibit the use of natural gas as a primary energy source in any new boiler (other than a major fuel-burning installation) if the Administrator determines that—

(1) such boiler will be used to produce steam for space heating purposes;

(2) such boiler will consume 50 Mcf or more of natural gas per day on a peak day; and

(3) such prohibition is consistent with the purposes of this part.

(c) The Administrator shall exempt any person from any rule prescribed pursuant to subsection (a) or (b) if such person demonstrates to the Administrator that an adequate and reliable source of petroleum is not likely to be available to such person during the period of the exemption.

(d) For purposes of this section—

(1) The term "new boiler" means any boiler the construction of which the Administrator determines commenced on or after the date of the enactment of this section.

(2) The term "existing boiler" means any boiler other than a new boiler.

SEC. 615. PROHIBITION ON USE OF NATURAL GAS FOR DECORATIVE OUTDOOR LIGHTING.

(a) Not later than 180 days after the effective date of this part, the Administrator shall, by rule, prohibit any natural gas pipeline or local distribution company from providing natural gas service to any residential, commercial, or industrial customer for use in out door lighting. The Administrator shall take into account any special circumstances or characteristics in prescribing such rule.

(b) The Administrator shall, by order, exempt any natural gas pipeline or local distribution company from the rule required to be prescribed under subsection (a) concerning the continuation of such service in effect on the date of the enactment of this Act upon the filing of a petition therefor by such pipeline or company, or by any interested person. Such exemption shall be for such period as, and to the extent that, the Administrator finds—

(1) such exemption is necessary to protect public safety;

(2) such exemption is necessary to permit the installation of substitute lighting where no outdoor lighting (other than that using natural gas) exists on the date of the enactment of this Act;

(3) compliance with such rule would entail extraordinary expense by the petitioner and would not be cost justified; or

(4) the issuance of the exemption furthers the purposes of this part.

(c) As used in this section, the term "outdoor lighting" means lighting by an stationary source which is not located inside any building.

SEC. 616. EXEMPTION FOR QUALIFYING COGENERATION FACILITIES.

The Administrator, upon the filing of a petition, may, by order, grant an exemption from any prohibition under this subpart applicable to any qualifying cogeneration facility, if—

(1) he finds that the petitioner has demonstrated that economic and other benefits of cogeneration are unobtainable unless petroleum or natural gas, or both, are used in such facility, and

(2) includes in the order a statement of the basis for such finding.

SEC. 617. EXEMPTION FOR HIGH BTU SYNTHETIC GAS DERIVED FROM COAL.

(a) Any person who is prohibited by any provision of section 611, 612, 613, or 614, or any rule or order, thereunder from using natural gas as a primary energy source may petition for a permanent exemption from such prohibition pursuant to this section.

(b) The Administrator shall grant an exemption, by order, from any prohibition on the use of natural gas as a primary energy source under this part or any rule or order thereunder if the Administrator finds that the petitioner has demonstrated that—

(1) such petitioner owns, or is entitled to receive, at the point of manufacture, synthetic gas derived from coal;

(2) the Btu content of such synthetic gas is equal to, or greater than, the Btu content of the natural gas to be covered by such exemption plus the approximate Btu content of any natural gas consumed or lost in transportation;

(3) such petitioner delivers, or arranges for the delivery of, such synthetic gas to a pipeline or pipelines which by transport or displacement are capable of delivering such synthetic gas, mixed with natural gas, to such person;

(4) (A) in the case of any such transportation in interstate commerce (with in the meaning of the Natural Gas Act), such transportation has been certified by the Federal Power Commission;

(B) in the case of any other transportation, such transportation has been approved by the State authority which exercises regulatory jurisdiction over the rates and charges applicable to such transportation; and

(5) all necessary permits, licenses, or approvals from appropriate Federal, State, and local agencies (including Indian tribes) have been obtained for construction or operation of the facilities for the manufacture of the synthetic gas involved.

(c) In granting any exemption under this section, the Administrator shall, after consultation with the Federal Power Commission, consider the appropriateness of the use of the synthetic gas involved for the benefit of the petitioner rather than for other possible uses, including residential and small commercial users which consume less than 50 Mcf of natural gas per day on a peak day.

(d) Nothing in this part shall be construed as affecting the use by any major fuel-burning installation of synthetic gas which is derived from coal and which is not mixed with natural gas as the primary energy source of such installation.

(e) If, at the time the Administrator makes his findings under subsection (b), the petitioner has not demonstrated that all necessary permits, licenses, and approvals from appropirate Federal, State, and local agencies (including Indian tribes) have been obtained for the construction and operation of the facilities for the manufacture of the synthetic gas with respect to which such exemption is sought under this section, such exemption, if granted, shall not be effective until the Administrator determines that such permits, licenses, and approvals have been obtained.

SEC. 618. TERMS AND CONDITIONS EXEMPTIONS.

Any exemption from any prohibition under this subpart shall be on such terms and conditions as the Administrator determines appropriate, including, in the case of any such exemption (other than from a prohibition under section 615), terms and conditions requiring the use of effective fuel conservation measures which are practicable and consistent with the purposes of this part. The terms and conditions applicable in the case of any temporary exemption shall be designed to insure that upon the expiration of such exemption, the persons covered by such will comply with the otherwise applicable prohibitions.

Subpart A—Enforcement; Administration

SEC. 621. ADMINISTRATIVE PROCEDURES.

(a) Except to the extent otherwise provided in this section, rules prescribed under this part shall be made in accordance with the procedures set forth in section 553 of title 5, United States Code.

(b) Before prescribing any rule or issuing any order imposing a prohibition under this part, the Administrator shall publish such proposed rule or order in the Federal Register, together with a detailed statement of the reasons for such rule or order, and in the case of a rule, a detailed statement of any special circumstances or characteristics required to be taken into account in prescribing such rule. In the case of any such order, a copy shall be transmitted to the person who operates any such powerplant or installation subject to such order.

(c) Any petition for an exemption from any prohibition under this part or for any permit under section 613(h), shall be filed at such time and shall be in such form as the Administrator shall by rule prescribe. The Administrator, upon receipt of such petition, shall publish a notice thereof in the Federal Register together with a detailed summary of the reasons set forth in such petition for requesting such exemption or permit, and provide a minimum of 45 days for written comments thereon. Rules required under this subsection shall be prescribed not later than 90 days after the date of the enactment of this Act.

(d) Any denial of any petition for an exemption or a permit under this part shall be published in the Federal Register, together with the reasons for such action.

(e) In the case of any rule or order by the Administrator imposing a prohibition or granting an exemption (or permit) under this part, any interested person shall be afforded an opportunity to present oral data, views, and arguments, including an opportunity, by means of conferences or other informal procedures, to question—

(1) other interested persons who have made oral presentations, and

(2) employees and contractors of the United States who have made written or oral presentations or who have participated in the development of the proposed rule or order,

with respect to disputed issues of material fact, but only to the extent the Administrator determines that such questioning is likely to result in a more timely and effective resolution of such issues.

(f) A transcript shall be kept of any oral presentation made in accordance with this section.

(g) (1) Any rule or order to be prescribed by the Administrator imposing a prohibition or granting an exemption (or permit) under this part shall be published in the Federal Register and shall not take effect earlier than the 60th day after such rule or order is published.

(2) Any person aggrieved by a rule or order referred to in paragraph (1) or in section 631, or by the denial of such a rule or order, may at any time before the 60th day after the date such rule or order is prescribed (or denied), file a petition with the United States court of appeals for the circuit wherein such person resides, or has his principal place of business, for judicial review thereof. A copy of the petition shall be forthwith transmitted by the clerk of the court to the Administrator. Such agency thereupon shall file in the court the written submissions to, and transcript of, the written or oral proceedings on which the rule was based as provided in section 2112 of title 28, United States Code.

(3) Upon the filing of the petition referred to in paragraph (2), the court shall have jurisdiction to review the rule or order (or denial thereof) in accordance with chapter 7 of title 5, United States Code, and to grant appropriate relief as provided in such chapter. No rule or order (or denial thereof) may be affirmed unless supported by substantial evidence.

(4) The judgment of the court affirming or setting aside, in whole or in part, any such rule or order (or denial thereof) shall be final, subject to review by the Supreme Court of the United States upon certain certiorari or certification as provided in section 1254 of title 28, United States Code.

(5) A copy of any proposed rule or order to be prescribed or issued by the Administrator which imposes a prohibition under this part (other than under section 614, 615, or 632), or which grants an exemption, shall be transmitted by the Administrator to the Administrator of the Environmental Protection Agency and the Administrator shall request such agency to comment thereon within the period provided to the public unless a longer period as provided by the Clean Air Act. In any such case, the Administrator of the Environmental Protection Agency shall be afforded the same opportunity to comment and question as is provided other interested persons under subsection (e).

(6) The Administrator, within 6 months after the initial public comment period applicable to any petition for an exemption or permit, shall grant or deny such exemption or permit, except that the Administrator may publish a notice in the Federal Register extending such period to a specified date. Such notice shall include the reasons for such extension.

SEC. 622. ENFORCEMENT AND PENALTIES.

(a) (1) Any person who violates any provision of this part, or rule or order thereunder, shall be subject to a civil penalty, which shall be assessed by the Administrator, of not more than $25,000 for each violation. Each day of violation shall constitute a separate violation.

(2) In the case of any electric powerplant granted an exemption as a peakload electric powerplant, any person who operates such powerplant during any 12-calendar-month period in excess of that authorized in such exemption, shall be liable for a civil pen-

alty, which shall be assessed by the Administrator. The amount of such civil penalty may not exceed an amount equal to $10 per barrel of oil or $3 per Mcf of natural gas used in operation of such powerplant in excess of that authorized in such exemption.

(3) Any person operating a major fuel-burning installation granted an exemption under section 612(d)(2) or section 613(d)(3) which, for any 12-calendar-month period, uses petroleum or natural gas, or both, in excess of that use allowed by such exemption shall be liable for a civil penalty, which shall be assessed by the Administrator. The amount of such civil penalty may not exceed an amount equal to $10 per barrel of oil or $3 per Mcf of natural gas which were used in excess of such use allowed by such exemption.

(4) Before assessing against any person any civil penalty under this title, the Administrator shall provide to such person notice of the proposed penalty. The determination to assess a civil penalty after such notice shall be made on the record after an opportunity for an agency hearing pursuant to section 554 of title 5, United States Code. The order of the Administrator assessing such penalty shall state the Administrator's findings and the basis for such assessment. If the person against whom a civil penalty is assessed fails to pay the penalty within the time prescribed in such order, the Administrator shall file a petition for enforcement of such order in any appropriate district court of the United States. A copy of the petition shall promptly be sent by registered or certified mail to the person against whom such order is sought to be enforced. At the time a petition for enforcement of such an order is filed, the Administrator shall certify and file in such court the record upon which such order was issued. The court shall have jurisdiction to enter a judgment enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part, the order of the Administrator, or the court may remand the proceeding to the Administrator for such further action as the court may direct.

(b) Any person who willfully violates any provision of this part, or rule or order thereunder, shall be subject to a fine of not more than $50,000, or by imprisonment of not more than one year, or both, for each violation.

(c) Any individual director, officer, or agent of a corporation who willfully authorizes, orders, or performs any of the acts or practices constituting in whole or in part a violation of this part, or rule or order thereunder, shall be subject to penalties under this section without regard to any penalties to which the corporation may be subject, except that no such individual director, officer, or agent shall be subject to imprisonment under subsection (b), unless he also knows, or reasonably should have known, of notice of noncompliance received by the corporation from the Administrator.

(d) No person shall be subject to any penalty under this section with respect to the operation of any powerplant in excess of that allowed by an exemption granted on the basis of the operation of such powerplant as a peakload powerplant if it is demonstrated to the Administrator that such operation was necessary to meet peakload demand and that other peakload powerplants within the same system as such powerplant were unavailable for service due to unit or system outages.

(e) Whenever it appears to the Administrator that any person has engaged, is engaged, or is about to engage in acts or practices constituting a violation of this part or any rule or order thereunder, the Administrator may request the Attorney General to bring a civil action to enjoin such acts or practices, and, upon a proper showing, shall grant, without bond, mandatory or prohibitive injunctive relief, including interim equitable relief.

SEC. 623. CITIZEN SUITS.

(a) Except as otherwise provided in subsection (b), any aggrieved person may commence a civil action for mandatory or prohibitive injunctive relief, including interim equitable relief, against—

(1) any person who is alleged to be in violation of any provision of this part, or any rule or order thereunder; or

(2) any Federal agency which has a responsibility under this part if there is an alleged failure of such agency to perform any act or duty under this part which is not discretionary.

The United States district courts shall have jurisdiction over actions brought under this section, without regard to the amount in controversy or the citizenship of the parties.

(b) No action may be commenced—

(1) under subsection (a)(1)—

(A) before the 60th day after the date on which the plaintiff has given notice of the violation (i) to the Administartor, and (ii) to any alleged violator of such provision, rule, or order; or

(B) if the Administrator has commenced and is diligently prosecuting a civil action to require compliance with such provision, rule, or order, but, in any such action, any person may intervene as a matter of right; or

(2) under subsection (a)(2), before the 60th day after the date on which the plaintiff has given notice of such action to the Administrator.

Notice under this subsection shall be given in such manner as the Administrator shall prescribe by rule.

(c) In any action brought under subsection (a), the Administrator, if not a party, may intervene as a matter of right.

(d) The court, in issuing any final order in any action brought under subsection (a), may award costs of litigation (including reasonable attorney and expert witness fees) to any party, whenever the court determines such award is appropriate.

(e) Nothing in this section shall restrict any right which any aggrieved person (or class of aggrieved persons) may have under any statute or common law to seek enforcement of this part or any rule thereunder, or to seek any other relief (including relief against the Administrator).

(f) For purposes of this section, if a person owning, operating, or controlling any electric powerplant or major fuel-burning installation complied in good faith with a provision, rule, or order under this part, then he shall not be deemed to have violated any provision of this part by reason of the invalidity of such provision, rule, or order.

SEC. 624. PRESERVATION OF CONTRACTUAL RIGHTS.

(a) The provisions of this section shall apply to any natural gas the use of which is prohibited by the provisions of section 611, 612, 613, or 614, or any rule or order thereunder.

(b)(1) Any person who receives such natural gas for such prohibited use pursuant to a firm service contract, in effect on April 20, 1977, between such person and any interstate pipeline, may transfer all or any portion of his interests under such contract to such interstate pipeline and receive in consideration therefor just compensation (as determined by the Administrator) from such pipeline.

(2)(A) Any person who receives such natural gas for such prohibited use pursuant to a contract, in effect on April 20, 1977, between such person and any person other than an interstate pipeline, may transfer his contractual interests under such contract to any person and receive in consideration therefor just compensation (as determined by the Administrator) from the person to whom such contractual rights are transferred.

(B) Any person who would have transported or distributed the natural gas subject to a contract with respect to which contractual interests are transferred to any other person pursuant to subparagraph (A) shall be entitled to receive just compensation (as determined by the Administrator) from the person to whom contractual rights are transferred.

(c)(1) Any provision of any contract which prohibits any transfer authorized by subsection (b) or terminates such contract on the basis of such transfer shall be unenforceable in any court of the United States and in any court of any State.

(2) No State may enforce any prohibition on any transfer authorized by subsection (b).

(d) For purposes of this section—

(1) The term "just compensation" means—

(A) in the case of paragraphs (1) and (2)(A) of subsection (b), an amount not to exceed the amount by which—

(i) the reasonable costs (excluding capital costs) incurred during the remainder of the period of the contract described in subsection (b) and directly associated with the use of an alternative fuel by the applicable existing electric powerplant or major fuel-burning installation,

(ii) exceeds the price of natural gas, to which the provisions of this section apply, during such period; and

(B) in the case of subsection (b)(2)(B), an amount equal to any loss of revenue, during the remaining period of the contract with respect to which contractual interests are transferred pursuant to subsection (b)(2), to the extent such loss is directly incurred by reason of the discontinuation of the transportation or distribution of natural gas resulting from the transfer of contractual interests pursuant to subsection (b)(2) and is not offset by revenues derived from other transportation or distribution which would not have occurred if contractual interests had not been transferred.

(2) The term "interstate pipeline" means—

(A) any person who transports natural gas, the transportation of which is subject to the jurisdiction of the Federal Power Commission; and

(B) any person who receives natural gas, from a person described in subparagraph (A), for distribution to ultimate consumers.

(3) The term "contractual interests", with respect to a contract described in subsection (b)(1), includes the right to receive natural gas as affected by any applicable curtailment plan of the interstate pipeline filed with the Federal Power Commission or State regulatory authority.

(4) The term "State" means each of the several States, the District of Columbia, Puerto Rico, any territory or possession of the United States, and any political subdivision of any of the foregoing.

(e) For purposes of paragraphs (1) and (2)(A) of subsection (b), in determining the amount of just compensation the Administrator shall, to the maximum extent practicable, apply any liquidated damages provision set forth in the applicable contract, but in no event may such amount exceed the maximum prescribed in subsection (d)(1)(A).

(f) The amount paid by any interstate pipeline pursuant to any transferred contractual interests and any amount paid by such pipeline as just compensation pursuant to subsection (b) shall be deemed just and reasonable for purposes of section 4, 5, and 7 of the Natural Gas Act. If a transfer of contractual interests pursuant to subsection (b) requires the sale of natural gas to an interstate pipeline by any person other than the person whose contractual interests are transferred, such former person and such sale shall not thereby become subject to the jurisdiction of the Federal Power Commission under the Natural Gas Act.

(g) No supplier of natural gas under any contract, with respect to which contractual interests have been transferred under this section, shall be required to supply natural

gas in volume amounts which, on an annual basis, exceeds the lesser of—

(1) the annual volume determined by reference to maximum delivery obligations specified in such contract;

(2) the volume which would have been delivered or for which payment would have been made during such annual period pursuant to such contract but for the application of section 611, 612, 613, or 614 of this part; or

(3) the volume actually delivered or for which payment would have been made pursuant to such contract during the 12-calendar-month period ending immediately before such transfer of contractual interests pursuant to this section.

SEC. 625. INFORMATION.

(a) For purposes of carrying out his responsibilities under this part, the Administrator may require, under the authority of this part or any other authority administered by him, any person owning, operating, or controlling any new or existing electric powerplant or major fuel-burning installation or any other person otherwise subject to this part to submit such information and reports of any kind or nature directly to the Administrator with respect to implementing the provisions of this part and insuring compliance with the provisions of this part and any rule or order thereunder. The provisions of section 11(d) of the Energy Supply and Environmental Coordination Act of 1974 shall apply with respect to information obtained under this section to the same extent and in the same manner as it applies with respect to energy information obtained under such section.

(b) In the case of responsibilities expressly given by this part to the President or the Federal Power Commission, subsection (a) shall be applied as if the references to the Administrator were references to the President or the Federal Power Commission, as the case may be.

Subpart D—Miscellaneous Provisions

SEC. 631. EMERGENCY POWERS OF THE PRESIDENT.

(a) If the President—

(1) declares a severe energy supply interruption, as defined in section 3(8) of the Energy Policy and Conservation Act, or

(2) finds, and publishes such finding, that a national or regional fuel supply shortage exists or may exist which the President determines—

(A) is, or is likely to be, of significant scope and duration, and of an emergency nature;

(B) causes, or may cause, major adverse impact on public health, safety, or welfare or on the economy; and

(C) results, or is likely to result, from an interruption in the supply of coal or from sabotage, or an act of God;

the President may, by order, allocate coal to any electric powerplant or major fuel-burning installation, in accordance with such terms and conditions as he may prescribe, to insure reliability of electric service or prevent unemployment, or both.

(b) In the event the President declares a severe energy supply interruption, as defined in section 3(8) of the Energy Policy and Conservation Act, the President may, by order, prohibit any new or existing electric powerplant or major fuel-burning installation from using natural gas or petroleum, or both, as a primary energy source for the period specified in the order. Any such order may authorize a waiver or modification of any Federal, State, or local law, standard, limitation, or other requirement applicable to emissions of environmental pollutants or any applicable environmental requirement if the President finds, and publishes such finding in the Federal Register, that such waiver or modification is necessary by reason of the prohibitions of such order (and the supply interruption on which it is based) and that no alternative means are practicable which would result in compliance with such environmental requirements. Any such waiver or modification shall be made under such terms and conditions as the President may prescribe to insure compliance with applicable environmental requirements to the maximum extent practicable under the circumstances. Such waiver or modification may cause or contribute to a violation of a primary ambient air quality standard only to the extent the President finds and publishes his finding that no alternative means are practicable to avoid such violation.

(c) The President may, by order, stay the application of any provisions of this part, or any rule or order thereunder—

(1) in the case of any provision, rule, or order applicable to any new or existing electric powerplant, if the Federal Power Commission finds, and publishes such finding, that an emergency exists, due to national, regional or systemwide shortages of coal or other fuels, or disruption of transportation facilities, which emergency is likely to affect reliability of service of any such electric powerplant; and

(2) in any other case, to the extent the President determines is necessary to alleviate or prevent any emergency adversely affecting the public health, safety, or welfare.

(d)(1) Except as provided in paragraph (3), any order issued by the President under this section shall not be effective for longer than the duration of the interruption or emergency, or 90 days, whichever is less.

(2) Any such order may be extended by a subsequent order which the President shall transmit to the Congress in accordance with section 551 of the Energy Policy and Conservation Act. Such order shall be subject to congressional review pursuant to such section.

(3) Notwithstanding paragraph (1), any order issued under this section shall remain effective throughout the 15-calendar-day period during which any order described in paragraph (2) is subject to congressional review under section 551 of the Energy Policy and Conservation Act.

(e) The authority of the President to issue any order under this section may not be delegated. This subsection shall not be construed to prevent the President from directing any Federal agency to issue rules or regulations implementing such order.

(f) Any order issued under this section shall be published in the Federal Register. To the greatest extent practicable, the President shall, before issuing any order under this section, but in no event later than 5 days after issuing such order, report to Congress of his intention to issue such order and state his reasons therefor.

SEC. 632. FEDERAL ACTIVITIES.

(a) No Federal facility (or unit thereof)—

(1) constructed by or on behalf of the United States or any agency or instrumentality thereof, after the effective date of this part, or

(2) effective beginning January 1, 1985, owned by the United States or any agency or instrumentality thereof,

shall use natural gas as the primary energy source for such facility or unit, unless the President determines in each case and informs the Congress of his determination, and the reasons therefor, that such use is necessary for national security reasons or to meet other requirements of law. The President shall review each such determination every two years and submit a report to the Congress on the results of such review. Any such facility permitted to use natural gas by the President shall establish and carry out effective fuel conservation measures, as determined by the Administrator.

(b) In order to implement the purposes of this part, the President shall, not later than 30 days after the effective date of this part, cause to be issued an order—

(1) requiring each Federal agency which is empowered to extend Federal assistance by way of grant, loan, contract, or other form of financial assistance, to promptly effectuate the purpose of this part, particularly those relating to the conservation of petroleum and natural gas, by rule, in such contrasting or assistance activities within 180 days after issuance of such order, and

(2) setting forth procedures, sanctions, penalties, and such other provisions, as the President determines necessary to carry out such requirement effectively, including procedures for each agency to annually transmit to the President, and make available to the public, a report on the actions taken and to be taken to implement such order.

(c) The President may exempt by order any specific grant, loan, contract, or other form of financial assistance from all or part of the provisions of this section if he determines such exemption is in the national interest. The President shall notify the Congress in writing of such exemption at least 60 days before it is effective.

(d) The President shall annually submit a detailed report to the Congress on the actions taken to implement this section, including the progress and problems associated with implementation of this section.

SEC. 633. IMPACT ON EMPLOYEES.

(a) The Administrator shall conduct continuing evaluations of potential loss or shifts of employment which may result from the issuance of any rule or order imposing any prohibition under this part, including, if appropriate, investigating threatened plant closures or reductions in employment allegedly resulting from such rule or order. The results of such evaluations and each investigation shall promptly be made available to the public.

(b) On a written request filed with the Administrator by or on behalf of any employee who is discharged or laid off, threatened with discharge or layoff, or otherwise discriminated against, by any person because of the alleged effects of any such rule or order, the Administrator shall investigate the matter and, at the request of any party, shall hold public hearings, after not less than 30 days notice, at which the Administrator shall require the parties, including any employer involved, to present information on the actual or potential effect of such rule or order on employment and on any alleged employee discharge, layoff, or other discrimination relating to rule or order and the detailed reasons or justification therefor. At the completion of such investigation, the Administrator shall make findings of fact as to the effect of such rule or order on employment and on the alleged employee discharge, layoff, or discrimination and shall make such recommendations as he deems appropriate. Such report, findings, and recommendations shall be available to the public.

(c) Nothing in this section shall be construed to require or authorize the Administrator to modify or withdraw any rule or order under this part.

SEC. 634. ANNUAL REPORT.

The Administrator shall submit to the Congress on March 1 of each year a detailed report prepared by him in conjunction with the Administrator of the Environmental Protection Agency of the actions taken under this part and under section 2 of the Energy Supply and Environmental Coordination Act of 1974 during the preceding calendar year, and the actions to be taken. Each such report shall include data on the effectiveness of this part in achieving the purposes of this part.

SEC. 635. AUTHORIZATION OF APPROPRIATIONS.

(a) There is authorized to be appropriated to the Administrator for fiscal year 1978 $11,500,000, including such sums as are authorized in section 29 of the Federal Energy Administration Act of 1974, to carry out the provisions of this part (other than sec-

tion 636(a)) and section 2 of the Energy Supply and Environmental Coordination Act of 1974.

(b) There is authorized to be appropriated to the Administrator of the Environmental Protection Agency $2,000,000 in fiscal year 1978 for the report required under section 636(a).

SEC. 636. STUDIES.

(a) The Administrator of the Environmental Protection Agency shall conduct, on a continuing basis, a program of monitoring, to the greatest extent possible and in accordance with the applicable authorities and provisions of the Clean Air Act, the emissions from new and existing electric powerplants and major fuel-burning installations required to use coal or other fuels by reason of this part or otherwise using coal or other fuels and the effect thereof on the public health, safety, and walfare. Such Administrator shall submit an annual report to the Congress on such program. In carrying out his responsibilities under this section, the Administrator of the Environmental Protection Agency shall consult with the other Federal and State agencies concerned with the health effects of such emissions.

(b) The Administrator, in consultation with the National Governors' Conference, other Federal agencies, interested persons, and organizations, shall conduct a study of the socioeconomic impacts of expanded coal production on States, including local communities, and on the public, including the adequacy of housing and public, recreational, and cultural facilities for coal miners and their families and the effect of any Federal or State laws or regulations on providing such housing and facilities. Within 1 year after the date of the enactment of this part, the Administrator shall submit a detailed report on the results of such study to the Congress, together with any recommendations for legislation he may consider appropriate.

(c) The Administrator shall conduct a detailed study of the uses of petroleum and natural gas as a primary energy source for combustors. In conducting such study, the Administrator shall—

(1) identify those categories of major fuel-burning installations in which the substitution of coal or other fuels for petroleum and natural gas is economically and technically feasible, and

(2) determine the estimated savings of natural gas and petroleum expected from such substitution.

Within 1 year after the date of the enactment of this part, the Administrator shall submit a detailed report on the results of such study to the Congress, together with any recommendations for legislation he may consider appropriate.

SEC. 637. EFFECTS OF OTHER LAWS ON PROCEDURES.

The procedures applicable under this part, or section 2 of the Energy Supply and Environmental Coordination Act of 1974, shall not—

(1) be considered to be modified or affected by any other provision of law unless such other provision specifically amends such part or section, or

(2) be considered to be superseded by any other provision of law unless such other provision does so in specific terms, referring to this part or such section, and declaring that such provision supersedes this part or such section.

SEC. 638. CONFORMING AMENDMENTS.

(a) Section 11(g) of the Energy Supply and Environmental Coordination Act of 1974 is amended—

(1) by striking out paragraph (2), and

(2) in paragraph (1) by striking out "(g)(1)" and inserting in lieu thereof "(g)".

(b) The preceding provisions of this part shall not affect any order issued under subsection (a), or any final order under subsection (c), of section 2 of such Act, and the authority of the Administrator to amend, repeal, rescind, modify, or enforce any such order, or rules applicable thereto shall remain in effect notwithstanding any limitation of time otherwise applicable to such authority. Except as provided in the preceding sentence, the authority of the Administrator under such section 2 of such Act shall terminate on the effective date of this part.

SEC. 639. EFFECTIVE DATES.

Unless otherwise provided in this part, the provisions of this part shall take effect 180 days after the date of the enactment of this Act, except that the Administrator may issue rules pursuant to such provisions at any time after such date of enactment, which rules may take effect no earlier than 180 days after such date of enactment.

AD HOC AMENDMENTS

The CHAIRMAN. The Clerk will designate the page and line numbers of the first ad hoc committee amendment to part VI.

Mr. ASHLEY. Mr. Chairman, there are three ad hoc committee technical amendments in part VI, and I ask unanimous consent to have them considered en bloc.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio?

Mr. BROWN of Ohio. Mr. Chairman, reserving the right to object, and I do not think I will object because our staff has reviewed these amendments with the staff of the majority, I want to be sure that the amendments are as we understand them to be.

Can we have the amendments read pending the reservation of objection?

The CHAIRMAN. The Clerk will report the three amendments.

The Clerk read as follows:

Ad hoc committee amendments: On page 342 delete the stricken word on line 18 and delete the stricken word on line 23 and insert the matter in italics; and on page 343 delete the stricken matter on lines 1 and 2.

(The ad hoc committee amendments read as follows:)

Ad hoc committee amendments: Page 342, line 18, strike "no." Page 342, line 23, strike "subsection" and insert "subsections (a) and." Page 343, lines 1 and 2, strike "pursuant to subsection (c)(1)(B)."

Mr. BROWN of Ohio. Further reserving the right to object, Mr. Chairman, and I shall not object, the amendments as the Clerk read them are as we understand them to be. They comport with the ad hoc committee's actions and are technical amendments.

With a certain catch in my voice I must note that I proposed to the Committee on Rules an amendment that would be somewhat more substantive than these technical amendments which relate to the size of boiler in this part of the bill, but the Committee on Rules, in its wisdom, for reasons that I never quite fully understood, chose not to make those amendments in order. We had a nice discussion about the issue of boiler exemptions in the ad hoc committee before it voted down my amendment. There had been some very close votes in the Committee on Interstate and Foreign Commerce, on the issue which I sought to have made in order by the Rules Committee.

But, Mr. Chairman, we will eventually see the legislation amended, as I originally proposed because what we have now in the bill is economically undesirable and brings into conflict our energy goals and our environmental goals. Since there seems at this point to be nothing that I can do about that other than to take this moment to reflect upon it, I am more than happy to withdraw my reservation of objection and to allow these technical amendments to be put in the bill.

The CHAIRMAN. Is there objection to the request of the gentleman from Ohio (Mr. ASHLEY) that the three amendments be considered en bloc?

There was no objection.

The CHAIRMAN. The question is on the amendments of the ad hoc committee to part VI.

The ad hoc committee amendments were agreed to.

The CHAIRMAN. The Clerk will designate the page number and heading of the part now pending.

The Clerk read as follows:

Page 377, line 4: Part VII—Federal Energy Initiatives.

(Part VII of title I reads as follows:)

PART VII—FEDERAL ENERGY INITIATIVES

Subpart A—Federal Van Pooling Program

SEC. 701. FEDERAL VAN POOLING PROGRAM.

Section 381 of the Energy Policy and Conservation Act is amended—

(1) in subsection (b)(1)(A), by striking out "or" after the semicolon and inserting in lieu thereof "and"; and

(2) by striking out subsection (c) and inserting in lieu thereof the following new subsections:

"(c)(1) The Secretary of Transportation (hereinafter in this subsection referred to as the 'Secretary') may, under such regulations as he may prescribe, after consultation with the Administrator of General Services and the Administrator, provide for the establishment of a program pursuant to which van pooling arrangements are offered and provided to officers and employees of the Federal Government. Any such program may be phased over a period of years, and may be limited by the Secretary to one or more reasonable categories of such officers and employees, or other individuals on a space-available basis, determined by the Secretary. Such categories may include, but need not be limited to, categories determined by such factors as location of residence, location of place of employment, or regular hours of work.

"(2) In order to establish, maintain, and operate any program authorized to be established under paragraph (1) of this subsection, the Secretary, after due consideration of the effect on existing public and private transportation services, shall be authorized to—

"(A) arrange for the provision of van pool services, including but not limited to—

"(i) encouraging and cooperating with officers and employees of the Federal Government, associations thereof, and other organizations, public or private, in establishing van pooling arrangements;

"(ii) encouraging and cooperating with officers and employees who own vans in participating in such a program;

"(B) establish and maintain, or encourage and assist departments and agencies to establish and maintain, lists of officers and employees participating, or desiring to participate, in van pooling arrangements; and

"(C) cooperate with other van pool programs available in a particular area.

"(3) In order to establish, maintain, and operate any program authorized to be estab-

lished by the Secretary under paragraph (1) of this subsection, the Administrator of General Services, in consultation with the Secretary and after due consideration of the effect on existing public and private transportation services, shall be authorized under such regulations as such Administrator may prescribe to—

"(A) acquire vans by purchase, or by lease for periods not exceeding five years, except that the number of vans made available for use under this subparagraph shall not, at any time, exceed six thousand vehicles;

"(B) contract for nonpersonal maintenance and other services incident to van pooling arrangements;

"(C) permit any person authorized to operate a van acquired pursuant to subparagraph (A) to—

"(i) operate the van for personal use (other than for hire or for use on vacation trips and trips over extended distance, as defined by the Administrator of General Services), with or without a charge for such personal use as determined by the Administrator of General Services, and subject to the provisions of paragraph (4)(C)(iv) of this subsection; and

"(ii) retain, if and to the extent authorized by the Administrator of General Services, a portion of the rider charges paid by individuals participating in such van pooling arrangements for the purpose of operation and maintenance of the vehicle or as incentive to encourage and sustain maximum capacity and effective service;

"(D) retain until expended such portions of the rider charges as the Administrator of General Services deems necessary to pay the costs of operation and maintenance of vans; and

"(E) establish and operate training programs for van operators and program administrators.

"(4) Any program using vans acquired pursuant to paragraph (3)(A) of this subsection shall, with respect to the operation of such vans, include—

"(A) a requirement that individuals participating in van pooling arrangements authorized under such program pay a rider charge, including a sum for government self-insurance against financial loss that may be imposed on the Federal Government because of such programs, in such amount and at such intervals as the Administrator of General Services may provide, except that such Administrator may provide that a person authorized to operate a van pursuant to a van pooling arrangement may not be required to pay a rider charge;

"(B) a requirement that, excluding Federal personnel costs and administrative expenses as designated by the Administrator of General Services, all costs and expenses incurred by the Federal Government in connection with the acquisition, maintenance, and operation of a van for such a program (including, with respect to a van purchased by the Federal Government, a sum to cover repayment of the purchase price of the van plus interest on the unrecovered balance of such price computed at a rate of 7 per centum per annum) will be repaid from rider charges over a period to be determined by the Administrator of General Services not to exceed five years, except that, for purposes of this subparagraph, the Administrator of General Services shall not exclude—

"(i) personnel costs of personnel spending all or a substantial portion of their time on such a program; or

"(ii) administrative expenses of such a program that are readily identifiable or segregable; and

"(C) requirements to insure that each individual operating such a van—

"(i) shall be a regular officer or employee of the Federal Government;

"(ii) shall, as directed by the Administrator of General Services, arrange for maintenance of the van in good and safe working order;

"(iii) shall be an individual who is entitled by law to operate the van in such individual's place of residence, except that nothing in this subparagraph shall be deemed to require that such individual be licensed to operate the van for hire; and

"(iv) shall, in the event that such individual is authorized to operate and operates the van for personal use, secure and maintain at such individual's expense insurance against such risks as the Administrator of General Services deems necessary to assure payment of any claim that may arise other than in van pooling use.

"(5) For the purposes of section 5 of the Act of July 16, 1914 (31 U.S.C. 638a), a van obtained for the purpose of, and operated pursuant to, a van pooling arrangement established pursuant to this subsection shall not be deemed to be a passenger motor vehicle.

"(6) Neither the offering of a van pooling arrangement pursuant to this subsection nor the operation of a van pursuant to such an arrangement shall subject any person to regulation as a motor carrier under part II of the Interstate Commerce Act (49 U.S.C. 301 et seq.), or to any similar regulation under the laws of the District of Columbia or of any State or political subdivision thereof.

"(7) Sections 1346(b), 2672, and 2679 of title 28, United States Code, shall apply to claims arising from van pooling use of vans acquired pursuant to paragraph (3)(A) of this subsection.

"(8) The operation of a van pursuant to a van pooling arrangement established pursuant to this subsection shall not be deemed to be operation of a motor vehicle for hire for purposes of any law of the District of Columbia or of any State or political subdivision thereof relating to the licensing of operators of motor vehicles for hire; nor shall personal use authorized under paragraph (3)(C)(i) be subject to any law of the District of Columbia or of any State or political subdivision thereof relating to registration, licensing, maintenance, or inspection of motor vehicles.

"(9) Time spent traveling in van pooling arrangements established pursuant to this subsection shall not be included in determining the hours of which a Federal employee is employed for the purposes of sections 6 and 7 of the Fair Labor Standards Act of 1938 (29 U.S.C. 201 et seq.); nor shall such time be considered Federal employment for the purpose of any law administered by the Civil Service Commission or by the Department of Labor pursuant to chapter 81 of title 5, United States Code. Rider charges paid the operator of a van pool shall be deemed to be paid to and received by individuals in their private capacity.

"(10) The Secretary or the Administrator of General Services may delegate to the heads of Federal departments and agencies whose officers and employees are authorized to participate in van pooling arrangements under paragraph (1) such of his functions, powers, and duties under this subsection as he deems necessary or appropriate to establish, maintain, operate, or promote van pooling programs authorized by this subsection.

"(11) Except as otherwise authorized in this subsection and in section 201(c) of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 481(c)), all rider charges and other receipts from the operation of van pooling arrangements established pursuant to this subsection received by the Administrator of General Services or by the head of any department or agency exercising authority delegated pursuant to paragraph (10) of this subsection shall be deposited in the general fund of the Treasury of the United States.

"(12) The requirements of section 211(k) of the Federal Property and Administrative Services Act of 1949 (40 U.S.C. 491(k)) regarding conspicuous identification shall not apply to the van pooling arrangements. The Administrator of General Services shall require that each Government-owned vehicle or leased vehicle acquired pursuant to paragraph (3)(A) shall use United States Government vehicle tags.

"(13) The Secretary shall be authorized to provide at Government expense special arrangements allowing physically handicapped officers and employees of the Federal Government to participate in programs established pursuant to this subsection.

"(14) The Secretary is authorized to study the feasibility of utilizing vans acquired under paragraph (3)(A) for use in providing social service-related transportation during periods of the day when such vans are not required for use in a van pooling arrangement.

"(15) For purposes of this subsection:

"(A) The term 'van' means any automobile which the Secretary determines is manufactured primarily for use in the transportation of not fewer than eight and not more than fifteen individuals.

"(B) The term 'van pooling arrangement' means an arrangement for the transportation of individuals in a van, in a single daily round trip between their residences or other designated locations and their places of employment, on a for-profit or nonprofit basis, in which the costs of such arrangement are primarily paid for by the individuals utilizing such arrangement.

"(C) The term 'van pooling use' means the operation or maintenance, by an officer or employee of the Federal Government, of a van acquired pursuant to paragraph (3)(A), in the course of or incidental to a van pooling arrangement authorized under this subsection, excluding any personal use permitted under paragraph (3)(D)(i).

"(16) There are authorized to be appropriated to the Secretary to carry out the provisions of this subsection not more than $15,000,000 for each of the fiscal years beginning on October 1 of 1977, 1978, 1979, 1980, and 1981. The Secretary shall authorize, with the approval of the Director of the Office of Management and Budget, to transfer to the Administrator of General Services and to the heads of Federal departments and agencies such amounts from the sums so appropriated as may be necessary to carry out the functions, duties, and responsibilities assigned or delegated to the Administrator of General Services and to the heads of Federal departments and agencies by this subsection. The Administrator of General Services may subsequently transfer funds to the heads of Federal departments and agencies to carry out the functions, duties, and responsibilities assigned or delegated by the Administrator of General Services to the heads of such departments and agencies.

"(d) The President shall submit to the Congress annual reports concerning all steps taken under subsections (a), (b), and (c). The President shall include with any report concerning steps taken under subsection (c) an annual financial report concerning all activities undertaken under such subsection.".

Subpart B—Amendment to Section 381 of Energy Policy and Conservation Act

SEC. 721. CONSERVATION PLAN AUTHORIZATION.

Section 381 of the Energy Policy and Conservation Act is amended by adding at the end thereof the following new subsections:

"(e) The plan developed by the President pursuant to subsection (a)(2) shall be applicable to Executive agencies as defined in section 105 of title 5, United States Code, and to the United States Postal Service.

"(f) In addition to funds authorized in any

other law, there is authorized to be appropriated to the President for fiscal year 1978 not to exceed $25,000,000, and for fiscal year 1979 not to exceed $50,000,000, to carry out the purposes of subsection (a)(2).".

Subpart C—Demonstration of Solar Heating and Cooling in Federal Buildings

SEC. 741. DEFINITIONS.

As used in this subpart—

(1) The term "agency" means—

(A) an Executive agency as defined in section 105 of title 5, United States Code; and

(B) each entity enumerated in subparagraphs (B) through (H) of paragraph (1) of section 5721 of title 5, United States Code.

(2) The term "building" means and structure owned by the United States or any agency, including any such structure occupied by an agency under a lease-acquisition agreement under which the United States or an agency will receive fee simple title under the terms of such agreement without further negotiating.

(3) The term "solar heating" means, with respect to any building, the use of solar energy to meet all or part of the heating needs of such building (including hot water), or all or part of the needs of such building for hot water (where its remaining heating needs are met by other methods).

(4) The term "solar heating and cooling" means, with respect to any building, the use of solar energy to provide all or part of the heating needs of such building (including hot water) and all or part of the cooling needs of such building, or all or part of the needs of such building for hot water (where its remaining heating needs are met by other methods) and all or part of the cooling needs or such building.

(5) The term "solar energy equipment" means equipment for solar heating and solar heating and cooling.

(6) The term "Administrator" means the Administrator of the Federal Energy Administration.

SEC. 742. FEDERAL SOLAR PROGRAM.

The Administrator shall develop and carry out a program to demonstrate the application to buildings of solar heating and solar heating and cooling technology in Federal buildings.

SEC. 743. DUTIES OF ADMINISTRATOR.

(a) In exercising the authority provided by section 742, the Administrator shall—

(1) solicit and consider proposals by any agency to apply solar heating and solar heating and cooling technology to any existing or proposed building;

(2) promulgate, by rule, criteria by which such proposals will be evaluated, which criteria shall provide for the inclusion in each proposal of a complete analysis of the present value of the costs and benefits of the proposal to the agency, and for the demonstration, to the maximum extent practicable, of innovative and diverse applications to a variety of type of buildings of solar heating and solar heating and cooling technology, and for location of demonstration projects in areas where a private sector market for solar energy equipment is likely to develop;

(3) evaluate each such proposal pursuant to the criteria promulgated pursuant to paragraph (2);

(4) provide assistance by interagency agreement for the cost of implementing a proposal (which costs shall be limited to design, acquisition, construction, and installation of solar energy equipment); and

(5) provide, by rule, that agencies report to the Administrator periodically such information as they acquire respecting maintenance and operation of solar equipment.

(b) In carrying out the responsibilities, pursuant to paragraphs (2) and (3) subsection (a), the Administrator shall provide an opportunity for consultation to the Administrator of the General Services Administration and the Administrator of the Energy Research and Development Administration.

SEC. 744. TRANSFER OF APPROPRIATION.

In carrying out a proposal for which the Administrator has provided assistance, any agency may use funds transferred to it by the Administrator to enter into such contracts as may be necessary to complete the project described in that proposal.

SEC. 745. SUBMISSION OF PROPOSALS.

(a) Each agency responsible for the construction of new buildings or operation of existing buildings shall, within one hundred and eighty days after publication of criteria under section 743(a)(2), submit initial proposals to the Administrator for installation of solar energy systems on selected buildings under its control.

(b) Such initial proposal shall include a list of the specific buildings proposed to be provided with solar energy systems, the funds requried for the system, the proposed implementation schedule, the estimated savings in fossil fuels and electricity, the estimated payback time, and such other information as may be required by the Administrator.

(c) Thereafter, each agency may submit proposals to the Administrator for additional solar energy systems for buildings under their control on a schedule established by the Administrator but not greater than two-year intervals.

SEC. 746. AUTHORIZATION.

There are authorized to be appropriated to the Administrator through fiscal year 1980 to carry out the purposes of this subpart not to exceed $100,000,000.

Subpart D—Use of Energy Conservation and Solar Energy in Federal Buildings

SEC. 761. FINDINGS.

The Congress finds that—

(1) there is an urgent need to promote the design, construction, and operation of buildings to conserve and make more efficient use of fuels and energy;

(2) a shift from dependence on nonrenewable to renewable energy sources would have a beneficial effect on the Nation's overall energy supply;

(3) programs for energy conservation in buildings, along with the use of renewable energy sources, would stimulate industries and create new job opportunities for supply and servicing new or improved energy-conserving and energy-supplying systems and equipment;

(4) in the construction or renovation of buildings, the cost of energy consumed over the life of such buildings must be considered as well as the initial cost of such construction or renovation; and

(5) the Federal Government, being the largest energy consumer in the United States, should be in the forefront in implementing energy conservation measures along with the use of renewable energy sources.

SEC. 762. POLICY.

It is the policy of the United States that the Federal Government has the opportunity and responsibility, with the participation of industry, to further develop, demonstrate, and promote the use of energy conservation and solar heating and cooling in Federal buildings.

SEC. 763. PURPOSE.

It is therefore the purpose of this subpart to promote the use of commonly accepted methods to establish and compare the life cycle costs of operating residential, commercial, industrial, and Federal buildings, and the life cycle fuel and energy requirements of such buildings, with and without special features for energy conservation and the use of solar heating and cooling. It is also the purpose of this subpart to aim for a reduction of energy use in existing Federal buildings by 20 per centum by 1985.

SEC. 764. DEFINITIONS.

For purposes of this subpart—

(1) the term "Administrator" means the Administrator of the Federal Energy Administration;

(2) the term "life cycle cost" means the total costs of owning, operating, and maintaining a building over its economic life, including its fuel and energy costs, determined on the basis of a systematic evaluation and comparison of alternative building systems; in the case of leased buildings the life cycle cost shall be calculated over the effective remaining term of the lease;

(3) the term "preliminary energy audit" means a determination of the per square foot energy demand, either actual or calculated, of existing buildings and of the physical characteristics of such buildings including but not limited to their age, use, construction, and retrofit potential;

(4) the term "Federal building" means any building, structure, or facility or part thereof which is constructed, renovated, or leased specifically for use by the United States or by an agency or agencies thereof; and

(5) the term "existing Federal building" means any Federal building for the construction, renovation, or leasing of which funds have been appropriated or otherwise actually made available prior to the date of the enactment of this subpart, and the term "new Federal building" means any other Federal building; except that a building shall be considered a "new Federal building" even though funds for its construction, renovation, or leasing have been made available prior to that date if (A) its construction, renovation, or leasing has not been completed prior to that date, and (B) the Administrator determines that the plans for such construction, renovation, or leasing can still feasibly be modified to take into account the provisions of this subpart relating to new Federal buildings.

SEC. 765. ESTABLISHMENT AND USE OF LIFE CYCLE COST METHODS.

(a) The Administrator, in consultation with the Director of the Office of Management and Budget, the National Bureau of Standards, the Administrator of the Energy Research and Development Administration, the Administrator of the General Services Administration, and the Secretary of Housing and Urban Development, shall—

(1) establish practical and effective methods for estimating and comparing life cycle capital and operating costs for residential, commercial, industrial, and Federal buildings, including the life cycle fuel and energy requirements for such buildings; and

(2) develop and prescribe the forms to be used and the procedures to be followed in applying and implementing the method so established and in conducting the preliminary energy audits required by section 767.

(b) All new Federal buildings shall be life cycle cost effective as determined in accordance with the methods established under subsection (a). In the design of new Federal buildings, preference shall be given to life cycle cost rather than first cost.

(c) In addition, the Administrator shall take such actions as may be necessary or appropriate to promote to the maximum extent possible the use and acceptance of such methods in the construction and renovation of non-Federal public buildings and in the construction and renovation of other buildings, structures, and facilities in all segments of the economy.

SEC. 766. ENERGY PERFORMANCE TARGETS FOR EXISTING BUILDINGS.

In addition to establishing methods for estimating and comparing life cycle costs under section 765, the Administrator, in consultation with the Administrator of the Energy Research and Development Administration, the Administrator of the General Services Administration, the Secretary of Hous-

ing and Urban Development, and the Director of the Office of Management and Budget, shall establish energy performance targets for existing buildings, structures, and facilities, and shall take such actions as may be necessary or appropriate to promote to the maximum extent feasible compliance with such targets by all existing Federal buildings within the United States. The performance targets established under the preceding sentence shall be compatible with standards adopted or developed by the Secretary of Housing and Urban Development.

SEC. 767. ENERGY AUDITS AND RETROFITTING OF EXISTING FEDERAL BUILDINGS.

(a)(1) As soon as possible after the date of the enactment of this subpart, each Federal agency shall conduct a preliminary energy audit of all existing Federal buildings under its jurisdiction, occupancy, or control which contain thirty thousand or more square feet, and shall furnish the results of such audit to the Administrator. The Administrator shall submit to the Congress a full report on all preliminary energy audits conducted under this paragraph no later than December 31, 1977.

(2) As soon as possible after the completion of the preliminary energy audits required under paragraph (1) (and concurrently with such audits to the extent feasible in the case of any agency), each Federal agency shall conduct a preliminary energy audit of all existing Federal buildings under its jurisdiction, occupancy, or control which contain one thousand or more but less than thirty thousand square feet, and shall furnish the results of such audit to the Administrator. The Administrator shall submit to the Congress a full report on all preliminary energy audits conducted under this paragraph no later than December 31, 1978.

(b)(1) Each Federal agency shall, in accordance with this subsection, select from each preliminary energy audit conducted by such agency under subsection (a) appropriate buildings for retrofit measures to improve their energy efficiency in general and their life cycle cost effectiveness in particular. Such measures shall include, without being limited to, energy conservation measures and measures involving solar technology.

(2) At least 1 per centum of the total gross square footage contained in all existing Federal buildings which are under the jurisdiction, occupancy, or control of any Federal agency, and which are included in a preliminary energy audit conducted by such agency under subsection (a), shall be retrofitted by such agency under paragraph (1) pursuant to actions taken or arrangements made by such agency during the first year after the date of the enactment of this subpart; and an additional percentage of such total gross square footage equal to at least 1 percentage point higher than the percentage applicable under this paragraph in the preceding year shall be so retrofitted pursuant to actions taken or arrangements made during the second and third such years, with a view to achieving full compliance with paragraph (3) by the time specified therein.

(3) By no later than January 1, 1990, all existing Federal buildings which are under the jurisdiction, occupancy, or control of any Federal agency shall have been the subject of such retrofit measures under paragraph (1) as will assure their maximum possible life cycle cost effectiveness.

SEC. 768. ENERGY PREFERENCE FOR LEASED BUILDINGS.

Each Federal agency, in leasing buildings or before exercising lease renewal options on buildings heretofore leased for its use or the use of any other Federal agency, shall give an appropriate preference to buildings which use solar heating and cooling or which otherwise have a high degree of energy efficiency in general and life cycle cost effectiveness in particular.

SEC. 769. BUDGET TREATMENT OF ENERGY ITEMS BY FEDERAL AGENCIES.

Each Federal agency, in the preparation and submission of its budget requests for any fiscal year, shall specifically set forth (and identify in a separate line item or items) the funds being requested for retrofit measures to be undertaken in accordance with section 767(b), and the portion of any other funds being requested which represents the initial costs of construction or renovation attributable to captial equipment for energy conservation or the utilization of solar energy.

SEC. 770. REPORTS.

Each Federal agency shall periodically furnish the Administrator with full and complete information on its activities under this subpart, and the Administrator shall annually submit to the Congress a comprehensive report on all activities under this subpart and on the progress being made toward achievement of the objectives of this subpart.

SEC. 771. TRANSFER OF FUNCTIONS.

Within sixty days after the effective date of any law creating a Federal Department of Energy or its equivalent (or within sixty days after the enactment of this subpart if the effective date of such law occurs prior to the enactment of this subpart), the functions vested in the Administrator of the Federal Energy Administration under this subpart and any funds which may have been appropriated pursuant to section 772 of this subpart, to the extent necessary or appropriate, may, in accordance with regulations prescribed by the Office of Management and Budget, be transferred to and vested in such Department.

SEC. 772. AUTHORIZATION OF APPROPRIATIONS.

There are authorized to be appropriated to the Administrator such sums, not exceeding $2,000,000 in the aggregate, as may be necessary to enable him to perform the functions vested in him under this subpart.

Subpart E—Use of Advanced Photovoltaic Energy Devices in Federal Facilities

SEC. 781. SHORT TITLE.

This subpart may be cited as the "Federal Photovoltaic Utilization Act".

SEC. 782. PHOTOVOLTAIC ENERGY PROGRAM.

There is hereby established a photovoltaic energy commercialization program (hereafter in this subpart referred to as the "program") for the accelerated procurement and installation of photovoltaic solar electric systems for electric production in new and existing Federal facilities, using technologically and technically approved and proved equipment.

SEC. 783. PURPOSE.

The purpose of the program shall be to accomplish the following:

(1) accelerate the growth of a commercially viable photovoltaic industry in order to make this energy system available to the general public as an option which can reduce national consumption of fossil fuel;

(2) conserve fossile fuel costs of the Federal Government;

(3) stimulate the general use within the Federal establishment of life-cycle costing and innovative procurement methods; and

(4) develop program performance data to support policy decisions on future incentive programs with respect to energy.

SEC. 784. ACQUISITION OF SYSTEMS.

The program shall provide for the acquisition of photovoltaic solar electric systems and associated storage capability, primarily for use by the Department of Defense. The acquisition of photovoltaic electric systems shall be at an annual level substantial enough to allow use of low-cost production techniques. The Administrator is authorized to make the acquisitions authorized by this section through the use of multiyear contracts.

SEC. 785. ADMINISTRATION.

The Administrator shall administer the program and shall—

(1) insure that the installation of photovoltaic electric systems pursuant to this subpart shall not interfere with defense-related activities;

(2) prescribe such rules and regulations as may be appropriate to monitor and assess the performance and operation of photovoltaic electric systems installed pursuant to this subpart; and

(3) report annually to Congress on the status of the program.

SEC. 786. SYSTEMS EVALUATION AND PURCHASE PROGRAM.

The Administrator and the Administrator of the Energy Research and Development Administration shall jointly establish, within sixty days following the date of the enactment of this subpart, a photovoltaic systems evaluation and purchase program to provide such systems as are required by the Secretary of Defense to carry out this subpart. In acquiring photovoltaic systems under this subpart, the Administrator of the Energy Research and Development Administration shall insure that such systems reflect the most advanced technology and shall schedule purchases in a manner which will stimulate the early development of a permanent low-cost private photovoltaic production capability in the United States.

SEC. 787. ADVISORY COMMITTEE.

There is hereby established an advisory committee to assist the Administrator in the establishment and conduct of the program. Such committee shall be composed of the Secretary of Defense, the Secretary of Housing and Urban Development, the Administrator of the National Aeronautics and Space Administration, the Administrator of the Energy Research and Development Administration, the Administrator of the General Services Administration, the Secretary of Transportation, the Administrator of the Small Business Administration, the Postmaster General, and such other persons as the Administrator deems necessary.

SEC. 788. DEFINITION.

As used in this subpart, the term "Administrator" means the Administrator of the Federal Energy Administration, or his successor.

SEC. 789. AUTHORIZATION.

For photovoltaic system acquisition, there is authorized to be appropriated to the Administrator not to exceed $39,000,000 for the period beginning October 1, 1978, and ending September 30, 1981.

AMENDMENT OFFERED BY MR. HORTON

Mr. HORTON. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HORTON: Strike out line 5 on page 377 and all that follows, up to and including line 25 on page 386; reletter succeeding subparts accordingly.

Mr. HORTON. Mr. Chairman, all of us believe that energy conservation is an important part of the solution to our national energy dilemma. In the transportation field, conservation steps must be taken which will encourage and enable more and more Americans to avoid reliance on private automobiles which carry only one person in going to and from work.

Improved access to efficient mass transit, increased use of car pooling and van pooling programs are certainly part of the answer to conserving fuel in the transportation sector.

However, we have an obligation which goes beyond the need to support energy conservation. We must determine how best to allocate the people's money in implementing sensible ways of encouraging energy conservation. The Federal Government does have an important role to play in encouraging voluntary and private sector van pooling programs. This encouragement should come in the form of Federal leadership in breaking down some of the institutional barriers which stand in the way of spreading the concept of van pooling across the country into those areas where it is an appropriate energy conservation solution.

Unfortunately, section 701 of this bill which would establish a massive van pooling program for Federal employees does not add up to a very effective approach to the problem. What section 701 does is to authorize the Federal Government to purchase 6,000 vans, I repeat, a fleet of 6,000 vans at a cost of $75 million so that these vehicles can be used to transport selected Federal employees to and from their jobs.

This is not encouragement and leadership directed at making van pooling a viable solution for American citizens in the private sector, it is rather a spendthrift and foolhardy way of wasting $75 million of the taxpayers money.

For those of my colleagues who are not familiar with the van pooling concept, let me say that van pooling was not invented or conceived by the drafters of the President's energy bill. Van pooling is an idea which has been implemented in many, many areas throughout this country. It is a program which has already garnered a wealth of experience. The Government Operations Subcommittee, which considered this portion of the energy bill, had testimony from expert witnesses who have been operating van pooling programs for many years. A reading of some of that testimony is all that is necessary to discover that section 701 of this bill does not build on the experience that has already been gained. Rather, it repeats in a massive way some of the mistakes that were made in the very earliest attempts to promote van pooling.

In the city of Knoxville, Tenn., for example, van pooling has been launched very successfully through the cooperation of the University of Tennessee Transportation Center, through the city's department of public transportation services and through the Tennessee Valley Authority. In the early stages of the Knoxville program, the city purchased 51 vans which were then leased to private operators. The very first witness to testify before the Government Operations Subcommittee was Frank Davis, head of the University of Tennessee's Transportation Center. He indicated that the city of Knoxville is now in the process of trying to sell to private operators the 51 vehicles which it had initially purchased. He feels, as does Robert Aex, who heads the city's department of public transportation services, that the publicly owned vehicles, which represent only a small portion of the vans used in the Knoxville area, have performed least efficiently and have generated the greatest problems and highest costs in comparison to the van pooling vehicles which are owned privately.

Mr. Aex told my office yesterday that the maintenance costs for the publicly owned vehicles in their program are close to 300 to 400 percent higher than those for comparable vehicles owned by private operators. In other words, Knoxville has gained a great deal of experience from this program and is learning from its initial mistakes. It has definitely decided that public ownership of van pooling vehicles is a serious mistake and a costly one.

Why then, Mr. Chairman, should we authorize in this bill an expenditure of $75 million so that the Federal Government can make in grand style the same mistake which Knoxville is now trying to correct? If we do not delete this provision, the Federal Government will be purchasing 117 times the number of vehicles that the city of Knoxville is now trying to sell to private operators because they have proven that public ownership of vans is neither prudent nor cost effective.

Much of the debate here this week has been partisan. I trust that our consideration of this amendment will be an exception. My distinguished colleague from California, JOHN MOSS, the second-ranking Democrat on the Commerce Committee, and I have had differing views on many matters, but we have joined together in offering this amendment. We propose striking the van pooling section for a truly bipartisan—or better yet, nonpartisan—reason: we want to remove from the bill a section which bears little, if any, relation to a national energy plan and which, in our view, makes no sense.

I feel that it would be a step forward if the Federal Government took the lead in encouraging sensible use of the van pooling concept. What we should be doing is taking note of the state of the art of van pooling as it stands today and build upon that experience through creative leadership at the Federal level. However, if we adopt section 701 of this bill, we will be taking a giant step backward in the van pooling field at a cost of $75 million. It is quite possible, in fact probable, that a Federal van pooling program based on the purchase of 6,000 vehicles will fall flat on its face and become a national laughing stock. That is clearly not creative Federal leadership nor is it likely to encourage sensible implementation of van pooling programs in the private sector.

Mr. Chairman, I believe that this bill is much too important to have it encumbered with this proposal. I would like to cite four reasons for supporting this amendment.

First. Establishing a van pooling program would create a new special benefit for Federal employees, which would be subsidized by the taxpayers. Van pooling may be a fine idea, and encouraging, promoting, and consulting on it seems to me an appropriate role for the Federal Government. Buying vehicles for bureaucrats to drive to work, on the other hand, does not strike me as a good idea.

Second. No one has yet performed a survey to determine whether a market exists for a van pooling program. Since the bill requires the program not to compete with existing public or private transportation services, the market could be very slim.

Third. No one knows how much this scheme would cost. The section which I propose to strike would authorize the appropriation of $75 million for the purchase of vans, with no guarantee that the Government would ever recoup any of the money. The expense of buying the vans, as well as all other costs which are readily allocable to the program, is supposed to be paid by riders of the vehicles. A major component of the rider charges, however, is the salaries of employees who administer the enterprise, and no one can predict how many people will be needed for this job. GSA estimates 12 for the entire Nation. Projections based on the experience of the one private van pooling organization for which we have figures, though, indicate that 60 would be a rock-bottom minimum.

Fourth. The proposal contains a potential for creating enormous amounts of paperwork in establishing and administering the program. As chairman of the Commission on Federal Paperwork, I have become extremely concerned about this aspect of Federal programs. Let me tell you, any system which involves 6,000 vans and, assuming 10 riders per vehicle, 60,000 Federal employees, all going back and forth to and from Federal buildings all over the country every day, is bound to pose a massive paperwork tangle.

In summary, Mr. Chairman, the van pooling program envisioned in this bill is poorly conceived and it is a step backward from experience already gained in this field. I urge Members to support the amendment to strike this program from the legislation before us.

Mr. ASHLEY. Mr. Chairman, I rise in opposition to the amendment.

I will be brief, Mr. Chairman, because the hour is late and I hope we might complete action on this amendment this evening. It is my understanding that there are other pieces of business that will be before this body before we retire later on in the evening, so let me be brief and I hope others will be as well.

The section which the gentleman's amendment would strike establishes a program for van pooling of Federal employees, wherever feasible. This program, Mr. Chairman, it seems to me, will provide a most valuable kind of demonstration to industries and other commercial concerns of the kinds of economic and energy conservation benefits to be derived from van pooling.

It is estimated each van will permit the savings of some 5,000 gallons per year, enough to fuel five average automobiles for 1 year.

It seems to me, Mr. Chairman, we should support the widespread adoption of vanpooling as well as carpooling systems. They can make a strong contribution toward conserving gasoline.

Let me repeat the statistics which the gentleman, my friend, the gentleman from New York, did not dwell upon. Forty percent of the gasoline we consume in this country is used in trips to and from work. Clearly that offers a target for conservation.

I acknowledge that Federal van pooling is not, indeed, the complete and ultimate answer, but it does seem to me that if van pooling and car pooling allow us to increase the average vehicle's occupancy by 10 percent, which is possible, we could reduce gasoline consumption by 200,000 to 300,000 barrels per day by 1985.

The Federal van pooling program proposed in this bill will pay for itself through rider charges and will represent a small step toward encouraging others to adopt those programs.

Furthermore, Mr. Chairman, I would think it incumbent on the Federal Government to lead the way in this area by providing van pooling for its own employees, as it has been doing through its private demonstration programs.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from New York (Mr. HORTON).

Mr. HORTON. I thank the gentleman for yielding.

The point I want to make is that I certainly am not going to disagree with the point the gentleman made in regard to the need for conservation of fuel and I certainly would agree with the gentleman that we ought to have more people riding in private automobiles.

I for one would want to encourage in every way we can, van pooling, but my point is we should do it in the private sector and should not be allocating $75 million in the next 5 years to buy a fleet of vans and have Federal Government subsidies for the Federal employees getting to and from work. That is the point I am trying to make.

Mr. ASHLEY. Mr. Chairman, I can understand the gentleman's point but I do not agree with it. It seems to me the Federal Government, being a major employer not only in Washington but also in other parts of the country, does have a responsibility in taking the lead and in trying to promote efficiency in the use of gasoline for commuting to work purposes.

Mr. HORTON. Mr. Chairman, will the gentleman yield again?

Mr. ASHLEY. Mr. Chairman, this is not a subsidized program.

I say if the gentleman from New York disagrees with me he should do so on his own time, but this program will pay for itself. It is not a subsidized program.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, I can see very sensibly setting up a tax program to give incentives to people to buy vans and use vans to transport their people and we can give people incentives through a tax system to do that.

For us to buy the vans and say, "Here, you take the vans," they can take these vans home on the weekend. They can use them for private purposes.

Mr. EDGAR. Mr. Chairman, will the gentleman yield?

Mr. ASHLEY. I yield to the gentleman from Pennsylvania.

Mr. EDGAR. Mr. Chairman, I will take my own time in a moment, but I just want to point out that in the private sector there are scores of companies, such as 3M, and Scott Paper, that go out and purchase the van and lease that van to the 8, 10, or 11 riders that are using it and recover the funds.

I think the Federal Government as a primary employer in the United States should lead the way in a symbolic manner and operate the van-pool system in the same way as we have asked the private sector to do.

Mr. MOSS. Mr. Chairman. I move to strike the requisite number of words. I rise in support of the amendment.

Mr. Chairman, this is a $75 million piece of damn foolishness, in my judgment. When I first saw it, I thought, "You must be kidding."

This is not very carefully thought out. We are being asked, as I say, to underwrite $75 million and we are going to get nothing new from it. If we want to refer to it as a good demonstration project, there are many excellent demonstration projects which have been funded by private industry all around the Nation.

Now, if the Federal Government wants to give some example here to the populace, maybe it should start pooling the vans that it has in the Washington area and in others, because it is not an efficient employer or utilizer of vans.

There are many questions that arise in connection with this. I do not know, for example, when we start reading the proposed language, I would say that the gentleman from New York is precisely right, the operator is entitled to operate the van for personal use.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield?

Mr. MOSS. I yield to the gentleman.

Mr. JOHN L. BURTON. Mr. Chairman, that is as long as he pays for it; is that right?

Mr. MOSS. As long as he pays whatever the Administrator prescribes.

Mr. JOHN L. BURTON. As long as he can regain a reasonable cost.

Mr. MOSS. There is nothing in this legislation that assures that the Government will recapture its cost. There is no language that proves the Government will be free of liability under the insurance program that will be necessary for the protection of the passengers in these vans.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield further?

Mr. MOSS. Of course, I yield.

Mr. JOHN L. BURTON. Before any more of these great thoughts, we ought to read the statutes. It is all in the statutes.

Mr. MOSS. Mr. Chairman, the gentleman knows I do not yield for such foolish comments. I do not yield.

Mr. Chairman, I have read the statutes, or I would not be in this well. I hope the gentleman has done as much.

Mr. JOHN L. BURTON. I happen to have done as much.

Mr. MOSS. I do not want to say a great deal about this, but I think we ought to take just a little time to look at what we are asked to create, without adequate hearings, and I say that with due deference to the distinguished committee upon which I am privileged to serve and have served for a great many years. It does its work normally very well, but it was reacting in a rather unusual fashion in the instance of writing this legislation. They did not proceed with their usual caution, because with usual caution this bill would not be here, or this portion of this bill would not now be on this floor asking for our approval.

I do not think anyone has had more of an input in trying to develop plans for conserving fuel or assuring that we have adequate supply than this Member now speaking; but I think there is a difference between gimmickry and something that is going to be promising and on a cost basis be feasible.

In my judgment, this does not meet any of the requirements for the kind of program that we ought to be enacting.

Mr. WAGGONNER. Mr. Chairman, I move to strike the last word, and I rise in support of the amendment.

Mr. Chairman, my colleagues of the committee, the idea that the Federal Government can at this point in time, under the guise of saving energy, justify spending $75 million to establish a pilot program—and that is about all it will really amount to—of van pooling to transport Federal workers to work is an idea whose time has not yet arrived. There is no justification whatever for the Federal Government to undertake such a foolhardy project.

Now, the Federal Government has programs subsidizing mass transit systems of all types, including bus systems, subway systems, and every other conceivable system. Just yesterday, or just this week, a great deal was said in the local media about the fact that the mass transit system here was shelving several hundred buses, taking them out of circulation, doing away with the routes to the extent that they were just going to take people to where they could get on the subway and ride rather than continue on their routes as they had been doing in times gone by.

The idea that the Federal Government does anything without cost to the taxpayers is about the most foolish thing I have heard said here on this floor in an awfully long time, because the Federal Government does not do anything without a cost to the taxpayer. Who would stand here and tell me that for the Federal Government to buy 6,000 vans, $75 million, 10 passengers each, that they can make this cost efficient for the rider or Federal Government? Federal workers are going to refuse to ride them because the costs are going to be so exorbitant.

They are going to it is said amortize the cost of the vehicle, the cost of its upkeep, its insurance, its liability, its replacement, the driver; all other factors, and with a 10-passenger van find that this van is cost efficient. How ridiculous can we be? It will cost the average worker probably $2 each way each day to ride the van. It cannot be done except at a cost to the taxpayer. The idea that it can be done with a few employees is equally as foolish.

Mr. EDGAR. Mr. Chairman, will the gentleman yield?

Mr. WAGGONNER. I will be happy to yield to the gentleman from Pennsylvania.

Mr. EDGAR. I thank the gentleman for yielding, because I am intrigued by his point about subsidies for mass transit

and other subsidies. I wonder if the gentleman in the well would agree with the Senator on the Senate side——

Mr. WAGGONNER. Tell me what his name is and I will tell the gentleman whether I agree with him without even knowing what he said.

Mr. EDGAR. Let me ask the gentleman if he agrees with the proposal of Senator GARY HART that we should stop subsidizing free parking in the House and Senate, and——

Mr. WAGGONNER. No, I do not agree with him, whoever he is. I sure do not. That proves the point that the Government does not do anything that does not cost the taxpayer.

The Government cannot do it without an extreme cost to the taxpayer, and all we are doing is trying to assure the failure of what we have already provided for, subsidy programs for mass transit. It is foolish; it is unwise, and the amendment ought to be adopted forthwith.

Mr. EDGAR. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I appreciate the opportunity to speak on the House floor on this important issue. In the last 2½ years my office has probably spent more man-hours on the issue of van pooling than any other office in Congress. I and a member of my staff had the opportunity in November to see the Tennessee Valley Authority's van-pooling program.

Just during the last recess I had the opportunity to spend a morning riding in a van provided by Scott Paper Co. to its employees, in Delaware County, who, on a purchase-of-service basis were able to fill that van with 11 to 12 persons each day and ride throughout the community and arrive at work.

As I have studied all of the reports and all of the issues, it seems to me that the President of the United States made a dramatic statement when he endorsed the van pooling concept.

In April 1973, 3M Co. began the van pooling program and proved that it could work.

In 1977 over 100 employers and oranizations out in the society have van pooling programs. In a quasi-governmental private agency corporation, such as the Tennessee Valley Authority, they have proven that van pooling can work, not just in an urban area, but at construction sites for nuclear powerplants or other hard-to-get-to places where vans can be provided.

I would remind the gentleman that when he mentioned the point about the Tennessee Valley Authority, they purchase the vans, they allow the driver to take that van home and use it on a cost basis with his family on weekends. But during the week that driver is trained—and his accident rate is lower—to drive fellow employees to work. The average trip for many of the vans in the Los Angeles area is 25 miles. Each van replaces 8 cars and has approximately 10 to 11 occupants. As our chairman just indicated, it saves 5,000 gallons of gasoline each year—and I think this is an important comment—it reduces carbon monoxide by 1.6 tons per year and hydrocarbons by 0.2 tons per year.

Our present average vehicle occupancy is 1.4 persons. How many of us could say that it would not help our energy problem if we could increase that to 2. If that could be achieved, we would save the equivalent of 500,000 barrels of oil each day.

Van pooling reduces pollution, eases traffic congestion, saves money for the participants, saves money on parking fees for employees and saves money on parking at all of those parking lots we have subsidized for years. It increases the labor pool for employers and improves employee morale.

Mr. Chairman, I would just like to close by making just this one important point. When I had the opportunity a few weeks ago to board a van and to ride it, I discovered some of the advantages of van pooling that I had not anticipated. It was not just the economic advantage or the energy advantage, but it was the social advantage. Each of the persons who boarded that van, when I asked them the specific question, "What is the advantage to you for riding in this van?" They indicated to me that it was the social interaction and the ability to get home from work without feeling that they had been in a pressure cooker for one-half hour or an hour in traffic, the fact that they had the opportunity to ride in comfort and ease to and from their place of employment. And each one of them indicated that that gave them higher productivity and higher efficiency through the day's tasks.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. EDGAR) has expired.

(By unanimous consent, Mr. EDGAR was allowed to proceed for 2 additional minutes.)

Mr. EDGAR. Mr. Chairman, I think the Federal Government, with all its employees, should be in the van pooling business. I think we should have taken the lead many years ago when the private sector proved it could do it. I think the Federal Government should take the lead in this energy-efficient means of transportation.

I believe that the Federal Government should make its stand in this area, because I think we cannot only save the energy that is so precious but we can develop and help to develop throughout this Nation an understanding that the one-occupancy private automobile has to be put aside, particularly in going from our places of residence to our places of work.

Finally, Mr. Chairman, let me make these points: The gentleman who offered the amendment said he had four reasons for offering the amendment:

First, that this was a new, special benefit. I reminded the gentleman that we provide a special benefit for parking. I do not believe that this is a new special benefit; I think it is a new opportunity to save energy, and the net cost to the Government would be virtually nothing.

Second, the gentleman from New York (Mr. HORTON) indicated there have not been sufficient surveys. We had a half day of public hearings before the Committee on Public Works and Transportation during which the program was endorsed by every witness. I testified before the Committee on Government Operations, and we had ample opportunity to hear from many of the people who have been in the business. Frankly, we surprised many members of the committee by getting new information that proved van pooling is working.

The third point is this: How much will it cost? Frankly, I do not think it will cost more than $1 million a year, because the money that will be spent in the purchasing and operating of the vans will be recycled, recovered as user charges. One hundred percent of the cost will be recycled. About 60 percent of the administrative costs will be covered, according to the Congressional Budget Office.

In some of the private sector areas, the private sector provides 100 percent of the administrative costs involved.

Mr. Charman, I think that this program should be implemented.

Finally, there is the issue of paperwork, and I do not think that the private sector has demonstrated that this is an unwieldy process as far as the paperwork is concerned.

The CHAIRMAN. The time of the gentleman from Pennsylvania (Mr. EDGAR) has expired.

Mr. BROOKS. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

Mr. Chairman, section 701 of the National Energy Act creates a Federal van pooling program submitted by the administration as part of its national program to conserve energy.

Van pooling has been tried successfully in a number of private industries. It has been thought that the Federal Government, as the largest employer in the Nation, should encourage this approach.

The potential for gasoline savings is considerable if it will get people out of their one-passenger-per-car habit into 8- and 12-passenger vans when they drive to work. One van carrying 11 passengers on a daily round trip of 50 miles is estimated to save 5,000 gallons of gasoline a year. Six thousand vans will give us an estimated total savings of some 30 million gallons of gasoline a year.

The gentleman from California (Mr. JOHN L. BURTON) is the chairman of the Subcommittee on Government Activities and Transportation of the Committee on Government Operations, and he did a splendid job handling this legislation which is really, as they say, the centerpiece of President Carter's energy program. In a moment the gentleman from California will give us some details on this program.

First, I would still like to say that I had some reservations about this. I still have some, but I think that the bill has been substantially improved by the subcommittee. As it now stands, virtually all costs to the Government will be recovered through fees paid by the riders. There seems little doubt that it will reduce gasoline consumption, traffic congestion, and parking problems. I think it is worth trying.

Mr. JOHN L. BURTON. Mr. Chairman, will the gentleman yield?

Mr. BROOKS. I yield to the gentleman from California.

Mr. JOHN L. BURTON. Mr. Chairman, I thank the gentleman for yielding.

I would like to point out that this program is fully recoverable under the law that would be passed, except for those funds that have to be spent to make the vans available to handicapped citizens.

Second, I think those Members who know me know that I have had a good many great interests in my legislative career, and van pooling was not really one of them.

After 2 full days of hearing a lot of witnesses, the subcommittee which heard this testimony came to the conclusion that it really made sense if we could save 30 million gallons of gasoline, if we could reduce pollution by 10,000 tons, and if we could get people out of private cars and into these vans. As far as the Government is concerned, every Government agency has people in it who work on carpools, work on parking, work on other types of situations; and to have them also deal with the van pool situation would not be that great a problem. Also, the administrative costs would be recovered.

The private sector which my good friend, the gentleman from New York (Mr. HORTON), talks about wants to do this and wants us to help break the ground to reduce the institutional barriers so as to make van pooling work. Every person, from the 3M Corp., to Arco to whatever corporation one can name, wants the Government to get involved in this program. It is not going to cost us money. The GSA figures show that the only cost not recoverable is going to be that for handicapped people.

We do not provide for purchase. We provide for lease and purchase. The reason we need $15 million in authorization is that in entering into a 5-year lease, one has to have all the money for the 5-year lease up front so that he can make the lease.

We provide for contracting out maintenance in the private sector. We do everything we can to tilt it to the private sector.

Mr. Chairman, it makes sense. Federal employees would like to have it. Those involved in the private sector want us to do it as well.

The CHAIRMAN. The time of the gentleman from Texas (Mr. BROOKS) has expired.

Mr. JOHN L. BURTON. Mr. Chairman, I move to strike the requisite number of words, and I rise in opposition to the amendment.

I would really just like to reiterate a couple of points that were made by the gentleman from New York (Mr. HORTON). We do not spend $75 million. The money is recoverable under the act. The President has to report to us every year as to how the program is going.

Mr. HORTON. Mr. Chairman, will the gentleman yield?

Mr. JOHN L. BURTON. I yield to the gentleman from New York.

Mr. HORTON. Mr. Chairman, that is one of the points that I tried to make. There is a tremendous amount of paperwork. Here we have the President who will have to report on this little program.

It was also mentioned by the gentleman from Texas (Mr. BROOKS) and I think the gentleman from California (Mr. JOHN L. BURTON) mentioned that the savings would be 30 million gallons a year.

Mr. Chairman, that sounds fine; but when we figure that it is costing us $15 million to establish the program, that comes out to 15 cents a gallon.

Mr. JOHN L. BURTON. It does not cost $15 million because the user fees pay for the project. It is in the law. If the gentleman will just read the law, the user fees—and these are the GSA figures—pay for the cost of the program except for fixing it up for handicapped individuals.

Mr. HORTON. Mr. Chairman, if the gentleman will yield further, he has just quoted the bill.

Mr. JOHN L. BURTON. Mr. Chairman, I do not yield any further. I am sorry.

Mr. BADHAM. Mr. Chairman, will the gentleman yield?

Mr. JOHN L. BURTON. I yield to the gentleman from California.

Mr. BADHAM. Mr. Chairman, I would just like to ask one question, if I might.

Knowing of the gentleman's great interest in public transportation systems, would this in any way, if this amendment were defeated and if the van pool provision were to go into effect, abrogate all public utility licensing of public transportation? Would the driver hired by the Federal Government under the leased van program have insurance?

Mr. JOHN L. BURTON. Yes. It is paid for under the program.

These are the institutional barriers that the proponent of the amendment would like to see struck down. They would be struck down by this amendment.

Mr. BADHAM. Then would the gentleman also advocate, perhaps, that fare box revenues will govern mass transit? If this program should work, it would certainly seem to me that fare box revenues would also govern mass transit.

Mr. JOHN L. BURTON. Yes. That would be subject to the decision of the transit agency of Orange County where I live.

Mr. BADHAM. Could we go, perhaps, next year into the rent-a-bus program?

Mr. JOHN L. BURTON. Not at all. We do not believe in Government subsidies.

Last, Mr. Chairman, the people who are involved in it in the private sector strongly support this legislation.

It is the only way to really break down the institutional barriers. It is not going to cost that much money, but I will admit this, it will require the President to send us a report, which I am sure will be a tremendous burden on the President's office. But I think we in the Congress have a right to do that. Further, the bill provides for contacts with the private sector, and the maintenance of contacts with the private sector.

Mr. WALKER. Mr. Chairman, will the gentleman yield?

Mr. JOHN L. BURTON. I yield to the gentleman from Pennsylvania.

Mr. WALKER. Mr. Chairman, I just wanted to point out that I agree with the chairman of the subcommittee that we came down strongly on the side of leasing vans and thought that was the direction we were taking but it seemed that perhaps when we got to the full committee that the weight of the financing seemed to be strongly on the side of purchasing. In fact, we are hearing here so much about purchasing on the floor it seems that is the way we are going.

Mr. JOHN L. BURTON. If the Government enters into a 5-year lease the Agency has to have all of the money for that 5-year lease in hand to enter into that contract. That would be the only way they could have a 5-year lease in the beginning of the program is to have sufficient money in hand to do so.

Mr. WALKER. But the very fact the committee established a record on purchasing, having the money in hand, was giving us the idea that that was the money they needed to purchase.

Mr. JOHN L. BURTON. The report of the committee in no way establishes that record. The views of the gentleman are in the report. The gentleman assumed that the 15 million dollars was for purchasing and the gentleman assumed they would be purchased. But it is for leasing. If the agency does not have that kind of money in hand then they cannot lease for 5 years, because that is a government regulation.

Mr. WALKER. Again I thank the gentleman for yielding, but I think the record clearly established that the money was for purchase.

Mr. JOHN L. BURTON. I do not think the record in the report so establishes that.

The CHAIRMAN. The time of the gentleman has expired.

(By unanimous consent, Mr. JOHN L. BURTON was allowed to proceed for 2 additional minutes.)

Mr. CUNNINGHAM. Mr. Chairman, will the gentleman yield?

Mr. JOHN L. BURTON. I yield to the gentleman from Washington.

Mr. CUNNINGHAM. Mr. Chairman, I thank the gentleman for yielding.

Let me say that I appreciate the arguments made by the gentleman from California, and it is certainly laudable as to the kind of gasoline that we will save, and the pollution that we will not have, but I do have one question and that is if it is so good for the private sector and these employees are going to pay all of the costs for them, why do they need the Government involved? Why do they not just do it themselves?

Mr. JOHN L. BURTON. Because this also provides for the moneys for those Federal employees purchasing vans, it is all the same, this law permits that to happen and permits the charge of users fees and permits the parking of the van in the area of the Federal building, and so forth. All of that is permitted. One of the problems to van pooling has been the institutional barriers that the gentleman from New York (Mr. HORTON), has talked about. This bill does permit the type of thing the gentleman is talking about.

Mr. VOLKMER. Mr. Chairman, if the gentleman will yield, in the private sector where we have van pooling, it is not

true that the private industry furnishes the financing and then recovers?

Mr. JOHN L. BURTON. The private industry does purchase the vans.

Mr. VOLKMER. Which is no different from what we are proposing here. In other words, we are saying the same thing, that what is good for private industry is good for the Government?

Mr. JOHN L. BURTON. Exactly.

Mr. KETCHUM. Mr. Chairman, if the gentleman will yield, the gentleman mentioned the Government employee buying the van and then establishing user fees. Who would establish those user fees and who would decide what those user fees would be?

Mr. JOHN L. BURTON. If they are established under this program for Federal employees they would come under whatever the user fees are for that kind of ride.

Mr. KETCHUM. Then if they are to establish the user fees in the State of California, for the Federal vans, would you not be abrogating the law, despite the fact that we have the public utilities commission that sets up transportation in the State, would you not be then just abrogating the State law?

Mr. JOHN L. BURTON. No. In California we have a van pooling program called Caltran that is run by the State government, and I will tell the gentleman that it works very well.

The CHAIRMAN. The question is on the amendment offered by the gentleman from New York (Mr. HORTON).

The questioin was taken; and the Chairman announced that the noes appeared to have it.

RECORDED VOTE

Mr. HORTON. Mr. Chairman, I demand a recorded vote.

A recorded vote was ordered.

The vote was taken by electronic device, and there were—ayes 232, noes 184, answered "present" 1, not voting 16, as follows:

[Roll No. 501]

Flood	McKinney	

ANSWERED "PRESENT"—1

The Clerk announced the following pairs:

On this vote:

Mr. Teague for, with Mr. Burke of Massachusetts against.

Mr. McCloskey for, with Mr. Badillo against.

Mr. O'Brien for, with Mr. Koch against.

Messrs. LENT, LEHMAN, RISENHOOVER, DICKS, NICHOLS, and BUCHANAN changed their vote from "no" to "aye."

Messrs. FITHIAN, THOMPSON, and KREBS changed their vote from "aye" to "no."

So the amendment was agreed to.

The result of the vote was announced as above recorded.

The CHAIRMAN. The Clerk will designate the heading of the part now pending.

The Clerk read as follows:

Page 403, line 18:

TITLE II—TAX PROVISIONS

SEC. 2001. SHORT TITLE.

This title may be cited as the "Energy Tax Act of 1977".

Mr. SIMON. Mr. Chairman, this is a short item but I think a significant one as we take up the energy bill. I just looked at the latest figures from the U.S. Department of Transportation and they show that in April 1977 we citizens of the United States purchased 13.3 percent more automobile gasoline than they did in the same period in 1974 and 9.1 percent more than they did in 1975.

This suggests the need for action on our part is not diminishing.

Mr. ASHLEY. Mr. Chairman, I move that the Committee do now rise.

The motion was agreed to.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. WRIGHT) having assumed the chair, Mr. BOLAND, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 8444 to establish a comprehensive national energy policy, had come to no resolution thereon.

REPORT ON RESOLUTION PROVIDING FOR CONSIDERATION OF CONFERENCE REPORT ON H.R. 6161, CLEAN AIR ACT AMENDMENTS OF 1977

Mr. BOLLING, from the Committee on Rules, submitted a privileged report (Rept. No. 95–562) on the resolution (H. Res. 7) providing for consideration of the conference report of the bill (H.R. 6161) to amend the Clean Air Act, and

for other purposes, which was referred to the House Calendar and ordered to be printed.

REPORT ON RESOLUTION TO PROVIDE FUNDS FOR EXPENSES OF INVESTIGATIONS AND STUDIES TO BE CONDUCTED BY HOUSE PERMANENT COMMITTEE ON INTELLIGENCE

Mr. THOMPSON, from the Committee on House Administration, submitted a privileged report (Rept. No. 95–562) on the resolution (H. Res. 729) to provide funds for the expenses of investigations and studies to be conducted by the House Permanent Committee on Intelligence, which was referred to the House Calendar and ordered to be printed.

PERMISSION TO FILE CONFERENCE REPORT ON H.R. 6161, CLEAN AIR ACT AMENDMENTS OF 1977

Mr. STAGGERS. Mr. Speaker, I ask unanimous consent that the managers may have until midnight tonight to file a conference report on the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from West Virginia?

There was no objection.

CONFERENCE REPORT ON H.R. 6179, ARMS CONTROL AND DISARMAMENT ACT AMENDMENTS OF 1977

Mr. ZABLOCKI submitted the following conference report and statement on the bill (H.R. 6179) to amend the Arms Control and Disarmament Act to authorize appropriations for fiscal year 1978, and for other purposes:

CONFERENCE REPORT (H. REPT. No. 95–563)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6179) to amend the Arms Control and Disarmament Act to authorize appropriations for fiscal year 1978, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

SHORT TITLE

SECTION 1. This Act may be cited as the "Arms Control and Disarmament Act Amendments of 1977".

SPECIAL REPRESENTATIVE

SEC. 2. (a) Title II of the Arms Control and Disarmament Act is amended by adding at the end thereof the following new section:

"SPECIAL REPRESENTATIVE

"SEC. 27. The President may appoint, by and with the advice and consent of the Senate, a Special Representative for Arms Control and Disarmament Negotiations who shall perform such duties and exercise such powers (under the direction of the President and the Secretary of State, acting through the Director) as the Director may prescribe with respect to international arms control and disarmament negotiations and matters relating thereto.".

(b) Section 5315 of title 5, United States Code, is amended by inserting the following new paragraph immediately after paragraph (49):

"(50) Special Representative for Arms Control and Disarmament Negotiations, United States Arms Control and Disarmament Agency.".

RESEARCH

SEC. 3. Section 31 of the Arms Control and Disarmament Act is amended by striking out "United States" in clause (2) of the second sentence.

VERIFICATION OF ARMS CONTROL AGREEMENTS

SEC. 4. Title III of the Arms Control and Disarmament Act is amended by adding at the end thereof the following new section:

VERIFICATION OF ARMS CONTROL AGREEMENTS

"SEC. 37. (a) It is the sense of the Congress that adequate verification of compliance should be an indispensable part of any international arms control agreement. In recognition of such policy and in order to assure that arms control proposals made or accepted by the United States can be adequately verified, the Director shall report to the Congress, on a timely basis, or upon a request by an appropriate committee of the Congress—

"(1) in the case of each element of any significant arms control proposal made to a foreign country by the United States, or made to the United States by a foreign country, the determination of the Director as to the degree to which such element can be verified by existing national technical means;

"(2) in the case of any arms control agreement or treaty that has entered into force, any significant degradation or alteration in the capacity of the United States to verify the various components of such agreement or treaty;

"(3) the number of professional personnel assigned to arms control vertification on a full-time basis by each Government agency; and

"(4) the amount and percentage of research funds expended by the Agency for the purpose of analyzing issues relating to arms control verification.

"(b) For purposes of paragraphs (1) and (2) of subsection (a), the Director shall assume that all measures of concealment not expressly prohibited could be employed and that standard practices could be altered so as to impede verification.

"(c) Except as otherwise provided by law, nothing in this section shall be construed as requiring the disclosure of sensitive information relating to intelligence sources or methods or persons employed in the verification of compliance with arms control agreements.".

GENERAL AUTHORITY

SEC. 5. (a) Section 41(b) of the Arms Control and Disarmament Act is amended to read as follows:

"(b) appoint officers and employees, including attorneys, for the Agency in accordance with the provisions of title 5, United States Code, governing appointment in the competitive service, and fix their compensation in accordance with chapter 51 and with subchapter III of chapter 53 of such title, relating to classification and General Schedule pay rates, except that during the 2-year period beginning on the date of enactment of the Arms Control and Disarmament Act Amendments of 1977, the Director may, to the extent he deems necessary to the discharge of his responsibilities, appoint and fix the compensation of officers and employees for the Agency without regard to such provisions, subject to the following requirements:

"(1) an officer or employee whose compensation is fixed under the foregoing exception may not be paid a salary at a rate in excess of the rate payable under such chapter 51 and such subchapter III for positions of equivalent difficulty or responsibility except for (A) those officers and employees whose compensation is fixed by law, and (B) scientific and technical personnel who may be compensated at a rate not to exceed the rate in effect for grade GS–18 of the General Schedule;

"(2) the Director shall make adequate provision for administrative review of any determination to suspend or dismiss any officer or employee appointed under the foregoing exception; and

"(3) an officer or employee of the Agency serving under a career or career conditional appointment on the date of enactment of the Arms Control and Disarmament Act Amendments of 1977 may not be involuntarily deprived, while employed by the Agency, of any rights normally granted such officer or employee in the competitive service;".

(b) Section 41 of such Act is amended—

(1) by redesignating paragraphs (g) and (h) as paragraphs (h) and (i), respectively; and

(2) by inserting immediately after paragraph (f) the following new paragraph:

"(g) permit, under such terms and conditions as he may prescribe, any officer or employee of the Agency, in connection with the attendance by such officer or employee at meetings or in performing advisory services concerned with the functions or activities of the Agency, to accept payment, in cash or in kind, from any private agency or organization, or from any individual affiliated with such agency or organization, for travel and subsistence expenses, such payment to be retained by such officer or employee to cover the cost thereof or to be deposited to the credit of the appropriation from which the cost thereof is paid;".

AUTHORIZATION OF APPROPRIATIONS

SEC. 6. Section 49(a) of the Arms Control and Disarmament Act is amended to read as follows:

"(a) To carry out the purposes of this Act, there are authorized to be appropriated—

"(1) for fiscal years 1976 and 1977, the sum of $23,440,000 (and such additional amounts as may be necessary for increases in salary, pay, retirement, other employee benefits authorized by law, and other nondiscretionary costs); and

"(2) for fiscal year 1978, the sum of $16,600,000 (and such additional amounts as may be necessary for increases in sal ry, pay, retirement, other employee benefits authorized by law, and other nondiscretionary costs);

to remain available until expended. Of the sum authorized to be appropriated by this section for the fiscal year 1978, $2,000,000 shall be available only for the purpose of furthering the nuclear safeguards programs and activities of the International Atomic Energy Agency.".

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6179) to amend the Arms Control and Disarmament Act to authorize appropriations for fiscal year 1978, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The Senate amendment struck out all of the House bill after the enacting clause and inserted a substitute text.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarifying changes.

VERIFICATION OF ARMS CONTROL AGREEMENTS

The House bill added a new section 37 to the Arms Control and Disarmament Act which set forth a sense of Congress that effective verification of compliance is an indispensable factor in any international arms control agreement. The House bill further provided that the Director of ACDA shall report to the Congress on a timely basis or upon request the following information: The verifiability by existing national technical means of each element of any arms control proposal made to foreign governments by the United States; the verifiability by existing national technical means of each element of any arms control proposal made by foreign governments to the United States; any significant degradation or alteration in the capacity of the United States to verify the various components of existing arms control agreements or treaties; the number of professional personnel assigned by various Government agencies to analyze arms control verification; and the amount and percentage of research funds expended by Government agencies for the purpose of analyzing issues relating to arms control verification.

The House bill further provided that the Director, in reporting to the Congress on the verifiability of arms control proposals made to or received by the U.S. Government, should assume that all measures of concealment not expressly prohibited could be employed and that standard practices could be altered so as to impede verification.

The Senate amendment also added a new section 37 to the Arms Control and Disarmament Act which set forth the sense of Congress that adequate verification of compliance should be an indispensable part of international arms control agreements or treaties. The Senate amendment required the Director of ACDA to report to the Congress on a timely basis or upon request the following information: the verifiability by existing national technical means of significant arms control proposals made to or received by the U.S. Government; any significant degradation or alteration in the capacity of the United States to verify the various components of existing international arms control agreements and treaties; the number of professional personnel assigned to arms control verification by Government agencies; and the amount and percentage of research funds expended by ACDA for the purpose of analyzing issues relating to arms control verification.

The Senate amendment further provided that, in making his reports to the Congress on the verifiability of arms control proposals and of arms control agreements or treaties that have entered into force, the Director shall assume that all measures of concealment not expressly prohibited could be employed and that standard practices could be altered so as to impede verification. The Senate amendment also provided that except as otherwise provided by law nothing in the section on verification of arms control agreements should be construed as requiring the disclosure of sensitive information relating to intelligence sources or methods or persons employed in the verification of compliance with arms control agreements.

The committee of conference adopted the Senate provisions. In doing so, the committee of conference makes clear the responsibility of ACDA to support verification research. Just as importantly, the committee of conference notes that the provision is not intended to interfere with the President's ability to conduct arms control negotiations but is intended to emphasize the responsibility of ACDA and other executive branch agencies to keep the Congress informed with respect to the verifiability of significant arms control proposals. The committee of conference intends that this provision should assist Congress in assessing the national security implications of arms control agreements and treaties, in accordance with its constitutional and statutory responsibilities.

SECURITY REQUIREMENTS

The House bill amended section 45(c) of the Arms Control and Disarmament Act to permit the Director of ACDA to grant ACDA employees access to restricted data.

The Senate bill did not contain a comparable provision.

The committee of conference did not adopt a provision on this issue. In doing so the committee of conference noted that a provision identical to the House provision was reported to the floor of the Senate by the Senate Foreign Relations Committee. That provision was deleted following receipt of assurances from ERDA and ACDA that every effort would be made to resolve problems with the clearance procedures by which ACDA contractors are granted access to restricted data. A memorandum of understanding to this effect was concluded on July 8, 1977, by ACDA and ERDA. After reviewing the memorandum, the committee of conference recommends that implementation of its understandings be reviewed by appropriate oversight committees, and that its terms be extended when the new Department of Energy is established.

GENERAL AUTHORITY

A. Excepted authority From Civil Service

The Senate amendment amended section 41(b) of the Arms Control and Disarmament Act to permit the Director of ACDA for a 2-year trial period to appoint officers and employees and fix their compensation without regard to the provisions of title 5, United States Code.

The House bill did not contain a comparable provision.

The committee of conference adopted the Senate provision. In taking note of objections to placing Government employees outside the competitive service, the committee of conference concludes that the specialized personnel needs of ACDA merited a 2-year trial of this excepted authority. The committee of conference further notes testimony from ACDA officials to the effect that the number of individuals hired each year under the excepted authority provision would be small.

B. Reimbursements to ACDA

The Senate amendment amended section 41 of the Arms Control and Disarmament Act to permit ACDA employees to accept payment in cash or in kind for travel and subsistence expenses incurred in attending meetings or performing advisory services concerned with the functions or activities of ACDA.

The House bill did not contain a comparable provision.

The committee of conference adopted the Senate provision. The committee of conference notes the provision is similar to provisions in the organic statutes of the Department of State and other departments and agencies.

AUTHORIZATION OF APPROPRIATIONS

The House bill amended section 49(a) of the Arms Control and Disarmament Act to authorize the appropriation of $14.6 million (and such additional amounts as may be necessary for nondiscretionary costs) for fiscal year 1978.

The Senate amendment also amended Section 49(a) of the Arms Control and Disarmament Act to authorize the appropriation of $16.6 million (and such additional amounts as may be necessary for nondiscretionary costs) for fiscal year 1978, $2 million of which shall be used only for the purpose of furthering the nuclear safeguards programs and activities of the International Atomic Energy Agency.

The committee of conference adopted the Senate provision with a technical and clarifying amendment. The $16.6 million authorized to be appropriated for ACDA for fiscal year 1978 is $3 million greater than the amount requested by the executive branch. Funds appropriated in excess of the $13.6 million requested and already programed by ACDA are to be used as follows: $1 million is to be used to support additional ACDA public information and external research programs. The remaining $2 million will be available to support the nuclear safeguards programs and activities of the International Atomic Energy Agency.

JOHN SPARKMAN,
C. PELL,
G. MCGOVERN,
HUBERT H. HUMPHREY,
CLIFFORD P. CASE,
CHARLES H. PERCY,
ROBERT P. GRIFFIN,
Managers on the Part of the Senate.

PERMISSION FOR SUBCOMMITTEE ON IMMIGRATION, CITIZENSHIP, AND INTERNATIONAL LAW OF COMMITTEE ON THE JUDICIARY TO SIT TOMORROW DURING 5-MINUTE RULE

Mr. EILBERG. Mr. Speaker, I ask unanimous consent that the Subcommittee on Immigration, Citizenship, and International Law of the Committee on the Judiciary may be permitted to sit tomorrow during the 5-minute rule.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

Mr. ASHBROOK. Mr. Speaker, reserving the right to object, could the gentleman indicate whether this will be for markup or for hearings?

Mr. EILBERG. If the gentleman will yield, it will be for hearings only.

Mr. ASHBROOK. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

CONFERENCE REPORT ON S. 1377, EXTENDING TIME FOR COMMENCING ACTIONS FOR SETTLEMENT OF MONETARY DAMAGES ON INDIAN CLAIMS

Mr. DANIELSON. Mr. Speaker, I call up the conference report on the Senate bill (S. 1377) to extend the time for commencing actions on behalf of an Indian tribe, band, or group, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the Senate bill.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). Is there objection to the request of the gentleman from California?

There was no objection.

The Clerk read the statement.

Mr. DANIELSON. Mr. Speaker, I ask unanimous consent that the statement be considered as read.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

(For conference report and statement, see proceedings of the House of July 20, 1977.)

The SPEAKER pro tempore. The gentleman from California (Mr. DANIELSON) is recognized for 30 minutes.

Mr. DANIELSON. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, this conference report refers to the Senate bill, S. 1377, which, as the Members will recall, is the bill which puts a new period of limitation on Indian claims that are litigated by the Department of Justice on behalf of Indian tribes or groups and agencies.

As the bill passed the House of Representatives, a date for expiration of the period of limitations was fixed as July 18, 1979. The other body did not agree with that and insisted on its date of December 31, 1981. The difference between the two dates is 29½ months. The controversy centered around what the effective date of the statute of limitations would be.

In the free conference that took place the managers on the part of the House yielded 8½ months to the other body. On the other hand, the other body yielded 20½ months to the House. We yielded 30 percent, and they yielded 70 percent. I think that is a pretty good bargain.

Mr. Speaker, I respectfully urge that the House adopt this conference report.

Mr. UDALL. Mr. Speaker, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Arizona.

Mr. UDALL. Mr. Speaker, the gentleman from California (Mr. DANIELSON) has stated the situation exactly. The will of the House and the position of the House are largely preserved in this conference report.

I think we have eliminated most of the controversy in this bill, and I hope the conference report will be speedily approved.

Mr. DANIELSON. Mr. Speaker, I thank the gentleman.

Mr. COHEN. Mr. Speaker, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Maine.

Mr. COHEN. Mr. Speaker, I will indicate that there is one thing that is missing from this conference report in terms of the statement of the managers, and that is a reflection of the very strong will as expressed by the House that this is the final extension of the Indian trust section of title 28, section 2415 (a) and (b) dealing with pre-1966 claims.

I think it ought to be very clear that this House has indicated on the record that this is the final extension, and that we are sending a message to the Department of the Interior and to the Justice Department that they had better get busy in processing whatever claims they have because this House will not extend the statute in the future.

Mr. DANIELSON. Mr. Speaker, I thank the gentleman for his contribution. He has stated the facts very eloquently, and I agree 100 percent.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Ohio.

Mr. ASHBROOK. Mr. Speaker, I just want to make certain that I heard what the gentleman from Maine (Mr. COHEN) said. I believe he used the word, "final," f-i-n-a-l. That was the word the gentleman used, was it not?

Mr. COHEN. I did.

Mr. ASHBROOK. Mr. Speaker, I thank the gentleman.

Mr. DICKS. Mr. Speaker, will the gentleman yield?

Mr. DANIELSON. I yield to the gentleman from Washington.

Mr. DICKS. Mr. Speaker, I would just like to associate myself with the remarks of the gentleman from Maine (Mr. COHEN). I know there are other Members from other parts of the country who are just as concerned, and I hope that this is the final extension.

Mr. UDALL. Mr. Speaker, will the gentleman yield once again?

Mr. DANIELSON. I yield to the gentleman from Arizona.

Mr. UDALL. Mr. Speaker, I just want to say that as a member of and the chairman of one of the committees that deals with Indian Affairs, I would like to dig a little hole for myself and state for the record that this is the last extension I would support.

Mr. DANIELSON. Mr. Speaker, I have never seen such unanimity.

Mr. Speaker, I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

DISAPPROVING CONTINUATION OF THE PRESIDENT'S AUTHORITY TO WAIVE FREEDOM OF EMIGRATION REQUIREMENTS FOR THE GRANTING OF MOST-FAVORED NATION STATUS TO ROMANIA

Mr. VANIK. Mr. Speaker, pursuant to section 152(d)(1) of the Trade Act of 1974, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of House Resolution 653, to disapprove the recommendation of the President to extend the authority in section 402(c) of the Trade Act of 1974 with respect to the Socialist Republic of Romania for an additional 12 months.

The Clerk read the title of the resolution.

The Clerk read the resolution, as follows:

H. RES. 653

Resolved, That the House of Representatives does not approve the extension of the authority contained in section 402(c) of the Trade Act of 1974 recommended by the President to the Congress on June 3, 1977, with respect to the Socialist Republic of Romania.

PREFERENTIAL MOTION OFFERED BY MR. STEIGER

Mr. STEIGER. Mr. Speaker, I offer a preferential motion.

The Clerk read as follows:

Mr. STEIGER moves, pursuant to section 152 (d)(3) of the Trade Act of 1974, to postpone indefinitely the motion that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of House Resolution 653.

The SPEAKER pro tempore (Mr. ROSTENKOWSKI). The question is on the preferential motion offered by the gentleman from Wisconsin (Mr. STEIGER).

The question was taken; and on a division (demanded by Mr. ASHBROOK) there were—ayes 149, noes 33.

Mr. ASHBROOK. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER pro tempore. The Chair will count.

Two hundred and twenty-four Members are present, a quorum.

Mr. ASHBROOK. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were refused.

So the preferential motion was agreed to.

A motion to reconsider was laid on the table.

DISAPPROVING THE CONTINUATION OF THE PRESIDENT'S AUTHORITY TO WAIVE FREEDOM OF EMIGRATION REQUIREMENTS FOR THE GRANTING OF MOST-FAVORED-NATION STATUS TO ROMANIA

GENERAL LEAVE

Mr. VANIK. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on House Resolution 653.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Ohio?

There was no objection.

Mr. VANIK. Mr. Speaker, I ask unanimous consent to address the House for 2 minutes before we proceed.

Mr. Speaker, on July 18, 1977, the Subcommittee on Trade ordered that House Resolution 653 be reported unfavorably to the full Committee on Ways and Means. House Resolution 653 provides for congressional disapproval of

the recommendation of the President to extend the waiver authority in section 402(c) of the Trade Act of 1974 with respect to the Socialist Republic of Romania for an additional 12 months, until July 3, 1978.

As you know, the United States-Romanian trade agreement took effect in August 1975 following passage by both Houses of Congress of concurrent resolutions approving the extension of nondiscriminatory—MFN—treatment to imported products from Romania under the waiver provisions of title IV of the Trade Act of 1974. Section 402 of the act prohibits the granting of MFN treatment, Government credits or investment guarantees, or the negotiation of a commercial agreement with any Communist country if that country does not allow its citizens the freedom to emigrate. Section 402 also permits the President to waive this prohibition for a limited period of time—subject to renewal—if he determines that doing so will promote freedom of emigration.

The first renewal of the President's waiver authority took place by operation of law last fall. Since Congress did not act to negate the President's recommendation within the statutory time period, the authority automatically extended until July 3, 1977. The Subcommittee on Trade held a hearing on September 14, 1976, on the President's request for renewal of the waiver authority, but took no further action.

On June 3, 1977, President Carter recommended to the Congress a further extension for 1 year of the Trade Act authority to waive the freedom of emigration requirement and its extension to Romania. On June 22, House Resolution 653, disapproving extension of the waiver authority to Romania, was introduced. Under the special expedited procedures of section 152(d) of the Trade Act, a motion to proceed to House consideration of the resolution is highly privileged and not debatable. The statutory 60-day period for House consideration of House Resolution 653 expires on September 1, 1977.

The Subcommittee on Trade held a public hearing on July 18, receiving testimony from the administration, Members of Congress, trade councils, the business community, and private citizens. The testimony was heavily in favor of continuation of MFN to Romania.

In reporting House Resolution 653 unfavorably by a voice vote, the Committee on Ways and Means gave full consideration to the moderately increasing trend of Romanian emigration to the United States and the declining emigration rate to Israel.

The committee concluded that the Government of Romania had made a sincere effort to live up to its human rights obligations and that extension of MFN treatment for another year is crucial to the continued development and improvement of U.S. economic and political relations with Romania. At the same time, the committee expects that the intention expressed by President Carter to monitor more closely Romania's compliance with the Trade Act emigration objectives will be implemented through a formalized monitoring system which includes periodic reporting to and consultation with Trade Subcommittee members and staff. The committee also expects the President to bring to the attention of the Romanian Government any actions or emigration trends which do not appear to conform to the assurances they have provided in the past to treat emigration matters in a humanitarian manner.

It is my view, therefore, that the House should table House Resolution 653 and thereby discharge its responsibilities under the special Trade Act procedures.

Mr. STEIGER. Mr. Speaker, I, too, oppose enactment of House Resolution 653, which would serve to reverse the President's determination to extend the waiver of emigration requirements under the Trade Act of 1974 as applied to Romania. I feel that, in light of the continuing favorable trade relationship between this country and Romania and of Romania's continued response to its human rights obligations, an effort to reinstate restrictions is not warranted at this time.

As my colleagues know, most favored nation—MFN—treatment for any Communist bloc country is contingent upon that country's efforts to assure its citizens the right to emigrate. However, under section 402 of the Trade Act of 1974, the President can waive this requirement if he determines that such a waiver will actually promote freedom of emigration. The waiver is subject to renewal if either House does not disapprove the renewal within 60 days after the waiver's termination date.

The Trade Subcommittee, in its oversight responsibility, has carefully monitored the emigration situation in Romania since that country was granted MFN status in August of 1975. Investigations have shown that, on the whole, Romania is meeting its humanitarian responsibilities and is allowing an increasing number of its citizens to move out of the country.

I want to point out to my colleagues, however, that there also is need for improvement. Statistics show that emigration from Romania rises significantly during the time period surrounding consideration by the Congress of waiver extensions. The President should make clear to the Romanians that these cyclical trends are not acceptable, and this Government should continually press for a more consistent commitment to human rights.

Mr. Speaker, with continuing oversight by the Trade Subcommittee, I believe that Romania should continue to receive the privileges afforded under MFN. They are good trading partners and are making a good faith effort to meet the humanitarian principles to which they have subscribed under international agreements. My colleagues on the Ways and Means Committee agree with me and have reported this bill unfavorably. I urge the House to reject House Resolution 653 at this time.

Mr. ROSENTHAL. Mr. Speaker, President Carter and the House Ways and Means Subcommittee on Trade have both recommended a year-long extension of most-favored nation status for Romania. I support this recommendation. However, I want to take this time to carefully review Romania's recent record on human rights.

In particular, I am disturbed by the apparent decline in the number of persons granted permission to emigrate to Israel since the approval of MFN status for Romania. Month-to-month figures are erratic, but the overall trend is downward. Surprisingly, the projected figure for 1977 departures is significantly lower than the 1974 figure of 3,700—when MFN was not in effect. The trend can be seen more clearly in the following statistics:

Permitted Romanian emigration to Israel—Arrivals in Israel, 1973–77

1973		3,700
1974		3,700
1975		2,140
1976		2,035
1977	(projected)	1,150

Many families remain divided, either because they have been turned down for an immigration visa or for fear of harassment. Threats of job loss, demotion, confiscation of property, mail censorship, loss of telephone privileges or military induction prevent many Romanian Jews from even expressing their desire to emigrate to be with their loved ones.

In addition, innumerable obstacles have been built into the application process that discourages even the most persevering. They must first undergo an intimidating preapplication process which is designed to screen out those who are not even eligible to apply. An individual may either receive permission to complete an application; be denied permission for any number of reasons, or receive no reply at all. An applicant may be confronted by official committees which probe into his background and try and persuade him from leaving. Adding to the confusion, the applicant is then required to produce countless documents, perhaps including assurances that all his taxes and utility bills are paid. Costs are prohibitive, and the waiting process is uncertain. The Kafka-like absurdity of the process is a significant deterrent to free emigration.

Romania is one of the 33 countries which signed the Helsinki agreement, which in Basket Three sets forth certain international standards concerning family reunification and other human rights. In light of the Helsinki accords and the MFN agreement, I feel that we must set forth publicly Romania's record on Jewish immigration. It is my hope that within the coming year Romania will liberalize its inordinately stringent immigration policy.

Mr. BINGHAM. Mr. Speaker, I intend to vote against House Resolution 653, which would terminate most-favored-nation trade status for Romania. I believe the favorable trade terms we presently share with Romania should be extended for another year.

The historical record of Romania with respect to emigration is a very commendable one. Despite Romania's very small size—only about 19.5-million in the recently completed census—many hundreds of thousands of people have been able to leave Romania over the years—not only Jews emigrating to Israel, where

Romanians are now one of the largest national origin groups, but also Germans, Hungarians, and others.

Furthermore, Mr. Speaker, Romania has been cooperative and responsive in successfully resolving cases of separated families and others wishing to emigrate as such cases have been brought to the attention of Romanian officials by Members of Congress and others in the West.

But there is a difference between a favorable historical record and resolution of certain emigration cases, on the one hand, and a broad and consistent policy of free emigration on the other. This difference disturbs me with respect to Romania to the extent that I am in considerable doubt as to whether I will be able to support continuation of Romanian most-favored-nation beyond the coming year.

The facts are that while the rate of emigration from Romania has risen slightly this year in comparison to last, the number of emigrants to Israel has declined. This is, no doubt, in part due to the diminishing size of the Jewish community—25,000, according to the recent Romanian census—but certainly an aggravating factor is the reality that emigration from Romania continues to be actively and rather harshly discouraged. Prospective emigrants continue to experience inhumane pressures and treatment, from detention to loss of jobs and educational opportunities for their children. While the Romanian Government may deny and even officially discourage such treatment, the fact is that it continues.

This suggests that rather than a true commitment and policy of free emigration, Romania is implementing instead a strategy of emigration—that it is deliberately using and manipulating emigration for the economy advantages of maintaining favorable trade status with the United States. The harsh treatment and case-by-case approach to emigration, Romania is using emigration as a calculated device for immediate political and economic ends.

There comes a point, Mr. Speaker, at which historical considerations and case-by-case progress become outweighed by the current realities of harsh treatment of emigrants and a lack of a broad and consistent policy which recognizes the right of peoples to leave one nation for another. They will have to be carefully watched in the year ahead.

Mr. HARRINGTON. Mr. Speaker, the 1-year extension of Romania's most-favored-nation status presents an opportunity for both the President and the Congress to reassert their commitment to human rights, as well as to further legitimize that policy in the eyes of our own people and the international community at large by insuring that it is carried out fairly and equitably. We cannot simply employ the human rights policy, and the economic sanctions attached to lend it substance, against those poorer countries which are dependent upon our aid. Through such an approach we risk compromising the principles involved and eventually undermining our own position through the loss of credibility which would insure from anything but a consistent application of the policy.

In recent years we have forged ties with Romania primarily through trade relations. These connections should be subjected to the same type of scrutiny, in terms of human rights considerations, that is involved in our review of political and economic relations with the countries of Latin America, Asia, or Africa.

In an interview with journalist Tad Szulc, of the New Republic, Romania's president, Nicolae Ceausescu, stated that with regard to economic relations between his nation and ours, "no attempts should be made to erect artificial barriers—such as a cancellation of the most-favored-nation clause—and that economic relations should not be subjected to political conditions." Commenting further, President Ceausescu went on to say that:

> We must set out from the principles laid down in the joint declarations made by Romania and the United States, principles of equality, non-interference in internal affairs, and reciprocal advantage.

In the recent past, both the Congress, through various applications of the human rights language, and the Carter administration, through several policy decisions, have made it clear that they intend to implement the human rights policy, in part, by a conscious linkage of political and economic policies, in order to give that policy some force greater than the mere power of words. Rather than an effort at creating barriers, it would seem that the strategy behind the Jackson-Vanik amendment in particular, and the Carter administration's human rights policy more generally, is that of using all available political instruments to eliminate political barriers—be they barrier to unhindered emigration, free thought, expression or religious belief.

Among the principles laid out in declarations to which both Romania and the United States have been signatories, and from which President Ceausescu implies relations between our two nations must proceed, are those comprising the Helsinki Accords. These include unrestricted travel for the people of all nations, as well as cooperation and exchange in the fields of education and culture. With regard to the economic agreements included in the accords, the United States clearly conveyed to the Soviets and the East Europeans at the time of final agreement that most-favored-nation status would not be conferred automatically.

It has been alleged by responsible sources that Romania has neither fully complied with the emigration requirements of the Trade Act of 1974 nor honored the principles to which it subscribed at Helsinki. In his New Republic article of October 23, 1976, Tad Szulc reported that Romania was embarking on a "cultural revolution," engendering conditions of domestic repression worse than at any time since the late 1960's. In direct contravention of the humanitarian principles established in the Helsinki Accords, the Romanian Government has imposed strict restrictions on the foreign travel rights of its citizens, and limited their contact with foreigners visiting Romania. Far from fostering cultural freedom and interchange between nations, Romania has engaged in stifling the cultural heterogeneity existent within its own borders. It is alleged that 2.5 million Hungarians, 400,000 Germans, 80,000 Jews, Ukrainians, Serbs, Greeks, Turks, and other ethnic minorities are being forcibly assimilated in order to establish "the unitary character of the formation of the Romanian people."

To allege that what is being waged here, namely a campaign to alert the Romanian Government to our concern for the rights of all its people, is an ideological battle in the guise of a human rights fight seems self-defeating. Given the concrete action that has been taken with regard to military and foreign assistance cutbacks to Latin America, I do not think that this policy can be construed as merely a ploy that masks a cold war attitude toward Communist regimes. Furthermore, I think that in this case our actions are commensurate with the severity of the infringements on human rights. While I do not think that Romania should be denied the most-favored-nation status recommended by the President, I nevertheless feel that we must convey the message that implementation of the Helsinki Accords and the United Nations Universal Declaration of Human Rights will be important considerations in decisions on the continuation of such privileged status.

It is my hope that in the case of Romania we can begin to work toward accomplishing two of our foreign policy goals, namely those of better relations with the nations of Eastern Europe and the furtherance of human rights worldwide, and that we can be spared the choice between improved economic relations and the protection of fundamental freedoms.

Mr. GRADISON. Mr. Speaker, I am deeply concerned over the treatment of human rights and the freedom of emigration extended to the citizens of the Socialist Republic of Romania. Monitoring of Romanian emigration figures has revealed a sharp drop in emigration to Israel and irregular patterns of emigration to the United States. In addition, there have been serious allegations directed against the Romanian Government regarding discriminatory treatment of minority groups.

I firmly believe that it is important to support human rights in formulating U.S. foreign policy. I am in favor of the recent decision to continue most-favored-nation status for Romania; however, I feel that it is necessary for the Congress to emphasize its concern over the unsatisfactory emigration trends and alleged violations of human rights, and continue to closely monitor Romania's future performance on these matters.

As is provided in the Trade Act of 1974, MFN status cannot be granted to any Communist country which does not allow its citizens a total freedom of emigration. However, section 402 of the Trade Act permits the President to waive this prohibition for a limited period of time if he determines that doing so would promote freedom of emigration. In 1975, Romania was granted such a waiver and was permitted a 1-year extension in 1976. On June 3, 1977,

President Carter recommended an additional 1-year extension.

In light of Romania's emigration record and alleged violations of human rights, Congressman LARRY MCDONALD introduced House Resolution 653, which would disapprove the President's waiver recommendation for extension of MFN status to Romania. In effect, removal of MFN status would force Romania to accept generally higher tariff rates on exports to the United States, discouraging trade relations with our country. House Resolution 653 was reported unfavorably by the Ways and Means Committee and was defeated in the House by a vote of 33–144.

I oppose passage of House Resolution 653. As stated in the Ways and Means Committee report, "* * * extension of MFN treatment for another year is crucial to the continued development and improvement of U.S. economic and political relations with Romania." I believe that improving United States-Romanian relations can have a positive effect on both nations. Additionally, it is my hope that the continuation of a strong trade policy will favorably affect the attitudes of Romania's leaders toward the personal freedoms of her citizens.

I agree with the President that continued MFN status for Romania is warranted. However, the Romanian Government should realize that its performance in human rights and emigration to date is not considered by Congress to be adequate, and that unless there is improvement, Congress and the President will have no alternative but to terminate MFN status.

Mr. MCDONALD. Mr. Speaker, the purpose of section 402 of the Trade Act of 1974 is to promote freedom of emigration. The President is granted authority to waive this requirement and grant most-favored-nation treatment to a Communist country, but only if he determines doing so will promote such freedom.

While the President has so determined with respect to Romania, the record does not support such a determination and I fail to see any other means of improving the human rights and emigration situation in Romania than to withhold MFN status.

Consider the record since Romania was first granted MFN status in July of 1975. Emigration to the United States did increase during the first year, but declined by 30 percent during the first 9 months of fiscal year 1977 in comparison to the same period last year. Whereas emigration of ethnic Germans to the Federal Republic of Germany and Jewish emigration to Israel has declined considerably since 1974. Total emigration to Israel for both fiscal year 1975 and fiscal year 1976 was 45 percent lower than 1974, and is 50 percent lower for the first 9 months of fiscal year 1977.

Thus total emigration has actually declined considerably during the time Romania has enjoyed MFN status.

There is, of course, a good explanation for this. I quote from an internal background document prepared in May for the members of the Commission on Security and Cooperation in Europe (CSCE), the congressional commission established to monitor the Helsinki Agreement:

> The Romanians claim that fewer Jews are applying; that is no doubt true since it seems that the procedures for emigrating to be reunified with families have become more complex, difficult, and arbitrary—in direct contradiction to the Final Act provisions. It is estimated that about 25–50 percent of Romania's Jewish population (estimated at 60,000 total) have informed relatives in Israel that they wish to leave, but most have not applied because application procedures remain discouraging and dangerous for Jews as well as other Romanians. Applying is a lengthy, convoluted process involving several branches of the bureaucracy—local and national—long delays, uncertainties, harassment, job loss, and unexplained and arbitrary rejections—often of the preliminary request for application forms. Some of the difficulties are the result of local bureaucratic inefficiencies, but the government has done nothing to facilitate the situation. President Ceausescu has, to the contrary, repeatedly spoken out against those who wish to desert their homeland.

In December 1975, Romania created local commissions, made up of local Communist Party members and community representatives, to screen and interview those wishing to leave. While the Government claims their purpose is to discourage young Romanian women from marrying foreigners who later desert them, they bring a great deal of social and psychological pressure to bear and have become a formidable obstacle to all who wish to emigrate.

Clearly the emigration situation in Romania is getting substantially worse, not better.

But Romania's record with respect to other human rights is even worse. At the beginning of May, for example, Romania initiated a major crackdown on dissidents, arresting the noted writer Paul Goma and many others (New York Daily News, May 1, 1977). Since then Romania has apparently released many political prisoners in a general amnesty. But there is every reason to believe this is nothing more than a public relations ploy designed to encourage the United States to extend MFN status, and represents only a temporary and partial lessoning of repressive treatment of dissidents.

Perhaps the true attitude of the Romanian Government toward human rights is best expressed by its treatment of a young English teacher named Nicolae Dascalu, a signer of the Czechoslovakia's charter 77. Beginning on April 15 of this year, Dascalu was taken each day for 10 days to security headquarters and subjected to interrogations and beatings that lasted for as much as 16 hours, in an effort to get him to sign a letter declaring that all human rights are respected in Romania. He refused and sought refuge in the U.S. Embassy. Apparently, however, our concern for human rights has not changed since the Simas Kudirka affair, as our Embassy refused to grant asylum to Dascalu and turned him back over to his torturers.

Religious persecution continues unabated in Romania, and is aimed at Christians as well as Jews. While the state-controlled church reports that everything is fine, the real church leaders continue to report incidents such as the 17 Baptists who were arrested on April 4, 1977, after signing a protest document describing in detail the persecution against neo-Protestants in Romania. I have been told by persons with access to sources behind the Iron Curtain that these individuals were arrested each night, interrogated and beaten. Then each morning they were released to go to work, only to be rearrested each night and the process repeated.

The Romanian Government also continues to make it difficult if not impossible for split families to be reunited. The News World of New York City reported on June 16, 1977, that 29 Romanian-Americans were in the 23d day of their hunger strike in a common effort to get their families reunited. In addition, I have been furnished with a list of 28 Romanians who wish to come to the United States but have not been allowed to leave. This list is attached as an appendix to this statement.

The purpose of granting Romania MFN status was to promote freedom of emigration. But after 2 years, both the emigration and human rights situation in general have become substantially worse. Obviously the only way to improve the situation is to withhold MFN status. The Romanians will not appreciate having their bluff called, but I doubt they will give up the substantial economic benefits of American technology and trade credits.

If we are serious about promoting human rights, we will vote to pass House Resolution 653 and send a signal to the world that we have a real concern for those being persecuted by repressive Communist regimes:

LIST OF THOSE WHO DID NOT RECEIVE ROMANIAN PASSPORT FOR UNITED STATES OF AMERICA

(Name, date and place of birth, address, and relation in the United States)

1. Aurelia Sămințâ, 2–19–32, Vermes, Str. 6 Martie Bocsâ Română, husband: Trandafir Sămintă, 2680 Huntington Pk.

2. Titu M. Sămintă, 11–22–52, Boca R., Str. 6 Martie, Bucharest, father, Trandafir Sămintă, 2680 Zoe Huntington Pk.

3. Dumitru Ghitea, 9–11–32, Oradea, Str. I, Creangă 9, brother, Mircea Ghitea, 4241 Walnut, Be.

4. Maria Ghitea, 8–13–40, Sebeș, Str. I, Creangă 9, brother-in-law, Mircea Ghitea, 4241 Walnut, Be.

5. Daniel Ghitea, 1–1–61, Hapria, Str. I, Creangă, uncle, Mircea Ghitea, 4241 Walnut, Be.

6. Magdalena Ghitea, 3–24–63, Bucharest, Str. I, Creagngă, uncle, Mircea Ghitea, 4241 Walnut, Be.

7. Cornelia Ghitea, 5–27–64, Bucharest, Str. I, Creangă, uncle, Mircea Ghitea, 4241 Walnut, Be.

8. Emil Ghitea, 6–29–65, Bucharest, Str. I, Creangă 9, uncle, Mircea Ghitea, 4241 Walnut, Be.

9. David Ghitea, 7–28–75, Bucharest, Str. I, Creangă 9, uncle, Mircea Ghitea, 4241 Walnut, Be.

10. Dragomir Simion, 5–26–27, Ohaba, Aleea Macaralei 2, Blox 021, Sc. 1, ap. 10, sister-in-law: Elis Florea, 8348 Stewart, Downey, Calif.

12. Titi Dragomir, 8–14–51, Sebeș, Aleea Macaralei 2, Bloc 021, Sc. 1, ap. 10, aunt: Elis Florea, 8348 Stewart, Downey, Calif.

13. Lia Dragomir, 2–14–53, Sebeș, Aleea Macaralei 2, Bloc 021, Sc. 1, ap. 10, aunt: Elis Florea, 8348 Stewart, Downey, Calif.

14. Ilie Jiganie, 11-8-33, Ogrezeni, Bl. D., Cantemir, sister in law: Elis Florea, 8348 Stewart, Downey, Calif.
15. Victoria Jiganie, 10-26-38, Sebes, Bloc lo Nr. 17, ap. 39 Sc. B, sister, Downey, CA.
16. Claudiu Jiganie, 6-15-64, Bucharest, Bloc lo Nr. 17, ap. 39 Sc. B, aunt, Downey, CA.
17. Alis Jiganie, 1-20-66, Bucharest, Bloc lo Nr. 17, aunt, Downey, CA.
18. Ilie Curuta, 3-24-08, Vrani, Caras, Vrani, wife: Minodora Curuta, 5462 Marathon, Los Angeles.
19. Cornel Curuta, 3-24-38, Vrani, Caras, Vrani, mother.
20. Radu A. Dumitrescu, 2-13-37, Bucharest, Dr. Taberii 12 Bloc A2 Sc. B ap. 33 Bucharest.
22. Rodica T. Dumitrescu, 1963, Bucharest, Dr. Taberii 12 Bloc A2 Sc. B ap. 33 Bucharest.
22. Rodica T. Dumitrescu, 1963, Bucharest, Dr. Taberii 12 Bloc A2 Sc. B ap. 33 Bucharest.
23. Doina M. Dumitrescu, 1968, Bucharest, Dr. Taberii 12 Bloc A2 Sc. B ap. 33 Bucharest.
24. Mircea I. Dumitrescu, 1975, Bucharest, Dr. Taberii 12 Bloc A2 Sc. B ap. 33 Bucharest.
25. Zaharia Ionescu, 2-8-22, Bucharest, Str. Presei 1 Bloc C. ap. 1 Bucharest.
26. Valeria Ionescu, 2-8-22, Bucharest, Str. Presei 1 Bloc C. ap. 1 Bucharest.
27. Cristina M. Ionescu, 12-25-51, Bucharest, Str. Presei 1 Bloc C. ap. 1 Bucharest.
28. Petre Zoldi with his family, Str. Gradinarilor 67 Bucharest.

FURTHER MESSAGE FROM THE SENATE

A further message from the Senate by Mr. Sparrow, one of its clerks, announced that the Senate agrees to the amendments of the House with an amendment to a bill of the Senate of the following title:

S. 1235. An act to further amend the Peace Corps Act.

PERMISSION FOR COMMITTEE ON INTERIOR AND INSULAR AFFAIRS TO SIT TOMORROW DURING THE 5-MINUTE RULE

Mr. PHILLIP BURTON. Mr. Speaker, I have been asked by the two contending forces on the matter concerning the upper boundary States to have a hearing tomorrow and to be permitted to sit during the 5-minute rule. There will be no legislative action, and no markup or anything. Therefore, Mr. Speaker, I ask unanimous consent that the committee be permitted to sit for that purpose.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, are there any redwoods involved in this?

Mr. PHILLIP BURTON. There is not even a minimum wage item involved in this.

Mr. ROUSSELOT. Fantastic.

Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

There was no objection.

CONFERENCE REPORT ON H.R. 6689, FOREIGN RELATIONS AUTHORIZATION ACT, FISCAL YEAR 1978

Mr. FASCELL. Mr. Speaker, I call up the conference report on the bill (H.R. 6689) to authorize fiscal year 1978 appropriations for the Department of State, the U.S. Information Agency, and the Board for International Broadcasting, to make certain changes in the Foreign Service personnel system, and for other purposes, and ask unanimous consent that the statement of the managers be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

Mr. ASHBROOK. Reserving the right to object, I believe the 224 Members who are present want to hear this.

Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

The Clerk will read the conference report.

(The Clerk commenced reading the conference report.)

Mr. BUCHANAN (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the conference report be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama?

Mr. ASHBROOK. Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

The Clerk continued to read.

Mr. RYAN. Mr. Speaker, I ask unanimous consent that further reading of the conference report be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from California?

Mr. ASHBROOK. Mr. Speaker, I object.

The SPEAKER pro tempore. Objection is heard.

The Clerk continued to read.

Mr. BUCHANAN (during the reading). Mr. Speaker, I ask unanimous consent that further reading of the conference report be dispensed with.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Alabama?

PARLIAMENTARY INQUIRY

Mr. ASHBROOK. Mr. Speaker, reserving the right to object, I would like to propound a parliamentary inquiry of the Chair. It is my understanding under the rules there is no appealing a ruling of the Chair that can be made as to those present. Am I correct?

The SPEAKER pro tempore. The gentleman is asking about an appeal to the count of the Chair?

Mr. ASHBROOK. An appeal to the count of the Chair cannot be taken?

The SPEAKER pro tempore. That is correct.

Mr. ASHBROOK. Further reserving the right, then, to object, all that the Members can rely on for the count of the Chair is the integrity of the Chair and the capacity of the Chair to make a correct count.

The SPEAKER pro tempore. The gentleman can ask for the yeas and nays.

Mr. ASHBROOK. I would like to do that later if I could be assured we probably could get that count.

But having made that point, I withdraw by reservation of objection.

Mr. BUCHANAN. I thank the gentleman.

POINT OF ORDER

Mr. CAPUTO. Mr. Speaker, a point of order.

I would like to make a point of order, and I regret that it comes at so late an hour and after the previous discussion. I make the point of order that the matter contained in section 515 of the conference report would not be germane to H.R. 6689 under clause 7 of rule XVI if offered in the House and is therefore subject to a point of order under clause 4 of rule XXVIII.

Let me state that the language in the conference report substantially changes the terms under which the Members of Congress can accept or authorize acceptance of things of value from foreign governments.

The Constitution clearly provides in article I that each House shall write its own rules. The House has a rule of its own on this matter, rule 44, which we only recently modified, under which Members of Congress could receive things of value from foreign governments.

The conference report changes that rule because it is a subsequent act of this House and in direct conflict with that rule. In Jefferson's Manual, section 335 and Deschler's Procedures, chapter 5, that is clearly improper. We cannot change the rules of the House in that manner. Let me read from Jefferson's Manual, section 335 briefly. It says:

> But a committee may not report a recommendation which, if carried into effect, would change a rule of the House unless a measure proposing amendments to House rules has initially been referred to the Committee of the Whole by the House.

This has not been referred to the Committee of the Whole by the House as required by the precedents. Indeed, this is the first time the House has viewed this matter and it would have been impossible for us to have referred it to the Committee of the Whole. It was put in by the other body. We never considered it.

If the Chair does not sustain my point of order, he will be in effect sustaining the other body in writing the rules of this House.

I insist on my point of order Mr. Speaker.

The SPEAKER pro tempore. Does the gentleman from Florida wish to be heard on the point of order?

Mr. FASCELL. Mr. Speaker, I would like to be heard on the point of order.

First of all, we are dealing with the 1966 Foreign Gifts and Declarations Act which is clearly and certainly within the jurisdiction of the committee.

The bill that went to the conference is broad and diverse enough to handle the subject matter in this amendment.

Finally, we do not in any way change the rules of the House. We are dealing with an act. We in no way impinge on the Ethics Committee or the rule the gentleman cited. That is clearly within their jurisdiction, it stays there, and is in no way affected by this amendment.

Therefore I would hope the Chair would overrule the point of order.

The SPEAKER pro tempore. Does the gentleman from New York wish to be heard further on the point of order?

Mr. CAPUTO. Mr. Speaker, it seems three points are raised, and again I apologize for the awkwardness of the hour at which I arise.

The jurisdiction of the committee was not questioned in my statement. I was merely saying that this changes the rules of the House. I have no quarrel with the jurisdiction of the committee over the Foreign Gifts and Declarations Act.

It is quite clear a subsequent and contradictory act by the legislature overrules a prior rule. Let me read from Deschler, chapter 5, section 3.3.

Mr. Speaker, let me read from Deschler's Procedures, chapter 5, section 3.3:

Where the rules of the House and a legislative enactment are not consistent, the most recent legislative expression will prevail.

Mr. Speaker, if we pass this tonight, the rule covering receipt of things of value from foreign governments will be changed.

Mr. FASCELL. Mr. Speaker, I would like to be heard.

The SPEAKER pro tempore. The gentleman from Florida may proceed.

Mr. FASCELL. Mr. Speaker, clause 4 of House rule 43 deals only with gifts to employees. It does not deal with gifts of foreign governments, which is the subject of this amendment.

Furthermore, Mr. Speaker, we have specifically provided that nothing in this section shall be construed in derogation of any regulations prescribed by any Member or agency, and in this instance it would be the Congress or the Ethics Committee, which provides for more stringent limitations on the receipt of gifts and declarations by employees.

We are dealing with this in this amendment, because it deals with the foreign gifts and declarations section which affects other members of the Government not having anything to do incidentally with Members of the House and in no way changes the rules of the House.

Mr. CAPUTO. Mr. Speaker, on page 21 of the committee report, section 515 says such act is amended and then it says, "a Member of Congress." It clearly applies to Members of Congress.

Let me state what it does. It permits Members of Congress to accept gifts of more than minimum value.

Page 22, section (c)(1)(B) clearly changes rule 24.

The SPEAKER pro tempore. The Chair is ready to rule.

The gentleman from New York makes a point of order that the conference report contains, in section 515, matter contained in the Senate amendment which would not have been germane to the bill if offered in the House.

Section 515 amends the Foreign Gifts and Declarations Act to provide new guidelines and procedures relating to the acceptance by employees of the United States of gifts and awards from foreign governments. The section provides that the Committee on Standards of Official Conduct shall have the functions of regulating the minimum value of an acceptable gift for Members and employees of the House of Representatives, of consenting to the acceptance by Members and employees of gifts in certain circumstances, and of disposing of unacceptable gifts through the General Services Administration. H.R. 6689, the Foreign Relations Authorization Act, as passed by the House, contained a wide variety of amendments to existing laws within the jurisdiction of the Committee on International Relations relating generally to the foreign relations of the United States and the operations of the Department of State, the U.S. Information Agency, and the Board for International Broadcasting. It thus appears to the Chair that an amendment to the Foreign Gifts and Declarations Act, a law within the jurisdiction of the committee and relative to our foreign relations, would have been germane to the bill if offered in the House, particularly since section 111 of the House bill dealt with foreign employment by officers of the United States notwithstanding article I, section 9 of the Constitution. The Foreign Gifts and Declarations Act arose from the identical constitutional provision. The fact that the Senate amendment placed new responsibilities on a standing committee of the House does not render the provision subject to a point of order, since no attempt is made to amend the rules of the House or to otherwise exceed the jurisdiction of the Committee on International Relations.

For the reasons stated, the Chair overrules the point of order.

The SPEAKER pro tempore. The gentleman from Florida (Mr. FASCELL) is recognized for 30 minutes.

Mr. FASCELL. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, let me say right at the outset that the statement made by the Speaker in overruling the point of order is clearly consistent with what the conference report provides. It does not affect House Rules in any way. The Committee on Standards of Official Conduct can recommend whatever standards they wish. We had to provide guidelines in the Foreign Relations Authorization bill to deal with the whole problem of Government-wide reform. We had to deal with all employees of the Government, including all three branches.

With respect to Congress, we made it quite clear that we intended to and by law did leave authority with the Ethics Committee, to write any regulations which are more stringent than the bill sets.

Mrs. FENWICK. Mr. Speaker, will the gentleman yield?

Mr. FASCELL. I yield to the gentlewoman from New Jersey.

Mrs. FENWICK. I thank my colleague for yielding to me. I would like to ask a practical, as well as a legal, question. We now have certain rules and regulations in this House for the conduct of Members of the House and staff. Are these rules and regulations changed by the passage of the conference report?

Mr. FASCELL. None whatsoever.

Mrs. FENWICK. There is no change in the rules we now have for the governance of the conduct of Members of the House?

Mr. FASCELL. Absolutely none.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield for a question?

Mr. FASCELL. I yield to the gentleman from Maryland.

Mr. BAUMAN. On page 22 of the conference report, section (B)(ii), it states:

An employee—

Meaning a Member of Congress—

may accept gifts of travel or expenses—

From foreign governments. The phrase used is—

consistent with the interests of the United States.

Who determines what is consistent with the interests of the United States under this provision?

Mr. FASCELL. That would be the employing agency, and the regulations set by that employing agency. As it relates to the Congress, it means the Ethics Committee.

Mr. BAUMAN. Does this mean that in each case of foreign travel in which a foreign government proposes to invite a Member and pay his expenses, each Member must go to the Ethics Committee and request a ruling?

Mr. FASCELL. That has been the position up until now. That is what we have all had to do.

Mr. BAUMAN. So whether it is Taiwan, Korea, South Africa, or the Soviet Union, each Member now will have to request a formal ruling as to what is in the interests of the United States as far as congressional travel?

Mr. FASCELL. I will tell the gentleman this: Before I would accept, I would certainly want to clear it. As a matter of fact, I did just that in a case here not too long ago when such an invitation was extended to me. Because I was not satisfied with the answer, it was kind of left up to my judgment, I turned it down.

Mr. BAUMAN. But the gentleman still has not answered my question.

Mr. FASCELL. The answer is yes. I would say that the gentleman would have to follow the Ethics Committee's procedures which are now in effect.

Mr. YOUNG of Florida. Mr. Chairman, will the gentleman yield?

Mr. FASCELL. I yield to my colleague from Florida.

Mr. YOUNG of Florida. I thank the gentleman for yielding to me. I would just like to ask, if it does not change anything, why are we doing it?

Mr. FASCELL. Because it deals with all the other employees of the U.S. Government who are not in the Congress.

Mr. BAUMAN. Mr. Speaker, may I ask a further question on that point?

Mr. FASCELL. Certainly.

Mr. BAUMAN. At the top of page 23 there appears to be a waiver for the Ethics Committee to allow Members of Congress to travel abroad at the expense of foreign governments without reporting. In the report, beginning with the third line, it states:

Unless such travel or travel expenses are accepted in accordance with specific instructions of his or her employing agency, the employee shall file a statement.

Mr. FASCELL. All I can tell the gentleman is this: Whatever the employing agency sets down by way of regulation

in terms of reporting will have to be complied with. That means that all gifts of more than minimal value will be reported in the Federal Register. Whatever additional conditions the Ethics Committee and the House decide to impose will govern Members and staff.

Mr BAUMAN. I thank the gentleman.

Mr. FASCELL. There is no intent here, in any way, to cover that up.

Mr. Speaker, I have no further requests for time.

Mr. BAUMAN. If the gentleman did not intend to discuss it further——

Mr. FASCELL. I will be glad to discuss it further.

Mr. BAUMAN. On another point we discussed earlier, on pages 16 and 17, section 504, the conference has added the language which pertains to foreign information offices located in the United States, and added the phrase, where these offices do exist:

If maintenance of such office is consistent with United States law.

As the gentleman knows, some officials of this administration have taken the position in the case of the Rhodesian Information Office that there is a legal obligation on the part of the U.S. Government to honor the United Nations resolution freezing the assets of that country in the United States, and thereby closing the office. My question is, does this phrase that the conference has adopted in any way force the United States Government to honor that resolution of the United Nations? My understanding is that they are not obligated by law; that it is discretionary with the U.S. Government. I do not believe the added language in any way justifies the closing of the Rhodesian Information Office.

Mr. FASCELL. My understanding is the same as that of the gentleman's; that is, they are not required to follow that interpretation. If they do so, they do so on their own. This sense of the Congress statement was written in by the other body. The language making it apply "consistent with United States law" was insisted upon by the House because of its possible application to situations that did not have anything to do with the Rhodesian office.

Mr. BAUMAN. I thank the gentleman.

Mr. FASCELL. The Trading with the Enemy Act is one example.

Mr. ASHBROOK. Mr. Speaker, will the gentleman yield?

Mr. FASCELL. I yield to the gentleman from Ohio.

Mr. ASHBROOK. I thank the gentleman for yielding.

Mr. Speaker, I merely want to thank the 10 conferees and particularly the chairman of the committee, the gentleman from Wisconsin, for explicitly—and I use the word "explicitly"—keeping their word and upholding the position of the House on the Vietnam amendment.

Mr. FASCELL. I thank the gentleman. We were very successful in upholding the House position all the way through this conference.

Mr. BUCHANAN. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, I want to associate myself very strongly with the remarks and the responses of our distinguished subcommittee chairman, Mr. FASCELL, and commend him for his outstanding leadership throughout our deliberations on this legislation.

I will not repeat what our colleague has said, but I would like to emphasize that the conference report on H.R. 6689, the Foreign Relations Authorization Act of fiscal 1978, is essentially the same bill as that passed by the House in May.

It authorizes the identical amounts approved by the House in three categories: the administration of foreign affairs; international organizations and conferences, and international commissions.

The conference version provides increases in two other areas: migration and refugee assistance and educational exchange. With respect to this latter provision, it is my hope that the Department of State will recognize the support for these programs within the Congress and will, therefore, take steps to expand them.

For far too long, the Bureau of Cultural Affairs has been the redheaded stepchild of the Department of State. Its programs have brought innumerable benefits to our country and it ought be expanded.

Many of the provisions added on the House floor have been retained. The language protecting the U.S. interests in negotiating on the Panama Canal is unchanged.

The provisions against aid to North Vietnam are essentially the same with the addition of language calling on the President to continue to take all possible steps to obtain a final accounting of all Americans missing in action in Vietnam.

Through the increases for the USIA and Radio Free Europe/Radio Liberty provided in the House bill and included in the conference report, we will enhance our communications with the rest of the world, particularly those in the lesser developed countries and behind the Iron Curtain where millions are denied access to news of events which effect their lives.

At the same time, we are expressing our support for the provisions of the Helsinki Final Act which provide for increased informational exchanges.

In conclusion, Mr. Speaker, the $1.69 billion provided in this bill for the Department of State, the U.S. Information Agency and RFE/RL, Inc., will permit the continued effective conduct of foreign policy by the United States.

I concur in my colleague's assessment that this conference bill reflects the best provisions of both the House and Senate versions and I, too, urge its adoption.

Mr. CAPUTO. Mr. Speaker, will the gentleman yield?

Mr. BUCHANAN. I yield to the gentleman from New York (Mr. CAPUTO).

Mr. CAPUTO. Mr. Speaker, I am concerned about this statement—and it has been difficult to hear all of the time—that nothing is changed here.

I would like to ask the gentleman if in his opinion the language at the bottom of page 21, where it says, " 'minimal value' means a retail value in the United States at the time of acceptance of $100 or less" is not in direct conflict with rule 434, which we amended earlier this year, which talked about $35 or less, with an aggregate of $100 in each of those $35 gifts.

Mr. FASCELL. If the gentleman will yield, the answer is, "no." We did not change the rule. We cannot change the rule of the House. Only the House can do that. In order to safeguard it and make it more specific, we wrote in subsection (j), on page 24, the section which I read earlier, which states:

Nothing in this section shall be construed to derogate any regulation prescribed by any employing agency which provides for more stringent limitations on the receipt of gifts and decorations by its employees.

In the definition we make it clear that insofar as the Congress is concerned, "employing agency" means the Committee on Standards of Official Conduct. They can write it down to zero. This act in no way impinges on the rules.

Mr. CAPUTO. Section (j) talks about "more stringent limitations." I am talking about more limited requirements. It would appear to me the language is somewhat different than the language of the rule, which says one cannot accept a gift of $35. I am glad to hear the gentleman say that Members cannot accept, notwithstanding this, gifts of more than $35.

Mr. FASCELL. I would say that if there is any doubt insofar as the committee which has jurisdiction is concerned, the committee can clarify that in a second.

Mr. CAPUTO. I would have thought that the language in section 515, which deals with the amount of money a Member can accept, refers to the consumer price index, indexing where something belongs. Bribery is something else. I did not see that in the section.

Mr. FASCELL. Again, we are not only talking about Members of Congress. We are talking about members of the executive branch of government as well.

Mr. CAPUTO. Is the gentleman sure that is right? I ask the gentleman to look at section (F). It says, "Member of Congress."

Mr. FASCELL. I understand that. The general rule of applicability would apply across the board to everybody covered by the definition. But if the rule of the House is more stringent then this provision would be superseded.

Mr. CAPUTO. I accept that.

Let me ask one last question. In the gentleman's mind how would this affect the propriety of something received in excess of the existing requirement by a Member of Congress. What we are doing tonight in no way applies retroactively to past behavior?

Mr. FASCELL. No. It does not apply retroactively.

Mr. BUCHANAN. Mr. Speaker, I yield myself 2 minutes.

Mr. Speaker, I will advise the Members to listen for just a moment, because I do not think this House should be falsely accused, as has too often been the case. Let me tell the Members what this section which was drafted in consultation with the Committee on Standards of Official Conduct in fact does.

Section 515 permits more stringent requirements, as we now have in the

House and will have. If any member on the Committee on Standards of Official Conduct feels that this is not the case, I invite you and, as a Member of the Congress, I charge you to make certain by your action, which we authorize and which we put into your hands, that you make certain that this is more stringent rather than less so.

Section 515 implements the General Accounting Office's rules for receipt and disposition of gifts and decorations and closes several loopholes and corrects weaknesses now existing in that law. Existing law does not set effective penalties for noncompliance with the act.

Section 515 would penalize a violator with a $5,000 fine, as well as assessing the value of the gift, if improperly received. The existing law does not provide for public disclosure of gifts with a minimal value.

Section 515 provides for annual publication in the Federal Register of the name of the recipient, the donor, a description of the gift, the circumstances justifying acceptance, and its estimated value. Existing law does not explicitly prohibit a Government employee from accepting or allow a Government employee to accept travel expenses for travel originating outside the United States, and this clarifies that law.

Mr. Speaker, I think if we examine this sentence by sentence, we will discover what the conferees believed, and that is that we have tightened, we have refined, and we have clarified the law.

Furthermore, Mr. Speaker, there is not a member on the conference committee representing the House of Representatives who would do other than that or who in any way would knowingly be a party to undermining the ethics of this House or weakening the law in terms of the ethical standards of Members of Congress.

Mr. Speaker, I urge adoption of the conference report.

Mr. BROOMFIELD. Mr. Speaker, I would like to take the opportunity to express my support for the adoption of the conference report on H.R. 6689. The compromise agreed upon by the House and Senate conferees would authorize a total of about $1.7 billion for fiscal year 1978 for the Department of State, the U.S. Information Agency—USIA—and the Board for International Broadcasting—BIB.

The money authorized would fund a variety of operations and expenses for these three agencies. One of the smallest allocations of money—only $441,000—was made available for the establishment of passport field offices in Detroit, Houston, and Connecticut. I want to thank the chairman of the International Operations Subcommittee, Mr. FASCELL, for his support in reaching the conference agreement to provide the funding and to instruct the Department of State to give priority attention to the establishment of these three offices.

H.R. 6689 also would authorize funds for administering foreign affairs; for international organizations conferences and commissions; educational exchanges; migration and refugee assistance; special international exhibitions; the acquisition and construction of radio facilities; and various costs associated with salaries, expenses, and employee benefits.

I would like to take a moment at this time to enumerate a few of the more significant aspects of the bill. In this regard, the conference report contains an additional $33.5 million over what the administration originally requested for migration and refugee assistance. Of this amount, $20 million is specifically earmarked for assistance to refugees from the Soviet Union and Communist East European countries who wish to resettle in Israel.

The conference version of this bill expresses the sense of Congress that the State Department should increase its efforts to assist and look after the welfare of American citizens imprisoned in foreign countries. To help Congress effectively monitor this situation, beginning in 1978 and annually thereafter, the Secretary of State will be required to submit a comprehensive report to the appropriate committees of Congress detailing the number of American prisoners abroad, the charges against them, the steps taken to assist these individuals, and an evaluation of those steps.

The conference report also declares it to be the sense of Congress that the President should "initiate a major diplomatic initiative," to make progress in the stalled international negotiations on the establishment of an international system of nationally held grain reserves to assure adequate supplies for consumers and income security for producers.

In addition to authorizing funds for various purposes for fiscal year 1978, this legislation also contains provisions dealing with U.S. foreign policy toward certain countries and placing restrictions on the use of funds authorized in the bill. Thus it continues the congressional policy of prohibiting reparations, aid, or other payments to Vietnam. Another provision expresses the sense of Congress that any negotiations to normalize relations with Cuba must protect the personal and property rights of U.S. citizens, and must take into account human rights conditions in Cuba and that country's military and paramilitary activities abroad. Likewise H.R. 6689 states the position of Congress that U.S. policy toward the Republic of Korea should be consistent with U.S. interests in Asia, particularly regarding Japan, and with the security interests of Korea.

My comments thus far have by no means touched upon every significant aspect of the legislation before us. However, I believe it is obvious from what has been said that the conference report on H.R. 6689 covers a number of important matters and deals with those issues in an appropriate fashion and at an appropriate overall funding level. I would therefore urge the House to adopt the conference report.

CERTAIN NONIMMIGRANT VISAS

Mr. FASCELL. Mr. Speaker, I would like to address the issue raised in connection with section 112 of the bill as agreed upon by the conference committee. The section deals with certain nonimmigrant visas and I want to discuss the conference language in legal terms, but especially in people terms.

When we consider the issue, we ought not to forget that our decisions will impact directly on how this Government deals with people—those who try to come here for temporary visits and oftentimes their families living here who await their arrival. And at the same time we will be considering a step toward better compliance with the Helsinki Final Act, something most of us usually think about when the policies and practices of other countries are the subject of our concern.

The United States takes seriously its commitments to freer movements of people. Its policy on granting visas is an integral element in encouraging other states to do better in letting people travel. The conference substitute conveys to foreign governments and people that, in a careful examination of our national interests and international commitment, we recognize the need for fairness in considering visas for people wishing to travel to the United States on legitimate business or for personal reasons. The amendment explicitly points to the Secretary of State's role in assuring that people whose activities and intentions are inimical to this country shall not come here. That has to be.

It has been said by that the very existence of the Immigration and Nationality Act's section 212(a) (27), (28), and (29), which outline political ineligibilities for a U.S. visa, is a source of embarrassment to the United States, given the high priority we attach to human rights, the free movement of people, and the upcoming Belgrade meeting. Well, I do not feel this is an embarrassment, for these words set forth clearly the criteria we have incorporated into our laws and judgments on who shall visit this country. They are the sort of criteria which some East European countries, signatory to the Final Act, impose with a far heavier hand, with far greater delays and with a degree of secrecy which leaves visa applicants uninformed as to why visas had been denied and with no possibility of recourse. We are out in the open, we say why visas are denied, and we even allow for reconsideration.

Western and Eastern European States all have policies, not as publicly disseminated as ours, which result in people being denied entry to their territory for political reasons. Communist countries know our policy, can read our laws and determine in advance what the situation is. Section 112 clarifies this further still.

Inclusion of the Senate amendment as changed by the conferees reaffirms the discretion of the Secretary of State and the Attorney General to decide for or against waivers of section 28 ineligibilities and underscores U.S. forthrightness in this matter. We can take some satisfaction that we are more public even than most of our Western allies in publishing our policies in this important subject. We are certainly more frank and honest about it than the Soviet bloc states.

The recommendation of the conferees does take an enlightened step by revising the presumptive nature of waivers.

In fact, its entire focus is to reverse that presumption while retaining flexibility for the Secretary of State to ensure that the security interests of the United States have first priority.

Under present circumstances—legal and consequent administrative—an applicant ineligible because of past or present membership must presume that on application he will not receive a visa because of the (28) ineligibility. This presumption in fact applies to entire categories of people and groups and has been the basis for sharp criticism of U.S. duplicity in calling for respect for the Final Act.

The language recommended by the conferees reverses the situation. Instead of indicating that persons will not get a U.S. visa, the conference substitute says he or she can get the visa, in that a recommendation for waiving the (28) ineligibility ought to be forthcoming, unless the applicant specifically is judged a danger to the United States. In practice, that is what happens now, and the law can reflect it.

A major CSCE criticism about the United States, echoed by some domestic voices, is that ineligibilities for U.S. visa policy are inconsistent with U.S. commitments under the U.N. Human Rights Declaration and the Helsinki Final Act, in terms of freer movement of people.

I do not think it is. Since the signing of the Final Act, and especially with the support of our President, we have continued to register concern for the right of peoples to move freely. In the CSCE context, we are on record in so many different ways, having pressed Communist governments to allow divided families to be reunited once again. Those of us who have intervened personally with Communist governments have had the unhappy experience sometimes of finding that our own Immigration and Nationality Act ends up as an unexpected obstacle barring potential immigrants from the United States to rejoin loved ones. Visa numbers sometimes are just not there, and often divided families have to wait months in Europe before the way can be found to get them here.

The conference language does not address this matter directly. It speaks of visas for people coming here temporarily. But the United States is beginning to emphasize its concern with the Final Act requirement that states permit temporary travel abroad to visit families. Our policies on visitors' visas thus have to be consonant with our express desire to have these people be able to get here without undue debate over whether a visa will be issued.

We ought to be able to say at Belgrade that the United States has taken a step—by voting the amendment—to comply more fully with the Helsinki Final Act. This motivation is not just to make ourselves look good, but to present the seriousness of U.S. commitments in a complex multilateral process. Changing the impact of the visa law, making it more equitable, and yet protecting the national security interests is not an easy task. The conference language is a step which reflects the need to give due recognition and balance to these factors, and yet move in the direction of freer movement of people.

We are a sophisticated and powerful country, the melting pot which has absorbed many races, creeds, and political beliefs. We have the strength and wisdom to accommodate many visitors to this country even if a few do not share the mainstream of American thought, as long as they are not here to throw bombs or to do harm to our citizens. We should be able to say at Belgrade that we are improving our law to facilitate these visits. After all, we are asking other countries signatory to the Final Act to do this when we speak of the need to remove Communist barriers against members of the clergy traveling eastward.

Every option that the Secretary of State traditionally has had to recommend for or against a waiver in these cases remains. They are options political in nature, legitimate, and discretionary, much as they exist in all countries signatory to the Helsinki Final Act.

The conference substitute only sets down in writing what in fact has become standard practice by this Government. Every visa form that we hand out to someone who wants to come to the United States asks specifically if the applicant is a member of a Communist party or other organizations committed to the overthrow of the U.S. Government. We want the applicant to answer this question. If he does so in the affirmative, or if he declines, a consular officer at an embassy somewhere then telegraphs the application to INS via the State Department. The Justice Department tells the State Department that the person can come and grants the waiver. There are those instances, and many of us know about them in detail, when there are very good reasons to deny entry to the United States to a person who presents a true danger through terrorism, because he is a committed anarchist, or he interprets his commitment to Communist ideology as a genuine license for destructive activities within our borders. The conference language requires the Secretary of State to deny entry to these people and to so inform the Justice Department and the Congress of this fact.

May I point out that people who are ineligible for the reasons in section 212(a) (27) and (29) are the ones recognized by law or practice as the real dangers to our national security. Those ineligibilities cannot be waived. No part of the conference language can or ought to change this protection.

You know, we do not often think about past affiliation to Communist parties, yet the question on the visa form requires the applicant to say whether, even in his past, he has been a member of a proscribed organization. What do we do if someone, perhaps respected by local society and known as a decent person, discloses truthfully that in his youth he was motivated by misplaced ideals to become a part of a leftist group?

Do we really want the force of U.S. visa law to tell this person, in advance of his request for a visa, that he will not get one unless the Secretary of State of the United States of America personally looks at the case and recommends that he should come?

These cases do occur, over and over again, not just in Eastern Europe but in Western Europe as well. Times change, people change, we grow wise and a bit more mature, and yet our law says that a person who years ago participated in some political group will not get his visa. It is time to say to the visa applicant ineligible because of section 28 that this ineligibility is going to be waived, unless, in the judgment of the Government of the United States this person today still is a clear danger to us.

The conference language in fact recognizes that party affiliation alone does not make a person a danger. What of the people in Communist countries whose families welfare depended on unwilling party membership because the head of household had to bring home money, assure a child's education, or receive decent living space? Are these dangerous people? Or were they forced to join the party? These are not the people which the law is meant to identify, label, and bar in advance from visiting the United States.

Section 112 does not give away anything regarding the national security of the United States. The language agreed upon by your conferees is just the sort of attempt by a CSCE government needed at this time to address the Helsinki Accords and to set a precedent for stimulating other governments to take steps to better compliance. We will be serving this very cause, and consequently, the respect for human dignity so much in the forefront of our thoughts, by retaining this language in the bill.

Mr. ZABLOCKI. Mr. Speaker, I rise in support of the conference report on H.R. 6689, and I wish to commend the gentleman from Florida (Mr. FASCELL) and his Subcommittee on International Operations for their expeditious—yet thorough—handling of this comprehensive piece of legislation. It is a testiment to the gentleman's leadership, extensive preparation and firm grasp of the many issues involved that we were able to work out a fair and satisfactory conference agreement in one session.

This conference report represents a good compromise—embodying, I believe, the best features of both Senate and House bills. Although, as the gentleman has pointed out, there were more than 40 issues of difference, many were minor or technical in nature and were disposed of without difficulty. On all major issues, the House position was either upheld fully or protected in a manner which was found satisfactory to all conferees.

In terms of dollar figures, the House authorization levels were either maintained or adjusted to split the difference between House and Senate levels. The amounts contained in this conference report, if fully appropriated, would be well under the budget authority and target outlays included in the international affairs function in the first budget resolution.

On all foreign policy issues, such as those relating to Vietnam and Panama, the House positions were fully upheld in conference. Senate provisions relating to Korea and Cuba, moreover, contain sense of Congress language which I believe is reasonable and acceptable to the mem-

bership of this body. It does not exceed the basic authority contained in the House bill.

As a longtime supporter of Radio Free Europe and Radio Liberty, I am pleased to note that sufficient funding has been retained to upgrade transmitter facilities for both of these radios and for the Voice of America. With respect to RFE/RL, the $5 million contingency fund for fluctuations in currency exchange rates—A provision included in last year's authorization which was recommended by the General Accounting Office—has also been retained in this conference document.

Mr. Speaker, this is a good agreement, a fair agreement, and one which reflects not only a number of key House initiatives, but also the essentials of approved House policy. I urge its prompt adoption.

Mr. FASCELL. Mr. Speaker, I have no further requests for time, and I move the previous question on the conference report.

The previous question was ordered.

The conference report was agreed to.

A motion to reconsider was laid on the table.

GENERAL LEAVE

Mr. FASCELL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to revise and extend their remarks on the conference report just agreed to.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Florida?

There was no objection.

AMENDING THE PEACE CORPS ACT

Mr. HARRINGTON. Mr. Speaker, I ask unanimous consent to take from the Speaker's desk the Senate bill (S. 1235) to further amend the Peace Corps Act, with a Senate amendment to the House amendments thereto, and concur in the Senate amendment to the House amendments.

The Clerk read the title of the Senate bill.

The Clerk read the Senate amendment to the House amendments, as follows:

In lieu of the matter proposed to be inserted by the House engrossed amendment to the text of the bill, insert:

That so much of section 3(b) of the Peace Corps Act (22 U.S.C. 2502(b)) as precedes the first proviso is amended to read as follows: "There are authorized to be appropriated for the fiscal year 1978 not to exceed $82,900,000 to carry out the purposes of this Act.".

SEC. 2. Section 3(c) of the Peace Corps Act (22 U.S.C. 2502(c)) is amended to read as follows:

"(c) In addition to the amount authorized to be appropriated by subsection (b) to carry out the purposes of this Act, there are authorized to be appropriated for the fiscal year 1978, $1,000,000 for increases in salary, pay, retirement, or other employee benefits authorized by law.".

SEC. 3. The amendments made by this Act shall take effect on October 1, 1977.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

Mr. ROUSSELOT. Mr. Speaker, reserving the right to object, I do not recall this being discussed as a crucial item on which action had to be taken. I do not recall any discussion indicating that we were going to bring this up tonight.

Why is it imperative that we act on this matter tonight? Will the Peace Corps fall apart if we do not act tonight?

Mr. HARRINGTON. Mr. Speaker, will the gentleman yield?

Mr. ROUSSELOT. I yield to the gentleman from Massachusetts.

Mr. HARRINGTON. Mr. Speaker, the Peace Corps will not fall apart. However, there is little controversy surrounding this bill, and it is a matter on which we have an indication of cooperation on behalf of the minority. It was felt that we might conserve our time available in terms of the handling of other matters that are more controversial and pressing, and therefore the decision was made to bring this measure up tonight.

Mr. ROUSSELOT. Mr. Speaker, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

Mr. WINN. Reserving the right to object, Mr. Speaker, one reason, I might answer the gentleman from California (Mr. ROUSSELOT), is that it is a matter of whether we bring it up tonight or we bring it up the first thing in the morning.

The Congress wants to recess by Friday night. We have a lot of work to do on the energy bill.

However, further reserving the right to object, Mr. Speaker, I would like to ask the gentleman from Massachusetts (Mr. HARRINGTON) if he would give the Members of the House a brief explanation of what was decided in our conferences and our meetings with the other body.

Mr. HARRINGTON. If the gentleman will yield, Mr. Speaker, let me just simply say that all we are doing is taking the measure as passed by the House, containing some $81 million, as compared with the other body's version of $84.8 million and splitting the difference.

There was little concern in terms of there being a relatively minor amount of money involved, and an effort is being made to insure that the Peace Corps will have at least both the capacity for modest pay increases limited to $1 million for fiscal year 1978 by the version of the other body and will have the capacity to spend moderately as far as the scope of its program is concerned.

In the absence of any substantial justification to do otherwise, this is an effort to resolve the matter and let the Peace Corps get on with its work for the coming year.

Mr. WINN. Again reserving the right to object, Mr. Speaker, I would like to add to what the gentleman from Massachusetts (Mr. HARRINGTON) has said.

Initially we acted, the Members may recall, on this authorization bill on June 1. However, there were long delays which the Subcommittee on International Development experienced in its desire to obtain further specified details; and this is one reason that it has taken so long for us to come before the full House for this action.

However, Mr. Speaker, I would have to point out that and we are all in agreement on this. I think we should go ahead and approve the unanimous-consent request of the subcommittee chairman, the gentleman from Massachusetts (Mr. HARRINGTON).

Mr. HARRINGTON. Mr. Speaker, if the gentleman will yield further, let me just concur in the gentleman's statement and suggest also that the authorization amount is well within the range established by the first budget resolution.

Mr. WINN. Mr. Speaker, I withdraw my reservation of objection.

Mr. Speaker, I join the distinguished chairman of the International Development Subcommittee, Mr. HARRINGTON, in urging that the House accept the proposed compromise between the fiscal year 1978 Peace Corps authorization levels initially passed by the House and Senate. The authorization proposed in the Senate amendment before us today is $82.9 million. This figure merely reflects the common practice of splitting the difference between the original House and Senate figures precisely in half. The initial fiscal year 1978 authorization passed by the House was $81 million. The original Senate figure was $84.8 million.

As many of you may recall, when the House initially acted on this authorization bill on June 1, I noted the long delays which the Subcommittee on International Development experienced in its desire to obtain details of the administration's revised fiscal year 1978 Peace Corps authorization request. When that revised request, for $84.8 million, was executive branch justification was somewhat lacking in details in my opinion. In retrospect, it appears that these delays and other shortcomings were probably due mostly to the administrative disruption accompanying recent changes in the leadership of the Peace Corps and its parent agency, ACTION, and the new administration's proposed "revitalization" of the Peace Corps.

Since that time, I believe the subcommittee has made it quite clear that we expect the Peace Corps to provide us with most thorough and specific program justifications for authorizing the expenditure of the taxpayers' hard-earned dollars. ACTION and Peace Corps officials have since demonstrated a very cooperative and constructive attitude in this respect. In addition to the continued careful scrutiny given to the annual Peace Corps authorization, I understand that the Subcommittee on International Development contemplates comprehensive hearings on the Peace Corps' structure, program operations, recruiting, management, and goals.

In light of the procedural and substantive considerations which I have briefly outlined just now, I feel that the $82.9 million compromise level embodied in the Senate amendment now before the House is a very reasonable one. The Peace Corps is a unique and essentially successful entity in mobilizing the energies of individual Americans willing to serve in people-to-people programs to provde basic self-help assistance to the needy majority in developing countries. I therefore urge the House to accept the appro-

priate compromise authorization level for the Peace Corps contained in this amendment.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

Mr. ASHBROOK. Reserving the right to object, Mr. Speaker, and perhaps this should be a parliamentary inquiry, does the gentleman from Massachusetts ask unanimous consent to bring the conference report up and consider it or ask for the adoption of the conference report?

Mr. HARRINGTON. If the gentleman will yield, Mr. Speaker, this request is just to concur in the Senate amendment.

Mr. ASHBROOK. Mr. Speaker, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

Mr. EDWARDS of Oklahoma. Reserving the right to object, Mr. Speaker, I just want to gauge the potential reactions of my colleagues because I have assured a number of colleagues who came by the desk that they could go home since there were not going to be any more votes.

Does the gentleman have any intention of getting a recorded vote on this, because if anybody is going to try to get a recorded vote, I will probably object.

Mr. BAUMAN. Mr. Speaker, will the gentleman yield?

Mr. EDWARDS of Oklahoma. I yield to the gentleman from Maryland.

Mr. BAUMAN. Mr. Speaker, if the gentleman would like to propound a parliamentary inquiry, I think the Chair would tell him that there is no way by which this can pass except by a unanimous-consent request. A vote cannot be had on it.

Mr. EDWARDS of Oklahoma. Mr Speaker, I thank the gentleman, and I withdraw my reservation of objection.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

A motion to reconsider was laid on the table.

Mr. ZABLOCKI. Mr. Speaker, I strongly support the bill S. 1235, as amended by the Senate, which represents a consensus among those members of both bodies who have been primarily concerned with the fiscal 1978 Peace Corps authorization.

As the gentleman from Massachusetts (Mr. HARRINGTON) has pointed out, the $82,900,000 authorization level provided in this bill is a compromise, splitting the difference between House and Senate figures.

The Committee on International Relations, as the gentleman has observed, acted on the basis of an initial executive branch request for $81 million, while the Senate Foreign Relations Committee was subsequently in a position to consider the Executives' amended request for $84.8 million. Under the circumstances, the agreement which has been worked out appears to be an entirely reasonable one.

As is evident from the history of this legislation, the Peace Corps is currently in a phase of reorganization and transition, and the new leadership is having some difficulty in putting its "act together."

I personally am deferring judgment on the program until the outlines of the new policies and programs currently being considered are more clearly defined. In the meantime, I believe the new leadership should be given a chance to prove itself and implement its new programs.

In fact, I would prefer that the Agency move cautiously and deliberately in devising such programs rather than hastily and, perhaps, unwisely. Our committee and the House as a whole will have the opportunity to review the record in due course.

This bill also contains an overall limitation of $1,000,000 for so-called nondiscretionary costs and is in line with actions taken in previous years to replace open-ended provisions with specific funding ceilings. The $1,000,000 figure, we are informed, will more than cover salary and other increases imposed by law during fiscal year 1978.

This is a 1-year authorization based on the best available estimates of program costs for the coming fiscal year. These costs, I might add, will be subjected to close scrutiny in the months ahead.

Mr. Speaker, I urge the adoption of S. 1235, as amended.

GENERAL LEAVE

Mr. HARRINGTON. Mr. Chairman, I ask unanimous consent that all Members may have 5 legislative days to revise and extend their remarks on the Senate amendment to the House amendments on the Senate bill S. 1235, to further amend the Peace Corps Act.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

MESSAGE FROM THE SENATE REQUESTING THE HOUSE TO RETURN TO THE SENATE HOUSE CONCURRENT RESOLUTION 317

The SPEAKER pro tempore laid before the House the following message from the Senate:

Ordered, That the Secretary be directed to request the House of Representatives to return to the Senate the concurrent resolution (H. Con. Res. 317) entitled "Concurrent resolution providing for an adjournment of the House from August 5 until September 7, 1977 and an adjournment of the Senate from August 6 until September 7, 1977."

The SPEAKER pro tempore. Without objection, the request is agreed to.

Mr. KAZEN. Mr. Speaker, I reserve the right to object.

I want to know what that last resolution was.

The SPEAKER pro tempore. The Chair will state that the Clerk read it.

Mr. KAZEN. Mr. Speaker, what is the effect? Who is going to explain it or did the Chair just lay it out?

The SPEAKER pro tempore. The Chair will state that the Chair laid the matter before the House and the Clerk read the request of the Senate.

Mr. O'NEILL. Mr. Speaker, will the gentleman yield?

Mr. KAZEN. I yield to the distinguished Speaker.

Mr. O'NEILL. Mr. Speaker, may I say with regard to the concurrent resolution, as I understand, we have received a message from the Senate regarding the concurrent resolution. As the gentleman from Texas (Mr. KAZEN) knows, we passed a concurrent resolution saying that we would conclude business on Friday night, and the request of the Senate is now to return the concurrent resolution. Comity says in view of the fact that that concurrent resolution has been reconsidered in the Senate, the Senate has requested that we send this resolution back to it. This has always been done in the past.

I might add that with respect to the Clean Air Act there could very well be a filibuster in the Senate, or something of that nature, and if such a thing should happen, then the Senate could not concur in the resolution to adjourn on Saturday.

This is the normal way we do this.

Mr. KAZEN. Mr. Speaker, I would inquire whether the Senate concurred in the concurrent resolution?

Mr. O'NEILL. The Senate did and then there was a motion to reconsider within the proper time in the Senate. The Senate had sent the papers over before the reconsideration had been moved. In view of the fact that the reconsideration has been moved, the House has always proceeded in this fashion, and on that basis we will send the concurrent resolution back.

Mr. KAZEN. Mr. Speaker, I thank the gentleman from Massachusetts, and I withdraw my reservation of objection.

The SPEAKER pro tempore. Without objection the request is agreed to.

There was no objection.

COMMUNICATION FROM THE COMMITTEE ON PUBLIC WORKS AND TRANSPORTATION

The SPEAKER pro tempore laid before the House the following communication from the Chairman of the Committee on Public Works and Transportation, which was read and, together with the accompaning papers, without objection, referred to the Committee on Appropriations:

COMMITTEE ON PUBLIC WORKS
AND TRANSPORTATION,
Washington, D.C., August 2, 1977.

Honorable THOMAS P. O'NEILL, Jr.,
Speaker of the House of Representatives,
Washington, D.C.

DEAR MR. SPEAKER: Pursuant to the provisions of section 12 of the Water Resources Development Act of 1974 (88 Stat. 12), the Committee on Public Works and Transportation on July 27, 1977, adopted a resolution stating that the projects listed in the resolution shall continue to be authorized projects.

A copy of the resolution is enclosed.

Sincerely,

HAROLD T. (BIZZ) JOHNSON,
Chairman.

Enclosure.

CONGRESSMAN BRADEMAS PAYS TRIBUTE TO ARCHBISHOP MAKARIOS

Mr. BRADEMAS. Mr. Speaker, I rise to express the deep regret that I am sure is

felt by millions of Americans at the announcemnt of the death early this morning of His Beatitude, Archbishop Makarios, President of the Republic of Cyprus.

Archbishop Makarios was a remarkable man, the leader both religious and political of his country and the father of independent Cyprus. Repeatedly elected by the people of Cyprus, he was its first and only President. He was, Mr. Speaker, an intelligent and tenacious defender of the independence of the small island republic of fewer than 700,000 persons.

Mr. Speaker, Archbishop Makarios led the people of Cyprus through a number of crises, the most recent of which was the invasion and occupation of nearly 40 percent of that country in the summer of 1974 by Turkish armed forces, a condition which persists to this day and which, because it was marked by the wrongful use of weapons supplied to Turkey by the United States, has meant a continuing problem for American relations with Cyprus, Greece, and Turkey.

Mr. Speaker, Archbishop Makarios enjoyed the strong support of an overwhelming majority of the people of Cyprus. He will not be easy to replace in this time of crisis there.

The son of a shepherd in western Cyprus, Archbishop Makarios studied both in Greece and at Boston University in the United States.

I myself, Mr. Speaker, first met the President of Cyprus at a luncheon given in his honor at the White House by President Kennedy in 1962, and I had, together with my distinguished colleague, the present junior Senator from Maryland, the Honorable PAUL SARBANES, the privilege of visiting the Archbishop in Nicosia in early 1975.

He was a man of great charm and personal charisma and it was easy to understand why he had such immense support among the people of Cyprus.

Mr. Speaker, although his was a small country, Archbishop Makarios led it so ably that he earned a place of considerable respect in the councils of world statesmen.

Mr. Speaker, I have little doubt that Archbishop Makarios of Cyprus will come to be regarded by historians as one of the most gifted leaders of our time.

Mr. Speaker, I insert at this point in the RECORD, an article on Archbishop Makarios from the Washington Post of August 3, 1977:

[From the Washington Post, August 3, 1977]

MAKARIOS DIES—SECOND HEART ATTACK IN 4 MONTHS KILLS 63-YEAR-OLD CYPRUS PRESIDENT

NICOSIA, CYPRUS.—Archbishop Makarios, president of the troubled island of Cyprus since it gained independence from Britain in 1960, died early today following his second heart attack in four months. He was 63.

A government spokesman said Makarios, who was to be 64 Aug. 13, died at 5:15 a.m. (11:15 p.m. EDT).

Makarios was taken seriously ill late yesterday. Officials said he suffered a miocardial infarction, or obstruction of blood flow to the heart, similar to his first attack April 3.

All Cabinet members were called to the Archbishop's palace within the walled city of Cyprus at the first news of his illness. Greek Prime Minister Constantine Karamanlis was immediately informed. Two ambulances were seen arriving at the palace with oxygen cylinders and nurses.

Civilian and military police closed all streets leading to the palace to keep away all traffic and noise.

The Greek Cypriot newspaper Simerini said the police and national guard had been placed on alert. But the government spokesman would say only that the situation was "under control."

Makarios, who has never lost the ascetic habits of his monastic youth, was vigorous and healthy before his heart attack in April. The attack came while he was celebrating a Palm Sunday service but he continued the rite despite his pain and was conducting state affairs from his bed the next day. At the time a heavy guard, similar to yesterday's was put outside his sandstone byzantine-style palace.

Makarios became president when Cyprus gained its independence from Britain on Aug. 16, 1960. With no opposition, he was declared re-elected to a five-year term in February 1973.

Makarios has been the major political figure on the island with a population of about 700,000, whose political evolution has been shaped by conflicts between its Greek ethnic majority and Turkish minority.

Greek Cypriots have long advocated enosis, or union with Greece, while Turkish Cypriots have favored partition of the island into Greek and Turkish enclaves.

The archbishop was ousted in a coup led by Greek army officers on July 15, 1974. Five days after the coup, Turkish troops invaded northern Cyprus, occupying about 40 percent of the island which has a total land area of about 3,570 miles.

Makarios returned to office in December of the same year, but on February 13, 1975 the northern sector declared a Turkish Cypriot Federal Wing of the Cyprus Republic with Rauf Denktash as president.

On July 20 this year, the third anniversary of the Turkish military invasion, Markarios addressed a mass rally in Nicosia's main square and declared that Greek Cypriots would "continue the struggle regardless of time and sacrifice until the Turkish agressor leaves our soil."

Makarios' illness created a vacuum in Cyprus state affairs. Under the constitution of the island, when the president of the republic is unable to perform his duties, the president of the House of Representatives takes over as acting president.

But House president Spyros Kyprianou has also been ill for the past three weeks and Makarios visited him at his home last Thursday.

At the time of the 1974 coup false reports circulated that the archbishop had been killed. After disappearing from view for a day or so, however, he broadcast a statement to encourage his followers and then flew off the island to safety.

Eventually, strong international pressure forced the coup leaders to give way and the archbishop returned to office.

The coup had been supported by the military regime then ruling Greece. With the collapse of the plot and the invasion of Cyprus by the Turks the military junta in Athens, which had ruled Greece since 1967, gave way to a civilian government.

The threat of violent death hung over Makarios constantly in recent years.

"I am careful, but the evil deed may happen," the thickly bearded archbishop once replied to a supporter who shouted to him to be careful.

Though he ruled like a benevolent dictator, he was genuinely loved and supported by the vast majority of Greek Cypriots, who make up three-quarters of the population of 647,000. He customarily won well over 90 per cent of the vote in presidential elections.

His unique position as religious and political leader of Cyprus was the basis of his durability. As the archbishop elected for life by universal suffrage, he was guaranteed massive electoral backing.

Those who knew Makarios well characterized him as an immensely charming and charismatic leader without an equal on the island.

He was born Michael Mouskos in western Cyprus, the son of a poor shepherd who sent him to the ancient monastery of Kykko to become a novice monk and receive the schooling the family could not otherwise afford.

He received later education in Greece and studied theology at Boston University in the United States. He rose quickly through the church and was elected archbishop in 1950.

A political activist, he was banished by the British in 1956 and returned in 1959 as the island was preparing for independence.

THE PERSECUTION AND CHARACTER ASSASSINATION OF HOWARD (BO) CALLAWAY AS PERFORMED BY THE INMATES OF THE U.S. SENATE UNDER THE AUSPICES OF THE DEMOCRATIC PARTY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Louisiana (Mr. WAGGONNER) is recognized for 10 minutes.

Mr. WAGGONNER. Mr. Speaker, many of us counted Howard (Bo) Callaway as a friend when he served in this House, representing his State of Georgia with honor and distinction. We watched with a sense of pride when he was chosen to become Secretary of the Army, because he brought to that office the same personal dedication and hard work that had characterized his years in Congress. His reputation for honesty was beyond reproach. His record of public service was enviable. He was a man respected for his talents by Members from both sides of the aisle. In short, Bo Callaway was a man who was respected because he earned that respect.

The cover story in this month's Harper's, "The Persecution and Character Assassination of Howard (Bo) Callaway As Performed By the Inmates of the U.S. Senate Under the Auspices of the Democratic Party," gives a shocking example of how the good works and reputation of an honorable public servant can be brought to ruin by innuendo. It is a sad commentary on America, and this Congress, in the so-called "post-Watergate age." It should be read and remembered, and lessons learned from it, because it reveals how fragile a person's reputation and life's work really are.

No formal charges of illegality or abuse of power were ever made against Bo Callaway. Indeed, no wrongdoing by him were ever found by the six investigations that were conducted. The specter of impropriety was raised, and that was enough. There has never been so much as a half-hearted apology for the wrong that was done to him or even news reports of his vindication in the media that spread the innuendoes against him.

For a man like Bo Callaway, who values honor and a good name above all, this is a cruel fate. I, for one, want Bo Callaway to know that there are those of us in Congress who are ashamed about how he was treated by the greatest legislative body in the world.

He is an honest and honorable man, and I am proud to still call him a friend.

The text of the article follows:

THE PERSECUTION AND CHARACTER ASSASSINATION OF HOWARD (BO) CALLAWAY AS PERFORMED BY INMATES OF THE U.S. SENATE UNDER THE AUSPICES OF THE DEMOCRATIC PARTY

(By Jim Hougan)

This is a Washington story, which is to say that it deals with the technique of character assassination, and, at the risk of committing a tautology, with the tactical use of false appearances, public pieties, and moral fraud. It tells how a cabal of Democratic senators, all of them well known for their fine and upstanding concern for the well-being of the Republic, combined to destroy the reputation of Howard (Bo) Callaway, who, at the time of his impeachment, was President Ford's campaign manager. The hit was sponsored by the Senate subcommittee on the Environment and Land Resources, before which tribunal Callaway was questioned about rumors to the effect that he had used his office as Secretary of the Army to further his financial interests in a Colorado ski resort. There was little evidence for the allegations brought against him, but Callaway was not in the hands of the judiciary. Senate privilege, and not the common law, decided the question of guilt or innocence. As Sen. Lee Metcalf (Dem.-Mont.) remarked, in an effort to give the hearings a semblance of respectability (while, at the same time, explaining the general disregard for Callaway's civil rights), "It's sort of like a grand jury."

Sen. Floyd Haskell (Dem.-Colo.) presided as chairman over the legislative "Gong Show" in which Callaway's reputation was ruined. The hearings exhausted more time and money than the same subcommittee had appropriated to its consideration of the Alaska pipeline—but its effect on the Ford campaign, at least to the parties interested in the result of the eventual election, presumably was worth the price. Sen. Henry Jackson, a Presidential candidate at the time, and chairman of the Committee[1] as a whole, could have stopped the hearings, but he chose not to do so. Instead Jackson indulged himself in a ritual handwashing, seeming pious by virtue of inaction. Sen. Frank Church (Dem.-Idaho), equally pious and also a candidate for the Presidency, was not so circumspect. He failed to attend a single hearing; nor did he bother to read the final Report, but he permitted his proxy to be voted twice in the cause of political expedience. Together with Haskell, Church, and Metcalf, two other Democratic Senators, James Abourezk (S. Dak.) and Dale Bumpers (Ark.) did what was necessary to accomplish the subcommittee's purpose. As is usual in such affairs the press proved itself a willing instrument of the subcommittee, allowing Senator Haskell to leak his innuendos in such a way as to bring down the maximum damage on Callaway. The object of the attack was not so much Callaway himself, but the Presidential campaign of President Ford, which (at the very least) can be said to have come unstuck in the shadow of a Colorado peak known as Snodgrass Mountain.

CRESTED BUTTE

The unraveling of Bo Callaway's reputation can be traced to his hopes for the rejuvenation of Crested Butte, Colorado, a town roughly a hundred miles southwest of Denver. Established in 1829 by representatives of the Colorado Fuel & Iron Co., Crested Butte had waxed and waned for more than a century as seams of coal, silver, and gold appeared and disappeared in its vicinity. At 9,000 feet, the city has always had a rather precarious hold on existence, and local residents sometimes feared that the town might "go the way of Gothic—or even Irwin and Pittsburg." The first reference is to a nearby ghost town, whose empty shells stand as testament to the perils of a one-dimensional economy; the allusion to Irwin and Pittsburg is even more pessimistic in that both these villages have disappeared entirely, leaving no testament at all.

And yet, as long ago as 1971, there was cause for optimism in Crested Butte. After a century of intermittent exodus and decline, the town's citizenry once again numbered more than 500. Many of the new immigrants were urban expatriates whose correspondence with senators and foresters suggests that their values could be looked up in the index to the *Whole Earth Catalog*. But a great deal of the town's new wealth was derived from the local skiing industry, whose fortunes sank below sea level in the mid-1960s. Driven into bankruptcy, the former proprietors of the Crested Butte Ski Area relinquished ownership of their property to a consortium of banks. In 1970, the consortium sold its interest to the Crested Butte Development Corporation (CBDC), a creation of Bo Callaway's.

The scion of a family tree rooted in the loamy traditions of the Old South, Callaway, a husky and distinguished-looking fifty-year-old with a fondness for squash, enjoyed inherited wealth and the benefits of an unsentimental education at West Point. A conservative respect for the value of hard work in a context of free enterprise was tempered in him by a history of family philanthropy. Politically active in the South, Callaway virtually reinvented Georgia's Republican Party in 1964, winning a seat in Congress. At the time, Democratic domination of the Peach Tree State was so complete that GOP candidates were often forced to petition for official recognition of their party. Callaway himself had to obtain more than 100,000 signatures when, in 1966, he returned from Washington to run for governor. A moderate in a decade of rhetorical extremism, he challenged Lester "Give-'Em-the-Axe, the-Axe,-the-Axe" Maddox. He defeated Maddox in the general election, but his victory was short-lived: falling 2 percent short of an absolute majority, Callaway's 48 percent plurality was declared null and void. In a procedure unique to Georgia, the election was remanded into the custody of the state legislature. There, in a sort of mono-partisan Electoral College, the assembled Democrats overturned the popular vote, and gave the governorship to Maddox. Despite the loss Callaway remained a popular and important figure, albeit within an impotent state party. In return for his services, and for his later support of Richard Nixon's candidacy, he was appointed to various state posts and served as Georgia's Republican National Committeeman.

Politics was an important part of Callaway's career, as were his philanthropic and business responsibilities. As president of the Callaway Foundation he presided over "Callaway Gardens," a large and popular southern resort established as a horticultural idyll. As the heir to a textile fortune, he's always been wealthy, and serves as chairman of the board of Interfinancial Inc., an insurance and real-estate combine with more than 16,000 stockholders. His other business affairs, however, were far from the Peach Tree State. Callaway's commitment to the Crested Butte ski resort in Colorado was a multi-million-dollar one that involved rebuilding virtually all its existing facilities. He persuaded his brother-in-law, Ralph Walton, to run the day-to-day affairs of the resort in exchange for an option to buy a one-third interest in the Crested Butte Development Corporation. The future of the firm depended upon its ability to succeed as a so-called "destination ski area." Because Crested Butte is a remote location, its clientele tends to consist of skiers whose priorities are short lift-lines and uncrowded slopes. To compete with the bigger resorts, it must provide "a higher-quality skiing experience," and that entailed rebuilding, refinancing, and expansion.

The logical place for expansion was nearby Snodgrass Mountain. To accomplish this, however, Walton and Callaway needed the permission of the U.S. Forest Service. Much of the vertical land in the country is owned by the federal government, and Snodgrass Mountain is no exception: the county in which it stands is about 85 percent National Forest. There's nothing unusual in the private rental and development of such federal lands. On the contrary, roughly one in three U.S. ski resorts, including Crested Butte, have received "special use permits" enabling them to build lifts and trails on taxpayers land.

[2] Often, as with Crested Butte, the skiing operation is part of a paralled real-estate venture in which the resort-owner builds vacation homes, lodges, and "warming houses" on privately owned land beneath the slopes. Obtaining a special-use permit presents bureaucratic difficulties on a gigantic scale, involving a succession of overlapping jurisdictions: city, county, state, and federal governments. Master Plans, unit plans, site plans, conceptual plans, and development plans must be prepared in various drafts and repeatedly amended, with the firm's criteria, alternatives, and priorities set forth in meticulous detail (with maps and flow-charts appended). Public hearings must be held, commentary solicited, and drafts of Environmental Statements filed detailing the proposed development's projected impact upon local air, water, soil, flora, fauna, noise, fisheries, and waste disposal. It is, in short, an enervating, if necessary, procedure requiring entrepreneurs to tread capital for years. Because the process is more or less indifferent to fluctuations within the economy, oil embargoes, interest rates, and changes in tax law, it occasionally happens that the money runs out while the permit pends. In any event, the businessman must endure a financial rite of passage during which the value of his assets is in doubt, and planning is well-nigh impossible. For all he knows, he's sitting on another Comstock Lode—or another Irwin.

So it was with the Crested Butte Development Corporation. In the spring of 1971, Callaway's firm formalized year-old discussions with the Forest Service, submitting a revised Master Plan for the resort's development—including a plan for expansion to Snodgrass Mountain. If and when that Master Plan should be approved, CBDC could begin the tortuous process of applying for a special permit which, if granted, would enable the development to take place. A decision on the Master Plan, however, would have to wait upon the Forest Rangers' completion of the East River Unit plan. (This was a document pertaining to the area of the Gunnison National Forest which contains the Crested Butte ski resort and Snodgrass Mountain.)

So Callaway knew he was going to have to wait. And wait. And wait again. He would wait for the Forest Service to produce a draft of the East River Unit plan. He would then attend upon public hearings and revisions of that draft. At each stage of the proceedings, his firm would be required to prepare a series of increasingly detailed environmental impact statements, each of them requiring negotiations with the Forest Service. Assuming that all of these obstacles were successfully overcome, CBDC could then, and only then, apply for a special permit—and, of course, wait years for a decision. And, in the end, if all permissions were granted, and if the money were still available, a few thou-

[1] The Senate Committee on Interior and Insular Affairs, to which the subcommittee on the Environment and Land Resources is responsible.

[2] From Forest Service statistics: the actual figure is 174 out of 522.

sand more vacationers could be hauled up to the top of a mountain where they would be allowed to pay for the privilege of roaring down 11,000 feet on snowflakes on slim boards of plastic.

A METICULOUS ARMY SECURITY

Bo Callaway became Secretary of the Army on May 15, 1973. If few people took notice of the appointment, they can hardly be blamed. In Washington that week almost everyone was consumed with anticipation of the testimony that James McCord was to give to the Senate Watergate Committee two days later. In any case, Callaway's office was a sub-Cabinet post that carried more honor than responsibility. As Secretary his most important job would be to "make the All-volunteer Army work." How seriously he took that task would be up to him.

In the Senate confirmation hearings, Callaway submitted his financial affairs to public scrutiny. Satisfied that there were no conflicts of interest, the Senate allowed him to take office in the Pentagon.

As a West Point graduate, Callaway had a special affection for the Army and for his new role as its commander. ("I loved that job. It was the best job in Washington. It was the best job I ever had.") Accordingly, he became an active Secretary, traveling from one military base to another in every part of the world. By all accounts, these were working visits during which Callaway would hold inspections, attend receptions, and give speeches about the virtues of a volunteer army.

The Watergate scandal must have seemed a world apart. But the atmosphere of suspicion created by it led Callaway to take precautions with what the Army's General Counsel later described as "an overabundance of care." On those occasions when Callaway's wife accompanied him on official trips, the Secretary reimbursed the government for her passage—despite a ruling that he needn't do so. He ordered a meticulous log kept of his telephone contacts and though it was unnecessary, he reimbursed the Army for every personal call. Even in the matter of postage, Callaway was circumspect, supplying his secretary with stamps for use on his private mail. Moreover, and again as his behest, a record of his daily activities was maintained: submitted to the Senate under unhappy circumstances, the record showed that, during his twenty-seven months as Secretary of the Army, he accumulated more than 3,000 hours of "overtime" by working twelve-hour days and weekends. Of this amount, he recovered perhaps forty hours, spending less than five minutes per day managing his private affairs from his office in the Pentagon—a minuscule amount in view of his holdings.

In all things, Callaway was governed by policies and regulations promulgated by the Department of Defense (DOD). The evidence is clear that he followed them to the letter. Despite the impression created by Senate Democrats, Callaway has never been publicly accused—by anyone—of breaking any law or violating any policy governing the demeanor or actions of a public official.

Admittedly, the precautions described above were as much a result of political prudence as ethical conviction. The point, however, is that Bo Callaway gave every *appearance* of being an honest and hardworking public official. And, in the end, that's what it came down to: appearances. The Senate inquiry in re Callaway would do everything in its power to uncover wrongdoing, but it would have to settle for the appearance of impropriety, an appearance, moreover, that the Senate would itself create by the simple means of questioning the man's integrity. In their own way, Senate Democrats would wage the same war of innuendo against Callaway that George Smathers once waged against Claude Pepper. ("Are you aware," Smathers used to harangue voters, "that Claude Pepper is known all over Washington as a shameless extrovert? Not only that, but this man is reliably reported to practice nepotism with his sister-in-law, and he has a sister who was once a thespian in wicked New York. Worst of all, it is an established fact that Mr. Pepper, before his marriage, practiced celibacy."[3]) Callaway would be found guilty of similar offenses.

While its owner served in Washington, the ski resort hummed. Although the East River Unit plan was years from completion, Callaway's brother-in-law helped incorporate the town of *Mount* Crested Butte (population 150 plus). Located only two and a half miles from its "sister city" to the south, the new town virtually guaranteed local approval of CBDC's plans for Snodgrass Mountain. Opponents of the new municipality charged that an "end-run" had been committed and that Mount Crested Butte would be a "company town." While CBDC disputed both descriptions, they seem accurate enough. Many of the new town's residents work for the firm, and its financial condition has a direct impact on virtually all of the town's residents. What is not valid, of course, is the implication that a "company town" includes a "company store." Incorporating Mount Crested Butte, therefore, was a logical business decision, and entirely within the letter and spirit of relevant laws.

Soon after the town's incorporation, however, fateful events occurred. Responding to a Forest Service request for statistical data, CBDC provided figures that would be used to calculate the resort's skiing "capacity." The capacity of the resort would be used by the rangers to decide upon the *timing* of the proposed expansion (if and when permission should be granted for it). Until there was a *need* to develop Snodgrass Mountain, the rock would remain untouched. What made this event "fateful" was the fact that the Forest Service used the CBDC figures to calculate the area's "maximum capacity"—rather than its "comfortable capacity." The distinction is a critical one for a "destination ski area." Using the wrong formula, the Forest Service arrived at the erroneous conclusion that the Crested Butte ski area was years away from any need to expand. If the resort would not, as the wrong numbers suggested, reach "capacity" for another decade, local Smokeys responsible for preparing the East River Unit plan could safely procrastinate upon the expansion proposal. They need only label it as a subject of consideration for some future time.

Repeated delays of the plan's publication, however, were frustrating to CBDC. They had waited five years for a decision. Their original request had been made at the height of the Vietnam war. Since then the Paris Peace Talks had come and gone, detente had been reached, wars had begun and ended, and a President had been elected and politically impaled. The *world* had changed, and still there was no decision as to whether or not Bo Callaway would be permitted to put a ski lift on Snodgrass Mountain. And though CBDC had good reason to expect a favorable decision, the firm needed an official commitment.

SUSPICIONS

The trouble began in January 1975, with the release of what was called "a tentative draft" of the East River Unit plan. The purpose of the draft, as the document itself stressed, was to generate public discussion, in consideration of which changes would be made. The reader may not be surprised to learn that the plan was ambiguous on the subject of Snodgrass Mountain. The good news was that "The management we [the Forest Service] propose for the Snodgrass Mountain area will protect its potential for future ski area development." The bad news was that the expansion would not be permitted "at this time" in view of the fact that "Crested Butte Mountain appears to have sufficient development capacity to satisfy public skiing demands . . . for approximately 10 years."

So after five years of waiting for a decision. Callaway was told that the Forest Service proposed to make a decision in ten more years.

CBDC contacted the Forest Service, pointing out that the tentative plan was based upon the misleading formula for "maximum capacity." They were told to submit new figures, and it was stressed once again that the tentative plan was subject to major revision. The new figures submitted by CBDC showed that the Crested Butte ski area would exceed its comfortable capacity within two years—and that, therefore, expansion to Snodgrass Mountain required a prompt decision.

A month after the tentative plan was released, two things happened, and both of them aroused suspicion. First, John T. Minow, the Forest Supervisor responsible for the East River Unit plan, was promoted and transferred to Denver, leading some to speculate that his expatriation from Crested Butte was "a punishment" for his work on the plan. In fact, however, the promotion preceded the plan's release by more than two months; the outgoing supervisor, moreover, was considered favorable to the expansion proposed by CBDC. By an unfortunate coincidence, however, his replacement, Jimmy R. Wilkins, was another career forester whose last assignment happened to have been in Atlanta, Georgia; in the atmosphere created by Watergate. it was inevitable that some would suspect a conspiracy. In fact, however, the new supervisor had never met Callaway or any other CBDC employee—and had, like his predecessor in Crested Butte, learned of his transfer long before the tentative plan's release. Both transfers, in other words, were routine—as the Senate later found. But people wondered at the time.

The second event generating suspicion was the rejection of the tentative plan by the regional Forest office in Denver. A month after the plan's release, the regional office described it as "unsuitable," pointing out that it included no alternatives, contained technical and factual errors, and actually violated the National Environmental Policy Act (NEPA). A "tentative" document in the first place, it was also erroneous and contrary to law.

Meanwhile, the revised figures provided to the Forest Service by CBDC resulted in a reconsideration of the tentative plan's approach to the Snodgrass Mountain issue. It appeared to those preparing the East River Unit plan in the spring and summer of 1975 that the expansion ought to be considered and not deferred. To some of the residents of Crested Butte, it appeared that the Forest Service had undertaken a dramatic reversal of position following what amounted to the wholesale transfer of local rangers to the asphalt jungles of Denver and Durango. That the new man in charge of the local office was "from Georgia" (and ipso facto thought to be a "crony" of Bo Callaway's) seemed "too coincidental." Talk of political pressure made the rounds of the chalets, and a veil of conspiracy-theory settled over the town. Not since Irwin and Pittsburgh vanished had local residents had so much to talk about. In their own way, they'd become a part of Watergate. Like everyone else in America, they'd been *touched* by current events.

To some of those in Crested Butte, unfolding events surrounding the ski resort resembled a scenario for a sequel of a Billy Jack film: as the romance was perceived, "progressive youths," nostalgic for time past and an innocence that never was, found their

[3] Miami *Herald*, *Tropic* Magazine, May 2, 1971.

inner peace and outer surroundings threatened by what they believed to be a corrupt and rapacious pol, a wheeler-dealer bent upon demolishing the wilderness from the vantage of his Pentagon aerie. "Working within the system," the youths would nevertheless triumph through the courageous efforts of the town's embattled newspaperman, a feisty mayor, and a liberal senator. As a film, the scenario was as plausible as it was hackneyed. But as reality, it was only the fantasy of suspicious naifs.

THE ARBER MEMORANDUM

Bo Callaway left office as Secretary of the Army on July 3, 1975, on the eve of America's Bicentenary celebration. His new post was much more influential than the one he'd just left: Callaway had been named campaign manager for the incumbent President, Gerald Ford. At the time of Callaway's appointment, Ford's chances for succes appeared great. Not only was he liked by most Americans, but he had skillfully sloughed off the Pardoner's image, exchanging it for one of Healer. With numbing frequency, the citizenry was told that "Watergate is behind us" and that the man in the White House was, above all else, a Decent Man. It seemed unlikely that the electorate would reject a well-liked incumbent in the Bicentennial year, opting for still further change in the aftermath of the Watergate maelstrom. On the contrary, the word in the streets was "Slow it down. Just. slow. it. down." Callaway and Ford understood that, and also understood that the biggest threats to their success were internal. "The enemies within," so far as they were concerned, were the possibilities that Watergate might somehow be reinvented, and that the party's militant right wing might somehow slip its leash. But, so long as Nixon remained under de facto house arrest, and providing that Ronald Reagon could be trounced in the opening primaries, the future was Ford's.

The Democrats were in their usual disarray, divided between a redistribution of the wealth and the immediate invasion of Soviet Russia. Sen. Edward Kennedy remained in political hermitage, and a multitude of other candidates spread across the scene, muddying it. Senators Henry Jackson and Frank Church were noisily engaged, as were Hubert Humphrey, Fred Harris, Gene McCarthy, George McGovern, and Mr. Carter, but few people thought they could win. The best analysis indicated that they'd get 48 percent of the vote, regardless of who ran, and alienate the staff of Ms. magazine.

What the Republicans did not anticipate, however, was the impact of the Crested Butte Chronicle, a weekly newspaper with a circulation comparable to that of a college "little magazine." The proprietor of the Chronicle is Miles Arber. A graduate of New York University Law School, Arber did not fail to notice the local controversy swirling around Callaway's resort. And it seemed to him that, as he later said, "something funny" was going on. Accordingly, at about the time Bo Callaway took over the Ford campaign, the small-town publisher "got together with" the mayor of Crested Butte, Tommy Glass, and a Gunnison County judge, John Levin. "We all thought it looked mighty strange," Arber said, referring to developments in Crested Butte, and so "we agreed to keep an eye on" the situation.

In October, Glass and Levin decided that their suspicions justified a "full-fledged" Senate inquiry. Armed with their doubts, they went to Denver for a meeting with Sen. Floyd Haskell, chairman of the Senate subcommittee on the Environment and Land Resources. A lifelong Republican who'd held senior posts in the Colorado State legislature, Haskell switched his allegiance to the Democratic party in 1970. Because that reversal of loyalties took place the day after the invasion of Cambodia, the apostasy was widely interpreted as an act of courage and moral principle. And, while Haskell did not pay a high price for the switch (indeed, he was elected to the U.S. Senate one campaign later), the change seems to have been more than superficial. As a former Denver tax lawyer, he'd represented some of the largest and most conservative corporations in America. Upon entering the Senate, however, Haskell revealed himself to be an uncompromising liberal and a powerful advocate of environmentalists' concerns. The depth of the change surprised many of his colleagues who, in trying to explain it, resort to religious metaphors about the convictions of those who have been "twice born."

Confiding their suspicions that a conspiracy was in progress, the mayor and the judge won a promise from the Senator to keep their rendezvous a secret. Judge Levin later testified that the secrecy pledge was sought in an effort to protect Callaway's reputation from harm. It may be cynical, but one might also add that the secrecy pledge had another virtue: it kept Callaway in ignorance of the innuendos raised against him and put him at the mercy of events that would transpire "behind the scenes." Haskell asked the pilgrims from Crested Butte to provide him with a statement in writing. Returning home, Glass and Levin told Arber of their secret mission and asked him, as a journalist, to prepare a confidential "memorandum" for the Senate.

So great was the atmosphere of paranoia and intrigue in Crested Butte that every event pertaining to the resort assumed a significance of vast proportions. When the CBDC Master Plan appeared in the Appendix of the first published draft of the East River Unit plan, Arber et al. apparently viewed it as proof that a decision had been made favoring expansion to Snodgrass Mountain. In fact, the Master Plan was added to the larger document in an effort to satisfy legal requirements that Unit plans include alternatives that the public might review. Still, it was apparent that the Forest Service was considering the expansion, contrary to recommendations contained in the "tentative plan" rejected months earlier. This, then, was the first public indication that CBDC would eventually get its way.

In January, while Callaway was managing President Ford's primary campaign to an unbroken string of successes, Arber completed his "confidential report" to the Senate.

Its opening pages analyze the "disastrous" financial condition of CBDC, describing the ski resort as a "marginal" operation. Pointing out that "bankruptcy was clearly unacceptable to a man as highly politically motivated as Callaway," Arber asserts that the firm's only chance for survival rests upon its ability to attract new capital. Depicting Callaway and Walton as financial desperados—"men who would do whatever had to be done"—the publisher notes a series of "ploys," "foils," and "schemes" carried out by "sleight-of-hand." Addressing the issue of expansion, Arber mentions Forest Service fears that "development might interfere with the life of the elk who make the mountain their habitat and that . . . expansion . . . might have a deleterious effect on . . . the former ghost town of Gothic . . . where the Rocky Mountain Biological Laboratory conducts its research." Claiming that CBDC has "its back . . . against the mountain," Arber tells how "Reports of private meetings between CBDC executive personnel and Forest Service personnel began leaking out, the reports being to the effect of some heavy pressure being brought to bear on the men responsible for [making a] momentous decision." Subsequent to this "personal pressure," "one by one, the local personnel . . . were transferred" and replaced by an "inexperienced" group led by a man from Georgia.

In conclusion, Arber put together a remarkable sequence of rhetorical innuendos: "How much influence was asserted by the CBDC both directly and indirectly and just what form that assertion took; the role of Callaway and his associates in asserting additional influence on a national level in Washington, D.C.; why local Forest Service personnel opposed to the designs of the CBDC were all transferred . . . and replaced by people whose only apparent advantage was their lack of familiarity with the entire matter. How much collusion existed on the part of high-level Forest Service personnel . . .; why public sentiment . . . was ignored; why the final plan inexplicably reversed earlier . . . policies and . . . the judgment of the experienced local Forest Service personnel; what further machinations of the CBDC will be condoned . . .; and the implications for the people of this valley and their descendants—these are the questions and doubts that remain. . . .

"For all of the foregoing reasons and all the doubts that have arisen in our individual minds . . ., we feel justified in relaying this information with a request . . . [for] a far-reaching investigation. . . . This request is made with the hope its results will either lay these doubts finally to rest or . . .vindicate all the doubts and suspicions which honest men have had to acknowledge have intruded themselves so profoundly and implacably into their consciousnesses during the course of being witnesses to this unsetting episode."[1]

Ploys, schemes, scenarios, designs, and machinations! The doubts and suspicions of honest men! Mysterious changes and strange ways! The memo's grammar is the best index to its accuracy. The analysis of CBDC's financial condition was muddied and inept. Senate Democrats would later be shocked to learn that the skiing operation was making a profit on its own, exclusive of real-estate enterprises, and that, moreover, Callaway had no personal notes outstanding on the property. That bankruptcy was an "unacceptable alternative" to Callaway is probably true, as is the assertion that he's a "politically motivated man." As it happens, however, Callaway was a rich man unlikely to go bankrupt. And, as for his political motivations, they were explicit enough: he was Ford's campaign manager. By referring to them in the way he did, Arber harkened back to George Smather's old speeches; he might as easily have called Callaway "a known ectomorph and masticator."

As for "reports of private meetings" between CBDC and Forest Service personnel, Arber is correct: there were frequent discussions between the two groups—as one would expect. Where Arber leads us astray, of course, is to imply that there was something wrong with this. He mentions reports of these meetings that the "heavy pressure" that's been brought to bear. We're given the impression, in the context of the questions Arber later raises, that this pressure is intense and out of the ordinary. The implication to be drawn is that Bo Callaway is yanking strings in Washington, threatening to ruin the men's careers if they don't give him what he wants.

Arber never indentifies the sources of these reports, but there's no need to speculate: since the meetings were "private," the reports presumably came from the rangers themselves. And yet, each of the rangers and all of their superiors would later testify under oath that no such pressure was exerted or felt; nor had any of them ever said otherwise to anyone. As Arber told the Senate, "I don't know what went on within the Forest Service." And, in the end, the Crested Butte publisher leaves us with a set of rhetorical questions whose obvious intent is to suggest criminal activity on the part of Callaway—without ever, of course, accusing him of anything per se.

The technique is not an unusual one. In-

[1] All quotations from the so-called "Arber Memorandum" to Senator Haskell.

deed, it's become the hallmark of an entire genre of post-Watergate journalism—what might be called "interrogative" as opposed to "investigative." In this feudal genre, the words "May" and "Seem" reign as king and queen over a dazzling court of "machinations," "scenarios," and lordly "ploys." Clustered below the salt like so many syllabic catamites, anxious to serve their conditional lieges, are the Facts—ignoble and dowdy, they combine and recombine for an assembly of stooped, but venerable, Question Marks, the grand viziers of innuendo.

And yet . . . and yet, while the Arber memorandum deserves to be criticized, there is no cause to interrogate Arber's own motives in writing it. As a citizen of Crested Butte, concerned about the town's welfare and the integrity of government, he had the right to petition his representatives in Congress and to advise them of his suspicions in any manner he saw fit.

A MATTER OF TIMING

On the other hand, it's hard to understand how Callaway's reputation could depend upon Arber's document, but that it did is certain. Some time after receiving the memo, Senator Haskell wrote to the Forest Service, asking for an explanation of the "disturbing allegations" he'd received. Interestingly, Arber later disputed that characterization of his memo's contents. ("I have not made any accusations against Mr. Callaway. I myself never accused him of any wrongdoing, per se. . . . You notice," he added helpfully, "I didn't allege these as charges. These are the questions and doubts. . . .") Haskell's timing was also interesting. He'd spoken with Arber in December, having talked to Levin and Glass months before that. Why he should have waited until February 19 before asking the Forest Service for an explanation has never been made clear. A subsequent statement of Arber's, however, is explicit. "I spoke to Haskell in December," he said, "and I said let's wait on . . . [the] beginning of the ski season. I think it can have a devastating effect . . . I would like to make sure that when it comes out it has a national impact."

To some—notably Callaway and the minority which supported him—Haskell's delay suggested that he agreed with Arber. And this raised an important question: What did the Colorado publisher intend when he referred to a "devastating effect"? Was it an effect that he and Haskell sought, or did they seek to avoid it? According to Arber, he feared the devastating effect which a scandal might have on the economy of Crested Butte, and so urged that the investigation be delayed until the spring. With the snows melting on Snodgrass Mountain the skiing season would be at an end. News of Callaway's activities might in other words, have a "national impact" in March without deterring a significant number of skiers from visiting Crested Butte. If this was Arber's only concern, his prudence seems to have been unnecessary. Townspeople assert that, when the scandal became a subject of national news, they began to get calls from relatives and friends around the country, remarking upon the physical beauty of Crested Butte and their intentions, therefore, of visiting it. Callaway himself, in a giddy moment of gallows humor, later remarked to the Senate that the scandal has "put Crested Butte on the map . . . the dream of our marketing department has come true. We have pushed Vail, Aspen, and Sun Valley to the back pages."

That was true. But it was also true that, by waiting until spring, Haskell and Arber made it possible for the national impact of the scandal to fall most heavily upon the Ford campaign. The economy of Crested Butte would be spared the effect of media attention (whether good or bad), but Gerald Ford would not. He would lose his campaign manager, and the integrity of his administration would be cast in doubt. News of the supposed scandal would project a baleful sense of déjà vu upon voters, inviting comparisons between Callaway's allegedly alleged activities, Watergate, and Teapot Dome. If the intention was to have a devastating effect upon the Ford campaign, it would do no good—indeed it would be a political disaster—to convene hearings at too early a date, especially in view of the Arber memorandum's questionable contents. Whether or not that *was* the intention is a matter of speculation.

In any case, Haskell waited months before contacting the Forest Service. The inquiry was an important formality: appearances, at least, demanded that the records show that an effort had been made to check Arber's innuendos before acting upon them. Failing to make such an inquiry, Haskell might easily find himself dangling from his own petard.

But that Haskell intended to call an investigation (even before the Forest Service could reply) appears certain. The possibility had been mentioned as far back as October, according to Arber, who adds that, in January, Haskell "promised to hold fair hearings."[5] And, while Senate Republicans were kept in ignorance of those intentions, NBC was not. Again according to Arber, who'd contacted the network's "head office," "NBC was called in and assisted in the gathering of further evidence in the case and when they agreed with Haskell that there were some reasonable grounds to suspect malfeasance of office on the part of Callaway . . . they agreed to break the story nationwide."[6] (Or, as the publisher later explained, "I called in NBC News and I said, 'Well, gentlemen, I think we have the makings of a major national issue here.'"[7] That commentary infuriates Jim Polk, the reporter who covered the story for NBC. Polk denies that there was any collusion between himself and Haskell with regard to the timing of the news. While it's true that Haskell leaked the Arber memorandum to Polk—and that, as early as February 25, Haskell discussed with Polk his intention to hold hearings—Polk says, "The memo was silly. There was nothing in it but Arber's conspiracy theories, and I didn't have much faith in the rumor about the Forest Service transfers." Nevertheless, Polk says, there was a "remote possibility" that there might be something to it and, as an avid skier, that was all the encouragement he needed to visit Crested Butte. Before leaving, Polk promised to keep Haskell informed.

After writing to the Forest Service and providing Polk with Arber's musings, Haskell waited. For its part, the Forest Service acknowledged the senator's inquiry on the day it was received, promising an immediate report. On March 8, as that report went into the mail, Haskell was suddenly galvanized into action. Claiming that the rangers were dragging their boots, he made a formal request for a Senate investigation. Two days later, the reply from the Forest Service arrived in his office, discrediting each of the allegations and explaining the agency's procedures in detail. Nevertheless, Haskell says he was "disturbed and troubled" by the response, falsely characterizing it as "incomplete, inadequate, and, perhaps, misleading."

Meanwhile, Bo Callaway knew nothing of Polk's presence in Crested Butte, the Arber memorandum, or Haskell's intentions in Washington. His concern at the time was with impending primaries in Illinois and North Carolina, primaries intended to write finis to Reagan's candidacy. Already Reagan had lost badly in New Hampshire, Massachusetts, and Florida; polls indicated that the incumbent President would win easily in both the March 16 Illinois primary and the March 23 contest in North Carolina.

Callaway, of course, was not entirely unaware of the controversy in Crested Butte. His information, however, was limited to what Arber published in the *Crested Butte Chronicle*. Accordingly, Ford's campaign manager was unconcerned. The dispute was a local matter, in his opinion, and he could answer the *Chronicle's* editorials after the November election.

In fact, the opportunity came sooner than he'd expected. And, while Callaway is noted more for his ability as a squash player than for his talent as a gymnast, it's fair to say that, as of March 10, 1976, he could kiss his ass goodbye.

TRIAL BY HEADLINE

March 10 was the day Jim Polk learned of correspondence between Callaway's brother-in-law, Ralph Walton, and Richard Ashworth, a Deputy Under-Secretary of Agriculture. It seemed significant to Polk, rummaging through Forest Service records in Gunnison, because the Forest Service is a part of the Department of Agriculture. That Walton was in contact with Agriculture officials in Washington suggested (correctly) that he'd gone over the heads of local rangers. There was nothing wrong with that, but Polk wondered, "Why Ashworth? Who's he?"

Checking further, he found that Ashworth was an ex-reporter who's served as a speechwriter in Callaway's Georgia campaign for governor. Looking even deeper, Polk learned that Ashworth met with Callaway in the Pentagon on July 3, 1975. Accompanying Ashworth to that meeting were Phil Campbell and an Associate Chief Forester, Rex Resler. Campbell, it turned out, was an Under-Secretary of Agriculture and, like his subordinate, a Georgian who counted Callaway as a personal friend. According to those involved, the meeting was "a courtesy call" arranged a few days earlier at Ashworth's suggestion. It took place during Callaway's last four hours in office, and one of its main purposes was to give him a briefing on the status of Crested Butte. Five months earlier, in the wake of the tentative East River Unit plan's release, Callaway had telephoned Ashworth, complaining about the non-decision. According to a memo written by Callaway at that time: "At Ralph's request, I called Richard Ashworth to tell him that I would appreciate it if someone could look at this clearly on the merits. This goes against the assurance we have been given by the Forest Service since 1971 . . . I made it very clear to . . . Ashworth that I did not want any special favors and that we thought this should be judged on its merits only, but that we felt we had a very strong case. . . ."

Whatever their "case," NBC had its story nine months later. After a great deal of searching by a Pulitzer prize-winning reporter, the "appearance of impropriety" was finally unearthed. All that was necessary for the 'impropriety" to become a fait accompli in the eyes of the public was for the Pentagon meeting to be made known. Jim Polk is aware of that irony, and expresses sympathy for Callaway. "I'm not sure I agree that the *appearance* of impropriety should be enough to convict government officials of wrongdoing. But it is. In my opinion, though, that meeting—the meeting itself—*was* improper. If I hadn't thought that, I wouldn't have put the story on the air. But I don't think that Callaway had any intention of using improper influence. I'm sure he thought that there was nothing wrong in meeting with Resler and his friends. It's unfair, I suppose. There never would have been a story if Callaway hadn't been who he was: Ford's campaign manager. If he'd been a first- or second-term Congressman—in fact, if he'd just stayed Secretary of the Army—we wouldn't have touched it. But that's the news business." The comment is remarkably candid in its acknowledgment

[5] Speech to the Gunnison Lion's Club, March 29, 1976.
[6] *Crested Butte Chronicle*, March 18, 1976.
[7] *Op. cit.*, Lion's Club speech.

of the methodology employed against Callaway. Ford's campaign manager was singled out, Polk admits, not for what he did—but for who he was.

At the time of his discovery, Polk was using Arber's office as a base of operations and keeping the Colorado publisher informed of his findings. Reportedly, Arber was overjoyed by news of the Pentagon meeting—so much so that Polk, fearing what he might do with (and to) his scoop, wrote a story for the *Chronicle's* next edition. Studiously avoiding any mention of the Pentagon meeting, Polk's anonymous article reported Senator Haskell's intention to announce an investigation to the Crested Butte controversy. *That* information, Polk says, came in a March 10 phone call from Haskell to Arber. The significance of this fact is that, on March 10, Haskell had less reason for suspicion than ever before. Rumors concerning the transfer of local personnel had been quashed: both the Forest Service and Polk agreed that the transfers were routine and even overdue. Nor was there any connection between Callaway and the rangers' replacements. Lacking that tenuous foothold in fact the Arber memorandum was an anthology of baseless innuendos. Nevertheless, Haskell was determined to hold hearings.

On March 12, Polk confronted Callaway at O'Hare Airport. The Illinois primary was at its height, and the circumstances for the interview were less than ideal. Minutes before Air Force One touched down, tornados ripped through Chicago's suburbs, blowing houses away. As the wind roared in his ears, Callaway heard Polk ask, "What took place at the meeting in the Pentagon?" Startled by the unexpected question, Callaway replied, "We just said we had been asking for this thing for four or five years, and we'd certainly appreciate getting a chance to have our views known." With that interview on film, Polk telephoned Haskell's office, advising them of the Pentagon meeting. Twenty minutes later, Haskell called back to provide the broadcast with its hook. Callaway, he said, would definitely be called to testify under oath at hearings the following month. Like the rest of America, *including Republicans on the Haskell subcommittee*, Callaway would learn of the hearings on the "NBC Nightly News."

Haskell's enthusiasm was perhaps understandable, but his decision would later lead other members of his subcommittee to accuse the Colorado Democrat of having conducted "a campaign more concerned with timing than with truth, with publicity rather than propriety." At the time he told NBC of his decision to question Callaway, Haskell had yet to show the Arber memorandum to subcommittee Republicans, nor had he informed them of the investigation getting under way. The partisan nature of the hearings, then, was self-evident even before they began: Indeed, the April hearings were merely an extension of the trial-by-headline orchestrated in March. Proof of that rests with Haskell's announced intention to interrogate Callaway in the Senate—knowing full well the effect that this would have on the Georgian's reputation—even before the investigation had begun. A week after his announcement, subcommittee investigators were journeying to Colorado in an effort to substantiate Arber's quasi allegations. After examining thousands of documents and questioning dozens of witnesses, they reported that the record showed that:

There had been no "reversal" of Forest Service position on the Snodgrass Mountain issue.

There was "no positive evidence" to indicate that any pressure or direction had passed from Washington to regional rangers.

There was nothing to indicate that the local transfers were anything other than routine.

There was "no evidence" that Callaway was acquainted with the rangers' replacements in Crested Butte.

The Arber memorandum, in other words, was useless. Had Haskell waited upon the results of his field investigation before imputing Callaway's guilt, it's unlikely that hearings into Crested Butte would have been held. At this point, Haskell was committed. By mid-March, Callaway's reputation and political career had already been destroyed. To have cancelled the hearings for lack of evidence might have exposed Haskell to charges of character assassination and political opportunism. The hearings would have to be held, and, sadly for Callaway, the reputation of his inquisitor probably would depend upon their outcome.

THE DEVASTATING EFFECT

Polk's broadcast, carrying news of the scheduled hearings, had a sensational effect. Hours after the news flickered across the television screen, Callaway took leave of the Ford campaign intending to return within a week or two. The Pentagon meeting was not, in his opinion, an improper one. He had a right to meet with Agriculture officials about Crested Butte, and there was nothing unusual in his request that the Forest Service expedite its decision in his favor. On the contrary, literally thousands of such contacts take place in Washington every year.[8] As for the meeting being held in his office, Callaway says, "It was my last day! I'd already resigned as Secretary of the Army. What was I supposed to do? Two friends I'd known for years asked if they could pay a 'courtesy call'—and I said 'fine.' Where else should we have met? In a hotel room? What would that have looked like?"

So Callaway thought the issue could be disposed of in a relatively short time. Working with his attorneys and aides, he gave the Senate a voluminous file, documenting every letter, phone call, and business contact he'd had in the preceding twenty-seven months. That file would eventually comprise more than half of the Senate's written record. It would also show that Callaway had written thank-you notes to those he'd met in the Pentagon and that, in a two-year period, he'd called Richard Ashworth exactly twice. Because the notes were typed on stationery belonging to the Secretary of the Army, this would be construed by Senate Democrats as further evidence that Callaway abused his office, attempting to bully the bureaucracy with subliminal hints at his power. To Callaway, however, it had seemed a casual thing: a letter from the President's campaign manager would have been more impressive had he actually intended to invoke his "political influence." In any case Callaway could hardly have disguised his position, unless he'd chosen to write in crayon on pages torn from a spiral notebook, signing them "You Know Who." In fact, Callaway used his Army stationery even when writing to his family. Indeed, one such letter to his brother-in-law describes the Pentagon meeting, and suggests rather clearly that the Forest Service was not intimidated:

"Ralph: I really couldn't get too much out of Rex Resler. Every time that I thought I had him pinned down, something else came out . . ." Not that the session was a complete bust. The letter continues, "But with Phil [Campbell] and Richard [Ashworth] listening, he did agree that there would be no timing on the issue of whether Snodgrass is in the ski area or not. I believe we can hold him to this commitment."

As it happened, Callaway was wrong about that but, after March 12, it hardly mattered. Following Polk's broadcast, Callaway's fortunes precipitously declined. Some people within the Ford campaign saw the Georgian's problem as a political opportunity for themselves. Accordingly, they isolated him from the President and demanded that his leave of absence become a resignation. Callaway refused, still thinking he could clear himself. By March 15, however, rumors involving Callaway were metastasizing in the national media. Besides the Senate's, there were at least six other investigations under way,[9] and no allegation was too fatuous in report.

From Colorado, a tale of bribery emerged, becoming national news a month after it first surfaced in the Gunnison County Times. According to that newspaper's managing editor, Kyle Lawson, the story came about in the following way: "A woman who refused to give her name asked if the newspaper was aware of a $135,000 bribe allegedly paid to the Forest Service and various Forest Service officials for a favorable reaction on the CBDC application to expand. . . . She said she had heard this information at 'a party.' She would not say from whom she had heard the rumor. And, shortly after divulging the information, 'for whatever you want to do with it,' hung up. I was skeptical of the remark and told her so and warned her that the repeating of the rumor was tantamount to scandalous libel. The County Times did nothing with the report, feeling it . . . to be unfounded." Well, not exactly. The editor continues: "However, when the opportunity came to interview [Forest Ranger] Wilkins, our reporter did broach the subject with him to see if the Forest Service had also heard of this rumor. With the resulting decision on Mr. Wilkin's part to call for an investigation, we felt we had no choice but to print such a call and give the reasons for it." So much for Free Will.

By asking the Forest Service about "the bribery rumor," the County Times created a news story, elevating a crank call to the stature of a scoop— albeit one with so little foundation that national media wouldn't touch it until mid-March. By then, Callaway's reputation was beyond the help of an oxygen tent. The March 14 issue of the Denver Post was a veritable broadside against Ford's campaign manager, devoting a yard of news space to the leaked and baleful suspicions of Arber and Haskel. With the publication of that story, the Colorado edda moved to the front pages of the Washington and New York papers, encasing Callaway's reputation in editorial cement.

As the month wore on, Callaway twisted in the wind of print. Reports of senate investigators interviewing Forest Service officials were page-one news in the *Washington Post*, while Callaway's denial of office misuse was embalmed on page 28 nine days later. The national news weeklies also made much of the story, trumpeting it with their usual sensitivity and panache. Headlining its March 29 dispatch "Curtains for Callaway," *Time* magazine referred to the "genial . . . bumbling . . . bigwig" who had a nickname that was two-thirds of the expletive "boo!" Under a photograph of a smiling Callaway on skis, the cutline read "Two many booboos," while subheads summed the story up

[8] According to former Secretary of Agriculture Earl Butz, the Forest Service handled 3,687 such inquiries in 1975—from members of Congress alone. Additionally, more than fifty formal meetings were convened between congressional constituents and representatives of the Forest Service's Washington office. An even larger number of other meetings, characterized as "informal," were held for the same purpose in the offices of those who were members of the 93rd Congress. Indeed, Senator Haskell himself intervened thirty-eight times on behalf of constituents, contacting Secretary of Agriculture Earl Butz with requests that he expedite Forest Service decisions or otherwise assist his constituents.

[9] None of the investigations found Callaway guilty of any wrongdoing.

with the words "Scandals," "Sweet-talk," and (again) "Boo-boos." If you failed to get the drift the first two times, the story's last sentence chugged in with the kicker that Ford "cannot afford to wait for the final verdict on Bo's boo-boos."

Within a matter of days, Ford's campaign took a predictably sudden turn for the worse; North Carolina reversed earlier polls showing "Mr. Clean" to be ahead, and gave its mandate to Reagan. After three years of scandal, GOP voters began to get the idea that a new team should be brought in from the coast. Bo Callaway seemed like just another bat in the "Watergate nightmare." A week before the Senate hearings, he resigned from Ford's campaign and retired from politics.

"NO SIR, HE DID NOT"

The hearings opened April 8 and, over the next three days, seventeen witnesses were read their rights and asked if they understood them. They did. The atmosphere in the hearings was that of a political trial. Indeed, Haskell's argumentative demeanor, interruptions of witnesses, and prosecutorial "summations" led Sen. James McClure (Rep.-Idaho) to issue an unheard-of-rebuke to his subcommittee chairman. "I suppose it's an irresistible impulse on the part of any persons interested in a congressional hearing to try the case to the jury before all the evidence is in," McClure said. "I don't intend to try to make a summation to the jury at this time," he added, alluding to the television cameras, "nor am I counsel for or against any of the participants in this inquiry." It was not the sort of commentary one usually hears in the Senate. But later McClure would go even further, joining four other senators in labeling the affair "an exercise for political advantage and excoriation . . ."

As for the witnesses, their testimony confirmed the results of the field investigation. Callaway's contacts with the Agriculture Department had been minimal, and entirely reasonable in light of his concern about the tentative East River Unit plan and the delay it proposed. Nothing untoward had occurred. No pressure had seeped from Washington to Crested Butte. Earl Butz's only role in the affair was to forward a memo from Campbell to Ashworth; the memo, reporting Callaway's position as he expressed it at the Pentagon meeting, remained for six weeks on Butz's desk before the Secretary of Agriculture forwarded it to Ashworth with the notation that "Phil thinks Bo is right on this, ELB—call Rex Resler." Ashworth, however, did not call Resler, and Butz had no other contact with Callaway concerning Crested Butte.

Callaway was the seventeenth witness to be called after three days of testimony. In his opening statement, he addressed the issue of improper influence directly: "Let me say that I know something about political pressure. I have seen it first hand. I have been pressured by governors, mayors, and local legislators . . . I have been wooed by Chambers of Commerce . . . I have been called by White House aides with the magic words: 'The President wants . . .' I have been told by Senators and Congressmen, 'Bo, I don't want any special favors, but I want you to remember that I sit on your Appropriations Committee.' I have been told: 'Bo, if I don't get what I want I'm going to go over your head to the Secretary of Defense or to the President.' Let me say in all candor, there are few people in America who know more about pressure than I do. I have it applied to me by experts. But, Mr. Chairman, in all my experience, I have never had anyone tell me that if I didn't do what he wanted, he would go to the Deputy Under-Secretary of the Army, because when you want to pressure you go to the top.

"As one who has had pressure applied, I should know how to apply it. If I wanted to apply pressure for Crested Butte, I can assure you I would have called the Secretary of Agriculture rather than the Deputy Under-Secretary of Agriculture, and I would have called him not once, but once a week.

"As you can imagine, I have gone over and over in my mind during the last month all of the events in connection with this investigation. The one that stands out, obviously, is the meeting in my office on July 3. Without that meeting I don't think there would be anything that anyone could, even by innuendo, allege as an impropriety on my part. I have thought about this a lot and in retrospect I have tried to get myself to conclude that if it happened again I would do something different. But, you know, I can't really say that. Perhaps I was naive.

"Let me give you the circumstances . . . On . . . July 1, the Army gave a farewell review in my honor. It was an emotional experience for me. I love the Army, regretted having to say goodbye and appreciated the enormous honor of a nineteen-gun salute, a review by the Old Guard . . . , and complimentary remarks by [the Secretary of Defense] and Army Chief of Staff. . . . Phil Campbell and Richard Ashworth came to that review. I thought it was a very gracious thing to do, and I appreciated it. On the following day Richard Ashworth called me as an old friend, saying that he and Phil would like to come by on my last day in office and express their gratitude for the job that I had done, and at the same time bring me up to date on the Crested Butte situation. In retrospect, I probably would say again, as I did on July 2, 'Come on by. I'll be glad to see you.' "

Having said that, Callaway went on to the Arber memorandum. "Mr. Chairman, as you know, I have requested repeatedly from this committee that I be allowed to see a copy of the so-called 'narrative,' but you have denied this request. I believe that it is fundamental to the American system of justice that a man be allowed to know the allegations against him and face his accusers. . . . Surely you realized that I would be handicapped having to answer allegations that have not been made known to me."

The accusation infuriated Haskell, who denied that the memorandum was the basis for the hearings. He recalled a letter Callaway had written demanding that Arber, Glass, and Levin be called before the committee to testify. And he asked if Callaway would like him to subpoena them. Callaway replied that "My problem is I have been twisting in the wind for a month. To wait again for another three or four weeks is not what I want." He withdrew his request for the subpoenas but offered an alternative: noting that Miles Arber was present, Callaway asked that he be called as a witness. If Arber would testify, Callaway would not ask that Levin and Glass appear. Haskell replied, "I think . . . we will recess these hearings until right after the Easter recess; we will issue subpoenas . . . to the three gentlemen."

"You are aware that I requested that not be done," Callaway said. "I have a personal commitment, my daughter is getting married in that week, my desire is to get this behind me as soon as possible and I request that we finish today, with or without witnesses, please, sir, finish today."

Haskell was resolute in the pose that the subcommittee's "integrity" was at stake. Callaway had asked, and Callaway would receive, whether he liked it or not. And he didn't like it. "As I understand it," he said, "at the time you quite properly read me my rights, I waived some of those rights, such as the right to remain silent. I will happily waive the right to know more information at this time. I will waive it fully, I will not complain, I will waive the right to have additional information if we can continue and end these trials . . . I would like to finish it."

The display was a brutal one, and it was also bizarre. Arber was seated in the hearing room and Haskell had already obtained a subpoena for him. Asked if he was willing to testify, Arber said, "I am . . ., [but] not without a subpoena." Nodding, Haskell then recessed the hearings for a month, until May 13. It didn't make any sense, unless you enjoyed the suffering in Callaway's face.

It was a peculiar course of action. Virtually all of the witnesses had already testified, and each of them was in agreement on the subject of improper influence. Their responses to the following question were unanimous:

"Did Howard H. Callaway or any person known to you to be associated with him or with Crested Butte Development Corporation offer you anything of value or threaten or pressure you in any way to reach any decision you may have reached or change any decision you may have changed with respect to any matter having to do with the Crested Butte Ski Resort at any time from 1969 to today?"

A good question. A hard question. A question with six "anys" and four "ors" in it! And this is what the witnesses replied:

Mr. MCGUIRE: "No."
Mr. RESLER: "Absolutely not."
Mr. ASHWORTH: "None whatsoever . . . ."
Mr. RUPP: "No, they did not."
Mr. LUCAS: "No."
Mr. WILKINS: "No, sir."
Mr. PIERCE: "Absolutely not."
Mr. EDSTROM: "No, sir."
Mr. LARSEN: "No, sir."
Mr. CARR: "No, sir."
Mr. BUTZ: "No, sir."
Mr. CAMPBELL: "No, sir, they did not."
Mr. MINOW: "No, sir, they did not."

NO REDEMPTION

When the hearings were reconvened thirty days later, Callaway had been twisting in the wind for so long that he seemed dehydrated. For more than two months his reputation had declined, despite the testimony of every witness repudiating charges of political pressure and wrongdoing. Actually, it didn't matter what the witnesses said. In the inverted atmosphere of post-Watergate Washington, a denial is usually regarded as a form of polite confession. In any case, Callaway couldn't win: the "appearance of impropriety" was established by the fact of the Senate's investigation. And predictably, Callaway's own testimony, coming a month after the hearings were recessed, was reported for what it was: the denial of a disgraced pol.

In Washington, the story was presented to the public as a latter-day version of the David and Goliath saga. Filling in for the Philistines were (appropriately enough) that small but fearsome, subculture known as the Republicans. The "Chosen People," of course, were the Democrats. And yet, a fair examination of the record reveals that Callaway/Goliath is a hardworking family man whose powers had been wildly exaggerated. David, on the other hand, was impersonated by Sen. Floyd Haskell, whose own dimensions were minimized by media sympathetic to the Democrats—the intention being to excuse David's blatant resort to dirty tricks (I refer to the sling containing mud).

This is a city that can only be understood through anecdotes told about it. General descriptions of Washington's ways and means are bound to fail because it is impossible to say anything that's completely true, or entirely false, about a town whose raison d'être is compromise. The city is *defined* by its ambiguities, its approximations, and reasonable facsimiles. A sort of urban Wonder Bread, familiar to all and theoretically capable of feeding millions, the capital is aglutinous and insubstantial at heart, ultimately unknowable and depressing to contemplate. It's a place where prestige is routinely confused with power when, in fact, the real power resides in the most boring process of an unreachable bureaucracy, its anonymous "transmission belts," red tape, and ringing phones.

And yet, prestige *is* rewarded here, just as celebrity is rewarded in Hollywood. A *reputation* for having power is bankable (and, as Callaway found out, potentially destructive). And Washington resembles Hollywood in another way, too: like its sister-city on the West Coast, it's devoted to the manufacture of images—second-rate deceptions projected upon the brain pans of a citizenry which expects little and gets . . . disappointed.

Callaway had no hope of returning to politics, but there was a chance that his reputation would be redeemed in the Senate subcommittee's final Report. He asked that the allegations against him be clearly stated, along with the committee's findings. "If the committee determines there is no evidence to support these accusations, then I respectfully request that the . . . Report say so and say I have been fully exonerated. I trust the Report will not speak vaguely and in generalities . . ."

His trust was misplaced. The Report took almost six months to prepare, during which time Callaway's reputation starved. And, over the protests of Senate Republicans, the Report was withheld from the minority until the last minute. On September 7, it was turned over to dissenting senators with the injunction that they had just forty-eight hours to analyze it and append any rebuttal they might have. Minority staffers said they were "flabbergasted" by the Report, as the GOP senators themselves made clear in a startling (and startled) dissent.

Branding the Report as one filled with "smear and innuendo," the dissenters went on to describe it as "unfair and misleading," citing as much evidence of its "bias and prejudice" as they could type out in two days. Pointing to Senator Haskell's opening statements as "damning evidence of bias," the Republicans commented that "the timing, the tenor and the content" of his remarks "removed forever any question regarding the chairman's objectivity. The chairman abandoned the role of an unbiased factfinder to assume the role of an outspoken advocate. The case against Callaway became *his* case and *he* argued to the public what he thought the facts were *before* all the evidence was in." (Emphasis in original.) It was a ringing rebuke, and it was accurate. The Report it described is a most unsenatorial document, invoking "lingering doubts" and "serious concerns" about a host of resolved issues. E.g., while there was "no evidence" that the Pentagon meeting was initiated by Callaway, and while the witnesses testified that it had no effect, the Report concludes that it was "at least translatable into the appearance of improper pressure." Translatable into an appearance? What does *that* mean? Similarly, the Report finds that "there is no positive evidence" of Callaway's having influenced the Forest Service; "On the other hand," it adds, "this possibility cannot be excluded." (Thus is the virtue of open-mindedness reduced to a vice: *why*, if there's no evidence, should the possibility not be excluded?)

Elsewhere, the Report suggests that witnesses have perjured themselves: repeatedly, summations of sworn testimony are introduced with the phrase, "The subcommittee has been asked to believe . . ." But, of course, no one is ever called a liar. In yet other places, we're told that Callaway's conduct "can raise the specter of improper pressure" and that it "poses . . . serious questions of propriety." Spectors, of course, are insubstantial things, and the purpose of Senate hearings is to *disperse*, rather than raise them—just as a Senate Report is supposed to answer questions rather than rephrase them. The document, in short, commits analytical mayhem, reaching its conclusive innuendos only by ignoring the evidence given by *every* witness.

JUDGING REPUTATION BY PROXY

The fact of the matter is that the damage done to Callaway's reputation and career was so great that Senator Haskell had placed himself in jeopardy. Should Callaway, in ruins, be found innocent, he would seem a martyr—and Haskell, as the instrument of his unravelling, an imprudent man at best, a persecutor at worst. At the very least, "reasonable doubts" of Callaway's innocence would have to be sustained if Haskell was not to suffer the consequences of his inquisition. One might think that in view of the witnesses' unanimity, such doubts could not be sustained. But "reasonable" is, in the end, a matter of majority opinion. And there were seven Democrats and only four Republicans on the Haskell subcommittee: it should not have been too hard to get a majority to approve the Report.

And yet, the subcommittee was an unusual one. Among the seven Democrats were no fewer than three candidates for places on the party's national ticket: Henry Jackson, Frank Church, and John Glenn. That in itself made the de facto impeachment of Ford's campaign manager highly suspect but Jackson, at least, had the intelligence to wash his hands of the affair from the beginning. He would not participate in the hearings, he said, or cast any vote, because it might give the appearance of partisan impropriety. This pose reduced the voting majority of Democrats to two. The majority was narrowed even further, however, when Sen. John Glenn proved unable to attend all the hearings. Glenn could have given his proxy to Haskell, but he declined. He didn't think it proper to judge a man's reputation by proxy.

With the proxies of Jackson and Glenn withdrawn, the Democratic majority consisted of a single vote. It belonged to Sen. Frank Church. Like Jackson, he was a Presidential candidate and might have excused himself from judgment on that ground alone. But there was another reason for him to demur: like Glenn, he would be unable to attend any of the hearings. He had two good reasons, then, to withhold his proxy from Haskell. But he did not: too many political debts could be incurred by casting it, or having it cast for him. Later, this became something of an embarrassment: Church's proxy vote on the Report put the seal on Callaway's reputation, and he was asked about it by Rick Coffman, an Idaho newspaperman. Church said he was not a Presidential candidate at the time the hearings were called, having declared for the Presidency on March 18. Coffman pointed out that Church already had raised a sizable campaign chest before that time and had, moreover, became eligible for federal funds months before. He could hardly deny that he was running for President. In any case, his failure to attend a single hearing might be seen as reason to disqualify himself from voting—especially in view of the fact that he had not read the Report. How could he allow his proxy to be cast under those circumstances?

Apparently, the questioning disturbed Church. A week after the Report was approved by a 5–4 majority, with Haskell casting Church's vote, a new vote was ordained. Its purpose was to afford Church the opportunity of casting his own vote: the decisive proxy left a queasy impression. Unfortunately, Church somehow failed to attend that meeting, too, and, at the last minute, Haskell endured the ignominy of having to cast the putative proxy a second time. He could hardly be blamed: if he failed to get a majority to endorse the Report, the hearings would be revealed as a fraud.

Months after the election had been lost, Callaway wandered through the editorial rooms of the *Washington Post* and other publications, looking for exoneration in print. Like the Ancient Mariner, he wouldn't let the issue die, but "stoppeth one in three." And like that old sailor, he received little solace. *Post* editor Ben Bradlee listened to his tale and sighed and shrugged. *"C'est vrai,"* he says, *"mais ce n'est pas une histoire."* And Bradlee was right. Boy, is it not a news story! Callaway is no longer a political figure of national importance. His reputation, having been ruined, is suddenly a private matter. Besides, Callaway has had his day in the hearing room, and it dragged on for months. The result was 1600 pages of turgid testimony about matters of fleeting relevance. Included in the hearings are scores of maps, excruciating chronologies of minor events spanning seven years, and literally hundreds of exhibits ranging from "Early Warning Alerts" to letters, memoranda, and telephone logs—all of it cresting in a 196-page Senate Report that reads like an investigative article in *Rolling Stone:* "the specter is raised," "nagging doubts persist," "there is no positive evidence but . . ." Indeed, the Senate's investigation of Callaway's activities generated so much detail that its product is, from beginning to end, almost unreadable. Any reasonable man (Sen. Frank Church, for instance) would, upon hefting these tomes of testimony, shake his head and conclude that "where there's smoke, there's fire." Ipso facto, Callaway must be a walking inferno. But . . .

("No.")

("No, sir.")

("Absolutely not.")

("No, sir, they did not.")

NOT FOR ATTRIBUTION

There is only one other anecdote to recount about the affair, and its says more about Washington in the Seventies than it does about Bo Callaway or his accusers.

While putting together the story of the character assassination of Bo Callaway, as performed by the inmates of the Senate, I had cause to interview a man who'd worked with him for years, and considered himself Callaway's friend. We met outside the Washington Visitors' Center, and he was obviously agitated at the thought of our meeting. He didn't want to be seen talking to a reporter.

"Let's walk over there," he said, gesturing to a park filled with trees. As we strolled, we made small talk about a third world war and then, locating a bench, we sat down. "I want you to understand something," he said, "before I'll talk to you."

"Okay."

"You have to agree that what I'm about to tell you is for deep-background only. Maybe that's not the right phrase. What I mean is, you can quote what I say, but you can't attribute it. I don't want to be mentioned in your story, and I don't want you to characterize me in any way—not as old or young or middle-aged, not as a bureaucrat, an Army man, or a politician. If this gets out, my career is ruined. Understand??"

"Yeah. What is it?"

He paused for a second and, in the space of it, glanced at his shoulder. "If you attribute this, I'll have your head."

"I won't."

"All right. Bo Callaway is an honest man. . . ."

The conversation lasted thirty minutes, but that was all he had to say, really. And I wondered about a city in which a good reputation is "not for attribution."

REBUTTAL REMARKS TO SPECIAL ORDER ON ROMANIA OF HON. EDWARD KOCH

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. DERWINSKI) is recognized for 5 minutes.

Mr. DERWINSKI. Mr. Speaker, yesterday, August 2, the gentleman from New York (Mr. KOCH) had a Special Order on Romania and I think his com-

ments deserve rebuttal. I do not believe that Mr. KOCH is properly analyzing the situation in Romania, and quite frankly, on this particular subject he is ignoring the intricacies of the present diplomatic situation. A number of points must be made:

Romania pursues a somewhat independent foreign policy, more so than any other Warsaw Pact country.

Romania does not have Soviet troops stationed within its border. It does not allow participation of its forces in Warsaw Pact military exercises and does not permit Warsaw Pact troop manueuvers within its territory.

Economically, Romania has broader ties with the non-Communist world than any other Warsaw Pact country. It is the only Warsaw Pact country that has joined the World Bank and the International Monetary Fund. It leads the other members of COMECON in the proportion of trade—now more than 55 percent—that it conducts with the West.

On ideological issues, Romania frequently is at odds with the U.S.S.R. For one, the Romanians are among the strongest champions of the right of all Communists parties to chart their own course rather than follow the lead of Moscow. Romania has extended this principle to apply to Western Europe Communist parties, thereby taking a stand on "Eurocommunism" which clearly conflicts with the Soviet position.

At Helsinki and at the Belgrade follow-up conference on CSCE, the Romanian position on some issues is closer to that of the West or the neutrals than to the Soviet position. In other international fora, including the United Nations, the Romanians sometimes depart from the Warsaw Pact line in ways that can be helpful to U.S. interests.

Unlike other Warsaw Pact countries or Yugoslavia, Romania has continued to maintain diplomatic relations with Israel after the 1967 Arab-Israel war and has a constructive working relationship with the Israelis.

Romania did not participate in the oil embargo and in fact increased shipments of petroleum products to the United States during that period. However Romania is not a major oil producer.

Romania also maintains good relations with such countries as the People's Republic of China, the Democratic People's Republic of Korea, and Albania—contacts that sometimes can be useful to the United States.

As the Members know, Romania was the only country to conclude a trade agreement with the United States under the terms of the Jackson-Vanik amendment to the Trade Act of 1974.

Since the visit of President Nixon to Romania in 1969, our two countries have maintained a growing dialog on many political, economic, and commercial issues. This is evidenced through the frequent visits to both countries by high-level government officials and delegations, including U.S. congressional leaders concerned with political and trade issues.

The most important trip in recent years was that of President Ford to Romania in August 1975. During that trip he and President Ceausescu reaffirmed their commitment to improving United States-Romanian economic and commercial relations and they signed the documents bringing the United States-Romanian Trade Agreement into force.

On the evening of March 4, 1977, Romania was struck by a major earthquake. Over 1,600 people lost their lives in the disaster and more than 11,000 people in Bucharest and other areas were injured. Material losses and damage included the destruction of housing complexes, hospitals, and schools. The homes of some 35,000 families were destroyed and over 33,000 other dwellings were seriously damaged. The Romanian Government estimates total damage resulting from the quake at approximately $1 billion.

As you know, the U.S. Government's response to this disaster was quick and generous. Within days the U.S. Government offered a $25,000 cash grant to Romania and delivered 7 tons of medical supplies valued at $85,000. Soon thereafter, we provided 300 tons of dried milk valued at $470,000 and sent a team of U.S. engineers and geological experts to Bucharest to work with Romanian specialists on assessing the condition of dams, buildings, and seismographic monitoring equipment.

The Congress authorized and President Carter approved a disaster relief program of $20 million in reconstruction and rehabilitation assistance to Romania. The Agency for International Development—AID, which is administering the program, has been working closely with the Romanians.

In authorizing the grant of $20 million for disaster relief assistance, Congress indicated that this money should be spent for humanitarian purposes to assist the victims of the earthquake. I understand the supplemental appropriation bill will have the needed funds. AID has identified assistance under the program as follows: repair and reconstruction of severely damaged building structures, including housing blocks and hospital and medical facilities; replacement housing; replacement of medical and school equipment; technical assistance in construction design and repair methods; and technical assistance in seismology.

The earthquake has had a devastating impact on Romania and the full effect of it on the Romanian economy is difficult to determine. Despite the disaster assistance efforts of many countries, the burden of restoring the country's economy obviously falls on the shoulders of Romania's people. An important element in this recovery effort is Romania's ability to expand its trade with the United States.

Mr. Speaker, the United States-Romanian Trade Agreement has properly served U.S. economic interests and should continue to do so in the future. I believe extension of the waiver authority under section 402 of the Trade Act, which will allow that agreement to remain in force, is in our national interest. Its extension will aid the development of United States-Romanian economic and commercial relations and encourage the expansion of economic cooperation between our two countries on a sound basis. It also gives us some political leverage with Romania, a fact that has major geopolitical implications.

HOUSE OF REPRESENTATIVES,
Washington, D.C., July 27, 1977.

DEAR COLLEAGUE: Before the Congress adjourns for the August recess, I think it is important through our public statements to impress upon the Romanian government that the Congress is concerned about emigration from and the status of human rights in Romania.

As you know, the President has recommended a one-year extension of the most favored nation status granted Romania, even though Romania has still not completely complied with the free emigration requirements of the Trade Act of 1974. In fact, emigration from Romania to both Israel and the United States has dropped substantially during the past year. In addition, a number of questions have been raised about Romania's treatment of dissident writers and intellectuals as well as ethnic minorities including Hungarians and Germans. If, as is probable, neither House of Congress votes disapproval of the President's recommendation for continued most favored nation status, the proposed extension will take effect during the August recess. Although I personally do not support a resolution disapproving MFN for Romania, I believe that it is important for the Congress to voice its concern with Romania's record on emigration, treatment of dissidents and the status of its ethnic minorities. I am pleased that the Report of the Ways and Means Committee, recommending continued MFN, also expressed its concern about emigration and human rights. As a signatory to the Helsinki Agreement and as a beneficiary of most favored trade treatment by the United States, Romania has agreed to follow internationally accepted standards with regard to human rights and emigration, and we should indicate that we expect them to do so.

On Tuesday, August 2nd, I will reserve time for a special order to enable Members to express their concern about the human rights situation in Romania. I believe that Romania should be made aware that the Congress' willingness to continue most favored nation treatment does not mean that we are unaware of the need for careful scrutiny of past and future performance in the area of human rights. In his recommendation for continued most favored nation treatment, President Carter pledged himself to carefully monitor the emigration and human rights situation in Romania, and I believe that Congress should also indicate that it will be watching Romania's human rights performance during the upcoming year.

If you would like to participate in this special order or desire more information, please contact Sean McCarthy at x52436.

Sincerely,

EDWARD I. KOCH.

LEGISLATION TO PLACE ELK HILLS ON A STANDBY BASIS

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. BOB WILSON) is recognized for 5 minutes.

Mr. BOB WILSON. Mr. Speaker, during the time-consuming and aggravating gasoline shortage lines of 1973, who would have believed that we could have too much oil? Yet with the long-awaited opening of the Alaska pipeline, the impossible dream is about to occur—on the west coast, at least in the short term, we are going to have a huge surplus.

While there are several contributory factors, one primary cause is the lack of refinery capacity. Conversions of west

coast refineries to process the relatively heavy, high sulfur North Slope crude have not occurred as rapidly as anticipated. These refineries will be able to process only about 700,000 to 800,000 barrels per day of the North Slope oil. As a result, by the end of this year, the pipeline will be delivering 400,000 to 500,000 barrels per day in excess of present refinery capability. This figure may well exceed 700,000 by 1980.

When the pipeline is constructed from the west coast to a midland point of distribution, this North Slope oil can be disbursed over a wide area of the United States. At present, the overland distribution pipeline is undergoing the rigors of meeting Federal, State, and local environmental requirements, but it is inconceivable that this could be completed prior to 1980. In the interim, administration energy officials have been reviewing several short-term options to dispose of the surplus, including the sale of North Slope oil to Japan in exchange for Japanese-owned oil more accessible to our gulf and east coast refineries. It is my understanding that this controversial proposal has been ruled out in favor of some type of transportation through the Panama Canal to gulf coast ports.

Adding further to the surplus, we have the petroleum produced from the Elks Hills Naval Petroleum Reserve, near Bakersfield. Congress last year opened this reserve for commercial production in the wake of the Arab boycott and subsequent energy crisis. This legislation reversed the long-standing policy that the Naval Reserves would be preserved for military use in the event of a national emergency. Additionally, the Naval Petroleum Reserves Production Act of 1976 did not anticipate the surplus of North Slope oil on the west coast, which substantial production at Elk Hills would only compound.

As a result, I am today introducing legislation to place Elk Hills and the smaller Petroleum Reserves Nos. 2 and 3 on a standby basis. The 1976 law mandated that the Secretary of the Navy produce the naval petroleum reserves at the maximum efficient rate for a period of 6 years. My amendment would instead authorize the Secretary to produce the reserves at a rate sufficient to defray the costs of exploring and developing the naval petroleum reserves, to a maximum capacity for national defense purposes.

I want to emphasize that this amendment would not in any way countermand the decision of Congress to put these reserves in a production-ready status. We simply would halt mass production, at least for the time being. The Navy would still be charged with the responsibility of exploring and developing Elk Hills, so that it could be put into immediate and full production in case of a future need.

With a glut of 500,000 barrels of excess North Slope oil expected daily by the end of this year, it makes no sense to also produce Elk Hills at this time. We should reserve this valuable energy resource for future emergency requirements, whether military or domestic. In this instance, our crystal ball miscalculated, and it is time to correct the stiuation. I urge my colleagues to amend the Naval Petroleum Reserves Production Act of 1976 to put Elk Hills on production-ready standby status, until we need it.

THE PRODUCT LIABILITY INSURANCE TAX EQUITY ACT: CONSUMERS WILL BENEFIT

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio (Mr. WHALEN) is recognized for 10 minutes.

Mr. WHALEN. Mr. Speaker, most discussions of product liability insurance seem to focus on the problems of manufacturers. The consumer has been somewhat overlooked.

I must confess, in the various statements I have placed in the RECORD lately which describe the Product Liability Insurance Tax Equity Act, H.R. 7711, I too have been guilty of not fully analyzing the consumer interest. So, that shall be the focus of this discussion.

The Product Liability Insurance Tax Equity Act—PLITE for short—provides that manufacturers can set up self-insurance reserve funds for product liability. Also, professionals can create self-insurance funds for professional liability, such as medical malpractice. Money paid into the trust funds so established would qualify as a deductible business expense and the reserve fund itself would be tax exempt so long as it is used properly.

Some companies and individuals might use the PLITE plan to build up a large reserve fund to cover their entire potential liability. However, I suspect that most would opt to use this plan to build a modest reserve and then use it to enable them to take a commercial policy with high deductibles.

Now, how does the plan embodied in H.R. 7711 help consumers? In my view, there are four principal ways in which enactment of this measure would be in the consumer's best interests.

First, and most obvious, is the potential savings to consumers.

The ad hoc task force on product liability, which I chaired earlier this year, found that one out of every three companies surveyed indicated that they had been forced to increase the price of at least one product line as a result of rising product liability insurance costs. And in the case of professional liability insurance, the impact of its costs on prices charged consumers of medical services is well documented.

Any proposal that might stabilize or reduce insurance costs can be expected to result in a pass-through economic benefit to consumers. This theory has already been confirmed by numerous statements I have received from corporations and individuals from around the country.

Second, PLITE offers immediate and direct relief to those who are hardest hit by the product/professional liability crisis. This will help abate the panic that has set in, and thus buy extra time in which we can work out the complex issue of tort law reform.

Meanwhile, H.R. 7711 would not itself make any change in the tort laws. Consequently, no hasty alterations occur in the respective rights and responsibilities of consumers and producers. Instead, while that debate continues, we simply make it easier for manufacturers and professionals to meet their existing obligations.

Third, we must acknowledge that a significant number of companies and professionals are today operating "bare," without any commercial coverage for liability. The task force's survey found that 21.6 percent of the firms in our four-State sample said they want product liability insurance coverage but either cannot afford it or cannot obtain it at any price. Other studies have shown that between 10 and 20 percent of all professionals are practicing today without commercial coverage.

Quite frankly, in a major liability action it would do the aggrieved party little good to sue a company or individual who has gone bare. Without a substantial self-insurance reserve fund, the defendant would simply have to declare bankruptcy and turn over the keys if the case were lost. This would be of little consolation and even less help to the plaintiff.

Without PLITE and the ability to create and maintain an adequate self-insurance reserve many firms and individuals simply will not be able to make good on major liability claims. H.R. 7711 would help protect the consumer against being left holding the bag.

In short, it does an injured consumer no good to sue a company or professional who will go bankrupt before the claim is paid. PLITE would help alleviate this risk.

Fourth, there is the very important fact that permitting the establishment of self-insurance reserve funds will create a greater incentive for manufactures to produce safe products.

The letters I have received, and the findings of our survey, indicate that in many instances the rising price of product liability insurance premiums bears little relationship to the safety record of the individual company. Consequently, commercial insurance today offers little direct incentive for stricter quality control.

In fact, there may be some psychological inducement to less stringent control. A manufacturer who has been paying ever-higher premiums and has had no claims paid out may begin to wonder what he has to show for his money.

On the other hand, a self-insurance reserve fund will be regarded as a corporate asset to be preserved and protected. Once the fund is built up sufficiently and the manufacturer no longer is paying large sums into it, then some of the annual budget allocation for insurance costs can be diverted to increased product safety efforts.

PLITE, therefore, will give manufac-

turers a vested interest in product safety. There will be an inherent attraction to comprehensive risk management.

Mr. Speaker, this has been just a quick overview of how consumers will benefit from passage of the Product Liability Insurance Tax Equity Act, H.R. 7711. I have been encouraged by the interest in this legislation manifested by some consumer interest groups. I am hopeful that many in the consumer movement will join with manufacturers and professionals in supporting this legislation, as it is to their mutual benefit.

KEMP ASKS PRESIDENT TO REJECT PRESIDENTIAL REVIEW MEMORANDUM 10

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New York (Mr. KEMP) is recognized for 5 minutes.

Mr. KEMP. Mr. Speaker, today in the Washington Post, columnists Rowland Evans and Robert Novak published excerpts from a document which is becoming notorious in the national security community for its vociferous advocacy of a weakened defense posture for the United States. This massive study of nearly 700 pages is filled with options concerning various modes of accommodation to the growth of Soviet military power. The sections dealing with the U.S. posture in Europe were prepared by one element of the Office of the Secretary of Defense, in the Office of the Assistant Secretary of Defense for International Security Affairs. Despite the strong recommendations of virtually every segment of relevant civilian and military opinion within the Defense Department who were asked to comment on the ISA draft, rejected it as either incompetent or thoroughly bad policy choices for any President to be forced to consider.

Needless to say, the proposals put forward by the authors or URM–10/NSC–10 would totally destroy the fabric of America's alliance structure if allowed to stand. Indeed, no alliance can be expected to survive when its most powerful member is committed to a strategy of withdrawal should a war break out. The ludicrous suggestion that outraged United Nations opinion would deter the Soviets from exploiting the fruits of military conquest must surely be the nadir of American strategic thought.

The text of the Evans-Novak column should be required reading for anyone concerned about the drift of American policy. I ask that it be printed at the conclusion of my remarks. I urge the President to publicly reject PRM–10, send its architects back from whence they came, and reassure the American public and its allies that it will not abandon Europe, should the Soviets decide to become adventuresome in Western Europe.

CONCEDING DEFEAT IN EUROPE

(By Rowland Evans and Robert Novak)

President Carter late this week will be presented by his national security advisers with a new defense strategy that secretly concedes one-third of West Germany to a Soviet invasion rather than seek increased defense spending, which these advisers say would provoke Moscow and divide Washington.

PRM–10, the Carter administration's top-secret strategic study, suggested that this policy could be made palatable to Western Europe by simply not admittng its implications. This course was wholly adopted in high-level meetings July 28 and 29 by Zbigniew Brzezinski, the President's National security adviser. There was dissent from the senior officials assembled.

The strategic policy paper to be given the President (about three pages of single-spaced typing) makes no mention of surrender or duplicity in central Europe but talks of a commitment to a "minimum loss of territory" in NATO. To achieve a broader perspective Carter ought to look at the minutes of the July 28–29 meetings of his Senior Coordinating Council (SCC) on national security.

The SCC agreed on a 3 per cent annual increase in defense spending, fulfilling Carter's promise to his NATO allies earlier this year. But, according to verbatim notes taken by one of the participants, Brzezinski declared: "It is not possible in the current political environment to gain support in the United States for procurement of the conventional forces required to assure that NATO could maintain territorial integrity if deterrence fails. Therefore, we should adopt a 'stalemate' strategy. That is, a strategy of falling back and leaving the Soviets to face the political consequences of their aggression."

Brzezinski went on to declare that these "political consequences"—world opinion, U.N. disapproval, U.S. mobilization—would help deter a Soviet invasion. There was no dissent from those present, including Vice President Mondale, CIA Director Stansfield Turner, Chief Disarmament Negotiator Paul Warnke, Deputy Defense Secretary Charles Duncan and Joint Chiefs of Staff Chairman Gen. George Brown.

Brzezinski continued: "We agree there must be a gap between our declared strategy and actual capability. We cannot for political reason announce our strategy." Again, there was no dissent, though some officials voiced the opinion there would be hell to pay if the Germans learned what was happening.

All this follows the script of the June 20 draft of PRM–10, which lists four options for lower-range defense spending. Each would stop a Soviet offensive at a line formed by the Weser and Lech Rivers, surrendering about one-third of West Germany (including Saxony and most of Bavaria).

These four options, according to PRM–10, do not "plan" to stop "a determined Warsaw Pact conventional attack. . . . If the Soviets persist in their attack, a U.S.-NATO conventional defeat in Central Europe is likely." Yet these options are certainly not rejected out of hand.

"Many of the adverse political implications" of the reduced defense options (such as independent German rearmament or, conversely, European accommodation to Moscow) "probably could be avoided if the U.S. continued to publicly support" present strategy. Adverse reactions by Western Europe "could be significantly softened . . . if the U.S. were to avoid any statements to the effect that a loss of NATO territory would be acceptable."

PRM–10 predicts any increase in defense spending would generate "divisive debate" and warns an across-the-board hike in defense capability "is likely to find little domestic support." In general, the options calling for decreased strength are seen as causing less trouble; in particular, the option calling for approximately the present military level but with less sustained power in Europe is described as "probably the most anodyne [option] in terms of its domestic impact, unless it were only described as a lowering of our sights."

These views were implicitly accepted last week by Brzezinski and the other senior officials. So the President is about to adopt a policy boiling down to this: Instead of seeking greater defense spending to defend central Europe, rely on political pressures to deter Moscow while secretly conceding a military defeat. Whether this reflects a "political environment" as claimed by Brzezinski, it certainly reveals the environment within the Carter administration.

THE HEAD OF HOUSEHOLD TAX EQUITY ACT OF 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Minnesota (Mr. FRENZEL) is recognized for 10 minutes.

Mr. FRENZEL. Mr Speaker, I am introducing a bill today that will allow heads of households to use the $3,200 standard deduction presently available only to married couples. The purpose of this bill is to end the unjust tax penalty on some 5 million people, who are unmarried, but have dependents to support.

Heads of households are unjustly treated by our tax laws because while they have similar expenses as married couples do in providing for their children, they are allowed only the $2,200 standard deduction for single people, not the $3,200 deduction established for married couples. The financial pressures on heads of households are greater, too, because they earn less than half the average income for married couples. The average family income for heads of households was $8,295 in 1975. The comparable figure for married couples in that year was $16,775.

The inequitable tax burden on heads of households is a recent development, but unfortunately has become worse every year. Before the Tax Reduction Act of 1975, heads of households could use the same standard deduction as married couples. However, this act set a $2,300 maximum standard deduction for heads of households, and $2,600 for married couples, thus creating a $300 gap. In 1976, the gap became $400 when heads of households were allowed a $2,400 standard deduction, but married couples $2,800. This year, 1977, the gap is $1,000 because the Tax Simplification Act set a $2,200 deduction for heads of households and a $3,200 deduction for married couples.

I believe it is time for Congress to take some action to end this inequity. The Senate has already shown its support for this bill by passing it as part of the Tax Simplification Act. However, in an unfortunate decision, a conference committee deleted it from the act on May 3d.

The proposal has wide support, though, and is endorsed by the American Association of University Women, League of Women Voters, Parents Without Partners, the National Organization of Women, the Women's Lobby, the Committee of Single Taxpayers, and the National American Singles Association.

I, therefore, urge prompt consideration of this bill. The Congress has cre-

ated this inequity, and should now begin to alleviate it.

The text of the bill is as follows:

H.R. —

A bill to amend the Internal Revenue Code of 1954 to permit heads of households to use the standard deductions used by married persons

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SECTION 1. STANDARD DEDUCTION FOR HEADS OF HOUSEHOLDS

(a) IN GENERAL.—Subsection (b) of section 1 of the Internal Revenue Code of 1954 (relating to the rates of tax on individuals) is amended by striking out the text thereof and inserting the following:

"(b) HEADS OF HOUSEHOLDS.—There is hereby imposed on the taxable income of every individual who is the head of a household (as defined in section 2(b)) a tax determined in accordance with the following table:

"If the taxable income is:	The tax is:
Not over $3,200	No tax.
Over $3,200 but not over $4,200	14% of the excess over $3,200.
Over $4,200 but not over $5,200	$140, plus 16% of excess over $4,200.
Over $5,200 but not over $7,200	$300, plus 18% of excess over $5,200.
Over $7,200 but not over $9,200	$660, plus 19% of excess over $7,200.
Over $9,200 but not over $11,200	$1,040, plus 22% of excess over $9,200.
Over $11,200 but not over $13,200	$1,480, plus 23% of excess over $11,200.
Over $13,200 but not over $15,200	$1,940, plus 25% of excess over $13,200.
Over $15,200 but not over $17,200	$2,440, plus 27% of excess over $15,200.
Over $17,200 but not over $19,200	$2,980, plus 28% of excess over $17,200.
Over $19,200 but not over $21,200	$3,540, plus 31% of excess over $19,200.
Over $21,200 but not over $23,200	$4,160, plus 32% of excess over $21,200.
Over $23,200 but not over $25,200	$4,800, plus 35% of excess over $23,200.
Over $25,200 but not over $27,200	$5,500, plus 36% of excess over $25,200.
Over $27,200 but not over $29,200	$6,220, plus 38% of excess over $27,200.
Over $29,200 but not over $31,200	$6,980, plus 41% of excess over $29,200.
Over $31,200 but not over $35,200	$7,800, plus 42% of excess over $31,200.
Over $35,200 but not over $39,200	$9,480, plus 45% of excess over $35,200.
Over $39,200 but not over $41,200	$11,280, plus 48% of excess over $39,200.
Over $41,200 but not over $43,200	$12,240, plus 51% of excess over $41,200.
Over $43,200 but not over $47,200	$13,260, plus 52% of excess over $43,200.
Over $47,200 but not over $53,200	$15,340, plus 55% of excess over $47,200.
Over $53,200 but not over $55,200	$18,640, plus 56% of excess over $53,200.
Over $55,200 but not over $67,200	$19,760, plus 58% of excess over $55,200.
Over $67,200 but not over $73,200	$26,720, plus 59% of excess over $67,200.
Over $73,200 but not over $79,200	$30,260, plus 61% of excess over $73,200.
Over $79,200 but not over $83,200	$33,920, plus 62% of excess over $79,200.
Over $83,200 but not over $91,200	$36,400, plus 63% of excess over $83,200.
Over $91,200 but not over $103,200	$41,440, plus 64% of excess over $91,200.
Over $103,200 but not over $123,200	$49,120, plus 66% of excess over $103,200.
Over $123,200 but not over $143,200	$62,320, plus 67% of excess over $123,200.
Over $143,200 but not over $163,200	$75,720, plus 68% of excess over $143,200.
Over $163,200 but not over $183,200	$89,320, plus 69% of excess over $163,200.
Over $183,200	$103,220, plus 70% of excess over $183,200.

(b) WITHHOLDING.—Paragraph (1) of section 3402 (f) of such Code (relating to withholding exemptions) is amended—

(1) by striking out "and" at the end of subparagraph (F),

(2) by striking out the period at the end of subparagraph (G) and inserting in lieu thereof a semicolon and the word "and", and

(3) by adding at the end thereof the following new subparagraph:

"(H) in the case of an employee who is the head of a household (as defined in section 2(b)) and who elects the application of this subparagraph, an additional zero bracket allowance.".

SEC. 2. EFFECTIVE DATE.

The amendments made by this Act apply with respect to taxable years beginning after the date of enactment of this Act.

REPREHENSIBLE PROCUREMENT PROCEDURE

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Ohio, (Mr. HARSHA) is recognized for 10 minutes.

Mr. HARSHA. Mr. Speaker, if there is but one lesson we have learned from the Watergate experience, it would be that under our system of government, from the President of the United States on down, no man is above the law. This is especially true for Government officials such as the Director of the CIA, the Director of the FBI, Members of Congress, and Federal employees such as civil service contracting officers holding positions where integrity is implicit and honor is synonymous with the job. As a Member of Congress, I know that if a law is bad, it should be changed. As an exprosecutor, I also know that regardless of popularity, good or bad, any law, to be effective, must be enforced.

I can still remember the Comptroller General's words "plainly illegal" and I had my staff look this up the other day and found that they pertained to the actions of an Air Force procurement official at Tinker AFB Oklahoma City over 8 years ago. In the CONGRESSIONAL RECORD of June 4, 1969, volume 115, page 14724, 91st Congress, I cited the General Accounting Office Decision B–161722 which resulted from a complaint filed at that time by Mr. P. J. Kanistros, then president of Dayton Electronic Products, Dayton, Ohio, against the Air Force award of a million dollar contract to a California manufacturer in spite of the fact that the Dayton firm was the legitimate, responsible, responsive, prequalified low bidder in a two-step procurement of the AN/GPA–118 Radar. The General Accounting Office found that the low bidder had been cheated out of the award by Air Force authorizations which were "plainly illegal" and I commented at that time that I was sure no one in the Air Force had even been reprimanded for this illegal award. Unfortunately, everybody, including my own staff, had other work to do of more immediate concern, so there was no follow-up to fix responsibility.

Mr. Speaker, since that time, we have all become acutely aware of other criminal activities of Government officials, some of whom honestly believed they were acting in the name of national security, while others, for their own purposes, break the law under cover of national defense. I regret to report that after a very careful study of certain documents developed by my staff, illegal acts by employees of the Defense Department have become so common as to become routine.

Mr. Speaker, falsification of official documents is a standard procedure at the U.S. Navy Ships Parts Control Center, Mechanicsburg, Pa. During fiscal 1976, this agency conducted 6,104 contracts over $10,000 in value for a total expenditure of $374,820,000 under which 5,277 of them covered a total $341,350,000 as "exceptions" to the Armed Services procurement regulation providing for formal, open competitive bidding. I have only seen a half-dozen documents which justified the 5,277 exceptions, all of which apply to the procurement of repair parts for a radio set identified as the AN/SRC–20(A). These documents have been falsified.

Mr. Speaker, section 1001, title 18 of the United States Code provides:

> Whoever, in any matter within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals or covers up by a trick, scheme, or device a material fact, or makes any false, fictitious or fraudulent statements or representations, or makes or uses any false or fraudulent statement or entry, shall be fined not more than $10,000 or imprisoned not more than five years or both. June 25, 1947, c 645, 62 Stat. 729.

Mr. Speaker, on January 8, 1975, a civilian employee named S. Rusack, contracting officer, U.S. Navy Ships Parts Control Center, Mechanicsburg, Pa., signed Determinations and Findings No. NOO104–75–R–VQ29 which was one of five sequential authorizations to cover approximately $2 million in repair parts for the AN/SRC–20(A) radio under restricted bidding conditions allowing proposals for this unclassified equipment to be opened in secret, out of sight of the public, behind closed doors.

Mr. Speaker, after the bids were opened in secret, the low bidder and previous supplier of this equipment, PoliCom Inc., 1240 Stanley Avenue, Dayton, Ohio, was cheated out of approximately $1.5 million contract when the Navy quietly canceled the requirement which still exists today. The president of PoliCom Inc. is Mr. P. J. Kanistros, the erstwhile president of Dayton Electronic Products Co. who was victimized by the "plainly illegal" actions of the Air Force under the AN/GPA–118 8 years ago. The difference is, of course, that this time the culprits are Navy employees not Air Force, but the conspiracy is clear, and so is the law.

To compound the problem the officials at the Navy Ships Parts Control Center generated a series of justifications to authorize noncompetitive negotiations

for radio set spare parts, one of which was PTWA44/6258/0747 resulting in an award to Teledyne Lewisburg under contract NOO104–77–C–0187 announced after the fact in the Department of Commerce Business Daily, May 3, 1977, page 26, column 3, covering six units of the SRC–20(A) power amplifier for $58,296.00, making an average unit price come to $9,716. More importantly, however, is the fact that the SPCC officials ignored the $3,510 unit price submitted by Poli-Com Inc., under the earlier solicitation NOO104–75–R–VQ29 for the same power amplifier, simultaneously denying Poli-Com an opportunity to compete for this small requirement.

To have the SPCC officials certify that Teledyne Lewisburg, Post Office Box 326, Industrial Park, Lewisburg, Tenn., is the only manufacturer in the United States capable of delivering power amplifiers within the shortest possible time is manifestly false, since Admiral Corp. is just now winding down production of the AN/SRC–20(A) radio set, and Poli-Com in Dayton stands ready with inventory on hand. This is a small loss to the taxpayer, but the key to it all is the basic falsification of the official records to show as fact something that is not a fact. For an agency charged with the responsibility of obligating $400 to $500 million a year of the taxpayers money, this kind of procurement procedure cannot be tolerated. I cannot ascribe to their motives, but the record will attest to their deeds.

I do not wish to burden the record with a lot of technical data, but because of the seriousness of the matter and the grave ramifications to follow, it is important to present as complete a summary as possible pertaining to the Navy procurement of the AN/SRC–20(A) radio. This transmitter-receiver was introduced to the Navy inventory over 15 years ago under an initial contract with Collins Radio, Cedar Rapids, Iowa. Subsequent competitive bids resulted in awards to various manufacturers at difference prices over the years including Stewart Warner, Teledyne, Beaconning Optical, Dayton Electronic Products, and Admiral Systems Corp. The AN/SRC–20(A) is a 3,500-channel unit produced under awards to Teledyne, Dayton Electronic Products and Admiral Systems.

A complete set of manufacturing drawings had been produced by Dayton Electronic Products and delivered to the Navy for approximately $200,000. Microfilm of these very drawings formed the basis for subsequent production procurement under open, competitive bidding through Navy Electronic Systems Command, Washington, D.C. Invitation NOOO39–72–B–0257 offered at $5 per reel—15 reels—to any and all firms interested in estimating the job. This action resulted in heavy competition and award of Contract NOOO39–72–C–0292 with Admiral Systems. At the time of solicitation, the Navy stipulated that the delivery schedule was firm, and that any deviation from the 270-day first-article, and 19-month production schedule would be cause for rejection of bid as nonresponsive. After the award to Admiral, the situation was altered apparently. The delivery schedule was relaxed, allowing 420 days for preproduction units and production to begin in 40 months after date of contract.

Following the award of contract to Admiral for the complete radio, subsequent requirements for repair parts to support the thousands upon thousands of these radio sets in service came under the procurement cognizance of the Electronics Supply Office, Great Lakes, Ill.

Approximately 1974, the Navy elected to close the ESO facility, so the procurement cognizance for fleet requirements was transferred to the Navy Ships Parts Control Center, Mechanicsburg, Pa. On January 8, 1975, Navy SPCC issued D. & F. 75–R–VQ–29—cited above—under the allegation that the use of formal advertising is impracticable because the data available is not adequate to assure that the part or component will perform the same function in the equipment as the part or component it is to replace. This D. & F. was signed by Navy civilian employee S. Rusack identified as contracting officer. This statement is false. To allege that drawings for this ancient equipment do not exist is absurd. Determinations and Findings 75–R–1740 dated March 5, 1975, employs identical language and is signed by S. Rusack. Also 76–R–2601 dated May 21, 1976, signed by Rusack, carries the same allegation, while 76–X–5722 signed by M. Slusser states "fully adequate data is not available and cannot reasonably be made available." The D. & F. 76–R–0547 is unsigned and undated, citing only NPD 3–201.50(B). These five documents formed the justification for solicitations of radio set components of the value of which was approximately $2 million, and the lowest, responsive, responsible bidder was the previously successful producer of similar equipment, Poli-Com Inc., Dayton, Ohio.

Under a preaward survey conducted at the Poli-Com facility, on April 6, 1976, Maj. Thomas A. Jones, Chief, Production Division, DCASMA, Dayton, Ohio, AV–850–6496, Survey NOO104–76–R–0547, serious S3605–A62004P(N), went on record to state:

> The Board met to discuss this pre-award and after an evaluation of all the points, the Board unanimously agreed to a "no award" . . . there was no complete government controlled data package with the pre-award and numerous phone calls have been made to SPCC to no avail. The following comments summarize the evaluation: From a production standpoint, the proposed contractor, Poli-Com, is capable of providing the items as quoted. However, without adequate data package, or detailed clarification of the current data in Navy files, the U.S. Navy will be faced with undue administrative delays, requests for clarification and deviations and the high possibility of justified claims.

Mr. Speaker, you may find it hard to believe, but here we have DCASMA, Dayton demanding drawings from the Navy—to no avail—under five procurement actions themselves justified for informal procurement on the false allegation that drawings do not exist. Even in the days of Mack Sennett comedies, the writers would not have dared to advance any concept of military procurement as lunatic as this. The Navy SPCC decided to cancel these requirements which effectively cheated Poli-Com out of the awards to which it was entitled. Of course, PCI protested this action to the General Accounting Office.

December 21, 1976.—In a conference held by Mr. Richard Martin, attorney for the GAO, seven Navy people met with Mr. P. J. Kanistros, including the following people from Mechanicsburg SPCC: S. Rusack, B. D. Share, L. R. Lines, and C. S. Chronister. These Navy employees repeatedly stated that the drawings for the AN/SRC–20(A) were "not available." They had no comment when Mr. Kanistros produced on the conference table several reels of the very drawings the Navy claimed did not exist. At that point Kanistros offered to withdraw his protest, provided the Navy would reinstate the solicitations and award the contracts to PCI to which they were already entitled. The SPCC representatives rejected this offer, knowing full well that their secret plans to award the entire package to the Small Business Administration would be an accomplished fact within a short period of time. These mendacious, cunning and devious government employees were unaware that a parallel inquiry on the subject resulted in a premature disclosure of their plans later on that same day.

Unknown to the participants in that December 21, 1976, meeting, a letter from the Secretary of Navy was in the mail dated December 16, 1976, signed by Mr. H. Robert Ferneau, the Special Assistant to the Secretary, which stated, in part:

> SPCC with the assistance of NavElex has now located a complete microfilm set of these drawings in the files of the Naval Ship Engineering Center, Hyattsville, Maryland, and is initiating procurement action on the items involved in the cancelled solicitations as well as other AN/SRC–20 parts whose procurement was held up pending resolution of the data question. The Small Business Administration has expressed interest in supplying these AN/SRC–20 parts under its Minority Business Enterprise Contracting Program pursuant to Section 8(a) of the Small Business Act. SPCC anticipates a solicitation for the AN/SRC–20 parts with the SBA.

Mr. Speaker, the vicious part about this situation is not that the Navy finally found their drawings, but the SPCC personnel had secretly decided to hand off a $2 million award under the SBA 8(a) program which automatically carries a higher price to a firm subsequently indentified as Oklahoma Aerotronics based only its minority ownership allegation. In other words, the previously denied existence of drawings was refuted, but the implication is clear that the quality of the drawings is such that any firm, even one without any previous experience in the manufacture of the AN/SRC–20 radio could make a satisfactory finished product in accordance with the specifications and within the time required.

Mr. Speaker, the ignorance of the SPCC procurement officials is appalling. They were obviously unaware that the Small Business Act, Public Law 85–536, July 1970, part 124 SBA rules and regulations, amendment No. 5 and OPI–20 brochure, specifically note that—

> The SBA will NOT accept subcontractual opportunities whenever a small business concern may suffer a major hardship if a procurement is offered to the 8(a) program.

Naturally, any give-away under the 8 (a) program would be fatal to Poli-Com, so the 8(a) project was scrapped for yet another attempt to exclude PCI from the market.

March 10, 1977.—General Accounting Office decision B–187086 concluded that:

It is clear that at the time of the cancellations, adequate specifications did exist within the Navy. We have no indication that prior to the RFP cancellation SPCC made any effort to determine if a data package was available within the Navy. Based on that record, we cannot say that the cancellations were justified.

Mr. Speaker, this conclusion on the part of the Comptroller General is supported by the Ferneau statement of December 16, 1976—cited above—and a letter from W. R. Dowd, Jr., rear admiral, SC, U.S. Navy, Naval Supply Systems Command dated 11 February 1977 which repeated, in part:

The central issue involved here is whether the specification provisions of the original solicitations were adequate for contracting purposes. After review of the recommendation of the Defense Contract Administration Services Management Area, Dayton, Ohio, that no awards be made because of specification inadequacy, SPCC concluded that the specifications were in fact inadequate and that the solicitations had to be cancelled. The fact that drawings and field changes thereto have now been located and revised testing procedures have now been developed will enable SPCC to competitively resolicit for proposal and hopefully award contracts for these needed items. However, we can find no justification for negotiating "sole-source" with POLI–COM to supply these items.

It is interesting to note that Admiral Dowd was quick to find justification for the noncompetitive award of contract 77–C–0187 with Teledyne Lewisburg to pay $9,716 each for a power amplifier PCI offered to manufacture for $3,510, obviously in full agreement with SPCC policy to withhold contracts and contract opportunities from PCI.

February 23, 1977.—The SPCC officials released a letter request for technical proposal NOO104–77–R–WR79 covering substantial requirements for the components of the SRC–20(A) radio. Authorized by J. F. Minahan, contracting officer, and R. H. Brydon (A/C 717 766–8511, extension 3035) it is stated that:

The government's previous experience in the procurement of components for the AN/SRC–20 Radio Set has proven that the drawings, specifications and technical data in the government's possession are insufficient to properly produce and manufacture the component.

In addition, it says:

Based on the urgent need and lack of complete documentation for supply of these items, only sources who have previously supplied these items or have the complete documentation and capability to supply them within a short time frame to meet the Navy requirements will be solicited.

Then, they add the key to the mystery:

Pricing will not be submitted with the technical proposal. This will be requested on a subsequent request for proposal (RFP) issued to those offerors who have submitted an acceptable technical proposal consisting of all the required documentation.

Mr. Speaker, the fact that the Secretary of the Navy and Admiral Dowd state that the drawings are perfectly acceptable for manufacturing purposes, Minahan and Brydon dispute this in their solicitation so slyly packaged and add something never before seen in the history of military procurement. These people proposed to solicit quotations under an informal basis in phase II of this action. In other words, the bids accepted by the Navy were again to be opened in secret, behind closed doors, out of sight of the public. This is directly contrary to the regulation covering letter request for technical proposals as all bids are to be opened publicly. The significant part about this is that informal request for proposals allows the contracting officer unlimited latitude to demand revised proposals or "best and final offer" in a series of roulette spins until the right face appears in the winner's circle. The best example of such a tragedy is documented in Report No. 94–1383, 94th Congress, 2d session, House of Representatives, Mr. BROOKS, from the Committee on Government Operations 29th report dated August 3, 1976, entitled "Questionable Contract for Mobile Field Radios by Department of the Army." This is a documented outrage where the legitimate low bidder was cheated out of the production, while the "winner" was paid over $3 million more than required in spite of the fact that it took four rounds of bidding before this could be accomplished.

Mr. Speaker, the LRFTP NOO104–77–R–WR79 was modified on February 23, 1977, to be replaced by Request for Proposal NOO104–77–R–WR79. The closing date is stated to be 4 p.m. on August 3, 1977. The Navy Ships Parts Control Center is right back where it started on January 8, 1975, where S. Rusack falsified D&F 75–R–VQ29. In the hands of legitimate procurement officials, delivery of this much-needed equipment would have already been accomplished. We cannot allow this farce to continue, and as soon as I can assemble some additional data, it will be my recommendation to the Secretary of the Navy to close the SPCC procurement office altogether and forever, transferring the contracting function to the Navy Purchasing Office, Washington.

Mr. Speaker, you might be interested in the following summary of the last procurement conducted by the NPO Washington, D.C. under solicitation 72–B–0257 covering the entire AN/SRC–20(A) radio set which resulted in award to Admiral Systems Corp., the lowest responsible bidder for the basic requirement plus the optional requirements. Note that the entire radio was priced at $10,872.00, as compared to the SPCC contract with Teledyne announced May 3, 1977, for the power amplifier, a small part of the overall radio, priced at $9,716 each. It is a crime. In this instance, we cannot afford to report the SPCC actions as "plainly illegal" and then forget it. I intend to coordinate my files through the office of the U.S. attorney for prosecution.

Bidders	Basic requirements				Optional number of units listed below								With options total bid

[1] Awarded Admiral Systems Corp., with optional requirements.

Notes: Maximum bid total based on maximum options. Bids opened Mar. 30, 1972 Naval Electronics Systems Command, Navy Purchasing Office, Washington, D.C. NOO039–72–B–0257.

TRUTH-IN-SAVINGS—A GROWING NEED FOR LEGISLATION

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Illinois (Mr. ANNUNZIO) is recognized for 5 minutes.

Mr. ANNUNZIO. Mr. Speaker, today individual consumers often lack the basic information necessary for them to meaningfully compare different savings opportunities. This lack of information causes confusion, misunderstanding and

economic loss for the consumer. In order to assist consumers I plan to reintroduce legislation designed to require standardized disclosure of pertinent savings account information. This legislation will be entitled the Truth in Savings Act.

The Truth in Savings Act is designed to provide the consumer with the information he needs to know to choose the savings account which will be most advantageous for him. The act requires disclosures of the terms and conditions of earnings on individual savings deposits. The more important disclosures include the annual percentage rate, the annual percentage yield, the minimum length of time funds must remain on deposit in order for earnings to be payable at the stated annual percentage rate, and the method used to calculate the interest earned. Under this legislation, all of this information must be clear and concise, and must be made available upon request, as well as at the time of the establishment of savings deposit account. These disclosures afford the consumer the opportunity to make an informed comparison of the savings options available to him.

According to the American Bankers Association, there are some 50 different methods being used to calculate the amount of interest earned on a savings account. Without these disclosures the consumer has no way of knowing what method is being used or how this affects the amount of interest he receives. A study on this subject made in 1970 at Kansas State University by Mr. J. Pinson, entitled: "Truth in Savings," found that many savings institutions were unable to adequately describe the method they used to calculate interest earned on accounts. The same study showed that it is possible for two institutions with similar earnings rates to vary by as much as 170 percent in the amount of earnings they paid on a specified 6 month savings program.

A similar problem exists with respect to NOW accounts. A saver earning 4 percent in a NOW account might decide to put his savings in another account earning 6 percent. The saver might not realize, however, that if, that 6-percent interest rate is being paid on the lowest balance in the account during each month, he might earn more by sticking with the 4-percent NOW account, if the interest is paid from day of deposit to day of withdrawal. The Truth in Savings Act will provide the saver with the information he needs to know to make the right choice.

The act will require every advertisement relating to the amount of earnings payable on an individual savings deposit account to include specific disclosures. Those who violate the act would be subject to civil suit and, in the case of a willful and knowing violation, would be subject to criminal liability.

There are many factors in the terms of savings deposit agreements which, when added together result in higher or lower interest yield for the saver. Some of these factors are: Charges for withdrawing funds at a certain date in the interest period and charges for withdrawing funds too frequently or for too large an amount. In addition, minimum balances are sometimes required in order to earn interest on an account. If consumers are unaware of these factors they can very well work to their detriment. With this information disclosed, savers will be able to make an informed decision as to when and how to save. They will be aware of the contract provisions of their account with their savings institution.

As chairman of the Banking Committee's Subcommittee on Consumer Affairs I intend to pursue this legislation in the coming session of Congress. Legislation of this type will not only increase competition among financial institutions, it will also benefit consumers by increasing their understanding of savings accounts and by helping consumers to make better use of their hard-earned dollars.

TRIBUTE TO THE HONORABLE PETER W. RODINO, JR.

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. LEFANTE) is recognized for 5 minutes.

Mr. LE FANTE. Mr. Speaker, New Jersey's 14th Congressional District, which I represent, became the recipient of a lasting and outstanding honor. Jersey City State College has established an Institute of Criminal Justice and dedicated it to the doyen of our State's delegation, PETER W. RODINO, JR.

Needless to say, the college made an excellent choice and a more fitting tribute could not possibly have been awarded to our colleague from Newark. Our colleague guided the House Judiciary Committee through the critical summer of 1974, and by his fairness and impeccable spirit of nonpartisanship during that crisis, won for himself the respect and admiration of all Americans.

A native of New Jersey, PETER RODINO is a graduate of Rutgers Law School, and in fact, was practicing law in early 1941 when he decided to enlist as a private in the U.S. Army. Among the first enlisted men to be given a field commission, PETER RODINO fought in both the North African and Italian campaigns, performing special assignments with the military mission of the Italian Army. Throughout his military service, he served his country with honor and distinction, being awarded both the Bronze Star and the War Cross, in addition to the many decorations which were bestowed upon him by various foreign governments.

Since coming to Congress 29 years ago, PETER RODINO has championed the needs of his district and those of the State of New Jersey. He has served his constituents well, with deep conviction and a sincere concern for their welfare. We in New Jersey were always aware of his dedication and sterling character, but it took a constitutional crisis to bring those qualities to the full attention of the Nation. PETER RODINO met that challenge and our Government is a more responsive representative institution because of it.

Today, PETER RODINO is the very embodiment of rule by law, and I for one am pleased to see that now the country and the world appreciate what we in New Jersey have known for so long: PETER RODINO is the epitome of unselfish and exceptional public service.

I congratulate my colleague from Newark on his long and exemplary career and on his most recent accolade, as well, which I am greatly honored to have located in my district: the Peter W. Rodino, Jr. Institute of Criminal Justice.

Mr. Speaker, at this time I would like to submit for inclusion in the RECORD the citation which accompanied Mr. RODINO's honorary degree of doctor of humane letters, as well as the certificate announcing the formation of the Peter W. Rodino, Jr. Institute of Criminal Justice and an article on the ceremonies which appeared in a campus publication:

PETER RODINO

Your willingness to accept and carry out the grave responsibility of chairing the Judiciary Committee of the House of Representatives in momentous deliberations has gained you the respect of your colleagues in both political parties. Your guidance of the committee during some of the most critical days in our nation's history was distinguished by its fairness and unwavering spirit of nonpartisanship. Under your leadership, the work of the committee was based, in the words of Edmund Burke, "not upon the niceties of a narrow jurisprudence, but upon the enlarged and solid principles of state morality." Your patience and determination through many hours of difficult toil have earned you the admiration and gratitude of the American people.

At present, your key role in the attempt to secure legislative passage of the bill entitled "Criminal Code Reform Act of 1977," which contributes significantly to the clarity and predictability of the American legal system while simultaneously modernizing it, is greatly appreciated.

Peter Rodino, a native of New Jersey, was born in Newark in 1909. He attended the University of Newark and earned his law degree from the New Jersey Law School (now Rutgers University). He began to practice law in 1938, but interrupted his career to enlist as a Private in the United States Army in March, 1941. He was among the first to be sent overseas, and among the first enlisted men to be given a field commission. After serving with the First Armored Division in the North African and Italian campaigns, he was given a special assignment with the Military Mission of the Italian Army to consolidate operations of the British and American troops for organizing and training equipment for a new Italian Army. He was awarded the Bronze Star, the War Cross, and other foreign decorations for his outstanding military service.

Peter Rodino was elected to Congress in 1948, and for the past twenty-nine years he has served all citizens of New Jersey, and particularly his constituents from the city of Newark and neighboring communities with dedication and a responsive concern for their welfare. He has long been a supporter of Human Rights. He voted against an amendment to the House Joint Resolution (of the women's rights amendment) that would have retained discriminatory laws against women in military service. In 1956, he played an instrumental part in liberalizing American immigration policy by helping to eliminate the national origin quotas provision of the McCarran-Walter Act of 1952. Mr. Rodino rightly considers his work in this cause to be one of his most outstanding accomplishments.

Mr. Rodino was an early supporter of the Marshall Plan for a strong and free Europe. and he was among the most important speakers in support of the United Nations crusade to aid children from war-damaged countries. In his native Newark, he has had an abiding interest in community affairs

and was an early advocate of rehabilitation of delinquent boys.

Husband, father, teacher, concerned citizen, defender of human rights, and upholder of the Constitution, your example of service with integrity will be of lasting value in restoring the faith of the American people in representative Government. It is with great pride that Jersey City State College awards you the honorary degree of Doctor of Humane Letters.

PETER W. RODINO, JR.
INSTITUTE OF CRIMINAL JUSTICE

It is with a great deal of pleasure and personal satisfaction that I make the following announcement. As of this date there shall be established at Jersey City State College an Institute of Criminal Justice. This Institute typifies the urban Commitment of the College which we consider basic to our mission. It also demonstrates growth and development of the College's academic programs. Jersey City State College is indeed moving forward.

In September, 1974 the Board of Higher Education approved a Bachelor of Science Degree in Safety and Security Administration. In the Fall of 1975, 936 students enrolled in the courses offered by this new department; in June, 1976 we graduated the first 13 majors. In June, 1976, after hard work by faculty and students in the program, the Department of Higher Education approved the College's request for a change in degree designation to Criminal Justice/Fire Safety Administration. In the academic year that ends today 1600 students enrolled in the courses offered by this department, and today we are honoring 26 Criminal Justice/Fire Safety majors.

Today I am announcing a third major step in the development of the program: The establishment, at Jersey City State College, of the Peter W. Rodino Jr. Institute of Criminal Justice. We are confident that the new institute will contribute significantly to the achievment of two major goals of Jersey City State College: To strive for excellence in all our academic programs, and to enhance our contribution to the community in which we live. The primary purposes of the Institute are: 1) To focus on the problems and solutions in the field of criminal justice as related to public administration; 2) To function as the educational center for professionals serving the public in the areas of law enforcement, correctional services, probation/parole and the courts; 3) To serve as a research and testing center for new programs and policies developed by governmental and private research organizations in the appropriate fields; 4) To enable Jersey City State College to enlarge its public service mission through providing technical assistance to local agencies; and 5) To improve the understanding of the American system of justice and to provide workshops for the citizenry at large in such matters as personal safety and security.

PETER W. RODINO, JR.

Jersey City State College thanks you for your willingness to have your name associated with the new institute. I am confident that this college community, Board of Trustees, students, faculty and administration, in close cooperation with each other and the community, will bring further honor to your name. May I ask you to come forward and accept a plaque which reads:

The Honorable Peter W. Rodino, Jr., Attorney, Congressman, Humanist, to Commemorate the Establishment of the Jersey City State College, Peter W. Rodino, Jr. Institute of Criminal Justice on June 5, 1977.

HANS W. HELD,
Vice President for Academic Affairs.

COMMENCEMENT 1977 HONORS REPRESENTATIVE RODINO

Commencement, 1977, the 47th at Jersey City State College, was special in many ways. At the initiative of President William J. Maxwell, the ceremonies were held on campus Sunday, June 5, for the first time since 1964. With the Gothic Tower of Hepburn Hall as a backdrop, the College not only awarded baccalaureate degrees to 997 candidates, but honored two retired faculty members, and awarded an honorary degree to one of the country's most distinguished Congressmen.

The Honorable Peter W. Rodino, Jr., Democratic Congressman from New Jersey's 10th District, was the keynote speaker. For his twenty-nine years of service to his constituents and to the American people, most notably as the chairman of the Judiciary Committee of the House of Representatives during the Watergate Affair, an honorary Doctorate of Humane Letters was conferred on him. In addition, the College established the Peter W. Rodino Institute of Criminal Justice in his honor.

GILLIS LONG SAYS "OLD FRIENDS MAKE THE BEST FRIENDS"

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Florida (Mr. PEPPER) is recognized for 5 minutes.

Mr. PEPPER. Mr. Speaker, I do believe that community leaders and individual citizens have the responsibility for assuring that advancing age will not diminish one's right to enjoy life, to serve one's fellow man, and to be a vital part of society's mainstream. More and more older Americans have greater capacity for involvement in life's affairs. Let us make sure that all enjoy the benefits, the opportunities, and the hope of continued growth in later years.

The House Select Committee on Aging, which I chair, has concentrated a great deal of its time in developing alternatives to retirement which involve paid work, but recognizes the contribution older Americans can make and the sense of satisfaction they can derive from "volunteerism."

Representative GILLIS LONG recently addressed this issue in remarks before members of the St. Landry Parish Senior Companion Program in Opelousas, La. His remarks accentuate the need to offer retirees the opportunity to continue using their talents in meaningful ways. I share Representative LONG's view that the stereotype of the enfeebled older person—as perceived by many Americans and the elderly themselves—need not persist. The doors need not be shut on vigorous, capable, willing senior citizens who want to participate in family, community and national life.

I recommend that my colleagues read Representative LONG's thoughtful remarks with respect to the value of a senior companion program in his community which allows older workers to continue to contribute thereby deriving a purpose in life. I insert these remarks to be included in their entirety at this point in the RECORD:

REMARKS GIVEN BY CONGRESSMAN GILLIS W. LONG

It has been said that age is best in four things—old wood to burn; old wine to drink; old authors to read; and old friends to trust.

Old friends make the best friends. When King James observed this fundamental truth a few hundred years ago, he was describing the comfort and the shared experience which familiarity can bring.

I can think of no more fitting tribute for this group. Shared experience is the guiding principle and the underlying strength of the "Senior Companions."

Who better knows the fear of becoming dependent than one who has faced it?

Who better recognizes the subtle discrimination against the aging than one who has encountered it?

Who better grasps the impact of doctor's bills, prescriptions and hospital care than one who has felt it?

Who better understands that isolation leads to quiet despair? Or that individual respect and recognition are the well-spring of meaning in life?

We need look no further than this room for the answer. People like you in the senior companion program have done so much to affect the lives and minds of other senior citizens. Leaders like you in the State and local government have done much to create opportunity where it is needed, muster resources and involve people in the effort.

You could serve no better cause.

I have a deep and abiding interest in your efforts, for I have been a long-standing advocate of programs to improve the quality of life for all Americans.

Nearly fifteen years ago, I was privileged to serve Louisiana's Eighth District in the 88th Congress. It was an active Congress. Among the many initiatives we accomplished was a new federal program known as the Economic Opportunity Act.

The key sentence in that act said that "It is therefore the policy of the United States to eliminate the paradox of poverty in the midst of plenty in this Nation."

That is a profound statement. It says that this rich land will not let human needs go begging whatever or wherever they may be.

But in passing that act, Congress was doing much more than launching a new program. It was challenging American communities to tackle their own problems, to break new ground, to take the lead in improving local living conditions.

New approaches to the problems of the poor, the elderly, the handicapped were needed because the old solutions simply were not working. And programs of new organizational design have been spinning off the system since that time.

Job Corps, Head Start, Neighborhood Youth, College Work-Study . . . and VISTA, the forerunner to your program—these programs dealt with poverty of the spirit as well as poverty of the pocketbook.

Perhaps even more important than the specific programs initiated, however, was what took place in the spirit of the country. People became aroused. Community organizations and associations formed to provide the forum for voices in need and to pull together entire communities for a common goal.

The process of progress was underway. It is the process which carried us here to this point today.

The Senior Companions program is solid evidence of the fruits of partnership between government, community organizations, such as the St. Landry Parish Community Action Agency, and local citizens when they unite for a common cause.

At present, there are nearly 2,600 Senior Companions at work all across this Nation, helping other seniors to remain independent as long as possible and to stay in their home setting with the people and the environment they have known all their lives.

Elderly people, like everybody else in the world, need to belong to a place and a time. Uproot people from their homes, they lose that sense of belonging. Isolate them from friends and fellow residents, they lose their sense of community.

This is why your efforts and your contributions have such great value. Your determination to fight the irreversible drift toward institutionalization in nursing homes or hospitals, has particular significance for all of us.

By providing alternatives for other older Americans, you are also helping to break the stereotyped images about the elderly.

By providing companionship and services to others in need, you are entering a unique position to share the wisdom and experience of your years with people of all ages.

You, as senior companions, can be one of the most valuable links we have between the young and old of our society. America has many important lessons to learn from its older citizens—lessons which are wasted as long as artificial, institutional barriers continue to develop between generations.

As society rushes through an era best characterized by technological advancement and creature comforts, we seem to be losing the communication and interrelationships among generations that have been a part of the American family in the past.

Our expectations, our perception of progress, our very patterns of living have changed with our scarcely knowing it.

When I was a youngster, growing up on my family's farm in Winn Parish, we had very little we could count on in terms of material wealth. These were fearful times for the most part. But we lived together as a family—young ones, parents, grandparents all were part of the same household, sharing a common experience, learning from each other and leaning on each other in times of need.

Today, fewer and fewer opportunities exist for this kind of family unity.

Our mobile society has become a rootless one. Generations have drifted apart and grouped together in living arrangements as much by age as by any other factor.

In the process we have lost an identity with the older population, and an awareness of the important structural influence they play in society.

Our children grow up, move away to better jobs, new lives, and often the family ties degenerate. It is not surprising then, that those left behind become remote and cut off from the mainstream of life as the years go by.

This is where you, as senior companions, provide that vital link. You can dissolve the social isolation which leads to loneliness among the elderly.

You can establish a stronger spirit of community. And by community spirit I mean the spirit of belonging, the spirit of responsibility and the spirit of participation.

You can and should become the ultimate communicators for our elderly population—a link through which their material and spiritual needs are carried to the rest of the community, and in turn by which they keep in touch with the contemporary world.

You must articulate the wisdom and understanding of your unique perspective if we are to regain that lost spirit of community, because the quality of life for older America requires the attention of us all.

"Old friends are the best friends," King James tells us. And as you go about talking with other old friends, helping to strengthen the good things that remain in life and restoring some of those that are lacking, I hope you won't forget the importance of identifying the special needs. This is as important as any contribution you can make.

We need to hear from you. Your dynamic local leadership needs the benefit of your judgment to respond on the local level. We who represent you need your valuable assistance so that we can do a better job of responding from a national level.

So you see, you are vitally important people. What you have been able to accomplish here with the St. Landry Senior Companions Program is significant in that it brings together people with common interests and common concerns. But the real importance of what you are doing goes beyond the immediate goal.

You are the cutting edge of a powerful and growing force of more than 23 million older Americans who can focus attention on some initiatives to be taken in your own behalf—initiatives such as improving the Social Security system, assuring adequate housing, eliminating discriminatory laws, promoting better health care and greater opportunities for self-respect and individual choice.

These initiatives will remain in the background without persons like you to lead the way.

With more than 4000 Americans turning 65 each day, you show strength by numbers. With the creation and development of programs such as the senior companions, you show strength of commitment as the well-organized constituency which you are.

In your hands lies success or failure.

From my personal point of view, you have the basic ingredients for a successful campaign here in St. Landry Parish against the deprivations of advancing age—an awareness of the problem, a dedication to solving it, and a mobilization of resources and talents to get the job done. I commend you for your efforts and your devotion to making a longer life in America a better life.

There is a Chinese folk tale about a hunter who, while traveling through the woods, saw a very old man planting a plum tree.

"Aged one," he said, "Many years will pass before this tree bears fruit."

"True," said the old man.

"Why, then do you plant it"

"I did not find the world a barren place when I came into it," the old man said. "And just as those who went before me planted trees, so do I for those who follow."

The seeds of hope for older Americans are planted here among you. I pledge my best efforts to help them grow.

IN SUPPORT OF HOUSE RESOLUTION 48 TO REESTABLISH COMMITTEE ON INTERNAL SECURITY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Georgia (Mr. McDONALD) is recognized for 5 minutes.

Mr. McDONALD. Mr. Speaker, another tragedy took place this morning in New York City as a result of a terrorist bombing. At about half-past nine this morning, a passerby was killed when a bomb went off at the Citibank on East 42 Street in New York City. The FALN, a Puerto Rican terrorist group which receives support from the Castro dictatorship in Cuba, took responsibility for the bombing. They claimed that six other bombs had been planned in various parts of New York City. One of these has already gone off in an office on Madison Avenue, with only property damage. Police are searching for the other five bombs.

The FALN is the group that was responsible for the January 24, 1975, bombing of Fraunces Tavern in New York in which four people were killed and over 50 injured.

As a result of the destruction of the police intelligence facilities in New York City and State, and the severe curtailment of FBI intelligence gathering, the FALN terrorists continue to commit atrocities without being apprehended. At this time, we have no congressional committee investigating terrorism or developing legislation to cope with this problem. Over 150 Members of Congress have joined Congressman JOHN ASHBROOK and myself in cosponsoring House Resolution 48 to reestablish the Committee on Internal Security so that we can begin rebuilding our defenses against terrorism. The innocent victim murdered by the FALN this morning and the unknown number of injured in the New York bombing would have been safe if our defenses against terrorism had been rebuilt long ago.

I invite my colleagues to join with those of us who have already sponsored House Resolution 48 and to urge the Rules Committee to report it out so that Congress will have the opportunity to vote on this important matter.

THE 1977 CAPTIVE NATIONS WEEK ON HUMAN RIGHTS AND U.S. FOREIGN POLICY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Pennsylvania (Mr. FLOOD) is recognized for 5 minutes.

Mr. FLOOD. Mr. Speaker, throughout the successful 19th observance of Captive Nations Week speakers and writers stressed the prime character of the captive nations for application of a foreign policy with human rights as its centerpiece. The elucidation of the captive nations field for human rights application was in the judgment of numerous analysts the sterling contribution of the 1977 Captive Nations Week. Plainly, the captive nations position is a natural for human rights advocacy, and to try to conceal this, as some influences behind the President's hesitancy in issuing his proclamation aimed at, just runs counter to commonsense and our perception of reality.

In presenting further selected items on the 1977 week, I submit the following: First the proclamations of Mayor Vincent A. Cianci, Jr., of Providence, R.I., and Mayor Thomas P. Ryan of Rochester, N.Y.; second, the proclamation of Gov. Scott M. Matheson of Utah; third, two reports on the President's proclamation in the New York Times and the New York News; fourth, a release by the National Captive Nations Committee on the Carter proclamation; fifth, the story in the July 30 issue of Human Events on "Carter's Desperate Moves To Maintain Détente"; and a report on free China's observance of the week in the China Post of July 19:

STATE OF UTAH.

DECLARATION

Whereas, the week of July 17 through 23, 1977, will be the 19th observance of "Captive Nations Week" in accordance with Public Law 86–90; and,

Whereas, the freedom loving peoples of Armenia, Byelorussia, Estonia, Latvia, Lithuania, Ukraine, Serbia, Poland, Rumania, Czechoslovakia and others, today find themselves in a situation which strongly parallels that from which these United States of America liberated themselves over two hundred years ago; and,

Whereas, these people in captive nations look to the United States as the citadel of human freedom and to its people for guidance and inspiration; and,

Whereas, this Nation's tradition of leadership in matters of independence and democracy has been a steady beacon of hope for the Captive Nations under a Russian Communist domination:

Now, therefore, I, Scott M. Matheson, Governor of the State of Utah, do hereby declare the week of July 17 through 23, 1977 as

"Captive Nations Week" in the State of Utah.

CITY OF PROVIDENCE.

PROCLAMATION

Whereas, the United States of America has enjoyed full freedom for all of its citizens ever since it became "one nation under God, with liberty and justice for all" in 1776; and

Whereas, throughout the world in 1977, the same rights for freedom and personal liberty to which all men are heirs, are not presently available to countless millions of our fellow human beings in many captive nations; and

Whereas, it is incumbent upon all elected officials in this nation, to whom the deprivation of human liberty and the continuing enslavement of peoples is most reprehensible, to speak out on behalf of all who reside in these captive nations;

Now, therefore, do I, Vincent A. Cianci, Jr., mayor of the city of Providence, hereby proclaim the week of July 17th through the 23rd, 1977 as "Captive Nations Week in Providence" and urge all of my fellow citizens in the capital city of Rhode Island to become cognizant of the fact that all of the personal freedom that we enjoy is still being denied many of our fellow human beings throughout the world.

CITY OF ROCHESTER.

Whereas, policies of the Soviet Union and other communist powers have led to the subjugation and domination of thousands of freedom-loving peoples whose yearnings for independence, and whose right to self-determination, have been arbitrarily ignored, and

Whereas, The United States of America, having thrived on the guiding principles of liberty and justice, is the ultimate symbol of human freedom and therefore has a unique obligation to make independence a reality for enslaved populations everywhere, and

Whereas, Rochesterians recognize their special responsibility to the overseas relatives and friends of many of our City's residents, who contribute so much to the nourishment of basic human rights and to the civic betterment of our comunity, and

Whereas, the Congress of the United States has established the third week in July each year as Captive Nations Week, to encourage all Americans to participate in activities to demonstrate our sympathy with and support for freedom, independence, and self-determination of captive peoples throughout the world, and

Whereas, at the ceremony in Rochester the ethnic groups represented each with their national flags and native costumes, include East Germany, Estonia, Hungary, Latvia, Lithuania, Poland, Ukraine, and Yugoslavia.

Now, therefore, I, Thomas P. Ryan, Jr., Mayor of the City of Rochester, do hereby proclaim July 18–July 24, 1977 to be "Captive Nations Week" in Rochester and urge all Rochesterians to rededicate themselves to work and pray for the day when freedom for all the world's peoples will be a reality.

[From the New York Times, July 21, 1977]

IT'S CAPTIVE NATIONS WEEK

WASHINGTON, July 20.—President Carter today proclaimed this week as Captive Nations Week and asked Americans to demonstrate their support for peoples seeking national independence, liberty and human rights. His action was based on a resolution adopted by Congress in 1959 asking the President to designate the third week in July as Captive Nations Week to emphasize disapproval of the Soviet Union's takeover of the Baltic states and the emergence of Communist governments in Eastern Europe, China, Cuba, North Korea and North Vietnam.

[From the New York News, July 21, 1977]

CARTER PROCLAIMS CAPTIVE NATIONS WEEK

WASHINGTON.—President Carter yesterday signed the annual proclamation designating Captive Nations Week. Acting belatedly, Carter proclaimed the week that began last Sunday is one calling for special observances "demonstrating America's support for those who seek national independence, liberty and human rights." Such proclamations have been issued each year since 1959.

CARTER PROCLAMATION ON CAPTIVE NATIONS CALLED "A RETREAT ON HUMAN RIGHTS"

WASHINGTON, D.C.—President Carter's four-day late and weakly-worded proclamation on Captive Nations Week was called today "the beginning of a retreat on human rights" by Dr. Lev E. Dobriansky, chairman of the National Captive Nations Committee.

Dr. Dobriansky, who earlier this week criticized President Carter for his failure to proclaim Captive Nations Week, which began last Sunday, July 17, charged there was "no excuse" for the delay—the first in the 19-year history of Captive Nations Week.

"Captive nations and human rights are a natural combination," stated Dr. Dobriansky, "and we therefore expected a prompt and strongly worded proclamation from President Carter.

"Instead, we were first informed there would be no proclamation. Then we are presented with a pro forma statement which makes no mention of any of the 27 nations now under communist captivity or the primary cause of their captivity—Soviet Russia.

"We note that this deplorable misreading of the cause of captive nations follows closely the formation of the inter-agency committee on U.S.-USSR relations—the first such governmental agency of its kind.

"We feel compelled to ask: Which is more important to this administration—human rights or relations with the Soviet Union?

"We will be watching very carefully the administration and the White House to determine the answer and how President Carter develops what he himself has called his 'crusade for human rights.'

"His near disastrous inaction on Captive Nations Week suggests that his commitments to his human rights crusade is growing lukewarm if not cold.

"If so, that is tragic news for the hundreds of millions living under communism who look to the United States and its leaders for encouragement, inspiration and hope for their individual freedom and national independence."

[From Human Events, July 30, 1977]

ALMOST CANCELLED CAPTIVE NATIONS WEEK: CARTER'S DESPERATE MOVES TO MAINTAIN DETENTE

President Jimmy Carter, who has made "human rights" a centerpiece of his diplomacy, beat a spectacular retreat last week that left many foreign policy observers simply stunned. "He almost duplicated Ford's snub of Solzhenitsyn," remarked one amazed critic.

What prompted this and similar outbursts against the President was his initial decision to forego issuing a Captive Nations proclamation in accordance with Public Law 86–90. Signed by President Eisenhower in 1959, the law states the Senate and the House resolve that "The President of the United States is authorized and requested to issue a proclamation designating the third week in July 1959 as 'Captive Nations Week.'"

The law further states that the President is "authorized and requested" to issue similar proclamations each year "until such time as freedom and independence shall have been achieved for all the captive nations of the world."

The brainchild of Georgetown University Prof. Lev E. Dobriansky, chairman of the National Captive Nations Committee, the act has become a symbol for those Americans of Eastern European ancestry who have seen their countries swallowed up by Soviet armies. Every year dozens of groups, many of whose members typify the ethnic base of the Democratic party in the East, gather during this week to talk of their heritage and liberation of their homelands. Because of the deep current of feeling among the ethnics, not only Presidents, but governors, mayors and other public officials from around the country pay homage to Captive Nations Week.

But for reasons which are still wrapped in something of a mystery, Carter, though ultimately reversing himself under pressure, had planned to become the first President since passage of PL 86–90 to ignore the occasion.

Dobriansky, who has raised the issue every year with whoever is President, wrote to Carter in the early part of May, telling him of the importance of Captive Nations Week and the presidential proclamation. He eventually received a reply—oddly enough, from a man at the Office of Management and Budget—saying the matter would be handled by the State Department. Still later, Dobriansky was directed to Greg Treverton, a staffer on the National Security Council, headed by the President's chief White House adviser on foreign affairs, Zbigniew Brzezinski.

Meanwhile, Captive Nations Week was approaching. On July 14, three days before it was to officially begin, Treverton's office informed Dobriansky that the NSC was still working on the President's statement, and gave no hint that Carter might choose not to deliver one at all. Up until 3 p.m. Friday, July 15, Dobriansky believed a declaration—which had been issued by every President prior to the official start of Captive Nations Week—would still be forthcoming.

Eager to obtain it to inform various interested parties, Dobriansky then told the executive director of his group, Lee Edwards, a conservative activist and publicist, to follow through with Treverton, since he had to fly out to Cleveland for, ironically enough, a panel on detente.

When Edwards called about an hour or so later, Treverton said there wasn't going to be any proclamation. It was "not required," he told Edwards, despite the language of the 1959 law stating the President is "authorized and requested" to issue such a proclamation. (Treverton, in fact, was correct, since Congress deliberately chose the softer word "requested" so it would not look as if it were ordering the President around.)

Treverton said the proclamation wasn't necessary because of the President's well-known stand on human rights. Edwards was taken aback, but told Treverton that a "lot of people" were going to be both surprised and disappointed. Treverton stressed that the lack of a proclamation should not be seen as a retreat for either human rights or self-determination for those behind the Iron Curtain, but Edwards responded it would be interpreted as a retreat for both.

(Treverton's response, however, appeared to be more considered than that of Pat Derian, the State Department's designated human rights expert. When Rep. Larry McDonald's (D.-Ga.) office asked Ms. Derian why there was no Captive Nations proclamation, she said: "I vaguely recollect recommending that the President issue a proclamation in support of captive nations, but I'm not overly concerned that he hasn't. It's not as if we were sending money to Chile.")

When Dobriansky found out about the President's decision, he began spreading the word to interested ethnic groups and to congressional leaders on Capitol Hill.

In a sharply worded letter to the President dated July 18, he wrote: "Your failure to proclaim Captive Nations Week is a source of grave disappointment to millions of Americans and our allies abroad. Those in the Kremlin and other Communist totalitarian

centers are doubtless happy and delighted by this generous inaction and certainly will weigh it accordingly.

"For one who is supposedly committed to human rights globally, we expected from you the strongest proclamation yet. Instead, for the first time since 1959 and in strange contrast to your five predecessors, you chose to ignore this traditional annual observance of Captive Nations Week. . . . We are appalled by this indifference."

As word filtered to various groups, many of whose members, in turn, wrote or called the White House, the pressure on Carter mounted to issue a proclamation. Republican leaders—many of whom, in fact, had ignored the "human rights" issue when Presidents Nixon and Ford were in office—began making some noises.

Sen. Robert Dole (R.-Kan.), contending that Americans were "distressed" because the President had failed to issue a proclamation, introduced a resolution that would have directed the Administration to bring up the subject of "captive nations" at the Belgrade conference this fall on the implementation of the Helsinki document.

But Democrats also got into the act. Andrew Valuchek, director of Minority Divisions at the Democratic National Committee, issued a special plea to the White House to come forth with a proclamation.

As is normally the custom, House members, in honor of Captive Nations Week, scheduled a special order for Wednesday, July 20, to bring up the subject and to discuss Carter's curious refusal to issue a statement.

By Wednesday morning, the President had yielded to political pressures at home. Before the House went into session on its special order, with many members primed to blast the President, Carter had issued a token proclamation, thereby avoiding some harsh condemnations.

What alarms foreign policy experts about this entire episode is that in the confrontation between Carter and Brezhnev on human rights, Carter appears to have blinked first. Moreover, he was clearly tempted to appease the Soviets in the most desperate fashion.

While the Soviets used to look upon Captive Nations proclamations as an offensive intrusion into their affairs, they now tend to view the issuances of such statements as ritualistic exercises, primarily because U.S. Presidents in recent years have kept watering down these proclamations. But Carter was so worried about offending the Soviets, he initially decided to cancel a pro forma proclamation, even if it would arouse the ire of ethnics loyal to the Democratic party.

Moreover, this Carter effort to appease Moscow follows a series of other major accommodation moves, including cancellation of the B–1, the scrapping of the production of the Minuteman III missile, the elimination of an upgraded guidance system for the Minuteman II, the end of the hard-line Foreign Intelligence Advisory Board and a move to end the Jackson-Vanik amendment limiting trade with the Soviet Union.

Just last week, in fact, the President authorized the creation of a special committee to coordinate all governmental policies involving the Soviet Union to be centered in the State Department. The new group, to be co-chaired by Marshall D. Shulman, chief adviser to Secretary of State Cyrus Vance on Soviet affairs, and George S. Vest, a foreign service officer, who was once an aide to Secretary of State Henry Kissinger, appears to have been established for the purpose of avoiding conflicts with the Soviets. Shulman, according to many who are acquainted with him, takes pretty much of a dovish position when it comes to formulating policy.

In other words, President Carter, who began his Administration with a relatively tough stance toward the Soviets on both human rights and SALT, now appears to be scurrying in retreat before Brezhnev's wrath. It may be the biggest retreat before the Russians since Napolean's army escaped Moscow in the winter of 1812.

[From the China Post, July 19, 1977]

WRITERS AGREE ON ANTI-COMMUNISM

Ten free world anti-Communist leaders including William L. Dickinson, member of the U.S. House of Representatives have arrived in Taipei for the 1977 Captive Nations Week being held in Taipei July 16 to 23.

During a meeting of national writers yesterday to accuse the Chinese Communists of destroying Chinese literature and culture, Dickinson pointed out that the Communists were preserving Chinese culture and said that the totalitarian rule will not be accepted for long by the people, and there is no place for such a regime anywhere in the world.

Im Tam, former Cambodian premier, also pointed out yesterday that the people in Cambodia are taking action to over throw the Communist regime which has undertaken a campaign of massacres throughout the country.

Ander Larsson, secretary-general of the World Anti-Communist League Sweden Chapter said that he believed that only Free China is the real China and the philosophers, artists and politicans in Taiwan are the sole representatives of Chinese culture.

Baycocie Bounleuth, an anti-Communist leader in Laos, said that anti-Communist activities are going on in his country.

He urged the free world to support these activities with financial and other material assistance.

Suvit Chi-nachote, secretary-general of World Anti-Communist League, Thailand Chapter, pointed out that the Communists never uphold human rights.

The writers' meeting yesterday, attended by about 100 people, agreed on the following five points:

Leaders and people of the free world must struggle for the protection of human rights are freedom. Human rights can not be interpreted under a double standard.

Many American politicians and people agree that totalitarian regimes are not viable.

The Chinese writers and people will always unite with the people of Asian countries and people of the world in anti-Communism, and anti-slavery and anti-totalitarianism.

Chinese traditional culture the freedom and democracy of the West and the Three Principles of Dr. Sun Yat-sen will be the mainstream of the world people's ideology and political models.

Philosophers, politcians and scholars all over the world must lead the people toward anti-Communism.

Picture shows U.S. Rep. William L. Dickinson, addressing the writers' meeting yesterday.

AMENDMENT TO THE OLDER AMERICANS ACT OF 1965 AS AMENDED, TO PROVIDE THAT THE COMMISSIONERS OF ADMINISTRATION ON AGING MAY MAKE GRANTS TO ASSIST OLDER PERSONS ADVERSELY AFFECTED BY NATURAL DISASTERS, AND FOR OTHER PURPOSES

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Ohio (Ms. OAKAR) is recognized for 5 minutes.

Ms. OAKAR. Mr. Speaker, as a member of the House Select Committee on Aging, I was privileged to attend a hearing held by the committee concerning the fate of elderly persons in the aftermath of a severe natural disaster. We heard from witnesses who had survived floods in Kentucky and Virginia, and a tornado in Nebraska. We were particularly concerned with the efforts of the Federal Government as represented by the Federal Disaster Assistance Administration to help our elderly when the President declares a disaster is eligible for Federal funds.

The Federal Disaster Assistance Administration establishes disaster assistance centers in the stricken area, and these serve as a central location for Federal, State, and local agencies, and facilitates matters for victims.

However, our hearing revealed that while these centers do provide an invaluable service to victims of disasters, the elderly, who are one of our most vulnerable groups in such situations, often do not receive the assistance they need. Many times, they cannot get to the center, and they find it difficult to secure the critical items like food, shelter, transportation and medical help. Psychologically, the impact of a disaster, which may wipe out the product of a lifetime, is much harder on them.

We heard testimony from elderly witnesses about the difficulties they experienced in dealing with the extensive bureaucratic redtape long after the disaster had occurred. They still needed help of all kinds.

As a result of this hearing, I am introducing an amendment to the Older Americans Act that this bill will allow the Commissioner of the Administration on Aging to reserve a certain percent of discretionary money for just such emergencies. This bill will allow him to give the appropriate area agency on aging the necessary funds to assist the older persons who are adversely affected by any emergency or major disaster declared by the President in accordance with the Disaster Relief Act of 1974.

I believe the Commissioner needs this flexibility to assist the elderly when they need it most. I am sure that those who have had serious weather disasters in their district can well understand the psychological and physical damage to people, particularly our older people. We should give our Government agencies the necessary flexibility to deal with such emergencies effectively. I believe that this bill will do just that.

H.R. 8606, THE NON-GAME FISH AND WILDLIFE CONSERVATION ACT OF 1978

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California, (Mr. LEGGETT) is recognized for 5 minutes.

Mr. LEGGETT. Mr. Speaker, when the first colonists came to America they found a land rich in wildlife resources. Their interest, however, was focused on animals which could be used to help these colonists survive in a new land. This early focus on game animals became imbedded in our national consciousness and when the early Americans thought of wildlife management, they thought of game animal management. Nearly 400 years later, America's

wildlife management structure is still focused primarily on game animals.

It is time, however, that we as a nation recognize that the 2.2 billion acres which comprise the United States supports a rich diversity of nongame wildlife. Of the approximately 3,700 species of verebrates found in the continental United States, approximately 3,100 are nongame species. Unfortunately, less than 10 percent of the total 3,700 vertebrate species receive scientific management and, with few exceptions, these represent the game species.

Although our wildlife management system is focused primarily on game animals the fact remains that game and nongame animals share the same environment. The same forces which threaten the habitats and the survival of game species, threaten nongame animals. Our present system offers only partial protection. If the wildlife habitats of America are to be fully protected for future generations of Americans we must begin now to establish a wildlife conservation program which places equal emphasis on game and nongame species.

The degree of enjoyment which the present generation of Americans derive from our nongame wildlife resources is illustrated by the fact that each year approximately 65 million Americans over 9 years of age venture into the outdoors specifically to observe or photograph wildlife. Those Americans who participate in activities involving nongame species spend on an annual basis approximately $170 million on bird seed, $7 million for field guides and other natural history books, $190 of the total sales of photographic equipment and $115 million of the total sales of binoculars.

It is because of these facts, Mr. Speaker, that ED FORSYTHE and I have introduced H.R. 8606, the Non-Game Fish and Wildlife Conservation Act of 1978. This bill offers matching funds to assist those States which establish a comprehensive and effective program for conserving and enhancing nongame resources. At the present time the States lack the funds to develop such a plan or to implement a comprehensive program. Existing funding sources are neither fully appropriate nor adequate for the protection and conservation of nongame wildlife.

Some States have nevertheless seized the initiative. My own State of California, for example, has created a Citizens Non-Game Advisory Committee which has recommended the establishment of a comprehensive nongame conservation program. To raise revenue, California sells personalized motor vehicle plates and earmarks funds derived from these sales for endangered and nongame species protection.

To evaluate the depth of the State's interest in establishing a nongame conservation program and to determine the States' views regarding the need for such a program the Department of the Interior's Fish and Wildlife Service recently conducted a survey of State fish and game departments. This survey indicated great support for nongame legislation and revealed that an average of 279 species of wildlife in each State will benefit from the conservation program established in H.R. 8606. This number represents more than twice the number of species which are legally harvested in each State and is probably more than three times the number of species which are currently under scientific management.

Mr. Speaker, the need to establish an effective and comprehensive program for the protection and enhancement of our nongame wildlife values is clear. The Non-Game Fish and Wildlife Conservation Act of 1978 attempts to meet this need and I look forward to hearings on this legislation before the Subcommittee on Fisheries and Wildlife Conservation and the Environment later this year.

HOUSE TELEPHONE DIRECTORY

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from New Jersey (Mr. THOMPSON) is recognized for 5 minutes.

Mr. THOMPSON. Mr. Speaker, I wish to thank House Members, chairmen, and the staff of each office and committee for their fine cooperation in submitting data that will be utilized in the publication of the first comprehensive House telephone directory next month.

The telephone directory is a joint undertaking of the House Administration Committee and the Clerk of the House, with the assistance and technical expertise of the House Information System, the House Finance Office, the Government Printing Office, and Joint Committee on Printing staff, as well as the staff personnel of each of the various offices involved in the project.

The House telephone directory will be published quarterly so as to be kept as reasonably accurate as possible. Each congressional office, committees, and subcommittees will receive an ample supply for official use. It will also be sold on an annual subscription basis by the Superintendent of Documents, Government Printing Office for use by executive branch personnel, trade associations, labor unions, law offices, and other groups who have regular communication requirements with the House.

The directory will alphabetically list all House employees who have a daily need for telephone contact, along with their titles, room numbers, and extensions. A separate classified listing will give the names, titles, room numbers, and extensions of staff personnel of each Member, with a similar listing of his district office personnel, their addresses, staff, and phone numbers. Another section of the directory will list similar information for all committees, subcommittees, select committees, joint committees, ad hoc groups, and other House organizations, including the officers of the House, leadership, and minority offices. A separate section will also list miscellaneous service and other functional offices of the House, while another section will list numbers of executive branch departments and agencies, with their congressional liaison contact numbers.

Mr. Speaker, I am confident that this House telephone directory will help immeasurably to expedite the work of this body by providing readily available, current information about addresses and phones of Members and committee staff personnel. It should reduce the number of second calls that are made many times each day to committees and subcommittees that are presently necessary to locate a particular staff member.

I appreciate the cooperation of the Clerk, Edmund L. Henshaw and his fine staff who have worked closely with House Information System Director Boyd Alexander and his able staff, and the staff of the House Administration Committee to help advance this House telephone directory project.

THE LATE ARCHBISHOP MAKARIOS

The SPEAKER pro tempore. Under a previous order of the House, the gentlewoman from Maryland (Mrs. SPELLMAN) is recognized for 5 minutes.

Mrs. SPELLMAN. Mr. Speaker, I was deeply saddened this morning to learn of the death of Archbishop Makarios. The loss of such a towering figure will be felt, not just by his own people who so revered him, but by those of the world community who have sought for so long to bring peace to the troubled Island of Cyprus.

The fratricidal conflict that has torn that beautiful island was the archbishop's constant cross. The most recent devastating attack by Turkish troops must have, at last, made it too heavy to bear.

Efforts to restore the human rights of the thousands of displaced, homeless refugees who still roam Cyprus will be extraordinarily more difficult without the moral leadership of the archbishop. I can only hope that sorrow at his passing will serve to fulfill the purpose to which he dedicated his life: An equitable peace for the Cypriot people.

NO HUMAN RIGHTS IN CZECHOSLOVAKIA

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from California (Mr. VAN DEERLIN) is recognized for 5 minutes.

Mr. VAN DEERLIN. Mr. Speaker, 9 years ago this August 21, a half million troops mustered by the Soviet Union overran Czechoslovakia, a small and gallant nation whose only offense was a penchant for freedom from the demands of monolithic communism.

Shamefully, the invasion force remains, and for the 14 million Czechs and Slovaks, there is great sadness. But there is also hope—the human spirit is unquenchable—and the August 21 anniversary will be designated correctly in Czechoslovakia as a "Day of Soviet Shame."

Throughout the world, Czechoslovak national groups intend to help keep the spark of liberty alive in their homeland. Men such as Dr. Joseph Hasek, cochairman of the Foreign Affairs Research Committee of the Czechoslovak National Council of America, are appealing to us to harken to the plight of these subjugated peoples.

There are relatively few people of Czechoslovak descent in my own district, yet it is impossible for me not to identify with the cause of these freedom-loving people who are, in Dr. Hasek's words, "now enslaved by the Soviet neo-colonialists."

Nine years seems a long time to wait for relief from oppression that disgraces us all, regardless where we stand on the political spectrum. Let us remain resolute in our determination some day to welcome back the brave people of Czechoslovakia, into the community of free nations.

THE OFFICE OF DRUG ABUSE POLICY SHOULD NOT BE ABOLISHED

Mr. RANGEL. Mr. Speaker, I would like to take this time to establish a record. The gentleman from New York (Mr. GILMAN) and I have asked for this opportunity because the President of the United States has recently indicated under the powers bestowed upon him by this House and Congress that he intends to abolish the Office of Drug Abuse Policy. It has taken a long time for this House to get some priority on the importance and sensitivity of the drug abuse in this country, and after many attempts we were successful last year in persuading the previous administration to if not support, at least sign into law the legislation that this Congress has passed.

We were able in the last administration at least to get on the record a white paper which outlined recommendations that this country had to make and decisions that we had to make in order to form a national policy in an international field to allow America's position to be known for opium-producing countries. It was a hard struggle here in the House, but with the combined effort, we not only were able to set up a Select Narcotics Committee in the House of Representatives, but we were able to get substantial support in the Senate. We waited a very long time for President Carter to be able to pull together his national policy as relating to drug abuse, not only as relates to our domestic policy but also its implication in the international arena.

On August 2 a message was sent to the Congress. It outlined many of the things the past administration had promised to do, but one of the significant things was that it was supposed to support the United Nations. It was an involvement of the Congress. It was supposed to put an emphasis on law enforcement. There were supposed to be additional studies made.

Ironically, the people who were supposed to do the studies are the people who are assigned to the Office of Drug Abuse Policy. It is my understanding, after the gentleman from New York (Mr. GILMAN) and I were briefed this morning by Dr. Peter Bourne, that it is this very same staff that has the responsibility that expects to be out of business at the end of this year as a result of the President's recommendation under the reorganization plan he submitted.

The gentleman from New York (Mr. GILMAN) and I have gone to many of our colleagues. I think we have close to 100 Members of the House who are prepared to ask the Speaker to use his good office to advise the President of the United States to reconsider his recommendation to abolish the Office of Drug Abuse Policy. It was created over the objection of the last administration, and the Congress created it to develop a national drug abuse policy and to finally coordinate the 50 policies, agencies, bureaus, and administrators of the executive branch having jurisdiction over drug traffic and drug abuse.

When President Carter first took office, he supported the decision, and for the first time the Congress and the Nation had hopes that progress was being made. Now with less than 5 months of existence, ODAP is being charged with the responsibility to research this study and to make recommendations to the Congress, and then at the end of the year go out of business. I think the Congress should maintain the oversight that it had with the Office of Drug Abuse.

Mr. Speaker, I now yield to my friend, the gentleman from New York (Mr. GILMAN).

Mr. GILMAN. I thank the distinguished gentleman for yielding.

I want to commend my colleague, the gentleman from New York (Mr. RANGEL) for taking the time and for having the leadership to focus attention on the President's recent decision to dismantle the Office of Drug Abuse Policy, the principal unit within the Executive Office of the President for coordinating the more than 50 departments and agencies and bureaus and administrations having jurisdiction over the drug abuse prevention and control program.

I ask the distinguished gentleman, who I know was here in the Congress at the time this Office of Drug Abuse Policy was created, was it the intention of the Congress at that time to try to maintain some oversight and some control over policymaking decisions and to have some input at the time this agency was created?

Mr. RANGEL. As the gentleman from New York (Mr. GILMAN) well knows, in the Congress itself so much of the jurisdiction that relates to law enforcement and drug abuse and rehabilitation, because it was covered in so many committees and subcommittees, the Congress in its wisdom or the House in its wisdom created the Select Committee on Narcotic Abuse. This same situation, as the gentleman stated, exists with over 50 bureaus and agencies in the executive branch, and the House in its wisdom and the Congress created the Office of Drug Abuse Policy so that there could be one agency that could inform this Congress as to what our national policy is and as to what our international policy is.

The ironic thing is that last year, as the gentleman well knows, the Congress appropriated a quarter million dollars that was not used, and the Congress sent back to the President an appropriation of $2 million, and yet President Ford did not see fit to recognize ODAP, and it was our present President in March of this year who recognized this creation of the ODAP and this President, without giving it a chance to produce, is asking that it be abolished.

Mr. GILMAN. I know my colleague participated with me in recent hearings of the Select Committee on Narcotic Abuse, when we had the principal policymakers of the Drug Administration before our committee, including Peter Bensinger, of the Drug Enforcement Agency and Mathea Falco of the Department of State, and Dr. du Pont of the National Institutes, and Dr. Peter Bourne, the President's Special Advisor. At that time we discussed who was making policy and how it was made with respect to the narcotic problems confronting our country. It was my impression from that testimony that these four people were the principal policymakers for the President with respect to narcotics, that is Dr. Bourne, Peter Bensinger, Mathea Falco, and Dr. du Pont, and they indicated they met, I believe, every other week in an informal working group.

Lo and behold, we find now that the President, with well intentions and good words, has yet to formulate a formal coordinator in his executive branch, after being in office for some 7 months, and is relying only on this informal arrangement.

Is it the impression of the gentleman that we still lack a formal policymaker in the executive branch with respect to narcotics?

Mr. RANGEL. Mr. Speaker, I would say to my dear colleague, the gentleman from New York, that through his thorough questioning at the Select Narcotics Committee hearings we were able to find out from the administration that indeed what we had hoped was a formal arrangement was very informal indeed, what I think was referred to as a working group. But as a result of the meeting the gentleman from New York (Mr. GILMAN) and I had with the administration just this morning, and I think the gentleman and I and those that were present in attendance at this meeting know that the depth of the relationship as it relates to coordinating the agencies and departments in the area of drug abuse depends on the relationship that Dr. Bourne has with the President of the United States.

Mr. GILMAN. Suddenly we find that Dr. Bourne is going to be without an office and that the policymaking will be folded in from its former position in the Office of Drug Abuse Policy into the Domestic Council in a reshuffling, which I think will be detrimental to the overall national effort.

Does my colleague agree that this could create a great deal of problems with regard to our national effort?

Mr. RANGEL. I not only agree with the gentleman from New York, but I think we ought to underscore that in the President's message the addition of opium and hard drug abuse, even though Dr. Bourne loses his staff, in a sense his responsibilities are increased as he is charged with studying the ill effects of tobacco, as well as international health problems.

Mr. GILMAN. Mr. Speaker, I thank the gentleman for helping us to focus attention on these very serious prob-

lems. I am very much concerned. I am concerned about the lack of leadership, the lack of attention to a very serious and massive problem. I am hoping that our colleagues will join in our mutual efforts to prevent this reorganization from occurring, to ask the President to reconsider his dismantling of the Office of Drug Abuse Policy, which I think is an extremely important agency within the executive branch for coordinating a widespread fragmented effort that is taking place throughout some 50 agencies in the National Government.

Mr. RANGEL. Well, I thank the gentleman for his support.

I have no problem with the commitment of the President of the United States in eliminating this epidemic, which I think is at the roots of many of our families in the cities and inner cities in our countries.

I think the problem our President faces is that he never had the opportunity to discuss this important issue with those people he had appointed as his advisers in the area of drug abuse. This was made clear in our hearings of the select committee, as well as the briefings we had.

With this support and the support of so many other people in the House, I am confident that the Speaker will use his good office to advise the President as to what will be in the best interests of this great country of ours.

Mr. GILMAN. Mr. Speaker, I thank my colleague, the distinguished gentleman from New York (Mr. RANGEL), and I commend him for his leadership and for taking this time to focus attention on the President's recent decision to dismantle the Office of Drug Abuse Policy—ODAP—the principal unit within the Executive Office of the President—EOP—responsible for coordinating the more than 50 departments, agencies, bureaus, and administrations having jurisdiction over drug abuse prevention and control programs.

In 1976, the Congress created the Office of Drug Abuse Policy in the executive branch to provide "for effective, ongoing, and highly visible Federal leadership in the formation and execution of a comprehensive, coordinated drug abuse policy." On March 14 of this year, the President activated ODAP, and now, just 4 months later, he has submitted to the Congress a plan to reorganize the EOP wherein ODAP would be abolished. Mr. Speaker, ODAP is the one major entity within the President's Executive Office that has the authority and ability to assist the President in formulating a comprehensive national drug strategy program. It is the one entity that could coordinate the diverse, competing Federal narcotics agencies.

Yesterday, August 2, the President submitted his long-awaited message to the Congress proclaiming a comprehensive national drug strategy program. Unfortunately, the President's approach toward controlling drug abuse and illicit drug trafficking in the United States is weak and disappointing. His program is mostly a reiteration of the obvious and a recitation of support of existing programs and agencies. His proposal is primarily a program of reviewing the adequacy of existing statutes and conducting of further studies.

The President's drug message calls for the revitalization of the Strategy Council on Drug Abuse, a Council that was activated last March but which has yet to hold its first meeting. Will the Strategy Council suffer the same fate as ODAP, being activated only to be abolished a few months later? If the President does not amend his reorganization proposal within the permitted 30 days. ODAP will be terminated—unless either the House or the Senate disapproves the reorganization proposal. Why activate the Strategy Council on the one hand if on the other hand ODAP is to be dismantled? Mr. Speaker, it is difficult to follow these inconsistencies.

The President noted in his drug message that ODAP has already begun the first phase of reviewing the proper division of Federal, State, and local law enforcement responsibility, including a review of border security and drug trafficking intelligence. With this work underway, it is difficult to understand why the President is seeking to dismantle the unit that has just started its mission of coordinating our Nation's efforts in interdicting narcotics trafficking and in eradicting illicit opium production.

The House Select Committee on Narcotics Abuse and Control, of which I am a member, recently heard testimony from administration narcotics officials who informed us that a "working group" consisting of Dr. Peter Bourne, Director of ODAP, Dr. Robert DuPont, Director of the National Institute of Drug Abuse, Peter Bensinger, Administrator of the Drug Enforcement Administration, and Mathea Falco, Senior Advisor to the Secretary of State and Coordinator for International Narcotics Matters, was meeting periodically, and informally, in the absence of the Strategy Council. From the testmony of the administration's narcotics experts, it is apparent that none of these narcotic administrators were aware that ODAP would soon be dismantled.

Further revelations indicate that the Office of Management and Budget, which was instrumental in recommending the dismantling of ODAP, did not consult the President's narcotics policymakers. If this lack of policy planning and coordination is indicative of how the executive branch is pursuing such a critical problem, then there is reason for grave concern about the direction and effectiveness of our Nation's "war" on drugs.

Who, then, Mr. Speaker, is assisting the President in formulating a comprehensive national strategy on drugs and who is coordinating the Federal drug programs? Our Select Committee on Narcotics is still at a loss to learn who actually assists the President in policymaking with regard to drug abuse prevention and control. The President's message on drug abuse does not shed any light on this question.

The President's words, while well intentioned, are inconsistent with the administration's actions in seeking its objectives: specifically the dismantling of the very unit in his Executive Office that could accomplish the objective of developing a national drug strategy.

Drug abuse and drug trafficking is not going to fade away. There are between 700,000 and 800,000 addicts who support the drug trafficking business. Illicit drug sales and drug-related crimes are estimated to exceed $27 billion. To fight this scourge on society, this Nation needs more than glossy verbiage; we need a serious, concerted effort to develop and coordinate the more than 50 Federal agencies that are concerned with drug abuse.

Mr. Speaker, the President's messages of July 15 and August 2 are certainly saying the right things with regard to drug abuse prevention and control, but there is a wide gap between his words and his deeds.

The administration's narcotic experts appearing before the Select Committee testified that the President has "a very personal interest in the drug abuse issue" and that "the suppression of illicit narcotic traffic is a high priority of his administration." If the President's August 2 message is any example of what he means by "personal interest" and a "high priority" in illicit drug trafficking and drug abuse, then his program is very disappointing. Coupled with his proposed dismantling of ODAP, his remarks constitute a setback in our Nation's efforts to develop a comprehensive drug strategy to effectively interdict narcotics trafficking and to eradicate the illicit supply of opium production.

Furthermore, I am concerned that with the demise of ODAP there will not be any visible unit within the White House which the American people can look to for guidance and for coordination of the fragmentation that exists in this Nation's widespread drug abuse prevention and control programs.

Mr. Speaker, I urge my colleagues to take a close, hard look at the President's proposal to dismantle ODAP and the inconsistencies of his drug strategy program. I hope that the President will amend his reorganization proposal by restoring ODAP to its original purpose of providing the necessary strong Federal leadership in formulating and coordinating a comprehensive drug abuse policy.

THE NEUTRON BOMB ARMS CONTROL IMPACT STATEMENT

(Mr. ZABLOCKI asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. ZABLOCKI. Mr. Speaker, shortly after the President released an arms control impact statement for the Lance 3 enhanced neutron radiation warhead, I asked the Congressional Research Service of the Library of Congress to evaluate this statement along the same criteria used earlier on the arms control impact statements submitted for fiscal year 1978. I would like to make available the evaluation of the Lance 3 arms control impact statement prepared by CRS.

The CRS evaluation of the administration's arms control impact statement shows that there has been a definite improvement in the scope and breadth of the analysis and statement. The CRS evaluation makes it clear that the admin-

istration is attempting to comply more completely with the letter and intent of the law to the degree by addressing more issues related to the arms control implications of enhanced radiation weapons.

The CRS evaluation also indicates however that questions of arms control policy and arms control negotiations were not as carefully addressed as one might expect. For example, there is no mention made of the legality of enhanced radiation weapons, or the relationship of such weapons to the U.S. call for a ban on radiological weapons. Certainly, one would expect that future arms control impact statements will address the arms control policy aspects in much greater detail than the current Lance 3 impact statement.

While the arms control impact statement submitted for the Lance 3 is not to be taken as a model for all future arms control impact statements, I believe it indicates a useful addition to the information available to the Congress in considering whether or not to go forward with enhanced radiation weapons. The CRS evaluation also contains important insights which when read with the administration's arm control impact statement provide new insights into the issue. Accordingly, I commened the arms control impact statement on the Lance 3 and the CRS analysis, which follow, to the attention of our colleagues:

CONGRESSIONAL RESEARCH SERVICE,
Washington, D.C., July 25, 1977.

To: Hon. Clement J. Zablocki, Chairman, Committee on International Relations, House of Representatives, Washington, D.C.

From: William W. Whitson, Chief, Foreign Affairs and National Defense Division.

Subject: CFS Evaluation of Arms Control Impact Statement.

In response to a request by the House International Relations Committee on July 14, 1977, the Congressional Research Service (CRS) has evaluated the Arms Control Impact Statement (ACIS) submitted by the President on the W–70 Mod 3 (Lance) warhead.[1] The evaluation was prepared by Robert G. Bell, a defense analyst on our staff. An ACIS on the W70–3 was not included among the twenty-six impact statements submitted by the executive branch to Congress earlier this year. These statement were evaluated by CRS under a procedure established in consultation with the House International Relations Committee and Senate Foreign Relations Committee in April 1976.[2] Since the submission of the ACIS on the W70–3 was intended to correct this omission, CRS has evaluated the statement according to the same criteria applied to the earlier set of statements.

It is our understanding that this ACIS was prepared on very short notice. Nevertheless, in performing our evaluation we could not have presumed that certain aspects of the arms control impact of this weapons system would have been addressed in greater detail had more time been available; nor could we have assumed that various lines of argument would have been developed more persuasively. In brief, we chose to critique this impact statement as if it were the final product of a careful deliberative process. To have approached this task otherwise could only have depreciated the net contribution to the informed, comprehensive dialogue expected from the ACIS procedure.

We have been advised that the Arms Control and Disarmament Agency recommends that this ACIS not be taken as a model for future statements submitted by the administration on this or any other weapons system. This caveat notwithstanding, the impact statement submitted on the W70–3 clearly marks a very laudatory transition from statements with little or no substantive content to one which provides a starting point for reasoned debate. Although the ACIS on the W70–3 does not address all possible arms control interests to the extent one might hope (particularly in the area of arms control negotiations), on balance the statement covers the range of arms control factors identified as salient by CRS. The statement is substantive and deserving of studied response. In this regard, we hope that this CRS evaluation will advance the public dialogue one step further.

ARMS CONTROL IMPACT STATEMENT EVALUATION*

PROGRAM TITLE: W–70 MOD 3 (LANCE) WARHEAD

1. Factual Information and Issues Related to Military Considerations.

a. Provide a brief outline of the capabilities of the proposed system, an estimate of its costs, the status of the testing program, if applicable, and projected date of completed deployment. If the system is still in some state of development, when is deployment expected to begin?

The arms control impact statement (ACIS) submitted on the W70–3 provides a fairly comprehensive and informative description of this weapons system. It explains the basic theory underlying enhanced radiation (ER) weaponry and presents data on the number and accuracy of planned W70–3 launchers. Although the ER warhead is categorized as a qualitative modernization of existing nuclear-capable Lance missiles, the statement goes beyond the W70–3 to make a case for the delivery vehicle itself. The ACIS estimates the expense of the W70–3 program for FY 77–80 to be $32.1 million, an estimate which presumably includes costs attributable both to RDT&E and production. No information is provided in this unclassified ACIS on the yield of the W70–3, the number of warheads planned for procurement, or the system's date of initial operational capability (IOC). Although previously declassified testimony by ERDA officials indicates that deployment of the ER Lance warhead will begin in 1979, the statement neither confirms nor amends this schedule.[1]

The ACIS would have been more comprehensive had it addressed two military considerations absent from the submitted text. First, the statement provides no information or analysis regarding the time required for the device to incapacitate enemy personnel. Some critics of ER weaponry contend that enemy troops exposed to the neutron radiation would not be incapacitated for hours and that during this interval the irradiated troops could be expected to fight with vengeful determination. An Army field manual published in 1976 indicates that the time until incapacitation varies from a few minutes to several hours, depending on the dosage.[2] Since the Army reportedly resisted introduction of this weaponry for years because it was not confident of ER weaponry's power to "instantaneously" incapacitate, this issue is particularly salient.[3]

The ACIS also fails to address the subject of residual radiation. While an airburst of the W70–3 could largely prevent the creation of fallout (radioactive soil particles carried by the wind), neutrons emitted by the detonation would combine with nitrogen present in the atmosphere to form Carbon-14 (C^{14}) isotopes. C^{14} is highly radioactive, with a half-life of 5,720 years. The ACIS does not indicate whether this "spike" of C^{14} would initially be sufficiently dense to cause death or injury to humans or the time required before the mass of C^{14} would dissipate. The statement also does not suggest whether the residual radiation effects of a single or multiple ER detonations would disrupt Allied military operations unduly or whether these effects would be any more or less disruptive than those associated with standard tactical nuclear airbursts.

b. What effect might the proposed system have on the military stability of the relevant environment (e.g., specific regional military forces, U.S.-Soviet strategic balance, etc.)? In the case of strategic weapons, could it be viewed as a threat to strategic equivalence? Could acquisition of the proposed system contribute to an adversary's perception of his own position as being inferior? Under what circumstances could the system be viewed as one which granted the United States an advantage over an adversary?

Since the W70–3 warhead is planned for deployment on the tactical, or "battlefield," Lance missile, it cannot be construed as a strategic weapons system or a factor in net assessments of U.S./Soviet strategic equivalence. The ACIS lists the range of the Lance missile as 130 km., a range which makes it impossible to strike targets in the Soviet Union from launch sites in West Germany. The ACIS's concern extends beyond measurements limited to the NATO/Warsaw Pact tactical nuclear balance and encompasses the broader issue of the military stability of the European central front. In this regard, the ACIS correctly focuses on the implications of deploying ER weaponry for the continuum of deterrence provided by NATO's "triad" of conventional, tactical nuclear, and strategic forces.

The ACIS analysis of the stabilizing or destabilizing impact of deploying ER weaponry in Europe is essentially theoretical. The statement does not suggest whether the current military balance is regarded as stable or unstable or whether future trends are regarded as favorable or unfavorable. To cite one example, the ACIS does not assess the significance of the Soviet Union's recent deployment of the mobil SS–20 missile. In brief, the analysis would have been better served had it provided an introductory frame of reference.

The ACIS analysis begins by noting two possible perceptions of the significance of ER weaponry. The statement first declares, "It can be argued that the improved warhead may make the initial use of nuclear weapons in battle seem more credible which might enhance deterrence." In fact, this assessment

---

[1] Although the submitted document was originally entitled "Arms Control Impact Analysis," the title was subsequently amended to comply with the statutory provision of P.L. 94–141 requiring the transmittal of a "statement." (See the Congressional Record, July 13, 1977, p. S11765)

[2] An explanation of this procedure and the criteria used in CRS's evaluation of the 26 statements is included in "Analysis of Arms Control Impact Statements Submitted in Connection with the FY 1978 Budget Request," Joint Committee Print: House International Relations and Senate Foreign Relations Committees; 95th Cong. 1st sess, April, 1977; pp. 1–21.

* Prepared by Robert G. Bell, Analyst in National Defense. The Arms Control Impact Statement submitted to Congress on July 13, 1977 is included as attachment 1.

[1] U.S. Congress. House: Committee on Appropriations, Subcommittee on Public Works. Public Works for Water and Power Development and Energy Research Appropriation Bill, 1978; Hearings, Part 6 (ERDA), 95th Cong., 1st sess.; Wash., D.C. U.S. Govt. Print. Off., 1977; p. 1089.

[2] U.S. Army, Field Manual FM 100–5, "Operations," 1976.

[3] The Washington Post, July 8, 1977, p. A3.

was central to the NATO tactical nuclear force improvement program detailed by Secretary of Defense Schlesinger in a 1975 report to Congress.[4] Secretary Schlesinger argued, "Reduction of collateral damage should make it more credible to the WP (Warsaw Pact) that the Alliance will use nuclear weapons."[5] The report also noted that, "Further reductions in collateral damage can be made by improvements in weapons systems (e.g., reduced yields, special warheads effects such as enhanced radiation . . .)."[6]

In its simplest form, this argument holds that one effect of deploying ER weaponry to Europe would be a lower likelihood that *any* war would occur. The following graph depicts this effect:

[Graph not printed in RECORD.]

The ACIS notes a second possible perception of the effect of deploying these weapons: ". . . it can be argued that it increases the likelihood that nuclear weapons would actually be used in combat." In this case the emphasis is not on raising or lowering the threshold between war and peace; rather, the focus is on raising or lowering the threshold between conventional warfare and nuclear warfare. In its simplest form, this argument holds that NATO commanders would recommend the use of ER weapons in cases where they otherwise would have refrained from urging standard tactical nuclear strikes, and the U.S. president would authorize their use. In other words, should war break out, NATO would cross the nuclear threshold sooner than otherwise would be the case. The following chart depicts this effect:

[Graph not printed in RECORD.]

Although the ACIS does not *explicitly* endorse or reject either of these two possible perceptions, the progression of the analysis appears to refute the second case and accept the first. In short, the ACIS concludes that the deployment of ER weapons would not lower the nuclear threshold but could enhance deterrence. Each of these points will be examined in turn.

At three separate points in the analysis, the ACIS unequivocally denies that any U.S. president would be inclined to order the use of ER weapons in situations where he would otherwise not authorize the employment of current tactical nuclear weapons:

The President would be faced with a decision of the same nature whether or not this class of weapons or other tactical weapons are used.

Any U.S. decision to use nuclear weapons is in all likelihood insensitive to whether or not ER weapons were deployed.

These weapons would not make [the] decision any easier.

The basic premise underlying the contentions repeated in the ACIS is that ". . . the escalating potential is the same for this weapon as for any other nuclear weapon." In another passage, the statement declares, "There is no evidence . . . that the Soviets would be less likely to escalate a nuclear exchange if ER weapons were used by the U.S. rather than standard fission weapons." According to the ACIS, "the prospect of escalation would remain a central component of a U.S. decision to use nuclear weapons *regardless of* the performance characteristics of this or other classes of nuclear weapons." [emphasis added]

In essence, the ACIS appears to argue that while at first glance the use of ER weapons may seem more plausible to NATO (due to their lower collateral damage), in the final analysis the President's assessment of the prospects of escalation will take precedence over this consideration. Furthermore, the ACIS concludes that the escalatory potential will be assessed to be the same regardless of the type of tactical nuclear weapons deployed in Europe. In short, all tactical nuclear weapons are equally credible or "*in*credible."

The statement devotes considerably less attention to assessing the argument that ER weaponry enhances deterrence. Instead, the ACIS seems content to accept this premise with a slight hedge: ". . . by enhancing deterrence, they *could* make it less likely that the President would have to face such a decision." [emphasis added] This somewhat equivocal endorsement is given added weight, however, by its placement as the concluding sentence in the ACIS.

The problem with ACIS's conclusion that ER weapons could enhance deterrence but would not affect the nuclear threshold is that one cannot argue the former unless the latter is also believed to be true. If deterrence is in fact enhanced, then it must be because the credibility of using ER weapons is greater; they would be used in cases where standard tactical nuclear weapons would not. While such a decision may or may not be any "easier," it is precisely an adversary's calculation, or at least his uncertainty, that the decision would be made that would deter his aggression. Conversely, if the adversary calculates that it is not more likely that the decision to go nuclear with ER weaponry would be made, then the net effect on deterrence is zero. To argue otherwise is tantamount to maintaining that there is no significant rationale for deploying these or any other "more discriminant" tactical nuclear weapons.

In summary, this is not a case in which one or the other argument can be true but not both; rather, the two effects are interrelated. Thus the principal dilemma for policy-makers considering the W70–3 is whether the perceived gains for deterrence outweigh the perceived risks of a lowered nuclear threshold. Inherent in the concept of ER weaponry is a trade-off. The ACIS would have made a more valuable contribution to the current debate on ER weaponry had it recognized the necessity of this trade-off and delineated its terms.

Although the ACIS acknowledges that Soviet perceptions are difficult to analyze, the statement concludes that NATO's deployment of ER weaponry "presumably" would not cause the Soviets to alter their tactical warfare doctrine. The ACIS predicts that the Soviets will attempt to use NATO's ER weaponry deployment to score propaganda points but does not suggest whether they can be expected to acquire similar weapons for their forces. Nor does the statement suggest what the net effect on stability would be should the Soviets acquire ER weaponry. Finally, the statement claims that "with this weapon armored vehicles, which are relatively unaffected by blast effects except at close range, can be temporarily neutralized by radiation casualties by crew personnel." The ACIS does not speculate on whether this capability represents a net "advantage" to NATO forces.

c. What role is the system expected to play in U.S. defense strategy? Does it replace another system or improve on an existing one in that role? Is the system being developed to counter a specific threat? If so, define.

The ACIS explains that the W70–3 equipped Lance will be used as a tactical nuclear artillery weapon and that the warhead is intended to replace existing nuclear warheads with one having lower collateral effects. As previously noted, the ACIS does not relate the deployment of the W70–3 to a specific "threat" in Europe. The statement does not suggest whether the on-going expansion and modernization of Warsaw Pact conventional capabilities has necessitated this weapon, or whether it is simply a case of the technology now becoming available. The statement notes that a Lance battalion with ER warheads will be earmarked for the Pacific "should the need arise," but it does not detail what specific changes in current military balances in the Pacific region might necessitate this course of action.

d. If this system were actively developed and/or deployed, how might one expect an adversary to respond in his own weapons program? To what extent would the development of similar weapons become an adversary's goal? To what extent might an adversary develop countermeasures?

The ACIS does not address any of these points, other than to predict that NATO's deployment of ER weaponry will not likely cause the Soviet Union to change its tactical warfare doctrine.

e. Could the mission of the proposed system be interpreted differently from the role assigned to the system in U.S. defense policy? If so, how? If not, why not?

The ACIS stresses that, in the long run, interpretations of U.S. intent in deploying ER weaponry will be more significant than "judgments based on hard analytical criteria or weapons characteristics." Thus regardless of U.S. efforts to emphasize ER weaponry's positive contribution to deterrence, the ACIS suspects that a large body of public opinion within the United States, Allied nations, and the third world (as well as the Soviet government) will perceive an intent to change U.S. doctrine "so as to make the use of nuclear weapons more likely in a tactical situation." The ACIS enumerates several adverse effects of such perceptions, including gains for Soviet propaganda, a lessened NATO receptivity to the weapons, and increased difficulty in preventing further nuclear proliferation.

The problem with the ACIS analysis is that it appears to presume that such perceptions would be different from those held by advocates of the weaponry. This paper has previously argued that the United States can claim the "benefits" of enhanced deterrence only if it concedes the "costs" of a lowered nuclear threshold. If the United States were to announce that it would most probably use ER weapons where it otherwise would not use standard tactical nuclear weapons, then the global debate would focus on the appropriateness of this decision, rather than on varying perceptions of U.S. intent.

The ACIS does not intimate whether it expects that anyone will perceive a strategic application for ER weaponry. Finally, the statement does not comment on the possibility that tactical ER weapons might be perceived by the Warsaw Pact as providing NATO with an offensive capability.

f. What are the possibilities for the proposed weapons system to serve in a tactical or strategic role? Will it be equipped with only conventional munitions, nuclear, or both?

The ACIS clearly describes the W70–3 as a *tactical nuclear* weapons system. It does not comment on whether the United States has plans for applying the ER concept to strategic weaponry.

g. To what extent could the proposed system be viewed as enhancing a first-strike capability? What is the extent of its technical capability to be used in a counterforce role?

The W70–3 weapons system is not relevant to calculations of U.S. counterforce first-strike capabilities. The ACIS does emphasize that ER weapons can be viewed as enhancing the likelihood of a NATO "first-use" of tactical nuclear weaponry. In addition, the statement stresses the battlefield, or counterforce, role of the W70–3.

h. What risks are posed to U.S. security in the absence of the proposed program or system?

Not addressed.

2. Arms Control Policy.

a. How is the weapons program consistent with arms control policy? In what ways could it reduce the likelihood of war or en-

[4] The Theater Nuclear Force Posture in Europe: A Report to Congress in Compliance with P.L. 93–365; DOD, March 1975.

[5] Ibid., p. 21.

[6] Ibid.

hance crisis stability? To what extent could it contribute to the destructiveness of war? To what extent could it reduce the destructiveness of war? To what extent does it lessen the burden of military expenditure?

The ACIS concludes that "this weapons system has no arms control advantages." This unequivocal assertion is subsequently contradicted by the claim that ". . . by enhancing deterrence, they could make it less likely that the President would have to face such a decision [authorizing the use of tactical nuclear weapons]." If indeed the statement supports the concept that ER weaponry enhance deterrence, then this is entirely consistent with the cardinal objective of U.S. arms control policy: to make war less likely. As previously argued, the trade-off inherent in ER weapons requires that this objective be strengthened at the expense of another cardinal U.S. arms control objective: avoiding nuclear war.

Although the ACIS points out that "casualties to civilians and damage to property from blast and thermal effects in a congested region would be greater" with standard tactical nuclear weapons than with ER weaponry, the statement does not relate this advantage to a third U.S. arms control objective: limiting the destructiveness of war should it occur. The ACIS concludes, rather, that "unless the Soviet forces are supplied with a comparable warhead, their response would create the kind of devastation that this warhead is designed to prevent." It is not clear from this sentence whether the ACIS believes that there is no value—moral or practical—in the United States acting unilaterally in a manner consistent with its own arms control policies.

The statement does not address the question of the cost effectiveness of this weapons system, except to note that the Lance missile has replaced older systems "on a less than one-for-one basis, thus reducing the number of forward-deployed nuclear systems and weapons." Likewise, the ACIS does not address the question of crisis stability or whether NATO's deployment of ER weaponry might provide the Soviets with a greater incentive to strike first with nuclear weapons, except to state that the Lance missile system is more survivable than the system it replaces. Both of these points pertain more to the delivery vehicle than the W70–3 itself.

b. What is the relationship of the proposed system to an existing arms control agreement? Does it represent a build-up to a ceiling? Does acquisition of the system accompany a tradeoff with other U.S. weapons systems? Could it be interpreted as a violation either of the spirit or letter of an arms control agreement in force?

Some opponents of ER weaponry contend that the development of this weapons system violates the spirit of arms control agreements prohibiting the use of chemical or biological weapons. The thrust of this argument is not that ER weaponry is outlawed by such agreements, but rather that the development of the W70–3 moves the United States in the direction of sanctioning the kinds of weapons effects that it seeks to outlaw in the chemical/biological warfare area. The questions of the "morality" of the ER weapon or its legality under existing arms control agreements are not addressed in the ACIS.

c. To what extent might the development and acquisition of this system contribute to horizontal proliferation of nuclear weapons or nuclear delivery systems? Will it increase the number of nuclear weapons or nuclear delivery systems available to the United States?

The ACIS declares:

"Some governments might couple a decision to deploy ER weapons with perceptions that U.S. doctrine has changed so as to make the use of nuclear weapons more likely in a tactical situation; such a coupling could have an adverse effect on U.S. efforts to prevent further nuclear proliferation."

Implicit in this argument is the suggestion that any development which makes the use of nuclear weapons more plausible makes them more attractive for non-nuclear states. The ACIS also appears to contend that some governments might take U.S. nonproliferation goals and policies less seriously if it deploys the ER weapon.

It is not clear whether the ACIS is contending that a U.S. decision to deploy ER weaponry would make it more likely that non-nuclear states would endeavor to develop or acquire ER weaponry, standard nuclear weapons, or both. If the first case applies, the statement does not speculate on how long it would take nonnuclear states to perfect the technology of the ER weapon. No information is given on the likely time and industrial base required to perfect ER weapons or on countries that have, or could acquire, this base. If the second case is endorsed by the statement, then the linkage between a U.S. decision to deploy ER weapons and increased demands from nonnuclear states for a standard nuclear capability should be developed more persuasively, rather than just asserted.

Since the Lance missiles are replacing older systems on less than a one-for-one basis, it is implied that the Lance will decrease the number of nuclear weapons and nuclear delivery systems available to the United States. The ACIS does not suggest whether the W70–3 inventory for the Lance will be larger or smaller than currently maintained for the nuclear Lance.

d. To what extent does this system have the potential of becoming a part of the U.S. arms sales or aid inventory?

Not applicable. (The United States does not export nuclear warheads.)

3. Arms Control Negotiations

a. What negotiations, either ongoing or proposed, might consider limitations on the proposed system?

The ACIS notes that a Comprehensive Test Ban (CTB) treaty "would pose limitations on the further development of this class of weapons since over the long term, further testing would be required." Since the yield of the W70–3 does not approach the 150 kiloton limitation in the proposed Threshold Test Ban Treaty, the ACIS concludes that the development and deployment of this weapons system would not be affected. Lastly, the ACIS observes that the so-called "nuclear sweetener" offered by NATO in December 1975 at the Mutual and Balanced Force Reduction (MBFR) talks did not include the removal of any Lance missiles. (The offer included nuclear-capable F4's and Pershing missiles.) The statement cautions, though, that the deployment of ER weaponry could shatter whatever credibility still rests with this NATO offer, since the W70–3 could be cited by the Soviets "as evidence that the U.S. proposal would involve elimination of obsolete weapons while actual capability is being upgraded."

b. Does or could the proposed system play a role in these negotiations? What trade-off with this system in negotiation would be acceptable to meet the needs of U.S. national security? Could one view the system as a hedge against failure of on-going discussions? Does it strengthen the U.S. negotiating position? If so, how? To what extent could its use as a bargaining chip impede agreement? If so, how?

The ACIS concludes that, "To the extent it has any impact on ongoing arms control negotiations, the impact is marginally negative." This conclusion is not developed in great detail, nor is it related to the specific kinds of concerns reflected in the above set of questions.

c. What method of verification would be necessary to monitor a limitation on this system? Can the system be deployed in a manner which lends itself to inspection by national technical means? Can the system be deployed in a manner that renders difficult inspection by national technical means?

Not addressed.

d. What effect is the proposed system expected to have on an adversary's position at the bargaining table? Could deployment of the system be viewed as an incentive for an adversary to accept mutual restraint on this or any other weapon system? Or would the opposite effect be likely?

Not addressed.

e. What impact could the current rate of development or deployment have on negotiations? To what extent would a slower pace of development or deployment jeopardize U.S. security?

Not addressed.

ARMS CONTROL IMPACT ANALYSIS

PROGRAM TITLE: W–70 MOD 3 (LANCE) WARHEAD

I. Program synopsis:

A. Descriptions:

The W–70 Mod 3 is being developed to satisfy an Army requirement for a low-yield enhanced radiation (ER) warhead for the Lance missile system.

Enhanced radiation is achieved by fusion reactions that produce high energy neutrons. When these neutrons are produced in connection with relatively low-yield fission reactions, the range of effect of the neutrons is greater than the range at which blast or thermal effects are lethal. At higher yields, blast and thermal effects predominate over both neutron and gamma radiation effects of any type. By employing ER as the target damage mechanism, a reduction in collateral damage is achieved since lower yields are required when personnel are the targets rather than equipment. For example, a 1KT ER warhead gives the same approximate damage expectancy of tank crew incapacitation through radiation effects as a 10KT fission warhead does through radiation effects.

The Lance is a highly mobile surface-to-surface, ballistic missile system which can provide tactical nuclear artillery support to the battlefield through attacks on either fixed targets or non-fixed targets (e.g., tank battalions in staging areas). The nuclear Lance missile has a maximum range of 130 km with a CEP (Circular Error Probable) of 400–450m. Lance has replaced the Honest John and Sergeant missile systems in the US forces in Europe and is replacing the Honest John and Sergeant in most NATO countries (UK, FRG, Belgium, Netherlands, Italy) in both cases on a less than one-for-one basis, thus reducing the number of forward-deployed nuclear system and weapons. (A total of 92 Lance launchers are now programmed for Europe.) Additionally, two Lance Battalions will be based in the US with one presently earmarked for deployment in the Pacific should the need arise. The Lance system is more survivable and more responsive than the systems it replaces, and it has a selectable yield capability. Its longer range allows it to remain further behind the forward edge of the battle area (FEBA) and thus contributes to its survivability. The longer range also facilitates targetting across Corps boundaries.

B. Rationale.

An ER warhead provides increased kill capability principally against personnel and reduce collateral effects (blast and thermal). It has less effect on standard military equipment than a fission weapon of the same yield. With this weapon, armored vehicles, which are relatively unaffected by blast effects except at close range, can be temporarily neutralized by radiation casualties of crew personnel. Requisite effects can still be achieved at much greater ranges, with less collateral damage, than could be expected from blast predominant weapons.

C. Funding.

ERDA's total projected direct costs are $32.1 million for FY–77 through FY–80.[1]

II. Analysis:

The ER warhead will kill tank crews by nuclear radiation. In covering the same intended target area with a non-ER fission weapon, casualties to civilians and damage to property from blast and thermal effects in a congested region would be greater.

It can be argued that the improved warhead may make initial use of nuclear weapons is battle seem more credible which might enhance deterrence. However, by the same token, it can be argued that it increases the likelihood that nuclear weapons would actually be used in combat. In any event, the escalating potential is the same for this weapon as for any other nuclear weapon.

The political effects of deploying enhanced radiation warheads relate to characteristics which may be imputed to the entire class of enhanced radiation weapons rather than to the Lance warhead alone. Potential effects on the nuclear threshold lie more in the gray area of perception—U.S. public, Allied, Soviet, and third world—than in judgments based on hard analytical criteria or weapons characteristics. This class of weapons is more dependent on radiation than on blast or thermal yields, but not entirely so. It is designed primarily against personnel and less against material and sheltering structures. Some will see this class of weapons as more plausible for battlefield use than other kinds of nuclear weapons and might infer a greater U.S. willingness to engage in nuclear war.

Soviet perceptions are difficult to analyze. There is no evidence that the development of this system would have any effect on Soviet doctrine for the initiation of nuclear war or that the Soviets would be less likely to escalate a nuclear exchange if ER weapons were used by the U.S. rather than standard fission weapons. They would presumably follow their own doctrines whether or not this weapon is introduced. The fact that the W–70 Mod 3 warhead may cause less collateral damage to civilians and property in NATO territory cannot be expected to moderate Soviet response. Its use would be no less likely than the present warhead to evoke Soviet retaliatory use of tactical nuclear weapons. Unless the Soviet forces are supplied with a comparable warhead, their response would create the kind of devastation that this warhead is designed to prevent.

Thus, the President would be faced with a decision of the same nature whether or not this class of weapons or other tactical nuclear weapons are used.

If ER weapons are deployed, the Soviets will continue to accuse the U.S. of contributing to the arms race in Europe. There is little doubt that the Soviets would seize or publicized materials alleging that U.S. development of ER weapons make nuclear war more likely by lowering the threshold.

In the U.S. case, the prospect of escalation would remain a central component of a U.S. decision to use nuclear weapons regardless of the performance characteristics of this or other classes of nuclear weapons Thus, any U.S. decision to use nuclear weapons is in all likelihood insensitive to whether or not ER weapons were deployed.

There is no evidence that NATO governments would be particularly concerned about Lance deployment with this warhead. Nevertheless, public discussion of the sort now taking place here could affect NATO attitudes.

The W–70 Mod 3 development and deployment would not be affected by the TTB since the underground testing of warhead under 150 KT is not prohibited.

A CTB would pose limitations on the further development of this class of weapons since over the long term further testing would be required. Conclusion of a test ban treaty with no PNE exception during the next few years would limit the development and refinement of such weapons by both sides.

With regard to MBFR, the Western proposal does not affect Lance launchers. Neither does the Western warhead proposal select specific types of warheads for removal. Development and deployment of the W–70 Mod 3 could, however, be cited by the Soviets as evidence that the U.S. proposal would involve elimination of obsolete weapons while actual capability is being upgraded.

Some governments might couple a decision to deploy ER weapons with perceptions that U.S. doctrine has changed so as to make the use of nuclear weapons more likely in a tactical situation; such a coupling could have an adverse effect on U.S. efforts to prevent further nuclear proliferation.

In conclusion, this weapon system has nc arms control advantages.

To the extent it has any impact on ongoing arms control negotiations, the impact would be marginally negative.

A decision to cross the nuclear threshold would be the most agonizing decision to be made by any President. These weapons would not make that decision any easier. But by enhancing deterrence, they could make it less likely that the President would have to face such a decision.

[1] Cost data provided by Energy Research Development Administration. The ERDA Budget Estimate (as amended for FY–78) supplied to Congress cites a figure of $43.3 million for FY–78, of which $14.4 million are direct costs.

ATTORNEYS ON BEHALF OF THE AGENCY FOR CONSUMER PROTECTION

(Mr. MIKVA asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MIKVA. Mr. Speaker, during the past several months, opponents of the proposed Agency for Consumer Protection have attacked its creation on the grounds that it is everything from unconstitutional to unfair. Unfortunately, the volume and frequency of the opposition has obscured the voices of many of the individuals who are best equipped to comment upon the effectiveness and practicality of the new agency, including the attorneys who practice before the Federal agencies.

Mr. Speaker, I would like to bring to the attention of the Members a letter to our distinguished colleague, JACK BROOKS, Chairman of the Committee on Government Operations which is signed by 14 attorneys with wide and varied experience in Federal agency practice. The letter puts to rest many of the spurious arguments raised against the establishment of the Agency for Consumer Protection, and demonstrates the effective and responsible way in which the agency will be able to represent consumer interests.

The letter follows:

JUNE 30, 1977.

Hon. JACK BROOKS,
Chairman, Committee on Government Operations, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN BROOKS: An increasingly active and vocal lobbying campaign is being waged against H.R. 6805, the bill to create an Agency for Consumer Protection. Its opponents claim that such an agency, having the power to gather information from business and to intervene on behalf of consumers in federal agency proceedings, will result in undue additional expense, delay, and confusion, will needlessly harass business, and will impede the workings of the regulatory process.

We are practicing lawyers who have appeared or otherwise participated in federal executive and administrative proceedings for many years. In our view, these concerns are unfounded and we share President Carter's belief that the opposition campaign against the ACP is ill-advised.

By training and experience, lawyers, more than most, appreciate the defects of a decisional process which fails to provide adequate representation of the various competing interests. Because the consumer interest is fragmented and under-financed, it is seldom effectively represented in the process of reaching and reviewing government regulatory decisions that substantially affect consumers.

A situation in which a major interest group in society is inadequately represented within the regulatory process is not only unfair to that group but may lead to unwise and incompeltely analyzed decisions. We believe that an institutionalized, adequately financed consumer advocate would improve rather than impede the regulatory process by bringing to light and forcefully advocating ideas and arguments that would not otherwise be fully explored. In this sense, the proposed Agency for Consumer Protection will contribute to a more efficient and responsible government process.

Several major objections to the bill have been cited which warrant response:

1. It is asserted that there are no criteria in the bill for defining the consumer interest which the ACP will represent. Section 16(4) defines the term "interests of consumers" with great particularity:

"Any concerns of consumers involving the cost, quality, purity, safety, durability, performance, effectiveness, dependability, and availability and adequacy of choice of goods and services offered or furnished to consumers; and the adequacy and accuracy of information relating to consumer goods and services (including labeling, packaging, and advertising of contents, qualities, and terms of sale)."

2. It is argued that there will be no effective check against abuse of the authority granted to the ACP. But, as now carefully refined, the legislation contains rigorous safeguards. The Administrator is required to refrain from intervening in any proceeding unless he determines in a public written statement containing his findings that "such intervention is necessary adequately to represent the interest of consumers," and states "the specific interests of consumers to be protected." The Administrator must comply, like every other party, with all agency statutes and rules governing timing and manner of intervention or participation in such proceedings. Where the Administrator has not intervened or participated in an agency proceeding, he may not obtain judicial review until he has petitioned the agency for rehearing or reconsideration of its action, and the court may, in any event, reject ACP's petition to review the agency action if it finds that this "would impede the interests of justice." (Section 6.)

3. It is suggested that the proposed ACP may be unconstitutional because its intervention before independent regulatory agencies might constitute improper executive interference. This fear is unfounded. Intragovernmental conflicts are not unusual (*e.g.*, Department of Justice intervention in ICC, CAB, FCC proceedings), and have repeatedly been litigated before the Supreme Court without constitutional impediment.

4. It is said that it is undemocratic to vest in a single unelected official the authority to represent, legally and politically, the interests of all the people. The Act confers

no such comprehensive and unconfined powers. The Administrator's duties and functions are carefully circumscribed. He is given no decision-making powers. He acts only as an advocate, and only on behalf of specifically defined consumer interests. His actions are subject to agency statutes and rules of general applicability. Any abuses of his authority are subject to judicial review. Like all officers in the executive branch, he may be removed at will by the President. His every action will be subject to the oversight of Congress and the agency's charter, under the terms of the statute, lapses in 1982.

5. Finally, it is said that the ACP will have limitless powers to harass business with burdensome, repetitive, useless and unfair demands for information. In fact, the discovery powers of the agency are carefully defined and sharply limited. In contrast to the usual investigative powers of regulatory agencies, the ACP may only ask questions and request information, and only where necessary to protect health or safety, or to uncover fraud or substantial economic injury to consumers. It cannot inspect documents or compel the testimony of witnesses; it must define with particularity the purpose for which the information is requested; it cannot exercise even its restricted gathering authority if the information is a matter of public record or available at another agency; small business is exempt. Most importantly, it has no power to issue subpoenas or compel production of information. If a recipient balks, the agency may seek a federal court order, but the order will be granted only if the agency proves in court its need for the requested information.

While we do not believe the ACP will be a panacea for all regulatory ills, we do believe that it will provide a useful, cost-beneficial technique for advocating the legitimate interests of consumers, for monitoring definciencies in the administrative process, and for improving the quality of agency decision-making. For these reasons, we support enactment of this legislation.

Very truly yours,

Joan Z. Bernstein, Sheldon Cohen, Kenneth Cox, Philip Elman, Ronald Goldfarb, Mary Gardiner Jones, Stuart Land, Harry McPherson, Michael Nussbaum, Robert Pitofsky, Stanford Ross, Thomas Troyer, Robert Skitol. Robert Wald

UNITED STATES SHOULD LEAD UNITED NATIONS IN DRAWING ATTENTION TO ELDERLY PEOPLE AROUND THE WORLD

(Mr. PEPPER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. PEPPER. Mr. Speaker, today I am introducing a House resolution for the purpose of requesting that the U.S. delegation to the United Nations be directed to join with other United Nation member nations in support of a World Year on Aging and a World Assembly on Aging in 1982.

A parallel resolution is being introduced today in the other body by Senator FRANK CHURCH of Idaho.

The Select Committee on Aging, which I chair, realizes that the elderly make up the fastest growing group in our society. By the year 2020, over 40 million Americans will be aged 65 and above, compared to 22 million in 1975, and only 3 million in 1900.

This very substantial increase in the number of people projected to be over 65 in future years is a compelling reason for public attention to focus on the needs of the eldery. This growing segment of our population will cause significant social and economic changes requiring immediate and long-term attention and action. And this population boom of over-65ers is not limited by national boundaries—the elderly are increasing in numbers worldwide. The approximate 291 million persons 60 years and over, in 1970, throughout the world, will increase to nearly 585 million by the year 2000—an increase of more than 100 percent!

The increasing aging population poses crucial social policy questions, not only for policymakers in the United States, but throughout the world. For this reason, I believe a great deal can be gained in bringing political leaders and governmental specialists together from different countries for the purpose of shaping responsive policies which address problems arising from this change in the population structure.

I urge my colleagues to allow the United States to take the lead in recognizing the need to enhance communication between policymakers, from many lands, to benefit from their insights with respect to methods, approaches, and techniques of improving the lot of elderly people throughout the world, whether it is with regard to improvement of health, status, income maintenance, housing, or simple social acceptability.

Mr. Speaker, I insert at this point the text of the resolution:

H. RES.—

Resolution to express the sense of the House of Representatives that the United States delegation to the United Nations should work with the delegations of other member nations to call for a World Assembly on Aging and a World Year on Aging

Whereas the United Nations has within recent years intensified its research and information exchange activities relating to aging;

Whereas a question relating to broadening the United Nations program on aging will be considered this autumn at the 32nd session of the General Assembly;

Whereas the discussion of such question will offer a timely forum for discussion of a proposal for a World Year on Aging and an intergovernmental Assembly on Aging;

Whereas recent United Nations reports provide impressive evidence that aging populations worldwide will cause widespread economic and social dislocations unless extensive and informed efforts are made to take full advantage of the beneficial and far-reaching cpportunities afforded by an increase in the proportion of older persons; and

Whereas there is reason to believe that widespread support for a World Assembly and World Year on Aging can be developed among member nations of the United Nations: Now, therefore, be it

Resolved, That it is the sense of the House of Representatives that the President should instruct the United States delegation to the United Nations to work with the delegations of other nations represented at the United Nations to call for a World Assembly on Aging and a World Year on Aging for not later than 1982.

SEC. 2. The Clerk of the House shall transmit a copy of this resolution to the President.

A WEATHERMAN OFFERS THE "NATIONAL WEATHER SERVICES ACT OF 1977"

(Mr. MILFORD asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. MILFORD. Mr. Speaker, almost every person that comes to Congress has a very special personal contribution that he would like to make. As the only weather forecaster, ever to have served in Congress, I would like to tender my small offering.

I am introducing today a bill entitled the "National Weather Services Act of 1977," which provides a systematic approach for updating national weather services and supporting research.

In an age of highly sophisticated technology there is some irony in the fact that man has in some respects become increasingly vulnerable with respect to natural disasters. The networks of production and transport which supply our food, energy, and material goods have linked large populations over large geographic areas in a common system.

Increased numbers of people with increased consumption have taxed these systems to the point where a disaster or major perturbation, at any point in the system, has consequences for us all.

The number of people in areas susceptible to natural disasters has increased along with the value of property in these areas. Thus the need for predictions of the occurrence of weather extremes becomes more critical for the saving of life and property.

As a professional meteorologist, I am especially aware of the public's need to be informed of violent weather. I spent 20 years forecasting weather in the "tornado belt" of this Nation where citizens are acutely aware of the affects of severe weather. Many people in that part of the United States are wiped out completely each year by violent weather. Hurricanes, tornadoes, and floods annually take their grim toll in the southeastern and eastern sections of our Nation. Droughts can devastate crops and produce water shortages anywhere.

While weather services in the United States have improved, due to new technological developments over the past 20 years, they have failed to keep pace with demand. Particularly lacking are specialized weather services such as those needed in agriculture, aviation, energy management, construction, forestry, and marine activities.

Lack of vital large-scale research and development programs have seriously hampered the operational weather forecasters' ability to deliver needed intermediate and long range forecasts.

Farmers may be the direct victims of floods, drought, and hailstorms, but all citizens are affected by the resulting higher food prices. When one stops to consider the losses to American agriculture from hail alone—currently running from $600 to $800 million annually—an aggressive research program to control hailstorms seems entirely justified.

The entire cost of the most expensive hail suppression research program ever envisioned would be less than 1 year's

crop losses. Experiments to diminish the intensity of hurricanes are underway with encouraging preliminary results. Similarly, there have been successful small-scale experiments to increase rainfall in limited circumstances.

Given the present state of science and technology, the prospects for a better understanding of weather, improved forecasting, and even modification of weather are bright. The answer to the world's food problem may very well lie in our ability to modify weather patterns.

Mr. Speaker, it is my opinion that the time has come to reorganize our entire weather service system so that the National Weather Service can adequately respond to these demands. Technology is now within reach which could provide a successful operational weather research program. Specific national goals can now be identified and established.

National policies, responsibilities and programs regarding weather services and weather research have never been prescribed as a whole by any administration or by any Congress.

No precise statement of federal responsibility for providing weather services to the public has ever existed. Rather, there are many scattered statutory references, some dating back more than 100 years, without clear, concise statements of an overall policy.

Currently, Congress does not even review weather services and supporting research programs that are being conducted by our Government. All we have now is a very brief review by an Appropriations Subcommittee when the President's budget comes up to Capitol Hill each year. This subcommittee has neither the time nor the staff to examine carefully the complete weather program. Certainly the subcommittee cannot examine comprehensive proposed plans or research goals.

The bill I am introducing today addresses this problem by providing for annual program authorizations. Congress would specify the direction, scope and funding of weather services and supporting research. Regular, comprehensive congressional reviews of all weather service programs will assure solutions to bona fide National Weather Service needs. This bill is in keeping with the intent of the 94th Congress when the House committees were restructured. Jurisdiction of weather services were placed under the Science and Technology Committee.

My bill would revise the statutory authority for national weather services which are provided by the Secretary of Commerce as set forth in title 15, United States Code, sections 311 through 328. This bill updates and clarifies existing authorities and functions conducted by the National Oceanic and Atmospheric Administration. It does this by taking into consideration the increasing technological advances made by the weather services both domestically and internationally.

The bill provides that the Secretary of Commerce shall be responsible for the implementation and coordination of all weather-related activities of the Federal Government.

Specific authority for performing weather services and studies and for engaging in joint projects and cooperative agreements with any person, firm, or others, both public and private, domestic, and international, is provided in the bill.

New authority has been added for an equipment replacement fund to replace national weather service facilities as needed in an orderly manner.

In short, Mr. Speaker, this bill is designed to provide a clear congressional mandate to conduct weather programs necessary to meet national needs and to establish procedures for complete weather services and supporting research necessary to fulfill those national needs.

CONFERENCE REPORT ON H.R. 7589

Mr. McKAY submitted the following conference report and statement on the bill (H.R. 7589) making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes.

CONFERENCE REPORT (H. REPT. NO. 95–560)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7589) "making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 7, 8, 9, 12, and 13.

That the House recede from its disagreement to the amendments of the Senate numbered 6, 10, and 11, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$527,769,000"; and the Senate agree to the same.

Amendment numbered 2: That the House recede from its disagreement to the amendment of the Senate numbered 2, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$463,056,000"; and the Senate agree to the same.

Amendment numbered 3: That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$406,986,000"; and the Senate agree to the same.

Amendment numbered 4: That the House recede from its disagreement to the amendment of the Senate numbered 4, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$58,009,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendment numbered 5.

GUNN MCKAY,
ROBERT SIKES,
JOHN MURTHA,

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE OF CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H.R. 7589) making appropriations for military construction for the Department of Defense for the fiscal year ending September 30, 1978, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report.

General subjects: The conferees agreed to include some but not all of the energy control and monitoring projects approved by the Senate. The House conferees feel that more testing of actual systems is required to verify that these systems actually live up to the services' expectations and to validate both the total concept and the specific applications of these systems. The conferees were also concerned by lack of evidence of comprehensive planning and an apparent tendency to increment such systems. Therefore, the conferees deleted those systems that did not complete the requirements at the installations concerned pending further evidence of documented savings from and comprehensive planning for such systems.

In many instances, the conferees have reduced the amounts provided by the House or Senate for specific projects. These reductions, by and large, were made as a result of lower estimates by the services or reduced authorization for these projects. With the exception of the reductions made in the exchange complex, service station, auto hobby shop, and base cafeteria at the Trident Support Complex, Bangor, Washington, and the addition to aircraft operational parking apron at Moody Air Force Base, Georgia, the conferees do not intend these reductions to represent limitations on the amounts which can be obligated for these projects.

Amendment No. 1, Military construction, Army: Appropriates $527,769,000 instead of $483,659,000 as proposed by the House and $583,059,000 as proposed by the Senate. The conferees have agreed to the following additions and deletions to the amounts and line items as proposed by the House:

Fort Bragg, North Carolina:	
Energy control system	+$2,936,000
Upgrade sewage plant	+7,950,000
Fort Carson, Colorado:	
Lighting systems	+617,000
Electrical distribution system	+492,000
Fort Hood, Texas:	
Oil interceptors	+1,768,000
Municipal sewer connection	+3,200,000
Dental clinic—*Trim*	+454,000
Fort George G. Meade, Maryland: Rehabilitate street lighting	+744,000
Fort Ord, California: Direct support maintenance facility	+1,478,000
Presidio of San Francisco, California: Energy control system	+132,000
Fort Stewart/Hunter Army Airfield, Georgia:	
Two brigade headquarters	+1,119,000
Tactical equipment shop	+1,385,000
Direct support maintenance facility—*Trim*	+4,893,000
Fort Benjamin Harrison, Indiana: Regional sewer connection	+1,796,000
Fort Benning, Georgia: Barracks complex, trainee	+13,934,000

Fort Bliss, Texas:	
Hot water heaters	+95,000
Insulate buildings	+557,000
Water storage tanks	+462,000
Fort Jackson, South Carolina: Sewage treatment upgrade	+366,000
Aberdeen Proving Ground, Maryland:	
Energy control system	+1,600,000
Alter electrical distribution system	+120,000
Corpus Christi Army Depot, Texas: Heat treatment facility	+2,693,000
Harry Diamond Laboratory, Maryland: Energy control system	+1,305,000
Iowa Army Ammunition Plant, Iowa:	
Insulate steam lines	+351,000
Spill control	+357,000
Picatinny Arsenal, New Jersey: Regional sewage plant	+2,823,000
White Sands Missile Range, New Mexico: Range communication facility	+$376,000
Walter Reed Army Medical Center, Washington, D.C.: Fuel storage and emergency generator support	+2,089,000
Military Ocean Terminal, Sunny Point, North Carolina:	
Field operations building	+312,000
Explosive truck access road	+319,000
Camp Zama, Japan: Dependent high school	+180,000
Germany, Various Locations: Funding reduction, NATO-eligible projects	+25,000,000
Rock Island Arsenal, Illinois: Replace Moline Bridge—*Trim*	−234,000
White Sands Missile Range, New Mexico: High energy laser systems test facility	−33,449,000
Fort Sam Houston, Texas: Brooke Army Medical Center—*Trim*	−1,000,000
U.S. Army Intelligence and Security Command (Korea): Supply warehouse and office	−158,000
Dining facility addition	−675,000
Panama Area, Canal Zone: Dining facility modification, Fort Kobbe	−447,000
Germany, Various Locations: NCO open mess, Bremerhaven	−618,000
Outdoor athletic facility, Garlstedt—*Trim*	−321,000
Dental clinic, Heidelberg—*Trim*	−891,000

At Fort Lewis, Washington, the conferees deferred without prejudice an instrument landing system requested for $615,000 pending decisions on the type of division and numbers of helicopters to be stationed at Fort Lewis and the feasible level of utilization of instrument landing facilities at airfields such as McChord Air Force Base. The action taken should not preclude the Army from requesting these facilities in an appropriate manner once these issues have been resolved.

For Fort Benning, the conferees provided an additional $13,934,000 for construction of a trainee barracks at authorized scope, but deferred the $5,886,000 requested for a reception station associated with implementation of one-station unit training (OSUT) for infantry. The conferees also agreed that the Army should undertake a test, as discussed in the House report, and direct that contract award for barracks construction should not be made until the Army has verified that such a test will be performed and has informed the Committees of the criteria, procedures, and schedule to be followed under this test. The conferees also agreed that if, after the results of the test have been analyzed, the Secretary of the Army reports that OSUT is the most advantageous and economic method of initial entry training of infantry, the Committee's concerns as expressed in the House report will be satisfied, provided however that in this connection the House committee shall determine whether the Secretary's determination is reasonable.

The conferees agreed to a general reduction in new budget authority for the Army of $45,000,000 in lieu of a $70,000,000 reduction proposed by the House and a $20,500,000 reduction proposed by the Senate. The conferees agree that the Army immediately shall take all steps necessary to obtain NATO eligibility for all or a significant portion of each of the POMCUS maintenance facilities requested in fiscal year 1978 and, further, that the Army should, to the extent practicable, utilize conjunctive funding in lieu of prefinancing for such facilities. In addition, the conferees understand that to the extent that additional ammunition storage may become NATO-eligible, this should serve to reduce military construction programming requirements. Except where it decreases NATO defense capabilities to do so, funds should not be directed to ammunition storage facilities which may become NATO-eligible as a result of the current NATO ammunition expenditure rate study. Further, the Army and Department of Defense must conscientiously work to ensure that in the future facilities necessary to enhance NATO readiness are NATO financed.

The Senate bill included authority to spend monies available from prior years to complete alterations and improvements to a medical and dental clinic at Giessen, Germany. The conferees agree to allow up to $200,000 to be spent for this purpose.

Amendment No. 2, Military construction, Navy: Appropriates $463,056,000 instead of $425,686,000 as proposed by the House and $523,279,000 as proposed by the Senate. The conferees have agreed to the following additions and deletions to the amounts and line items as proposed by the House:

Trident Support Complex, Bangor, Washington:	
Exchange complex, service station, auto hobby shop and cafeteria—*Trim*	+$1,800,000
Post contract award services—*Trim*	+450,000
Marine Corps Supply Center, Albany Georgia:	
Energy monitoring and control system	+90,000
Steam and condensate systems	+100,000
Marine Corps Air Station, Beaufort, South Carolina: Sanitary sewage collection and treatment	+1,100,000
Marine Corps Base, Camp Lejeune, North Carolina:	
Steam and condensate systems	+550,000
Lighting systems	+500,000
Marine Corps Air Station, Cherry Point, North Carolina: Lighting systems	+450,000
Marine Corps Air Station, El Toro, California: Electrical energy systems	+600,000
Marine Corps Recruit Depot, San Diego, California: Steam and condensate systems	+1,200,000
Marine Corps Base, Twentynine Palms, California: Maintenance facilities	+2,600,000
Naval Academy, Annapolis, Maryland: Steam and condensate systems	+200,000
Naval Observatory, Flagstaff, Arizona: Heating, ventilation and air-conditioning	+80,000
Naval District, Washington: Steam and condensate systems	+850,000
Naval Air Station, Brunswick, Maine: Operational trainer building	+1,100,000
Fleet Combat Training Center, Dam Neck, Virginia: Insulation and Storm windows	+240,000
Naval Submarine Base, New London, Connecticut:	
Lighting systems	+80,000
Insulation and storm windows	+390,000
Naval Station, Norfolk, Virginia: Insulation and storm windows	+230,000
Naval Air Station, Norfolk, Virginia: Air freight terminal	+2,950,000
Naval Air Station, Miramar, California: Boiler plant modifications	+$230,000
Naval Air Station, Moffett Field, California: Heating, ventilation and air-conditioning	+110,000
Naval Air Station, North Island, California:	
Steam and condensate systems	+4,500,000
Oil spill prevention	+1,500,000
Naval Station, Pearl Harbor, Hawaii: Arizona Memorial shoreside facility	+2,000,000
Naval Station, San Diego, California: Berthing improvements	+400,000
Naval Submarine Support Facility, San Diego, California: Berthing pier	+1,670,000
Armed Forces Staff College, Norfolk, Virginia: Building alterations	+160,000
Naval Training Center, Orlando, Florida: Building alterations	+200,000
Naval Regional Medical Center, Norfolk, Virginia: Steam and condensate systems	+600,000
Naval Ship R&D Center, Annapolis, Maryland:	
Energy recovery system	+150,000
Steam and condensate systems	+130,000
Naval Shipyard, Charleston, South Carolina: Welding shop	+1,850,000
Naval Ordnance Station, Indian Head, Maryland: Heating, ventilation and air-conditioning	+180,000
Naval Air Rework Facility, Jacksonville, Florida: Lighting systems	+1,200,000
Naval Torpedo Station, Keyport, Washington: Industrial waste collection	+2,650,000
Naval Air Station, Lakehurst, New Jersey: Building alterations	+160,000
Naval Shipyard, Long Beach, California:	
Heating, ventilation and air-conditioning	+170,000
Steam and condensate systems	+320,000
Insulation and storm windows	+140,000
Naval Air Rework Facility, Norfolk, Virginia: Insulation and storm windows	+390,000
Navy Public Works Center, Norfolk, Virginia: Municipal sewer connections	+4,150,000
Naval Shipyard, Norfolk, Virginia: Electrical energy systems	+100,000
Naval Air Test Center, Patuxent River, Maryland: Steam and condensate system	+1,589,000

Naval Shipyard, Puget Sound, Washington: Ship support service center	+1,550,000
Navy Public Works Center, Pensacola, Florida: Sanitary sewage collection and treatment	+1,250,000
Naval Shipyard, Philadelphia, Pennsylvania: Municipal sewer connection	+2,200,000
Naval Construction Battalion Center, Port Hueneme, California: Boiler plant modification	+310,000
Navy Public Works Center, San Francisco, California: Energy monitoring and control system	+480,000
Naval Research Laboratory, Washington, D.C.: Heating, ventilation and air-conditioning	+330,000
Naval Weapons Station, Yorktown, Virginia:	
Building alterations	+200,000
Dredging	+900,000
Ammunition segregation facility	+2,350,000
Portsmouth Naval Shipyard, Kittery, Maine: Dredging	+2,650,000
Naval Security Station, Washington, D.C.: Heating, ventilation and air-conditioning	+90,000
Naval Station, Roosevelt Roads, Puerto Rico: Sanitary sewage collection and treatment	+150,000
Navy Public Works Center, Guam: Sanitary sewage collection and treatment	+2,800,000
Navy Fleet Activities, Yokosuka, Japan: Electrical power improvements	+1,850,000
General reduction	+181,000
Naval Air Station, Whiting Field, Florida: Land acquisition	−530,000
Atlantic Fleet Ballistic Missile Refit Site (Preferred), Kings Bay, Georgia: Refit site	−19,500,000

At the Trident Support Complex, Bangor, Washington, the Committee of Conference deferred explosive handling wharf No. 2 and missile motor magazines without prejudice. Navy schedules for missile and submarine deployments indicated that funding of this construction is not required in fiscal year 1978. The House had allowed a total of $3,000,000 for an exchange complex, service station, auto hobby shop, and cafeteria, a reduction of $3,789,000 from the budget request. The conferees agreed to restore $1,800,000 of the House reduction. Although specific restrictions are not set for the manner in which the Navy allocates these funds, the conferees feel that service stations normally are and should be built from nonappropriated funds and that the exchange facility is overscoped according to Department of Defense criteria and in view of support available in the civilian community and military installations in the area. The conferees agreed to restore $450,000 of the $900,000 House reduction for on-post contract award services. In addition, the conferees agreed to eliminate $4,533,000 for an off-crew administration building and make a $5,000,000 overall funding reduction.

The conferees agreed to an appropriation of $10,800,000 for the construction of the Naval Station, Adak, Alaska supply pier in lieu of $14,000,000 as proposed by the Senate. It is the intent of the conferees that the amount appropriated should provide facilities adequate to service this remote location. Since there appears to be some question as to the amount actually required for construction of an adequate pier, the conferees wish to be apprised of Navy intentions in this regard. This should include an evaluation of the relative capabilities of supply wharfs in lieu of a pier, together with the costs of each based upon the most complete design information available. While an important factor, cost alone should not be the major consideration in determining the proper means of satisfying supply requirements for this station.

The House bill contained $19,500,000 for a refit site at the preferred location for the Atlantic Fleet Ballistic Missile Refit Site. The conference committee has not provided $19,500,000 in funding; however, this is done without prejudice and with the understanding that the Navy will be allowed to submit a reprogramming request for the approval of the Committees on Appropriations of the Senate and the House of Representatives. A similar procedure is specifically authorized in section 202 of the authorizing legislation.

With respect to the National Naval Medical Center at Bethesda, Maryland, included in the fiscal year 1978 Military Construction Authorization Act as section 205, the conferees concurred with the use of prior-year appropriations for this construction. Fiscal year 1976 appropriations in the amount of $8,000,000 may be used for the construction of a south parking structure for the 500-bed replacement hospital.

Amendment No. 3, Military construction, Air Force: Appropriates $406,986,000 instead of $379,044,000 as proposed by the House and $451,233,000 as proposed by the Senate. The conferees have agreed to the following additions and deletions to the amounts and line items as proposed by the House:

Kingsley Field, Oregon: Add to and alter runway special lighting	+$115,000
Peterson Air Force Base, Colorado: Energy monitoring and control system	+623,000
Hill Air Force Base, Utah: Alter heating systems	+1,500,000
Kelly Air Force Base, Texas:	
Aircraft instrument landing and navigational facility	+134,000
Alter lighting system	+2,300,000
McClellan Air Force Base, California: Repair heating distribution system	+886,000
Robins Air Force Base, Georgia:	
Alter heating and steam mains	+2,669,000
Alter air-conditioning system	+1,500,000
Tinker Air Force Base, Oklahoma: Alter lighting system	+584,000
Wright-Patterson Air Force Base, Ohio:	
Alter lighting fixtures and install light switches	+1,000,000
Repair heating distribution systems	+1,210,000
Arnold Engineering Development Center, Tennessee:	
Waste heat recovery	+850,000
Alter lighting system	+430,000
Edwards Air Force Base, California: Alter mechanical system	+546,000
Eglin Air Force Base, Florida:	
Alter heating and air-conditioning systems	+700,000
Solar domestic hot water	+76,000
Security police operations facility	+309,000
Energy monitoring and control system	+544,000
Patrick Air Force Base, Florida: Waste heat recovery for water heating	+300,000
Columbus Air Force Base, Mississippi: Aircraft instrument landing and navigational facility	+77,000
Keesler Air Force Base, Mississippi: Aircraft control tower	+642,000
Lowry Air Force Base, Colorado: Energy monitoring and control system	+1,808,000
Mather Air Force Base, California: Alter heating plants	+115,000
Randolph Air Force Base, Texas: Aircraft instrument landing and navigational facility	+91,000
Williams Air Force Base, Arizona:	
Parachute and dinghy shop	+432,000
Aircraft instrument landing and navigational facility	+125,000
Elmendorf Air Force Base, Alaska: Alter sewage treatment and disposal facilities	+142,000
Eielson Air Force Base, Alaska: alter sewage treatment and disposal facilities	+$297,000
Shemya Air Force Base, Alaska: Alter sewage treatment and disposal facilities	+853,000
Altus Air Force Base, Oklahoma: Aircraft instrument landing and navigational facility	+145,000
Andrews Air Force Base, Maryland:	
Add to and alter security police operations facility	+692,000
Repair heating distribution system	+2,844,000
Bolling Air Force Base, District of Columbia: Storm windows	+133,000
Little Rock Air Force Base, Arkansas:	
Energy monitoring and control system	+573,000
Flight simulator training facility	+2,305,000
McChord Air Force Base, Washington: Energy monitoring and control system	+1,008,000
Norton Air Force Base, California:	
Solar process water	+444,000
Repair steam distribution system	+430,000
Pope Air Force Base, North Carolina: Energy monitoring and control system	+550,000
Travis Air Force Base, California: Energy monitoring and control system	+500,000
Barksdale Air Force Base, Louisiana:	
Sanitary sewer mains	+1,530,000
Alter air-conditioning system and install insulation	+368,000
Industrial waste treatment and disposal	+215,000
Beale Air Force Base, California: Energy monitoring and control system	+409,000
Castle Air Force Base, California:	
Aircraft instrument landing and navigational facility	+134,000
Energy monitoring and control system	+650,000
Ellsworth Air Force Base, South Dakota: Addition to communications - electronics shop	+251,000
McConnell Air Force Base, Kansas:	
Storm windows	+100,000
Aircraft instrument landing and navigational facility	+116,000
Plattsburgh Air Force Base, New York: Aircraft instrument landing and navigational facility	+140,000
Bergstrom Air Force Base, Texas: Energy monitoring and control system	+874,000
Cannon Air Force Base, New Mexico: Alter fuel systems maintenance facility	+329,000
Davis-Monthan Air Force Base, Arizona: Aircraft instrument landing and navigational facility	+262,000

George Air Force Base, California: Aircraft instrument landing and navigational facility	+127,000
Holloman Air Force Base, New Mexico: Aircraft instrument landing and navigational facility	+128,000
Luke Air Force Base, Arizona: Aircraft instrument landing and navigational facility	+115,000
MacDill Air Force Base, Florida: Energy monitoring and control system	+$1,009,000
Aircraft corrosion control facility	+1,411,000
Moody Air Force Base, Georgia: Addition to aircraft operational parking apron	+1,000,000
Mountain Home Air Force Base, Idaho: Fire protection-avionics shop	+195,000
Myrtle Beach Air Force Base, South Carolina: Energy monitoring and control system	+718,000
Shaw Air Force Base, South Carolina: Aircraft instrument landing and navigational facility	+117,000
Energy Monitoring and control system	+646,000
Gunter Air Force Base, Alabama: Alter air-conditioning system	+248,000
United States Air Force Academy, Colorado: Alter sanitary sewage treatment and disposal facility	+132,000
Kadena Air Base, Japan: Sanitary sewage main	+344,000
Taxiway lighting	+443,000
Osan Air Base, Korea: Corrosion control facility	+1,255,000
Misawa Air Base, Japan: Alter sewage treatment plant	+732,000
Spangdahlem Air Base, Germany: POL operations facility	+340,000
RAF Alconbury, United Kingdom: Aircraft arresting system	+274,000
Galena Airport, Alaska: Dormitory addition	−5,100,000
Various Locations, Strategic Air Command: Addition to field training facility	−1,097,000
Funding adjustment (overall reduction)	−10,955,000

The conferees have denied the Technical Intelligence Operations Center project at Wright-Patterson Air Force Base, Ohio, but do so without prejudice. While it is agreed the work at the Center is essential, the conferees are unconvinced this particular project has been thoroughly justified. Upon receipt of sufficient justification, a request for reprogramming or inclusion in a supplemental or regular program will be considered.

With regard to an environmental and radiological health laboratory at Brooks Air Force Base, Texas, the conferees are in agreement that language in the House report should govern.

Both the House and Senate have approved $5.1 million for the construction of a 179-man bachelor enlisted quarters at Galena Airport, Alaska. The House, however, had recommended new fiscal year 1978 appropriations in this amount, whereas the Senate had recommended project execution within available fiscal year 1977 resources. The conferees agreed that since the project had undergone complete review during the normal review cycle, its approval as a reprogramming would not violate standing injunctions against the reprogramming of funds for a project previously denied by the Congress. Accordingly, the conferees adopted the Senate position, which eliminated the need for new appropriations in fiscal year 1978.

At Moody Air Force Base, Georgia, the conferees have allowed $1,000,000 for upgrading existing operational apron space.

Amendment No. 4, Military construction, Defense Agencies: Appropriates $58,009,000 instead of $32,314,000 as proposed by the House and $59,659,000 as proposed by the Senate. The conferees have agreed to the following additions and deletions to the amounts and line items as proposed by the House:

(NSA) Fort George G. Meade, Maryland: Underground communications link	+$436,000
Unspecified Location, DARCOM: (White Sands Missile Range, New Mexico) High energy laser systems test facility	+33,449,000
Unspecified Location, TRADOC: (Fort Belvoir, Virginia) Alter building for Defense Systems Management College	+1,810,000
Department of Defense Emergency Construction	−10,000,000

The conferees have agreed to provide $1,810,000 for facilities in support of a Defense Systems Management College at Fort Belvoir, Virginia. The conferees feel that reductions should be made in the Defense establishment in the National Capital Region and encourage the Secretary of Defense and the military services to establish new targets for further reductions in the approximately 139,000 Defense personnel in the National Capital Region and an additional meaningful reduction in the space occupied by Defense activities.

In view of the many problems resulting from Department of Defense impaction in the Washington area, the conferees feel that economic criteria should not be the sole determinant in specific decisions to relocate activities from the National Capital Region. Many factors should be carefully considered in such decisions, and costs for new construction or modification at a location outside of Washington may be outweighed by advantages of such a move.

Amendment No. 5, Family Housing, Defense: Reported in technical disagreement. The managers on the part of the House will offer a motion to recede and concur in the amendment of the Senate with an amendment to appropriate $1,460,140,000 instead of $1,435,538,000 as proposed by the House and $1,451,640,000 as proposed by the Senate. The managers on the part of the Senate will move to concur in the amendment of the House to the amendment of the Senate.

Amendment No. 6, Family Housing, Defense: Authorizes not to exceed $26,837,000 for the construction of Navy family housing as proposed by the Senate instead of $2,235,000 as proposed by the House.

The conferees have agreed to five hundred and twenty units of family housing at the Naval Complex, Bremerton, Washington. These units were not contained in the House bill because they were not contained in the House authorizing bill at the time the appropriations bill passed the House of Representatives. In addition, the Committee on Appropriations of the House was concerned that the project should contain a greater proportion of two-bedroom units in view of the very large deficit projected for this size units, particularly for the lower enlisted pay grades. These units have now been authorized with the condition that no funds be obligated until the Department of the Navy has revalidated the requirement. The conferees agree to appropriations for this housing with the above condition. Further, the House conferees caution the Navy not to present an unbalanced program (one which completes the programmable requirements for larger units for higher rank personnel while leaving a large deficit of two-bedroom quarters for lower rank enlisted personnel).

Amendment No. 7, Family housing, Defense: Restores technical matter proposed by the House.

Amendment No. 8, Family housing, Defense: Restores $8,500,000 for energy consumption metering as proposed by the House.

The conferees agreed to an appropriation of $8,500,000, as proposed by the House, for a test to determine the feasibility of metering family housing facilities. The conferees further agree that these funds should be limited solely for the purpose of the feasibility test, and that such test should follow the specific guidelines established by the military construction authorization conferees. The Department of Defense should not implement a metering program for the current housing inventory without the express prior approval of the House and Senate Committees on Appropriations.

Amendment No. 9, Family housing, Defense: Restores technical matter proposed by the House.

Amendment No. 10, Family housing, Defense: Adds language proposed by the Senate to establish a maintenance floor within funds appropriated for operations and maintenance.

Amendment No. 11, Homeowners Assistance Fund, Defense: Appropriates $1,500,000 as proposed by the Senate instead of $3,000,000 as proposed by the House.

Amendment No. 12, General provisions: Deletes language proposed by the Senate with regard to sections 612 of the Military Construction Authorization Acts of 1977 and 1978.

Amendment No. 13, General provisions: Deletes language proposed by the Senate with regard to eligibility of applicant for the United States Military Academy.

CONFERENCE TOTAL—WITH COMPARISONS

The total new budget (obligational) authority for the fiscal year 1978 recommended by the Committee of Conference, with comparisons to the fiscal year 1977 amount, the 1978 budget estimates, and the House and Senate bills for 1978, follows:

New budget (obligational) authority, fiscal year 1977	$3,461,397,000
Budget estimates of new (obligational) authority, fiscal year 1978	3,015,600,000
House bill, fiscal year 1978	2,819,501,000
Senate bill, fiscal year 1978	3,130,630,000
Conference agreement	2,977,720,000
Conference agreement compared with:	
New budget (obligational) authority fiscal year 1977	−483,677,000
Budget estimates of new (obligational) authority, fiscal year 1978	−37,880,000
House bill, fiscal year 1978	+158,219,000
Senate bill, fiscal year 1978	−152,910,000

CONFERENCE REPORT ON H.R. 6161

Mr. STAGGERS submitted the following conference report and statement on the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes.

CONFERENCE REPORT (H. REPT. NO. 95-564)

The committee of conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes, having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the House recede from its disagreement to the amendment of the Senate and agree to the same with an amendment as follows:

In lieu of the matter proposed to be inserted by the Senate amendment insert the following:

SHORT TITLE AND TABLE OF CONTENTS

SECTION 1. This Act, together with the following table of contents, may be cited as the "Clean Air Act Amendments of 1977".

TABLE OF CONTENTS

Sec. 1. Short title and table of contents.

TITLE I—AMENDMENTS RELATING PRIMARILY TO TITLE I OF THE CLEAN AIR ACT

Sec. 101. Training.
Sec. 102. Waiver of maintenance of effort requirement.
Sec. 103. Air quality control regions.
Sec. 104. Criteria and control techniques.
Sec. 105. Transportation planning and guidelines.
Sec. 106. Air quality standards.
Sec. 107. Energy or economic emergency authority.
Sec. 108. Implementation plans.
Sec. 109. New source standards of performance.
Sec. 110. Standards for hazardous air pollutants.
Sec. 111. Enforcement provisions.
Sec. 112. Compliance orders (including coal conversion).
Sec. 113. Notice to State in case of certain inspections, etc.
Sec. 114. International air pollution.
Sec. 115. President's air quality advisory board.
Sec. 116. Control of pollution from Federal facilities.
Sec. 117. Primary nonferrous smelter orders.
Sec. 118. Noncompliance penalty.
Sec. 119. Consultation.
Sec. 120. Unregulated pollutants.
Sec. 121. Stack heights.
Sec. 122. Assurance of plan adequacy.
Sec. 123. Interstate pollution abatement.
Sec. 124. Public notification.
Sec. 125. State boards.
Sec. 126. Ozone protection.
Sec. 127. Prevention of significant deterioration.
Sec. 128. Visibility protection.
Sec. 129. Nonattainment areas.

TITLE II—AMENDMENTS RELATING PRIMARILY TO TITLE II OF THE CLEAN AIR ACT

Sec. 201. Light-duty motor vehicle emissions.
Sec. 202. Studies and research objective for oxides of nitrogen.
Sec. 203. Study and report of fuel consumption.
Sec. 204. State grants.
Sec. 205. Cost of certain emission control parts.
Sec. 206. Warranties.
Sec. 207. California waiver.
Sec. 208. Maintenance instructions.
Sec. 209. Warranties and motor vehicle parts certification.
Sec. 210. Repair at owner's place of choosing.
Sec. 211. High altitude performance adjustments.
Sec. 214. Assurance of protection of public health and safety.
Sec. 215. Fill pipe standards.
Sec. 216. Onboard hydrocarbon technology.
Sec. 217. Test procedures for measuring evaporative emissions.
Sec. 218. Certain minor and technical and conforming amendments.
Sec. 219. Tampering.
Sec. 220. Testing by small manufacturers.
Sec. 221. Parts standards; preemption of State law.
Sec. 222. Testing of fuels and fuel additives.
Sec. 223. Small refineries.
Sec. 224. Aircraft emissions standards.
Sec. 225. Carbon monoxide intrusion into sustained use vehicles.

TITLE III—AMENDMENTS RELATING PRIMARILY TO TITLE III OF THE CLEAN AIR ACT

Sec. 301. Definitions.
Sec. 302. Emergency powers.
Sec. 303. Citizen suits.
Sec. 304. Civil litigation.
Sec. 305. Administrative procedures and judicial review.
Sec. 306. Sewage treatment grants.
Sec. 307. Economic impact assessment.
Sec. 308. Financial disclosure; conflicts of interest.
Sec. 309. Air quality monitoring by environmental protection agency.
Sec. 310. Modeling.
Sec. 311. Employment effects.
Sec. 312. Employee protection.
Sec. 313. National Commission on Air Quality.
Sec. 314. Vapor recovery.
Sec. 315. Authorizations.

TITLE IV—GENERAL AND MISCELLANEOUS PROVISIONS

Sec. 401. Basis of administrative standards.
Sec. 402. Interagency cooperation on prevention of environmental cancer and heat and lung disease.
Sec. 403. Studies.
Sec. 404. Railroad emission study.
Sec. 405. Study and report concerning economic approaches to controlling air pollution.
Sec. 406. Savings provision; effective dates.

TITLE I—AMENDMENTS RELATING PRIMARILY TO TITLE I OF THE CLEAN AIR ACT

TRAINING

SEC. 101. (a) Section 103(b) of the Clean Air Act is amended by striking out paragraph (5), redesignating the following paragraphs accordingly, and adding the following at the end thereof: "In carrying out the provisions of subsection (a), the Administrator shall provide training for, and make training grants to, personnel of air pollution control agencies and other persons with suitable qualifications and make grants to such agencies, to other public or nonprofit private agencies, institutions, and organizations for the purposes stated in subsection (a)(5). Reasonable fees may be charged for such training provided to persons other than personnel of air pollution control agencies but such training shall be provided to such personnel of air pollution control agencies without charge.".

(b) Section 103(a) of such Act is amended by striking out "training," in paragraph (1); by striking out the period at the end of paragraph (4) and inserting in lieu thereof "; and"; and by inserting the following paragraph at the end thereof:

"(5) conduct and promote coordination and acceleration of training for individuals relating to the causes, effects, extent, prevention, and control of air pollution."

(d) The Administrator of the Environmental Protection Agency shall consult with the House Committee on Science and Technology on the environmental and atmospheric research, development, and demonstration aspects of this Act. In addition, the reports and studies required by this Act that relate to research, development and demonstration issues shall be transmitted to the Committee on Science and Technology at the same time they are made available to other committees of the Congress.

WAIVER OF MAINTENANCE OF EFFORT REQUIREMENT

SEC. 102. (a) The third sentence of subsection (b) of section 105 of the Clean Air Act is amended to read as follows: "No agency shall receive any grant under this section during any fiscal year when its expenditures of non-Federal funds for other than nonrecurrent expenditures for air pollution control programs will be less than its expenditures were for such programs during the preceding fiscal year, unless the Administrator, after notice and opportunity for public hearing, determines that a reduction in expenditures is attributable to a nonselective reduction in expenditures in the programs of all executive branch agencies of the applicable unit of Government; and no agency shall receive any grant under this section with respect to the maintenance of a program for the prevention and control of air pollution unless the Administrator is satisfied that such grant will be so used to supplement and, to the extent practicable, increase the level of State, local, or other non-Federal funds that would in the absence of such grant be made available for the maintenance of such programs, and will in no event supplant such State, local, or other non-Federal funds.".

(b) Subsection (c) of section 105 of such Act is amended by adding the following at the end thereof: "In fiscal year 1978 and subsequent fiscal years, subject to the provisions of subsection (b) of this section, no State shall receive less than one-half of 1 per centum of the annual appropriation for grants under this section for grants to agencies within such State.".

AIR QUALITY CONTROL REGIONS

SEC. 103. Section 107 of the Clean Air Act is amended by adding the following new subsections at the end thereof:

"(d)(1) For the purpose of transportation control planning, part D (relating to nonattainment), part C (relating to prevention of significant deterioration of air quality), and for other purposes, each State, within one hundred and twenty days after the date of enactment of the Clean Air Act Amendments of 1977, shall submit to the Administrator a list, together with a summary of the available information, identifying those air quality control regions, or portions thereof, established pursuant to this section in such State which on the date of enactment of the Clean Air Act Amendments of 1977—

"(A) do not meet a national primary ambient air quality standard for any air pollutant other than sulfur dioxide or particulate matter;

"(B) do not meet, or in the judgment of the State may not in the time period required by an applicable implementation plan attain or maintain, any national primary ambient air quality standard for sulfur dioxide or particulate matter;

"(C) do not meet a national secondary ambient air quality standard;

"(D) cannot be classified under subparagraph (B) or (C) of this paragraph on the basis of available information, for ambient air quality levels for sulfur oxides or particulate matter; or

"(E) have ambient air quality levels better than any national primary or secondary air quality standard other than for sulfur dioxide or particulate matter, or for which there is not sufficient data to be classified under subparagraph (A) or (C) of this paragraph.

"(2) Not later than sixty days after submittal of the list under paragraph (1) of this subsection the Administrator shall promulgate each such list with such modifications as he deems necessary. Whenever the Administrator proposes to modify a list submitted by a State, he shall notify the State and request all available data relating to such region or portion, and provide such State with an opportunity to demonstrate why any proposed modification is inappropriate.

"(4) Any region or portion thereof which is not classified under subparagraph (B) or (C) of paragraph (1) of this subsection for sulfur dioxide or particulate matter within one hundred and eighty days after enactment of the Clean Air Act Amendments of 1977 shall be deemed to be a region classified under subparagraph (D) of paragraph (1) of this subsection.

"(5) A State may from time to time review, and as appropriate revise and resubmit, the list required under this subsection. The Administrator shall consider and promulgate such revised list in accordance with this subsection.

"(e)(1) Except as otherwise provided in paragraph (2), the Governor of each State is authorized, with the approval of the Administrator, to redesignate from time to time the air quality control regions within such State for purposes of efficient and effective air quality management. Upon such redesignation the list under subsection (d) shall be modified accordingly.

"(2) In the case of an air quality control region in a State, or part of such region, which the Administrator finds may significantly affect air pollution concentrations in another State, the Governor of the State in which such region, or part of a region, is located may redesignate from time to time the boundaries of so much of such air quality control region as is located within such State only with the approval of the Administrator and with the consent of all Governors of all States which the Administrator determines may be significantly affected.

"(3) No compliance date extension granted under section 113(d)(5) (relating to coal conversion) shall cease to be effective by reason of the regional limitation provided in section 113(d)(5) if the violation of such limitation is due solely to a redesignation of a region under this subsection.

CRITERIA AND CONTROL TECHNIQUES

SEC. 104. (a) The first sentence of section 108(b)(1) of the Clean Air Act is amended by striking the words "technology and costs of emission control" and inserting in lieu thereof the words "cost of installation and operation, energy requirements, emission reduction benefits, and environmental impact of the emission control technology".

(b) Section 108(c) of such Act is amended by adding the following at the end thereof: "Not later than six months after the date of the enactment of the Clear Air Act Amendments of 1977, the Administrator shall revise and reissue criteria relating to concentrations of NO_2 over such period (not more than three hours) as he deems appropriate. Such criteria shall include a discussion of nitric and nitrous acids, nitrites, nitrates, nitrosamines, and other carcinogenic and potentially careinogenic derivatives of oxides of nitrogen.".

TRANSPORTATION PLANNING AND GUIDELINES

SEC. 105. Section 108 of the Clean Air Act is amended by adding the following new subsections at the end thereof:

"(e) The Administrator shall, after consultation with the Secretary of Transportation and the Secretary of Housing and Urban Development and State and local officials and within 180 days after the enactment of this subsection, and from time to time thereafter, publish guidelines on the basic program elements for the planning process assisted under section 178 of part D. Such guidelines shall include information on—

"(1) methods to identify and evaluate alternative planning and control activities;

"(2) methods of reviewing plans on a regular basis as conditions change or new information is presented;

"(3) identification of funds and other resources necessary to implement the plan, including interagency agreements on providing such funds and resources;

"(4) methods to assure participation by the public in all phases of the planning process; and

"(5) such other methods as the Administrator determines necessary to carry out a continuous planning process.

"(f)(1) The Administrator shall publish and make available to appropriate Federal agencies, States, and air pollution control agencies, including agencies assisted under Section 175 within 6 months after enactment of this subsection for clauses (i), (ii), (iii), and (iv) of subparagraph (A) and within one year after the enactment of this subsection for the balance of this subsection (and from time to time thereafter),

"(A) information, prepared, as appropriate, in cooperation with the Secretary of Transportation, regarding processes, procedures, and methods to reduce or control each pollutant, including but not limited to—

"(i) motor vehicle emission inspection and maintenance programs;

"(ii) programs to control vapor emissions from fuel transfer and storage operations and operations using solvents;

"(iii) programs for improved public transit;

"(iv) programs to establish exclusive bus and carpool lanes and areawide carpool programs;

"(v) programs to limit portions of road surfaces or certain sections of the metropolitan areas to the use of common carriers, both as to time and place;

"(vi) programs for long-range transit improvements involving new transportation policies and transportation facilities or major changes in existing facilities;

"(vii) programs to control on-street parking;

"(viii) programs to construct new parking facilities and operate existing parking facilities for the purpose of park and ride lots and fringe parking;

"(ix) programs to limit portions of road surfaces or certain sections of the metropolitan area to the use of nonmotorized vehicles or pedestrian use, both as to time and place;

"(x) provisions for employer participation in programs to encourage carpooling, vanpooling, mass transit, bicycling, and walking.

"(xi) programs for secure bicycle storage facilities and other facilites, including bicycle lanes, for the convenience and protection of bicyclists, in both public and private areas;

"(xii) programs of staggered hours of work;

"(xiii) programs to institute road user charges, tolls, or differential rates to discourage single occupancy automobile trips;

"(xiv) programs to control extended idling of vehicles;

"(xv) programs to reduce emissions by improvements in traffic flow;

"(xvi) programs for the conversion of fleet vehicles to cleaner engines or fuels, or to otherwise control fleet vehicle operations;

"(xvii) programs for retrofit of emission devices or controls on vehicles and engines, other than light duty vehicles, not subject to regulations under section 202 of title II of this Act; and

"(xviii) program to reduce motor vehicle emissions which are caused by extreme cold start conditions;

"(B) information on additional methods or strategies that will contribute to the reduction of mobile source related pollutants during periods in which any primary ambient air quality standard will be exceeded and during episodes for which an air pollution alert, warning, or emergency has been declared;

"(C) information on other measures which may be employed to reduce the impact on public health or protect the health of sensitive or susceptible individuals or groups; and

"(D) information on the extent to which any process, procedure, or method to reduce or control such air pollutant may cause an increase in the emissions or formation of any other pollutant.

"(2) In publishing such information the Administrator shall also include an assessment of—

"(A) the relative effectiveness of such processes, procedures, and methods;

"(B) the potential effect of such processes, procedures, and methods on transportation systems and the provision of transportation services; and

"(C) the environmental, energy, and economic impact of such processes, procedures, and methods.".

AIR QUALITY STANDARDS

SEC. 106. (a) Section 109 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

"(d)(1) Not later than December 31, 1980, and at five-year intervals thereafter, the Administrator shall complete a thorough review of the criteria published under section 108 and the national ambient air quality standards promulgated under this section and shall make such revisions in such criteria and standards and promulgate such new standards as may be appropriate in accordance with section 108 and subsection (b) of this section. The Administrator may review and revise criteria or promulgate new standards earlier or more frequently than required under this paragraph.

"(2)(A) The Administrator shall appoint an independent scientific review committee composed of seven members including at least one member of the National Academy of Sciences, one physician, and one person representing State air pollution control agencies.

"(B) Not later than January 1, 1980, and at five-year intervals thereafter, the committee referred to in subparagraph (A) shall complete a review of the criteria published under section 108 and the national primary and secondary ambient air quality standards promulgated under this section and shall recommend to the Administrator any new national ambient air quality standards and revisions of existing criteria and standards as may be appropriate under section 108 and subsection (b) of this section.

"(C) Such committee shall also (i) advise the Administrator of areas in which additional knowledge is required to appraise the adequacy and basis of existing, new, or devised national ambient air quality standards, (ii) describe the research efforts necessary to provide the required information, (iii) advise the Administrator on the relative contribution to air pollution concentrations of natural as well as anthropogenic activity, and (iv) advise the Administrator of any adverse public health, welfare, social, economic, or energy effects which may result from various strategies for attainment and maintenance of such national ambient air quality standards.".

(b) Section 109 of such Act is amended by adding the following new subsection at the end thereof:

"(c) The Administrator shall, not later than one year after the date of the enact-

ment of the Clean Air Act Amendments of 1977, promulgate a national primary ambient air quality standard for NO_2 concentrations over a period of not more than 3 hours unless, based on the criteria issued under section 108(c), he find that there is no significant evidence that such a standard for such a period is requisite to protect public health.".

ENERGY OR ECONOMIC EMERGENCY AUTHORITY

SEC. 107. (a) Section 110(f) of the Clean Air Act is amended to read as follows:

"(f)(1) Upon application by the owner or operator of a fuel burning stationary source, and after notice and opportunity for public hearing, the Governor of the State in which such source is located may petition the President to determine that a national or regional energy emergency exists of such severity that—

"(A) a temporary suspension of any part of the applicable implementation plan may be necessary, and

"(B) other means of responding the energy emergency may be inadequate.

Such determination shall not be delegable by the President to any other person. If the President determines that a national or regional energy emergency of such severity exists, a temporary emergency suspension of any part of an applicable implementation plan adopted by the State may be issued by the Governor of any State covered by the President's determination under the conditions specified in paragraph (2) and may take effect immediately.

"(2) A temporary emergency suspension under this subsection shall be issued to a source only if the Governor of such State finds that—

"(A) there exists in the vicinity of such source a temporary energy emergency involving high levels of unemployment or loss of necessary energy supplies for residential dwellings; and

"(B) such unemployment or loss can be totally or partially alleviated by such emergency suspension.

Not more than one such suspension may be issued for any source on the basis of the same set of circumstances or on the basis of the same emergency.

"(3) A temporary emergency suspension issued by a Governor under this subsection shall remain in effect for a maximum of four months or such lesser period as may be specified in a disapproval order of the Administrator, if any. The Administrator may disapprove such suspension if he determines that it does not meet the requirements of paragraph (2).

"(4) This subsection shall not apply in the case of a plan provision or requirement promulgated by the Administrator under subsection (c) of this section, but in any such case the President may grant a temporary emergency suspension for a four month period of any such provision or requirement if he makes the determinations and findings specified in paragraphs (1) and (2).

"(5) The Governor may include in any temporary emergency suspension issued under this subsection a provision delaying for a period identical to the period of such suspension any compliance schedule (or increment of progress) to which such source is subject under section 119, as in effect before the date of the enactment of this paragraph or 113(d) of this Act, upon a finding that such source is unable to comply with such schedule (or increment) solely because of the conditions on the basis of which a suspension was issued under this subsection.".

(b) Section 110 of such Act is amended by adding the following new subsection at the end thereof:

"(g)(1) In the case of any State which has adopted and submitted to the Administrator a proposed plan revision which the State determines—

"(A) meets the requirements of this section, and

"(B) is necessary (i) to prevent the closing for one year or more of any source of air pollution, and (ii) to prevent substantial increases in unemployment which would result from such closing, and

which the Administrator has not approved or disapproved under this section within the required four month period, the Governor may issue a temporary emergency suspension of the part of the applicable implementation plan for such State which is proposed to be revised with respect to such source. The determination under subparagraph (B) may not be made with respect to a source which would close without regard to whether or not the proposed plan revision is approved.

"(2) A temporary emergency suspension issued by a Governor under this subsection shall remain in effect for a maximum of four months or such lesser period as may be specified in a disapproval order of the Administrator. The Administrator may disapprove such suspension if he determines that it does not meet the requirements of this subsection.

"(3) The Governor may include in any temporary emergency suspension issued under this subsection a provision delaying for a period identical to the period of such suspension any compliance schedule (or increment of progress) to which such source is subject under section 119 as in effect before the date of the enactment of this paragraph or section 113(d) upon a finding that such source is unable to comply with such schedule (or increment) solely because of the conditions on the basis of which a suspension was issued under this subsection.".

IMPLEMENTATION PLANS

SEC. 108. (a)(1) Section 110(a)(2)(A) of the Clean Air Act is amended by inserting "except as may be provided in subparagraph (I)" after "(A)".

(2) Section 110(a)(2)(B) of such Act is amended by striking out "land-use and" and by inserting after "transportation controls" the following: ", air quality maintenance plans, and preconstruction review of direct sources of air pollution as provided in subparagraph (D)".

(3) Section 110(a)(2)(D) of such Act is amended by inserting after "(D) it includes" and before "a procedure" the following: "a program to provide for the enforcement of emission limitations and regulation of the modification, construction, and operation of any stationary source, including a permit program as required in parts C and D and a permit or equivalent program for any major emitting facility, within such region as necessary to assure (i) that national ambient air quality standards are achieved and maintained, and (ii)".

(4) Section 110(a)(2)(E) of such Act is amended to read as follows:

"(E) it contains adequate provisions (i) prohibiting any stationary source within the State from emitting any air pollutant in amounts which will (I) prevent attainment or maintenance by any other State of any such national primary or secondary ambient air quality standard, or (II) interfere with measures required to be included in the applicable implementation plan for any other State under part C to prevent significant deterioration of air quality or to protect visibility, and (ii) insuring compliance with the requirements of section 126, relating to interstate pollution abatement;".

(5) Section 110(a)(2)(F) of such Act is amended by striking out "and" before "(v)" and by inserting the following at the end thereof: "and (vi) requirements that the State comply with the requirements respecting State boards under section 128;" after "such authority;".

(6)(A) Section 110(a)(2)(II)(ii) of such Act is amended by inserting after "to achieve the national ambient air quality primary or secondary standard which it implements" the following: "or to otherwise comply with any additional requirements established under the Clean Air Act Amendments of 1977".

(B) Section 110(a)(2)(II) ii, of such Act is amended by inserting "except as provided in paragraph (3)(C)," before "whenever".

(b) Section 110(a)(2) of the Clean Air Act is amended by striking out "and" at the end of subparagraph (G), striking out the period at the end of subparagraph (H), and by adding the following new subparagraphs at the end thereof:

"(I) it provides that after June 30, 1979, no major stationary source shall be constructed or modified in any nonattainment area (as defined in section 171(2)) to which such plan applies, if the emissions from such facility will cause or contribute to concentrations of any pollutant for which a national ambient air quality standard is exceeded in such area, unless, as of the time of application for a permit for such construction or modification, such plan meets the requirements of part D (relating to nonattainment areas);

"(J) it meets the requirements of section 121 (relating to consultation), section 127 (relating to public notification), part C (relating to prevention of significant deterioration of air quality and visibility protection); and

"(K) it requires the owner or operator of each major stationary source to pay to the permitting authority as a condition of any permit required under this Act a fee sufficient to cover—

"(i) the reasonable costs of reviewing and acting upon any application for such a permit, and

"(ii) if the owner or operator receives a permit for such source, whether before or after the date of enactment of this subparagraph, the reasonable costs (incurred after such date of enactment) of implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action.".

(c) Section 110(a)(3) of such Act is amended by adding the following new subparagraph at the end thereof:

"(C) Neither the State, in the case of a plan (or portion thereof) approved under this subsection, nor the Administrator in the case of a plan (or portion thereof) promulgated under subsection (c), shall be required to revise an applicable implementation plan because one or more exemptions under section 118 (relating to Federal facilities), enforcement orders under section 113(d), suspensions under section 110(f) or (g) (relating to temporary energy or economic authority) or orders under section 119 (relating to primary nonferrous smelters) have been granted, if such plan would have met the requirements of this section if no such exemptions, orders, extensions, or variance had been granted.".

(d)(1) Section 110(c)(1) of such Act is amended by adding the following new sentence at the end thereof: "Notwithstanding the preceding sentence, any portion of a plan relating to any measure described in the first sentence of section 121 (relating to consultation) or the consultation process required under such section 121 shall not be required to be promulgated before the date eight months after such date required for submission.".

(2) Section 110(c)(1)(A) of such Act is amended to read as follows:

"(A) the State fails to submit an implementation plan which meets the requirements of this section,".

(3) Section 110(c) of such Act is amended by adding the following new paragraphs at the end thereof:

"(3) Upon application of the chief executive officer of any general purpose unit of

local government, if the Administrator determines that such unit has adequate authority under State or local law, the Administrator may delegate to such unit the authority to implement and enforce within the jurisdiction of such unit any part of a plan promulgated under this subsection. Nothing in this paragraph shall prevent the Administrator from implementing or enforcing any applicable provision of a plan promulgated under this subsection.

"(4) In the case of any applicable implementation plan containing measures requiring—

"(A) retrofits on other than commercially owned in-use vehicles,

"(B) gas rationing which the Administrator finds would have seriously disruptive and widespread economic or social effects, or

"(C) the reduction of the supply of on-street parking spaces,

the Governor of the State may, after notice and opportunity for public hearing, temporarily suspend such measures notwithstanding the requirements of this section until January 1, 1979, or the date on which a plan revision under section 110(a)(2)(I) is submitted, whichever is earlier. No such suspension shall be granted unless the State agrees to prepare, adopt, and submit such plan revision as determined by the Administrator.

"(5)(A) Any measure in an applicable implementation plan which requires a toll or other charge for the use of a bridge located entirely within one city shall be eliminated from such plan by the Administrator upon application by the Governor of the State, which application shall include a certification by the Governor that he will revise such plan in accordance with subparagraph (B).

"(B) In the case of any applicable implementation plan with respect to which a measure has been eliminated under subparagraph (A), such plan shall, not later than one year after the date of the enactment of this subparagraph, be revised to include comprehensive measures (including the written evidence required by part D) to:

"(i) establish, expand, or improve public transportation measures to meet basic transportation needs, as expeditiously as is practicable; and

"(ii) implement transportation control measures necessary to attain and maintain national ambient air quality standards,

and such revised plan shall, for the purpose of implementing such comprehensive public transportation measures, include requirements to use (insofar as is necessary) Federal grants, State or local funds, or any combination of such grants and funds as may be consistent with the terms of the legislation providing such grants and funds. Such measures shall, as a substitute for the tolls or charges eliminated under subparagraph (A), provide for emissions reductions equivalent to the reductions which may reasonably be expected to be achieved through the use of the tolls or charges eliminated.

"(C) Any revision of an implementation plan for purposes of meeting the requirements of subparagraph (B) shall be submitted in coordination with any plan revision required under part D.".

(e) Section 110(a) of such Act is amended by adding at the end thereof the following new paragraphs:

"(5)(A)(i) Any State may include in a State implementation plan, but the Administrator may not require as a condition of approval of such plan under this section, any indirect source review program. The Administrator may approve and enforce as part of an applicable implementation plan, an indirect source review program which the State chooses to adopt and submit as part of its plan.

"(ii) Except as provided in subparagraph (B), no plan promulgated by the Administrator shall include any indirect source review program for any air quality control region, or portion thereof.

"(iii) Any State may revise an applicable implementation plan approved under section 110(a) to suspend or revoke any such program included in such plan, provided that such plan meets the requirements of this section.

"(B) The Administrator shall have the authority to promulgate, implement and enforce regulations under section 110(c) respecting indirect source review programs which apply only to federally assisted highways, airports, and other major federally assisted indirect sources and federally owned or operated indirect sources.

"(C) For purposes of this paragraph, the term 'indirect source' means a facility, building, structure, installation, real property, road, or highway which attracts, or may attract, mobile sources of pollution. Such term includes parking lots, parking garages, and other facilities subject to any measure for management of parking supply (within the meaning of section 110(c)(2)(D)(ii)), including regulation of existing off-street parking but such term does not include new or existing on-street parking. Direct emissions sources or facilities at, within, or associated with, any indirect source shall not be deemed indirect sources for the purpose of this paragraph.

"(D) For purposes of this section the term 'quote indirect source review program' means the facility-by-facility preconstruction or premodification review of indirect sources of air pollution, including such measures as are necessary to assure, or assist in assuring, that a new or modified indirect source will not attract mobile sources of air pollution, the emissions from which would cause or contribute to air pollution concentrations—

"(i) exceeding any national primary ambient air quality standard for a mobile source-related air pollutant after the primary standard attainment date, or

"(ii) preventing maintenance of any such standard after such date.

"(E) For purposes of this paragraph and paragraph (2)(B), the term 'transportation control measure' does not include any measure which is an 'indirect source review program'.

"(6) No State plan shall be treated as meeting the requirements of this section unless such plan provides that in the case of any source which uses a supplemental, or intermittent control system for purposes of meeting the requirements of an order under section 113(d) or section 119 (relating to primary nonferrous smelter orders), the owner or operator of such source may not temporarily reduce the pay of any employee by reason of the use of such supplemental or intermittent or other dispersion dependent control system.".

(f) Section 110(d) of such Act is amended by striking out "implements" and all that follows down through the period at the end thereof and inserting in lieu thereof "implements the requirements of this section.".

(g) Section 110 of such Act is amended by adding the following new subsection at the end thereof:

"(h)(1) Not later than one year after the date of enactment of the Cean Air Act Amendments of 1977 and annually thereafter, the Administrator shall assemble and publish a compresensive document for each State setting forth all requirements of the applicable implementation plan for such State and shall publish notice in the Federal Register of the availability of such documents. Each such document shall be revised as frequently as practicable but not less often than annually.

"(2) The Administrator may promulgate such regulations as may be reasonably necessary to carry out the purpose of this subsection.

"(i) Except for a primary nonferrous smelter order under section 119, a suspension under section 110(f) or (g) (relating to emergency suspensions), an exemption under section 118 (relating to Federal facilities), an order under section 113(d) (relating to compliance orders), a plan promulgation under section 110(c), or a plan revision under section 110(a)(3) no order, suspension, plan revision, or other action modifying any requirement of an applicable implementation plan may be taken with respect to any stationary source by the State or by the Administrator.

"(3) As a condition for issuance of any permit required under this title, the owner or operator of each new or modified stationary source which is required to obtain such a permit must show to the satisfaction of the permitting authority that the technological system of continuous emission reduction which is to be used as such source will enable it to comply with the standards of performance which are to apply to such source and that the construction or modification and operation of such source will be in compliance with all other requirements of this Act.

NEW SOURCE STANDARDS OF PERFORMANCE

SEC. 109 (a) Section 111 of the Clean Air Act is amended by adding the following new subsections at the end thereof:

"(f)(1) Not later than one year after the date of enactment of this subsection, the Administrator shall promulgate regulations listing under subsection (b)(1)(A) the categories of major stationary sources which are not on the date of the enactment of this subsection included on the list required under subsection (b)(1)(A). The Administrator shall promulgate regulations establishing standards of performance for the percentage of such categories of sources set forth in the following table before the expiration of the corresponding period set forth in such table:

"Percentage of source categories required to be listed for which standards must be established:	Period by which standards must be promulgated after date list is required to be promulgated:
25	2 years.
75	3 years.
100	4 years.

"(2) In determining priorities for listing of unlisted categories of major stationary sources for the purpose of paragraph (1), the Administrator shall consider—

"(A) the quality of air pollutant emissions which each such category will emit, or will be designed to emit;

"(B) the extent to which such pollutant may reasonably be anticipated to endanger public health or welfare; and

"(C) the mobility and competitive nature of each such category of sources and the consequent need for nationally applicable new source standards of performance.

"(3) Before promulgating any regulations under this subsection or listing any category of major stationary sources as required under this subsection the Administrator shall consult with appropriate representatives of the Governors and of State air pollution control agencies.

"(g)(1) Upon application by the Governor of a State showing that the Administrator has failed to specify in regulations under subsection (f)(1) any category of major stationary sources required to be specified under such regulations, the Administrator shall revise such regulations to specify any such category.

"(2) Upon application of the Governor of a State, showing that any category of stationary sources which is not included in the list under subsection (b)(1)(A) contributes significantly to air pollution which may reasonably be anticipated to endanger public

health or welfare (notwithstanding that such category is not a category of major stationary sources), the Administrator shall revise such regulations to specify such category of stationary sources.

"(3) Upon application of the Governor of a State showing that the Administrator has failed to apply properly the criteria required to be considered under subsection (f)(2), the Administrator shall revise the list under subsection (b)(1)(A) to apply properly such criteria.

"(4) Upon application of the Governor of a State showing that—

"(A) a new, innovative, or improved technology or process which achieves greater continuous emission reduction has been adequately demonstrated for any category of stationary sources, and

"(B) as a result of such technology or process, the new source standard of performance in effect under subsection (b) for such category no longer reflects the greatest degree of emission limitation achievable through application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, and any non-air-quality health and environmental impact and energy requirements) has been adequately demonstrated, the Aministrator shall revise such standard of performance for such category accordingly.

"(5) Upon application by the Governor of a State showing that the Administrator has failed to list any air pollutant which causes, or contributes to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness as a hazardous air pollutant under section 112, the Administrator shall revise the list of hazardous air pollutants under such section to include such pollutant.

"(6) Upon application by the Governor of a State showing that any category of stationary sources of a hazardous air pollutant listed under section 142 is not subject to emission standards under such section, the Administrator shall propose and promulgate such emission standards applicable to such category of sources.

"(7) Unless later deadlines for action of the Administrator are otherwise prescribed under this section or section 112, the Administrator shall, not later than three months following the date of receipt of any application by a Governor of a State, either—

"(A) find that such application does not contain the requisite showing and deny such application, or

"(B) grant such application and take the action required under this subsection.

"(8) Before taking any action required by subsection (f) or by this subsection, the Administrator shall provide notice and opportunity for public hearing.

"(h)(1) For purposes of this section, if in the judgment of the Administrator, it is not feasible to prescribe or enforce a standard of performance, he may instead promulgate a design, equipment, work practice, or operational standard, or combination thereof, which reflects the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated. In the event the Administrator promulgates a design or equipment standard under this subsection, he shall include as part of such standard such requirements as will assure the proper operation and maintenance of any such element of design or equipment.

"(2) For the purpose of this subsection, the phrase 'not feasible to prescribe or enforce a standard of performance' means any situation in which the Administrator determines that (A) a pollutant or pollutants cannot be emitted through a conveyance designed and constructed to emit or capture such pollutant, or that any requirement for, or use of, such a conveyance would be inconsistent with any Federal, State, or local law, or (B) the application of measurement methodology to a particular class of sources is not practicable due to technological or economic limitations.

"(3) If after notice and opportunity for public hearing, any person establishes to the satisfaction of the Administrator that an alternative means of emission limitation will achieve a reduction in emissions of any air pollutant at least equivalent to the reduction in emissions of such air pollutant achieved under the requirements of paragraph (1), the Administrator shall permit the use of such alternative by the source for purposes of compliance with this section with respect to such pollutant.

"(4) Any standard promulgated under paragraph (1) shall be promulgated in terms of standard of performance whenever it becomes feasible to promulgate and enforce such standard in such terms.

"(i) Any regulations promulgated by the Administrator under this section applicable to grain elevators shall not apply to country elevators (as defined by the Administrator) which have a storage capacity of less than two million five hundred thousand bushels.".

(b)(1) Section 111(d)(1) of such Act is amended by striking out "emission standards" in each place it appears and inserting in lieu thereof "standards of performance" and by adding at the end thereof the following new sentence: "Regulations of the Administrator under this paragraph shall permit the State in applying a standard of performance to any particular source under a plan submitted under this paragraph to take into consideration, among other factors, the remaining useful life of the existing source to which such standard applies.".

(2) Section 111(d)(2) of such Act is amended by adding at the end thereof the following new sentence: "In promulgating a standard of performance under a plan prescribed under this paragraph the Administrator shall take into consideration, among other factors, remaining useful lives of the sources in the category of sources to which such standard applies.".

(c)(1)(A) Section 111(a)(1) of the Clean Air Act, defining standard of performance, is amended to read as follows:

"(1) The term 'standard of performance' means—

"(A) with respect to any air pollutant emitted from a category of fossil fired stationary sources to which subsection (b) applies, a standard—

"(i) establishing allowable emission limitations for such category of sources, and

"(ii) requiring the achievement of a percentage reduction in the emissions from such category of sources from the emissions which would have resulted from the use of fuels which are not subject to treatment prior to combustion;

"(B) with respect to any air pollutant emitted from a category of stationary sources (other than fossil fuel fired sources) to which subsection (b) applies, a standard such as that referred to in subparagraph (A)(i); and

"(C) with respect to any air pollutant emitted from a particular source to which subsection (d) applies, a standard which the State (or the Administrator under the conditions specified in subsection (d)(2)) determines is applicable to that source and which reflects the degree of emission reduction achievable through the application of the best system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, and any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated for that category of sources.

For the purpose of subparagraphs (A)(i) and (ii) and (B), a standard of performance shall reflect the degree of emission limitation and the percentage reduction achievable through application of the best technological system of continuous emission reduction which (taking into consideration the cost of achieving such emission reduction, any nonair quality health and environmental impact and energy requirements) the Administrator determines has been adequately demonstrated. For the purpose of subparagraph (1)(A)(ii), any cleaning of the fuel or reduction in the pollution characteristics of the fuel after extraction and prior to combustion may be credited as determined under regulations promulgated by the Administrator, to a source which burns such fuel.".

(B) Section 111(a) of such Act is further amended by adding the following new paragraph at the end thereof:

"(7) The term 'technological system of continuous emission reduction' means—

"(A) a technological process for production or operation by any source which is inherently low-polluting or nonpolluting, or

"(B) a technological system for continuous reduction of the pollution generated by a source before such pollution is emitted into the ambient air, including precombustion cleaning or treatment of fuels.".

(2) Section 111(b)(1)(B) of such Act is amended by striking out "may, from time to time," in the next to last sentence thereof and by inserting in lieu thereof "shall, at least every four years, review and, if appropriate,".

(3) Section 111(b) of such Act is further amended by inserting at the end thereof the following:

"(5) Except as otherwise authorized under subsection (h), nothing in this section shall be construed to require, or to authorize the Administrator to require, any new or modified source to install and operate any particular technological system of continuous emission reduction to comply with any new source standard of performance.

"(6) The revised standards of performance required by enactment of subsection (a)(1)(A)(i) and (ii) shall be promulgated not later than one year after enactment of this paragraph. Any new or modified fossil fuel fired stationary source which commences construction prior to the date of publication of the proposed revised standards shall not be required to comply with such revised standards.".

(d)(1) The second sentence of section 111(c)(1) is amended by striking out "(except with respect to new sources owned or operated by the United States)".

(2) The second sentence of section 112(d)(1) is amended by striking out "(except with respect to stationary sources owned or operated by the United States)".

(3) The second sentence of section 114(b)(1) is amended by striking out "(except with respect to new sources owned or operated by the United States)".

(e) Section 111 of such Act is amended by adding the the following new subsections at the end thereof:

"(j) As a condition for issuance of any permit required under this title, the owner or operator of each new or modified stationary source which is required to obtain such a permit must show to the satisfaction of the permitting authority that the technological system of continuous emmission reduction which is to be used at such source will enable it to comply with the standards of performance which are to apply to such source and that the construction or modification and operation of such source will be

in compliance with all other requirements of this Act.

"(k)(1)(A) Any person proposing to own or operate a new source may request the Administrator for one or more waivers from the requirements of this section for such souce or any portion thereof with respect to any air pollutant to encourage the use of an innovative technological system or systems of continuous emission reduction. The Administrator may, with the consent of the Governor of the State in which the source is to be located, grant a waiver under this paragraph, if the Administrator determines after notice and opportunity for public hearing, that—

"(i) the proposed system or systems have not been adequately demonstrated,

"(ii) the proposed system or systems will operate effectively and there is a substantial likelihood that such system or systems will achieve greater continuous emission reduction than that required to be achieved under the standards of performance which would otherwise apply, or achieve at least an equivalent reduction at lower cost in terms of energy, economic, or nonair quality environmental impact,

"(iii) the owner or operator of the proposed source has demonstrated to the satisfaction of the Administrator that the proposed system will not cause or contribute to an unreasonable risk to public health, welfare, or safety in its operation, function, or malfunction, and

"(iv) the granting of such waiver is consistent with the requirements of subparagraph (C).

In making any determination under clause (ii), the Administrator shall take into account any previous failure of such system or systems to operate effectively or to meet any requirement of the new source performance standards. In determining whether an unreasonable risk exists under clause (iii), the Administrator shall consider, among other factors, whether and to what extent the use of the proposed technological system will cause, increase, reduce or eliminate emissions of any unregulated pollutants; available methods for reducing or eliminating any risk to public health, welfare, or safety which may be associated with the use of such system; and the availability of other technological systems which may be used to conform to standards under subsection (b) of this section without causing or contributing to such unreasonable risk. The Administrator may conduct such tests and may require the owner or operator of the proposed source to conduct such tests and provide such information as is necessary to carry out clause (iii) of this subparagraph. Such requirements shall include a requirement for prompt reporting of the emission of any unregulated pollutant from a system if such pollutant was not emitted, or was emitted in significanty lesser amounts without use of such system.

"(B) A waiver under this paragraph shall be granted on such terms and conditions as the Administrator determines to be necessary to assure—

"(i) emissions from the source will not prevent attainment and maintenance of any national ambient air quality standards, and

"(ii) proper functioning of the technological system or systems authorized.

Any such term or conditions shall be treated as a standard of performance for the purposes of subsection (e) of this section and section 113.

"(C) The number of waivers granted under this paragraph with respect to a proposed technological system of continuous emission reduction shall not exceed such number as the Administrator finds necessary to ascertain whether or not such system will achieve the conditions specified in clauses (ii) and (iii) of subparagraph (A).

"(D) A waiver under this paragraph shall extend to the sooner of—

"(i) the date determined by the Administrator, after consultation with the owner or operator of the source, taking into consideration the design, installation, and capital cost of the technological system or systems being used, or

"(ii) the date on which the Administrator determines that such system has failed to—

"(I) achieve at least an equivalent continuous emission reduction to that required to be achieved under the standards of performance which would otherwise apply, or

"(II) comply with the condition specified in paragraph (1)(A)(iii),

and that such failure cannot be corrected.

"(E) In carrying out subparagraph (D)(i), the Administrator shall not permit any waiver for a source or portion thereof to extend beyond the date—

"(i) seven years after the date on which any waiver is granted to such source or portion thereof, or

"(ii) four years after the date on which such source or portion thereof commences operation,

whichever is earlier.

"(F) No waiver under this subsection shall apply to any portion of a source other than the portion on which the innovative technological system or systems of continuous emission reduction is used.

"(2)(A) If a waiver under paragraph (1) is terminated under clause (ii) of paragraph (1)(D), the Administrator shall grant an extension of the requirements of this section for such source for such minimum period as may be necessary to comply with the applicable standard of performance under subsection (b) of this section. Such period shall not extend beyond the date three years from the time such waiver is terminated.

"(B) An extension granted under this paragraph shall set forth emission limits and a compliance schedule containing increments of progress which require compliance with the applicable standards of performance as expeditiously as practicable and include such measures as are necessary and practicable in the interim to minimize emissions. Such schedule shall be treated as a standard of performance for purposes of subsection (e) of this section and section 113.".

(f) Section 111(a) of such Act is amended by adding the following new paragraph at the end thereof:

"(7) A conversion to coal (A) by reason of an order under section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 or any amendment thereto, or any subsequent enactment which supersedes such Act, or (B) which qualifies under section 113(d)(5)(A)(ii) of this Act, shall not be deemed to be a modification for purposes of paragraphs (2) and (4) of this subsection.".

EMISSION STANDARDS FOR HAZARDOUS AIR POLLUTANTS

SEC. 110. Section 112 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

"(e)(1) For purposes of this section, if in the judgment of the Administrator, it is not feasible to prescribe or enforce an emission standard for control of a hazardous air pollutant or pollutants, he may instead promulgate a design, equipment, work practice, or operational standard, or combination thereof, which in his judgment is adequate to protect the public health from such pollutant or pollutants with an ample margin of safety. In the event the Administrator promulgates a design or equipment standard under this subsection, he shall include as part of such standard such requirements as will assure the proper operation and maintenance of any such element of design or equipment.

"(2) For the purpose of this subsection, the phrase 'not feasible to prescribe or enforce an emission standard' means any situation in which the Adminstrator determines that (A) a hazardous pollutant or pollutants cannot be emitted through a conveyance designed and constructed to emit or capture such pollutant, or that any requirement for, or use of, such a conveyance would be inconsistent with any Federal, State, or local law, or (B) the application of measurement methodology to a particular class of sources is not practicable due to technological or economic limitations.

"(3) If after notice and opportunity for public hearing, any person establishes to the satisfaction of the Administrator that an alternative means of emission limitation will achieve a reduction in emissions of any air pollutant at least equivalent to the reduction in emissions of such air pollutant achieved under the requirements of paragraph (1), the Administrator shall permit the use of such alternative by the source for purposes of compliance with this section with respect to such pollutant.

"(4) Any standard promulgated under paragraph (1) shall be promulgated in terms of an emission standard whenever it becomes feasible to promulgate and enforce such standard in such terms.".

ENFORCEMENT PROVISIONS

SEC. 111. (a) Section 113(a) of the Clean Air Act is amended by inserting the following new paragraph at the end thereof:

"(5) Whenever, on the basis of information available to him, the Administrator finds that a State is not acting in compliance with any requirement of the regulation refered to in section 129(a)(1) of the Clean Air Act Amendments of 1977 or any plan provisions required under section 110(a)(2)(I) and part D, he may issue an order prohibiting the contruction or modification of any major stationary source in any area to which such provisions apply or he may bring a civil action under subsection (b)(5).".

(b)(1) So much of section 113(b) of such Act as precedes paragraph (1) thereof is amended to read as follows:

"(b) The Administrator shall, in the case of any person which is the owner or operator of a major stationary source, and may, in the case of any other person, commence a civil action for a permanent or temporary injunction, or to assess and recover a civil penalty of not more than $25,000 per day of violation, or both, whenever such person—".

(2) Section 113(b) of such Act is amended by inserting the following after the first sentence thereof: "The Administrator may commence a civil action for recovery of any noncompliance penalty under section 120 or for recovery of any nonpayment penalty for which any person is liable under section 120 or for both.".

(b) Section 113(b) of such Act is amended by striking out the penultimate sentence thereof and substituting: "Any action under this subsection may be brought in the district court of the United States for the district in which the violation occurred or in which the defendant resides or has his principal place of business, and such court shall have jurisdiction to restrain such violation, to require compliance, to assess such civil penalty and to collect any noncompliance penalty (and nonpayment penalty) owed under section 120. In determining the amount of any civil penalty to be assessed under this subsection, the court shall take into consideration (in addition to other factors) the size of the business, the economic impact of the penalty on the business, and the seriousness of the violation.".

(3) Section 113(b) of such Act is amended by adding the following at the end thereof: "In the case of any action brought by the Administrator under this subsection, the court may award costs of litigation (includ-

ing reasonable attorney and expert witness fees) to the party or parties against whom such action was brought in any case where the court finds that such action was unreasonable.".

(c)(1) Section 113(b)(3) of such Act is amended by striking out "or section 119(g)" and inserting in lieu thereof "section 119(g) (as in effect before the date of the enactment of the Clean Air Act Amendments of 1977) subsection (d)(5) (relating to coal conversion), section 320 (relating to cost of certain vapor recovery), section 119 (relating to smelter orders) or any regulation under part B (relating to ozone)".

(2) Section 113(b)(4) of such Act is amended by inserting "or subsection (d)" after "114".

(3) Section 113(b) of such Act is amended by striking out "or" at the end of paragraph (3), striking out the period at the end of paragraph (4) and substituting ": or", and inserting the following new paragraph at the end thereof:

"(5) attempts to construct or modify a major stationary source in any area with respect to which a finding under subsection (a)(5) has been made."

(d)(1) Section 113(c)(1)(B) of such Act is amended to read as follows:

"(B) violates or fails or refuses to comply with any orders under section 119 or under subsection (a) or (d) of this section, or"; and

(2) Section 113(c)(1) of such Act is amended by striking out "or" at the end of subparagraph (B), by striking out "section 112(c), or section 119(g)" and inserting in lieu thereof: "section 112(c), or

"(D) violates any requirement of section 119(g) (as in effect before the date of the enactment of this Act) subsection (b)(7) or (d)(5) of section 120 (relating to noncompliance penalties) or any requirement of part B relating to ozone)".

(3) Section 113(c) of such Act is amended by adding the following new paragraph at the end thereof:

"(3) For the purpose of this subsection, the term 'person' includes, in addition to the entities referred to in section 302(e), any responsible corporate officer.".

COMPLIANCE ORDERS (INCLUDING COAL CONVERSION)

SEC. 112. (a) Section 113 of the Clean Air Act is amended by adding the following new subsection:

"(d)(1) A State (or, after thirty days notice to the State, the Administrator) may issue an order for any stationary source which specifies a date for final compliance with any requirement of an applicable implementation plan later than the date for attainment of any national ambient air quality standard specified in such plan if—

"(A) such order is issued after notice to the public (and, as appropriate, to the Administrator) containing the content of the proposed order and opportunity for public hearing;

"(B) the order contains a schedule and timetable for compliance;

"(C) the order requires compliance with applicable interim requirements as provided in paragraph (5)(B) (relating to sources converting to coal), and paragraph (6) and (7) (relating to all sources receiving such orders) and requires the emission monitoring and reporting by the source authorized to be required under sections 110(a)(2)(F) and 114(a)(1);

"(D) the order provides for final compliance with the requirement of the applicable implementation plan as expeditiously as practicable, but (except as provided in paragraph (4) and (5)) in no event later than July 1, 1979, or three years after the date for final compliance with such requirement specified in such plan, whichever is later; and

"(E) in the case of a major stationary source, the order notifies the source that it will be required to pay a noncompliance penalty under section 120 or by such later date as is set forth in the order in accordance with section 120 in the event such source fails to achieve final compliance by July 1, 1979.

"(2) In the case of any major stationary source, no such order issued by the State shall take effect until the Administrator determines that such order has been issued in accordance with the requirements of this Act. In the case of any source other than a major stationary source, such order issued by the State shall cease to be effective upon a determination by the Administrator that it was not issued in accordance with the requirements of this Act. If the Administrator so objects, he shall simultaneously proceed to issue an enforcement order in accordance with subsection (t) or an order under this subsection. Nothing in this section shall be construed as limiting the authority of a State or political subdivision to adopt and enforce a more stringent emission limitation or more expeditious schedule or timetable for compliance than that contained in an order by the Administrator.

"(3) If any source not in compliance with any requirement of an applicable implementation plan gives written notification to the State (or the Administrator) that such source intends to comply by means of replacement of the facility, a complete change in production process, or a termination of operation, the State (or the Administrator) may issue an order under paragraph (1) of this subsection permitting the source to operate until July 1, 1979, without any interim schedule of compliance: *Provided*, That as a condition of the issuance of any such order, the owner or operator of such source shall post a bond or other surety in an amount equal to the cost of actual compliance by such facility and any economic value which may accrue to the owner or operator of such source by reason of the failure to comply. If a source for which the bond or other surety required by this paragraph has been posted fails to replace the facility, change the production process, or terminate the operations as specified in the order by the required date, the owner or operator shall immediately forfeit on the bond or other surety and the State (or the Administrator) shall have no discretion to modify the order under this paragraph or to compromise the bond or other surety.

"(4) An order under paragraph (1) of this subsection may be issued to an existing stationary source if—

"(A) the source will expeditiously use new means of emission limitation which the Administrator determines is likely to be adequately demonstrated (within the meaning of section 111(a)(1) upon expiration of the order.

"(B) such new means of emission limitation is not likely to be used by such source unless an order is granted under this subsection.

"(C) such new means of emission limitation is determined by the Administrator to have a substantial likelihood of—

"(i) achieving greater continuous emission reduction than the means of emission limitation which, but for such order, would be required; or

"(ii) achieving an equivalent continuous reduction at lower cost in terms of energy, economic, or nonair quality environmental impact; and

"(D) compliance by the source with the requirement of the applicable implementation plan would be impracticable prior to, or during, the installation of such new means.

Such an order shall provide for final compliance with the requirement in the applicable implementation plan as expeditiously as practicable, but in no event later than five years after the date on which the source would otherwise be required to be in full compliance with the requirement.

"(5)(A) In the case of a major stationary source which is burning petroleum products or natural gas, or both and which—

"(i) is prohibted from doing so under an order pursuant to the provisions of section 2(a) of the Energy Supply and Environmental Coordination Act of 1974 or any amendment thereto, or any subsequent enactment which supersedes such provisions, or

"(ii) within one year after enactment of the Clean Air Act Amendments of 1977 gives notice of intent to convert to coal as its primary energy source because of actual or anticipated curtailment of natural gas supplies under any curtailment plan or schedule approved by the Federal Power Commission (or, in the case of intrastate natural gas supplies, approved by the appropriate State regulatory commission),

and which thereby would no longer be in compliance with any requirement under an applicable implementation plan, an order may be issued by the Administrator under paragraph (1) of this subsection for such source which specifies a date for final compliance with such requirement as expeditiously as practicable, but not later than December 31, 1980. The Administrator may issue an additional order under paragraph (1) of this subsection for such source providing an additional period of such source to come into compliance with the requirement in the applicable implementation plan, which shall be as expeditiously as practicable, but in no event later than five years after the date required for compliance under the preceding sentence.

"(B) In issuing an order pursuant to subparagraph (A), the Administrator shall prescribe (and may from time to time modify) emission limitations, requirements respecting pollution characteristics of coal, or other enforceable measures for control of emissions for each source to which such an order applies. Such limitations, requirements, and measures shall be those which the Administrator determines must be complied with by the source in order to assure (throughout the period before the date for final compliance established in the order) that the burning of coal by such source will not result in emissions which cause or contribute to concentrations of any air pollutant in excess of any national primary ambient air quality standard for such pollutant.

"(C) The Administrator may, by regulation, establish priorities under which manufacturers of continuous emission reduction systems necessary to carry out this paragraph shall provide such systems to users thereof, if he finds, after consultation with the States, that priorities must be imposed in order to assure that such systems are first provided to sources subject to orders under this paragraph in air quality control regions in which national primary ambient air quality standards have not been achieved. No regulation under this subparagraph may impair the obligation of any contract entered into before the date of enactment of the Clean Air Act Amendments of 1977.

"(D) No order issued to a source under this paragraph with respect to an air pollutant shall be effective if the national primary ambient air quality standard with respect to such pollutant is being exceeded at any time in the air quality control region in which such source is located. The preceding sentence shall not apply to a source if, upon submission by any person of evidence satisfactory to the Administrator, the Administrator determines (after notice and public hearing)—

"(i) that emissions of such air pollutant from such source will affect only infrequently the air quality concentrations of such pollutant in each portion of the region

where such standard is being exceeded at any time;

"(ii) that emissions of such air pollutant from such source will have only insignificant effect on the air quality concentrations of such pollutant in each portion of the region where such standard is being exceeded at any time; and

"(iii) with reasonable statistical assurance that emissions of such air pollutant from such source will not cause or contribute to air quality concentrations of such pollutant in excess of the national primary ambient air quality standard for such pollutant.

"(6) An order issued to a source under this subsection shall set forth compliance schedules containing increments of progress which require compliance with the requirement postponed as expeditiously as practicable.

"(7) A source to which an order is issued under paragraph (1), (3), (4), or (5) of this subsection shall use the best practicable system or systems of emission reduction (as determined by the Administrator taking into account the requirement with which the source must ultimately comply) for the period during which such order is in effect and shall comply with such interim requirements as the Administrator determines are reasonable and practicable. Such interim requirements shall include—

"(A) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons, and

"(B) a requirement that the source comply with the requirements of the applicable implementation plan during any such period insofar as such source is able to do so (as determined by the Administrator).

"(8) Any order under paragraph (1) or (3) of this subsection shall be terminated if the Administrator determines on the record, after notice and hearing, that the inability of the source to comply no longer exists. If the owner or operator of the source to which the order is issued demonstrates that prompt termination of such order would result in undue hardship, the termination shall become effective at the earliest practicable date on which such undue hardship would not result, but in no event later than the date required under this subsection.

"(9) If the Administrator determines that a source to which an order is issued under this subsection is in violation of any requirement of this subsection, he shall—

"(A) enforce such requirement under subsection (a), (b) or (c) of this section.

"(B) (after notice and opportunity for public hearing) revoke such order and enforce compliance with the requirement with respect to which such order was granted,

"(C) give notice of noncompliance and commence action under section 120, or

"(D) take any appropriate combination of such actions.

"(10) During the period of the order issued under this subsection and where the owner or operator is in compliance with the terms of such order, no other enforcement action pursuant to this section or section 304 of this Act shall be pursued against such owner or operator based upon noncompliance during the period the order is in effect with the requirement for the source covered by such order.

"(11) For the purposes of sections 110, 304, and 307 of this Act, any order issued by the State (and approved by the Administrator) pursuant to this subsection shall become part of the applicable implementation plan.

"(12) Any enforcement order issued under subsection (a) of this section or any consent decree in an enforcement action which is in effect on the day of enactment of the Clean Air Act Amendments of 1977 shall remain in effect to the extent that such order or consent decree is (A) not inconsistent with the requirements of this subsection and section 119 or (B) the administrative orders on consent issued by the Administrator on November 5, 1975 and February 26, 1976 and requiring compliance with sulfur dioxide emission limitations or standards at least as least as stringent as those promulgated under section 111. Any such enforcement order issued under subsection (a) of this section or consent decree which provides for an extension beyond July 1, 1979, except such administrative orders on consent, is void unless modified under this subsection within one year after the enactment of the Clean Air Act Amendments of 1977 to comply with the requirements of this subsection.".

(b)(1) Section 119 of such Act is hereby repealed. All references to such section 119 or subsections thereof in section 2 of the Energy Supply and Environmental Coordination Act of 1974 (Public Law 93-319) or any amendment thereto, or any subsequent enactment which supersedes such Act, shall be construed to refer to section 113(d) of the Clean Air Act and to paragraph (5) thereof in particular. Any certification or notification required to be given by the Administrator of the Environmental Protection Agency under section 2 of the Energy Supply and Environmental Coordination Act of 1974 or any amendment thereto, or any subsequent enactment which supersedes such Act, shall be given only when the Governor of the State in which is located the source to which the proposed order under section 113(d)(5) of the Clean Air Act is to be issued gives his prior written concurrence.

(2) In the case of any major stationary source to which any requirement is applicable under section 113(d)(5)(B) of the Clean Air Act and for which certification is required under section 2 of the Energy Supply and Environmental Coordination Act of 1974 or any amendment thereto, or any subsequent enactment which supersedes such Act, the Administrator of the Environmental Protection Agency shall certify the date which he determines is the earliest date that such source will be able to comply with all such requirements. In the case of any plant or installation which the Administrator of the Environmental Protection Agency determines (after consultation with the State) will not be subject to an order under section 113(d) of the Clean Air Act and for which certification is required under section 2 of the Energy Supply and Environmental Coordination Act of 1974 or any amendment thereto, or any subsequent enactment which supersedes such Act, the Administrator of the Environmental Protection Agency shall certify the date which he determines is the earliest date that such plant or installation will be able to burn coal in compliance with all applicable emission limitations under the implementation plan.

(3) Any certification required under section 2 of the Energy Supply and Environmental Coordination Act of 1974 or any amendment thereto, or any subsequent enactment which supersedes such Act, or under this subsection may be provided in an order under section 113(d) of the Clean Air Act.

NOTICE TO STATE IN CASE OF CERTAIN INSPECTIONS, ETC.

SEC. 113. Section 114 of the Clean Air Act is amended by adding at the end thereof the following new subsection:

"(d)(1) In the case of any emission standard or limitation or other requirement which is adopted by a State, as part of an applicable implementation plan or as part of an order under section 113(d), before carrying out an entry, inspection, or monitoring under paragraph (2) of subsection (a) with respect to such standard, limitation, or other requirement, the Administrator (or his representatives) shall provide the State air pollution control agency with reasonable prior notice of such action, indicating the purpose of such action. No State agency which receives notice under this paragraph of an action proposed to be taken may use the information contained in the notice to inform the person whose property is proposed to be affected of the proposed action. If the Administrator has reasonable basis for believing that a State agency is so using or will so use such information, notice to the agency under this paragraph is not required until such time as the Administrator determines the agency will no longer so use information contained in a notice under this paragraph. Nothing in this section shall be construed to require notification to any State agency of any action taken by the Administrator with respect to any standard, limitation, or other requirement which is not part of an applicable implementation plan or which was promulgated by the Administrator under section 110(c).

"(2) Nothing in paragraph (1) shall be construed to provide that any failure of the Administrator to comply with the requirements of such paragraph shall be a defense in any enforcement action brought by the Administrator or shall make inadmissible as evidence in any such action any information or material obtained notwithstanding such failure to comply with such requirements.

INTERNATIONAL AIR POLLUTION

SEC. 114. Section 115 of the Clean Air Act is amended to read as follows:

"INTERNATIONAL AIR POLLUTION

"SEC. 115. (a) Whenever the Administrator, upon receipt of reports, surveys or studies from any duly constituted international agency has reason to believe that any air pollutant or pollutants emitted in the United States cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare in a foreign country or whenever the Secretary of State requests him to do so with respect to such pollution which the Secretary of State alleges is of such a nature, the Administrator shall give formal notification thereof to the Governor of the State in which such emissions originate.

"(b) The notice of the Administrator shall be deemed to be a finding under section 110(a)(2)(H)(ii) which requires a plan revision with respect to so much of the applicable implementation plan as is inadequate to prevent or eliminate the endangerment referred to in subsection (a). Any foreign country so affected by such emission of pollutant or pollutants shall be invited to appear at any public hearing associated with any revision of the appropriate portion of the applicable implementation plan.

"(c) This section shall apply only to a foreign country which the Administrator determines has given the United States essentially the same rights with respect to the prevention or control of air pollution occurring in that country as is given that country by this section.

"(d) Recommendations issued following any abatement conference conducted prior to the enactment of the Clean Air Act Amendments of 1977 shall remain in effect with respect to any pollutant for which no national ambient air quality standard has been established under section 109 of this Act unless the Administrator, after consultation with all agencies which were party to the conference, rescinds any such recommendation on grounds of obsolescence.".

PRESIDENT'S AIR QUALITY ADVISORY BOARD

SEC. 115. Section 117 of the Clean Air Act is amended—

(1) to strike subsections (a) through (c);

(2) to renumber subsection (d) and (e) as subsections (a) and (b), respectively; and

(3) to amend redesignated subsection (b)—

(A) by striking the words "the Board and"

the first time the word "Board" appears and inserting in lieu thereof the word "any"; and

(B) by striking the words "of the Board" the second time the word "Board" appears.

CONTROL OF POLLUTION FROM FEDERAL FACILITIES

SEC. 116. (a) Section 118 of the Clean Air Act, relating to control of pollution from Federal facilities, is amended—

(1) by inserting "(a)" after "118", and

(2) by striking out "shall comply with Federal, State, interstate, and local requirements respecting control and abatement of air pollution to the same extent that any person is subject to such requirements" and inserting in lieu thereof "and each officer, agent, or employee thereof, shall be subject to, and comply with, all Federal, State, interstate, and local requirements, administrative authority, and process and sanctions respecting the control and abatement of air pollution in the same manner, and to the same extent as any nongovernmental entity. The preceding sentence shall apply (A) to any requirement whether substantive or procedural (including any recordkeeping or reporting requirement, any requirement respecting permits and any other requirement whatsoever), (B) to the exercise of any Federal, State, or local administrative authority, and (C) to any process and sanction, whether enforced in Federal, State, or local courts or in any other manner. This subsection shall apply notwithstanding any immunity of such agencies, officers, agents, or employees under any law or rule of law. No officer, agent, or employee of the United States shall be personally liable for any civil penalty for which he is not otherwise liable."

(b) Section 118 of such Act is amended by striking out "The President may exempt" and inserting in lieu thereof:

"(b) The President may exempt".

(c) Section 118(b) of such Act, as amended by subsection (b) of this Act, is amended by inserting the following immediately before the last sentence thereof: "In addition to any such exemption of a particular emission source, the President may, if he determines it to be in the paramount interest of the United States to do so, issue regulations exempting from compliance with the requirements of this section any weaponry, equipment, aircraft, vehicles, or other classes or categories of property which are owned or operated by the Armed Forces of the United States (including the Coast Guard) or by the National Guard of any State and which are uniquely military in nature. The President shall reconsider the need for such regulations at three-year intervals.".

PRIMARY NONFERROUS SMELTER ORDERS

SEC. 117. (a) Title I of the Clean Air Act is amended by inserting immediately before section 101 the following:

"PART A—AIR QUALITY AND EMISSION LIMITATIONS".

(b) Part A of title I of the Clean Air Act is amended by adding the following new section at the end thereof:

"PRIMARY NONFERROUS SMELTER ORDER

"SEC. 119. (a)(1) Upon application by the owner or operator of a primary nonferrous smelter, a primary nonferrous smelter order under subsection (b) may be issued—

"(A) by the Administrator, after thirty days' notice to the State, or

"(B) by the State in which such source is located, but no such order issued by the State shall take effect until the Administrator determines that such order has been issued in accordance with the requirements of this Act.

Not later than ninety days after submission by the State to the Administrator of notice of the issuance of a primary nonferrous smelter order under this section, the Administrator shall determine whether or not such order has been issued by the State in accordance with the requirements of this Act. If the Administrator determines that such order has not been issued in accordance with such requirements, he shall conduct a hearing respecting the reasonable control technology for primary nonferrous smelters.

"(2)(A) An order issued under this section to a primary nonferrous smelter shall be referred to as a 'primary nonferrous smelter order'. No primary nonferrous smelter may receive both an enforcement order under section 113(d) and a primary nonferrous smelter order under this section.

"(B) Before any hearing conducted under this section, in the case of an application made by the owner or operator of a primary nonferrous smelter for a second order under this section, the applicant shall furnish the Administrator (or the State as the case may be) with a statement of the grounds on which such application is based (including all supporting documents and information). The statement of the grounds for the proposed order shall be provided by the Administrator or the State in any case in which such State or Administrator is acting on its own initiative. Such statement (including such documents and information) shall be made available to the public for a thirty-day period before such hearing and shall be considered as part of such hearing. No primary nonferrous smelter order may be granted unless the applicant establishes that he meets the conditions required for the issuance of such order (or the Administrator or State establishes the meeting of such conditions when acting on their own initiative).

"(D) Any decision with respect to the issuance of a primary nonferrous smelter order shall be accompanied by a concise statement of the findings and of the basis of such findings.

"(b) A primary nonferrous smelter order under this section may be issued to a primary nonferrous smelter if—

"(1) such smelter is in existence on the date of the enactment of this section;

"(2) the requirement of the applicable implementation plan with respect to which the order is issued is an emission limitation or standard for sulfur oxides which is necessary and intended to be itself sufficient to enable attainment and maintenance of national primary and secondary ambient air quality standards for sulfur oxides; and

"(3) such smelter is unable to comply with such requirement by the applicable date for compliance because no means of emission limitation applicable to such smelter which will enable it to achieve compliance with such requirement has been adequately demonstrated to be reasonably available (as determined by the Administrator, taking into account the cost of compliance, nonair quality health and environmental impact, and energy consideration).

"(c)(1) A second order issued to a smelter under this section shall set forth compliance schedules containing increments of progress which require compliance with the requirement postponed as expeditiously as practicable. The increments of progress shall be limited to requiring compliance with subsection (d) and, in the case of a second order, to procuring, installing, and operating the necessary means of emission limitation as expeditiously as practicable after the Administrator determines such means have been adequately demonstrated to be reasonably available within the means of subsection (b)(3).

"(2) Not in excess of two primary nonferrous smelter orders may be issued under this section to any primary nonferrous smelter. The first such order issued to a smelter shall not result in the postponement of the requirement with respect to which such order is issued beyond January 1, 1983. The second such order shall not result in the postponement of such requirement beyond January 1, 1988.

"(d)(1)(A) Each primary nonferrous smelter to which an order is issued under this section shall be required to use such interim measures for the period during which such order is in effect as may be necessary in the judgment of the Administrator to assure attainment and maintenance of the national primary and secondary ambient air quality standards during such period, taking into account the aggregate effect on air quality of such order together with all variances, extensions, waivers, enforcement orders, delayed compliance orders and primary nonferrous smelter orders previously issued under this Act.

"(B) Such interim requirements shall include—

"(A) a requirement that the source to which the order applies comply with such reporting requirements and conduct such monitoring as the Administrator determines may be necessary, and

"(B) such measures as the Administrator determines are necessary to avoid an imminent and substantial endangerment to health of persons.

(C) Such interim measures shall also, except as provided in paragraph (2), include continuous emission reduction technology. The Administrator shall condition the use of any such interim measures upon the agreement of the owner or operator of the smelter—

"(i) to comply with such conditions as the Administrator determines are necessary to maximize the reliability and enforceability of such interim measures, as applied to the smelter, in attaining and maintaining the national ambient air quality standards to which the order relates, and

"(ii) to commit reasonable resources to research and development of appropriate emission control technology.

"(2) The requirement of paragraph (1) for the use of continuous emission reduction technology may be waived with respect to a particular smelter by the State or the Administrator, after notice and a hearing on the record, and upon a showing by the owner or operator of the smelter that such requirement would be so costly as to necessitate permanent or prolonged temporary cessation of operations of the smelter. Upon application for such waiver, the Administrator shall be notified and shall, within ninety days, hold a hearing on the record in accordance with section 554 of title 5 of the United States Code. At such hearing the Administrator shall require the smelter involved to present information relating to any alleged cessation of operations and the detailed reasons or justifications therefor. On the basis of such hearing the Administrator shall make findings of fact as to the effect of such requirement and on the alleged cessation of operations and shall make such recommendations as he deems appropriate. Such report, findings, and recommendations shall be available to the public, and shall be taken into account by the State or the Administrator in making the decision whether or not to grant such waiver.

"(3) In order to obtain information for purposes of a waiver under paragraph (2), the Administrator may, on his own motion, conduct an investigation and use the authority under section 319.

"(4) In the case of any smelter which on the date of enactment of this section uses continuous emission reduction technology and supplemental controls and which receives an initial primary nonferrous smelter order under this section, no additional continuous emission reduction technology shall be required as a condition of such order unless the Administrator determines, at any time, after notice and public hearing, that

such additional continuous emission reduction technology is adequately demonstrated to be reasonably available for the primary nonferrous smelter industry.

"(e) At any time during the application of such order, the Administrator may enter upon a public hearing respecting the availability of technology. Any order under this section shall be terminated if the Administrator determines on the record, after notice and hearing, that the conditions upon which the order was based no longer exist. If the owner or operator of the smelter to which the order is issued demonstrates that prompt termination of such order would result in undue hardship, the termination shall become effective at the earliest practicable date on which such undue hardship would not result, but in no event later than the date required under subsection (c).

"(f) If the Administrator determines that a smelter to which an order is issued under this section is in violation of any requirement of subsection (c) or (d), he shall—

"(1) enforce such requirement under section 113,

"(2) (after notice and opportunity for public hearing) revoke such order and enforce compliance with the requirement with respect to which such order was granted.

"(3) give notice of noncompliance and commerce action under section 122, or

"(4) take any appropriate combination of such actions".

NONCOMPLIANCE PENALTY

SEC. 118. Part A of title I of the Clean Air Act is amended by adding the following new section at the end thereof:

"NONCOMPLIANCE PENALTY

"SEC. 120. (a)(1)(A) Not later than 6 months after the date of enactment of this section, and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations requiring the assessment and collection of a noncompliance penalty against persons referred to in paragraph (2)(A).

"(B)(i) Each State may develop and submit to the Administrator a plan for carrying out this section in such State. If the Administrator finds that the State plan meets the requirements of this section, he may delegate to such State any authority he has to carry out this section.

"(ii) Notwithstanding a delegation to a State under clause (i), the Administrator may carry out this section in such State under the circumstances described in subsection (b)(2)(B).

"(2) (A) Except as provided in subparagraph (B) or (C) of this paragraph, the State or the Administrator shall assess and collect a noncompliance penalty against every person who owns or operates—

"(i) a major stationary source (other than a primary nonferrous smelter which has received a primary nonferrous smelter order under section 119) which is not in compliance with any emission limitation, emission standard or compliance schedule under any applicable implementation plan, or

"(ii) a stationary source which is not in compliance with an emission limitation, emission standard, standard of performance, or other requirement established under section 111 or 112 of this Act, or

"(iii) any source referred to in clause (i) or (ii) (for which an extension, order, or suspension referred to in subparagraph (B) is in effect), or a primary nonferrous smelter which has received a primary nonferrous smelter order under section 110 which is not in compliance with any interim emission control requirement or schedule of compliance under such extension, order, or suspension.

For purposes of subsection (d)(2), in the case of a penalty assessed with respect to a source referred to in clause (iii) of this subparagraph, the costs referred to in such subsection (d)(2) shall be the economic value of noncompliance with the interim emission control requirement or the remaining steps in the schedule of compliance referred to in such clause.

"(B) Notwithstanding the requirements of subparagraph (A) (i) and (ii), the owner or operator of any source shall be exempted from the duty to pay a noncompliance penalty under such requirements with respect to that source if, in accordance with the procedures in subsection (b)(5), the owner or operator demonstrates that the failure of such source to comply with any such requirement is due solely to—

"(i) a conversion by such source from the burning of petroleum products or natural gas, or both, as the permanent primary energy source to the burning of coal pursuant to an order under section 119;

"(ii) in the case of a coal-burning source granted an extension under the second sentence of section 119(c)(1), a prohibition from using petroleum products or natural gas or both, by reason of an order under the provisions of section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 or under any legislation which amends or supersedes such provisions;

"(iii) the use of innovative technology sanctioned by an enforcement order under section 113;

"(iv) an inability to comply with any such requirement, for which inability the source has received an order under section 113(u) (an order under section 113 issued before the date of enactment of this section) which has the effect of permitting a delay or violation of any requirement of this Act (including a requirement of an applicable implementation plan) which inability results from reasons entirely beyond the control of the owner or operator of such source or of any entity controlling, controlled by, or under common control with the owner or operator of such source; or

"(v) the conditions by reason of which a temporary emergency suspension is authorized under section 110 (f) or (g).

An exemption under this subparagraph shall cease to be effective if the source fails to comply with the interim emission control requirements or schedules of compliance (including increments of progress) under any such extension, order, or suspension.

"(C) The Administrator may, after notice and opportunity for public hearing exempt any source from the requirements of this section with respect to a particular instance of noncompliance if he finds that such instance of noncompliance is de minimis in nature and in duration.

"(b) Regulations under subsection (a) shall—

"(1) permit the assessment and collection of such penalty by the State if the State has a delegation of authority in effect under subsection (a)(1)(B)(i);

"(2) provide for the assessment and collection of such penalty by the Administrator, if—

"(A) the State does not have a delegation of authority in effect under subsection (e), or

"(B) the State has such a delegation in effect but fails with respect to any particular person or source to assess or collect the penalty in accordance with the requirements of this section;

"(3) require the States, or in the event the States fail to do so, the Administrator, to give a brief but reasonably specific notice of noncompliance under this section to each person referred to in subsection (a)(2)(A) with respect to each source owned or operated by such person which is not in compliance as provided in such subsection, not later than July 1, 1979, or thirty days after the discovery of such noncompliance, whichever is later;

"(4) require each person to whom notice is given under paragraph (3) to—

"(A) calculate the amount of the penalty owed (determined in accordance with subsection (d)(2)) and the schedule of payments (determined in accordance with subsection (d)(3)) for each such source and, within forty-five days after the issuance of such notice or after the denial of a petition under subparagraph (B), to submit that calculation and proposed schedule, together with the information necessary for an independent verification thereof, to the State and to the Administrator, or

"(B) submit a petition, within forty-five days after the issuance of such notice, challenging such notice of noncompliance or alleging entitlement to an exemption under subsection (a)(2)(B) with respect to a particular source:

"(5) require the Administrator to provide a hearing on the record (within the meaning of subchapter II of chapter 5 of title 5, United States Code) and to make a decision on such petition (including findings of fact and conclusions of law) not later than ninety days after the receipt of any petition under paragraph (4)(B), unless the State agrees to provide a hearing which is substantially similar to such a hearing on the record and to make a decision on such petition (including such findings and conclusions) within such ninety-day period;

"(6)(A) authorize the Administrator on his own initiative to review the decision of the State under paragraph (5) and disapprove it if it is not in accordance with the requirements of this section, and (B) require the Administrator to do so not later than sixty days after receipt of a petition under this subparagraph, notice, and public hearing and a showing by such petitioner that the State decision under paragraph (5) is not in accordance with the requirements of this section;

"(7) require payment, in accordance with subsection (d), of the penalty by each person to whom notice of noncompliance is given under paragraph (3) with respect to each non-complying source for which such notice is given unless there has been a final determination granting a petition under paragraph (4)(B) with respect to such source;

"(8) authorize the State or the Administrator to adjust (and from time to time to readjust) the amount of the penalty assessment calculated or the payment schedule proposed by such owner or operator under paragraph (6), if the Administrator finds after notice and opportunity for a hearing on the record that the penalty of schedule does not meet the requirements of this section; and

"(9) require a final adjustment of the penalty within 180 days after such source comes into compliance in accordance with subsection (d)(4);

A delayed compliance penalty established by a State under this section shall apply unless the Administrator, within ninety days after the date of publication of the proposed penalty under subsection (c)(2)(A) of this section, objects in writing to the amount of the penalty as less than would be required to comply with guidelines established by the Administrator. If the Administrator objects under this subsection, he shall immediately establish a substitute delayed compliance penalty applicable to such facility.

"(c) If the owner or operator of any stationary source to whom a notice is issued under subsection (b)(3)—

"(1) does not submit a timely petition under subsection (b)(4)(B), or

"(2) submits a petition under subsection (b)(4)(B) which is denied, and

fails to submit a calculation of the penalty assessment, a schedule for payment, and the information necessary for independent veri-

fication thereof, the State (or the Administrator, as the case may be) may enter into a contract with any person who has no financial interest in the owner or operator of the source (or in any person controlling, controlled by or under common control with such source) to assist in determining the amount of the penalty assessment or payment schedule with respect to such source. The cost of carrying out such contract may be added to the penalty to be assessed against the owner or operator of such source.

"(d)(1) All penalties assessed by the Administrator under this section shall be paid to the United States Treasury. All penalties assessed by the State under this section shall be paid to such State.

"(2) The amount of the penalty which shall be assessed and collected with respect to any source under this section shall be equal to—

"(A) the amount determined in accordance with regulations promulgated by the Administrator under subsection (a), which is no less than the quarterly equivalent of the capital costs of compliance and debt service over a normal amortization period, not to exceed ten years, operation and maintenance costs foregone as a result of noncompliance, and any additional economic value which a delay in compliance beyond July 1, 1979, may have for the owner or operator of such source, minus

"(B) the amount of any expenditure made by the owner or operator of that source during any such quarter for the purpose of bringing that source into, and maintaining compliance with, such requirement to the extent that such expenditures have not been taken into account in the calculation of the penalty under subparagraph (A).

To the extent that any expenditure under subparagraph (B) made during any quarter is not subtracted for such quarter from the costs under subparagraph (A), such expenditure may be subtracted for any subsequent quarter from such costs, except that in no event shall the amount paid be less than the quarterly payment minus the amount attributed to actual cost of construction.

"(3)(A) The assessed penalty required under this section shall be paid in quarterly installments for the period of covered noncompliance. All quarterly payments (determined without regard to any adjustment or any subtraction under paragraph (2)(B)) after the first payment shall be equal.

"(B) The first payment shall be due on the date six months after the date of issuance of the notice of noncompliance under subsection (b)(3) with respect to any source or on January 1, 1980, whichever is later. Such first payment shall be in the amount of the quarterly installment for the upcoming quarter, plus the amount owed for any preceding period within the period of covered noncompliance for such source.

"(C) For the purpose of this section, the term 'period of covered noncompliance' means the period which begins—

"(i) two years after the date of enactment of this section, in the case of a source for which notice of noncompliance under subsection (b)(3) is issued on or before the date two years after such date of enactment, or

"(ii) on the date of issuance of the notice of noncompliance under subsection (b)(3), in the case of a source for which such notice is issued after July 1, 1979,

and ending on the date on which such source comes into (or for the purpose of establishing the schedule of payments, is estimated to come into) compliance with such requirement

"(4) Upon making a determination that a source with respect to which a penalty has been paid under this section is in compliance and is maintaining compliance with the applicable requirement, the State (or the Administrator as the case may be) shall review the actual expenditures made by the owner or operator of such source for the purpose of attaining and maintaining compliance, and shall within 180 days after such source comes into compliance—

"(A) provide reimbursement with interest (to be paid by the State or Secretary of the Treasury, as the case may be) at appropriate prevailing rates (as determined by the Secretary of the Treasury) for any overpayment by such person, or

"(B) assess and collect an additional payment with interest at appropriate prevailing rates (as determined by the Secretary of the Treasury) for any underpayment by such person.

"(5) Any person who fails to pay the amount of any penalty with respect to any source under this section on a timely basis shall be required to pay in addition a quarterly nonpayment penalty for each quarter during which such failure to pay persists. Such nonpayment penalty shall be in an amount equal to 20 percent of the aggregate amount of such person's penalties and nonpayment penalties with respect to such source which are unpaid as of the beginning of such quarter.

"(e) Any action pursuant to this section, including any objection of the Administrator under subsection (b)(1)(2)(B) shall be considered a final action for purposes of judicial review of any penalty under section 307 of this Act.

"(f) Any orders, payments, sanctions, or other requirements under this section shall be in addition to any other permits, orders, payments, sanctions, or other requirements established under this Act, and shall in no way affect any civil or criminal enforcement proceedings brought under any provision of this Act or State or local law.

"(g) In the case of any emission limitation or other requirement approved or promulgated by the Administrator under this Act after the enactment of the Clean Air Act Amendments of 1977 which is more stringent than the emission limitation or requirement for the source in effect prior to such approval or promulgation, if any, or where there was no emission limitation or requirement approved or promulgated before enactment of the Clean Air Act Amendments of 1977, the date for imposition of the noncompliance penalty under this section, shall be eitner July 1, 1979, or the date on which the source is required to be in full compliance with such emission limitation or requirement, whichever is later, but in no event later than three years after the approval or promulgation of such emission limitation or requirement."

CONSULTATION

SEC. 119. Part A of title I of the Clean Air Act is amended by adding the following new section at the end thereof.

"CONSULTATION

"SEC. 121. In carrying out the requirements of this Act requiring applicable implementation plans to contain—

"(1) any transportation controls, air quality maintenance plan, requirements or preconstruction review of direct sources of air pollution, or

"(2) any measure referred to—

"(A) in part D (pertaining to nonattainment requirements), or

"(B) in part C (pertaining to prevention of significant deterioration),

and in carrying out the requirements of section 113(d) (relating to certain orders), the State shall provide a satisfactory process of consultation with general purpose local governments, designated organizations of elected officials of local governments and any Federal land manager having authority over Federal land to which the State plan applies, effective with respect to any such requirement which is adopted more than one year after the date of enactment of the Clean Air Act Amendments of 1977 as part of such plan. Such process shall be in accordance with regulations promulgated by the Administrator to assure adequate consultation. Such regulations shall be promulgated after notice and opportunity for public hearing and not later than 6 months after the date of enactment of the Clean Air Act Amendments of 1977. Only a general purpose unit of local government, regional agency, or council of governments adversely affected by action of the Administrator approving any portion of a plan referred to in this subsection may petition for judicial review of such action on the basis of a violation of the requirements of this section.".

UNREGULATED POLLUTANTS

SEC. 120. (a) Part A of title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"LISTING OF CERTAIN UNREGULATED POLLUTANTS

"SEC. 122. (a) Not later than one year after date of enactment of this section (two years for radioactive pollutants) and after notice and opportunity for public hearing, the Administrator shall review all available relevant informaion and determine whether or not emissions of radioactive pollutants (including source material, special nuclear material, and byproduct material), cadmium, arsenic and polycyclic organic matter into the ambient air will cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health. If the Administrator makes an affirmative determination with respect to any such substance, he shall simultaneously with such determination include such substance in the list published under section 108(a)(1) or 112(b)(1)(A) (in the case of a substance which, in the judgment of the Administrator, causes, or contributes to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious irreversible, or incapacitating reversible, illness), or shall include each category of stationary sources emitting such substance in significant amounts in the list published under section 111(b)(1)(A), or take any combination of such actions.

"(b) Nothing in subsection (a) shall be construed to affect the authority of the Administrator to revise any list referred to in subsection (a) with respect to any substance (whether or not enumerated in subsection (a)).

"(c)(1) Before listing any source material, special nuclear, or byproduct material (or component or derivative thereof) as provided in subsection (a), the Administrator shall consult with the Nuclear Regulatory Commission.

"(2) Not later than six months after listing any such material (or component or derivative thereof) the Administrator and the Nuclear Regulatory Commission shall enter into an interagency agreement with respect to those sources or facilities which are under the jurisdiction of the Commission. This agreement shall, to the maximum extent practicable consistent with this Act, minimize duplication of effort and conserve administrative resources in the establishment, implementation, and enforcement of emission limitations, standards of performance, and other requirements and authorities (substantive and procedural) under this Act respecting the emission of such material (or component or derivative thereof) from such sources or facilities.".

"(3) In case of any standard or emission limitation promulgated by the Administrator, under this Act or by any State (or the Administrator) under any applicable implementation plan under this Act, if the Nuclear Regulatory Commission determines, after notice and opportunity for public hearing that the application of such standard or limitation to a source or facility within the jurisdiction of the Commission would endanger

public health or safety, such standard or limitation shall not apply to such facilities or sources unless the President determines otherwise within ninety days from the date of such finding.".

(b) The Administrator of the Environmental Protection Agency shall conduct a study, in conjunction with other appropriate agencies, concerning the effect on the public health and welfare of sulfates, radioactive pollutants, cadmium, arsenic, and polycyclic organic matter which are present or may reasonably be anticipated to occur in the ambient air. Such study shall include a thorough investigation of how sulfates are formed and how to protect public health and welfare from the injurious effects, if any, of sulfates, cadmium, arsenic, and polycyclic organic matter.

STACK HEIGHTS

SEC. 121. Part A of title I of the Clean Air Act is amended by adding the following new section at the end thereof:

"STACK HEIGHTS

"SEC. 123. (a) The degree of emission limitation required for control of any air pollutant under an applicable implementation plan under this title shall not be affected in any manner by—

"(1) so much of the stack height of any source as exceeds good engineering practice (as determined under regulations promulgated by the Administrator), or

"(2) any other dispersion technique.

The preceding sentence shall not apply with respect to stack heights in existence before the date of enactment of the Clean Air Amendments of 1970 or dispersion techniques implemented before such date. In establishing an emission limitation for coal-fired steam electric generating units which are subject to the provisions of section 118 and which commenced operation before July 1, 1957, the effect of the entire stack height of stacks for which a construction contract was awarded before February 8, 1974, may be taken into account.

"(b) For the purpose of this section, the term 'dispersion technique' includes any intermittent or supplemental control of air pollutants varying with atmospheric conditions.

"(c) Not later than six months after the date of enactment of this section, the Administrator, shall after notice and opportunity for public hearing, promulgate regulations to carry out this section. For purposes of this section, good engineering practice means, with respect to stack heights, the height necessary to insure that emissions from the stack do not result in excessive concentrations of any air pollutant in the immediate vicinity of the source as a result of atmospheric downwash, eddies and wakes which may be created by the source itself, nearby structures or nearby terrain obstacles (as determined by the Administrator). For purposes of this section such height shall not exceed two and a half times the height of such source unless the owner or operator of the source demonstrates, after notice and opportunity for public hearing, to the satisfaction of the Administrator, that a greater height is necessary as provided under the preceding sentence. In no event may the Administrator prohibit any increase in any stack height or restrict in any manner the stack height of any source.".

ASSURANCE OF PLAN ADEQUACY

SEC. 122. Part A of title I of the Clean Air Act is amended by adding the following new sections at the end thereof:

"ASSURANCE OF ADEQUACY OF STATE PLANS

"SEC. 124. (a) As expeditiously as practicable but not later than one year after date of enactment of this section, each State shall review the provisions of its implementation plan which relate to major fuel burning sources and shall determine—

"(1) the extent to which compliance with requirements of such plan is dependent upon the use by major fuel burning stationary sources of petroleum products or natural gas,

"(2) the extent to which such plan may reasonably be anticipated to be inadequate to meet the requirements of this Act in such State on a reliable and long-term basis by reason of its dependence upon the use of such fuels, and

"(3) the extent to which compliance with the requirements of such plan is dependent upon use of coal or coal derivatives which is not locally or regionally available.

Each State shall submit the results of its review and its determination under this paragraph to the Administrator promptly upon completion thereof.

"(b)(1) Not later than eighteen months after the date of enactment of this section, the Administrator shall review the submissions of the States under subsection (a) and shall require each State to revise its plan, if in the judgment of the Administrator, such plan revision is necessary to assure that such plan will be adequate to assure compliance with the requirements of this Act in such State on a reliable and long-term basis, taking into account the actual or potential prohibitions on use of petroleum products or natural gas, or both, under any other authority of law.

"(2) Before requiring a plan revision under this subsection, with respect to any State the Administrator shall take into account the report of the review conducted by such State under paragraph (1) and shall consult with the Governor of the State respecting such required revision.

"MEASURES TO PREVENT ECONOMIC DISRUPTION OR UNEMPLOYMENT

"SEC. 125. (a) After notice and opportunity for a public hearing—

"(1) the Governor of any State in which a major fuel burning stationary source referred to in this subsection (or class or category thereof) is located.

"(2) the Administrator, or

"(3) the President (or his designee),

may determine that action under subsection (b) is necessary to prevent or minimize significant local or regional economic disruption or unemployment which would otherwise result from use by such source (or class or category) of—

"(A) coal or coal derivatives other than locally or regionally available coal,

"(B) petroleum products,

"(C) natural gas, or

"(D) any combination of fuels referred to in subparagraphs (A) through (C),

to comply with the requirements of a State implementation plan.

"(b) Upon a determination under subsection (a)—

"(1) such Governor, with the written consent of the President or his designee,

"(2) the President's designee with the written consent of such Governor, or

"(3) the President

may by rule or order prohibit any such major fuel burning stationary source (or class or category thereof) from using fuels other than locally or regionally available coal or coal derivatives to comply with implementation plan requirements. In taking any action under this subsection, the Governor, the President, or the President's designee as the case may be, shall take into account, the final cost to the consumer of such an action.

"(c) The Governor, in the case of action under subsection (b)(1), or the Administrator, in the case of an action under subsection (b) (2) or (3) shall, by rule or order, require each source to which such action applies to—

"(1) enter into long-term contracts of at least ten years in duration (except as the President or his designee may otherwise permit or require by rule or order for good cause) for supplies of locally or regionally available coal or coal derivatives,

"(2) enter into contracts to acquire any additional means of emission limitation which the Administrator or the State determines may be necessary to comply with the requirements of this Act while using such coal or coal derivatives as fuel, and

"(3) comply with such schedules (including increments of progress), timetables and requirements as may be necessary to assure compliance with the requirements of this Act.

Requirements under this subsection shall be established simultaneously with, and as a condition of, any action under subsection (b).

"(d) This section applies only to existing or new major fuel burning stationary sources—

"(1) which have the design capacity to produce 250,000,000 Btu's per hour (or its equivalent), as determined by the Administrator, and

"(2) which are not in compliance with the requirements of an applicable implementation plan or which are prohibited from burning oil or natural gas, or both, under any other authority of law.

"(e) Except as may otherwise be provided by rule by the State or the Administrator for good cause, any action required to be taken by a major fuel burning stationary source under this section shall not be deemed to constitute a modification for purposes of section 111(a) (2) and (4) of this Act.

"(f) For purposes of sections 113 and 120, a prohibition under subsection (b), and a corresponding rule or order under subsection (c), shall be treated as a requirement of section 113. For purposes of any plan (or portion thereof) promulgated under section 110 (c), any rule or order under subsection (c) corresponding to a prohibition under subsection (b), shall be treated as a part of such plan. For purposes of section 113, a prohibition under subsection (b), applicable to any source, and a corresponding rule or order under subsection (c), shall be treated as part of the applicable implementation plan for the State in which subject source is located.

"(g) The President may delegate his authority under this section to an officer or employee of the United States designated by him on a case-by-case basis or in any other manner he deems suitable.

"(h) For the purpose of this section—the term 'locally or regionally available coal or coal derivatives' means coal or coal derivatives which is, or can in the judgment of the State or the Administrator feasibly be, mined or produced in the local or regional area (as determined by the Administrator) in which the major fuel burning stationary source is located".

INTERSTATE POLLUTION ABATEMENT

SEC. 123. Part A of title I of the Clean Air Act is amended by adding at the end thereof the following new section:

"INTERSTATE POLLUTION ABATEMENT

"SEC. 126. (a) Each applicable implementation plan shall—

"(1) require each major proposed new (or modified) source—

"(A) subject to part C, relating to significant deterioration of air quality or

"(B) which may significantly contribute to levels of air pollution in excess of the national ambient air quality standards in any air quality control region outside the State in which such source intends to locate (or make such modification),

to provide written notice to all nearby States the air pollution levels of which may be affected by such source at least sixty days prior to the date on which commencement of construction is to be permitted by the State providing notice, and

"(2) identify all major existing stationary sources which may have the impact described in paragraph (1) with respect to new or modified sources and provide notice to all nearby States of the identity of such sources not later than three months after the date of enactment of the Clean Air Act Amendments of 1977.

"(b) Any State or political subdivision may petition the Administrator for a finding that any major source emits or would emit any air pollutant in violation of the prohibition of section 110(a)(2)(E)(i). Within 60 days after receipt of any petition under this subsection and after public hearing, the Administrator shall make such a finding or deny the petition.

"(c) Notwithstanding any permit which may have been granted by the State in which the source is located (or intends to locate), it shall be a violation of the applicable implementation plan in such State—

"(1) for any major proposed new (or modified) source with respect to which a finding has been made under subsection (b) to be constructed or to operate in violation of the prohibition of section 110(a)(2)(E)(i), or

"(2) for any major existing source to operate more than three months after such finding has been made with respect to it.

The Administrator may permit the continued operation of a source referred to in paragraph (2) beyond the expiration of such three-month period if such source complies with such emission limitations and compliance schedules (containing increments of progress) as may be provided by the Administrator to bring about compliance with the requirement contained in section 110(a)(2)(E)(i) as expeditiously as practicable, but in no case later than three years after the date of such finding. Nothing in the preceding sentence shall be construed to preclude any such source from being eligible for an enforcement order under section 113(d) after the expiration of such period during which the Administrator has permitted continuous operation.".

PUBLIC NOTIFICATION

SEC. 124. Part A of title I of the Clean Air Act is amended by adding the following new section at the end thereof.

"PUBLIC NOTIFICATION

"SEC. 127. (a) Each State plan shall contain measures which will be effective to notify the public during any calendar year on a regular basis of instances or areas in which any national primary ambient air quality standard is exceeded or was exceeded during any portion of the preceding calendar year, to advise the public of the health hazards associated with such pollution, and to enhance public awareness of the measures which can be taken to prevent such standards from being exceeded and the ways in which the public can participate in regulatory and other efforts to improve air quality. Such measures may include the posting of warning signs on interstate highway access points to metropolitan areas or television, radio, or press notices or information.

"(b) The Administrator is authorized to make grants to States to assist in carrying out the requirements of subsection (a).".

STATE BOARDS

SEC. 125. Part A of title I of the Clean Air Act is amended by adding the following new section at the end thereof:

"STATE BOARDS

"SEC. 128. (a) Not later than the date one year after the date of the enactment of this section, each applicable implementation plan shall contain requirements that—

"(1) any board or body which approves permits or enforcement orders under this Act shall have at least a majority of members who represent the public interest and do not derive any significant portion of their income from persons subject to permits or enforcement orders under this Act, and

"(2) any potential conflicts of interest by members of such board or body or the head of an executive agency with similar power be adequately disclosed.

A State may adopt any requirement respecting conflicts of interest for such boards or bodys or heads of executive agencies, or any other entities which are more stringent than the requirements of paragraph (1) and (2), and the Administrator shall approve any such more stringent requirements submitted as part of an implementation plan.".

OZONE PROTECTION

SEC. 126. Title I of the Clean Air Act is amended by adding at the end thereof the following new part:

"PART B—OZONE PROTECTION

"PURPOSES

"SEC. 150. The purposes of this part are (1) to provide for a better understanding of the effects of human actions on the stratosphere, especially the ozone in the stratosphere, (2) to provide for a better understanding of the effects of changes in the stratosphere, especially the ozone in the stratosphere on the public health and welfare, (3) to provide information on the progress of regulation of activities which may reasonably be anticipated to affect the ozone in the stratosphere in such a way as to cause or contribute to endangerment of the public health or welfare, and (4) to provide information on the need for additional legislation in this area, if any.

"FINDINGS AND DEFINITIONS

"SEC. 151. (a) The Congress finds, on the basis of presently available information, that—

"(1) halocarbon compounds introduced into the environment potentially threaten to reduce the concentration of ozone in the stratosphere;

"(2) ozone reduction will lead to increased incidence of solar ultraviolet radiation at the surface of the Earth;

"(3) increased incidence of solar ultraviolet radiation is likely to cause increased rates of disease in humans (including increased rates of skin cancer), threaten food crops, and otherwise damage the natural environment;

"(4) other substances, practices, processes, and activities may affect the ozone in the stratosphere, and should be investigated to give early warning of any potential problem and to develop the basis for possible future regulatory action; and

"(5) there is some authority under existing law, to regulate certain substances, practices, processes, and activities which may affect the ozone in the stratosphere.

"DEFINITIONS

"SEC. 152. For the purposes of this subtitle—

"(1) the term 'halocarbon' means the chemical compounds $CFCL_3$ and CF_2CL_2 and such other halogenated compounds as the Administrator determines may reasonably be anticipated to contribute to reductions in the concentration of ozone in the stratosphere.

"(2) the term 'stratosphere' means that part of the atmosphere above the tropopause.

"STUDIES BY ENVIRONMENTAL PROTECTION AGENCY

"SEC. 153. (a) The Administrator shall conduct a study of the cumulative effect of all substances, practices, processes, and activities which may affect the stratosphere, especially ozone in the stratosphere. The study shall include an analysis of the independent effects on the stratosphere especially such ozone in the stratosphere of—

"(1) the release into the ambient air of halocarbons,

"(2) the release into the ambient air of other sources of chlorine,

"(3) the uses of bromine compounds, and

"(4) emissions of aircraft and aircraft propulsion systems employed by operational and experimental aircraft.

The study shall also include such physical, chemical, atmospheric, biomedical, or other research and monitoring as may be necessary to ascertain (A) any direct or indirect effects upon the public health and welfare of changes in the stratosphere, especially ozone in the stratosphere, and (B) the probable causes of changes in the stratosphere, especially the ozone in the stratosphere.

"(b) The Administrator shall undertake research on—

"(1) methods to recover and recycle substances which directly or indirectly affect the stratosphere, especially ozone in the stratosphere,

"(2) methods of preventing the escape of such substances,

"(3) safe substitutes for such substances, and

"(4) other methods to regulate substances, practices, processes, and activities which may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere.

"(c)(1) The studies and research conducted under this section may be undertaken with such cooperation and assistance from universities and private industry as may be available. Each department, agency, and instrumentality of the United States having the capability to do so is authorized and encouraged to provide assistance to the Administrator in carrying out the requirements of this section, including (notwithstanding any other provision of law) any services which such department, agency, or instrumentality may have the capability to render or obtain by contract with third parties.

"(2) The Administrator shall encourage the cooperation and assistance of other nations in carrying out the studies and research under this section. The Administrator is authorized to cooperate with and support similar research efforts of other nations.

"(d)(1) The Administrator shall undertake to contract with the National Academy of Sciences to study the state of knowledge and the adequacy of research efforts to understand (A) the effects of all substances, practices, processes, and activities which may affect the stratosphere, especially ozone in the stratosphere; (B) the health and welfare effects of modifications of the stratosphere, especially ozone in the stratosphere; and (C) methods of control of such substances, practices, processes, and activities including alternatives, costs, feasibility, and timing. The Academy shall make a report of its findings by January 1, 1978.

"(2) The Administrator shall make available to the Academy such information in the Administrator's possession as is needed for the purposes of the study provided for in this subsection.

"(e) The Secretary of Labor shall study and transmit a report to the Administrator and the Congress not later than six months after date of enactment, with respect to the losses and gains to industry and employment which could result from the elimination of the use of halocarbons in aerosol containers and for other purposes. Such report shall include recommended means of alleviating unemployment or other undesirable economic impact, if any, resulting therefrom.

"(f)(1) The Administrator shall establish and act as Chairman of a Coordinating Committee for the purpose of insuring coordination of the efforts of other Federal agencies carrying out research and studies related to or supportive of the research provided for in subsections (a) and (b) and section 154.

"(2) Members of the Coordinating Committee shall include the appropriate official re-

sponsible for the relevant research efforts of each of the following agencies:

"(A) the National Oceanic and Atmospheric Administration,

"(B) the National Aeronautics and Space Administration,

"(C) the Federal Aviation Administration,

"(D) the Department of Agriculture,

"(E) the National Cancer Institute,

"(F) the National Institute of Environmental Health Sciences,

"(G) the National Science Foundation, and the appropriate officials responsible for the relevant research efforts of such other agencies carrying out related efforts as the Chairman shall designate. A representative of the Department of State shall sit on the Coordinating Committee to encourage and facilitate international coordination.

"(3) The Coordinating Committee shall review and comment on plans for, and the execution and results of, pertinent research and studies. For this purpose, the agencies named in or designated under paragraph (2) of this subsection shall make appropriate and timely reports to the Coordinating Committee on plans for and the execution and results of such research and studies.

"(4) The Chairman may request a report from any Federal Agency for the purpose of determining if that agency should sit on the Coordinating Committee.

"(g) Not later than January 1, 1978, and biennially thereafter, the Administrator shall report to the appropriate committees of the House and the Senate, the results of the studies and research conducted under this section and the results of related research and studies conducted by other Federal agencies.

"RESEARCH AND MONITORING BY OTHER AGENCIES

"SEC. 154. (a) The Administrator of the National Oceanic and Atmospheric Administration shall establish a continuing program of research and monitoring of the stratosphere for the purpose of early detection of changes in the stratosphere and climatic effects of such changes. Such Administrator shall on or before January 1, 1978, and biennially thereafter, transmit such report to the Administrator and the Congress on the findings of such research and monitoring. Such report shall contain any appropriate recommendations for legislation or regulation (or both).

"(b) The National Aeronautics and Space Administration shall, pursuant to its authority under title IV of the National Aeronautics and Space Act of 1958, continue programs of research, technology, and monitoring of the stratosphere for the purpose of understanding the physics and chemistry of the stratosphere and for the early detection of potentially harmful changes in the ozone in the stratosphere. Such Administration shall transmit reports by January 1, 1978, and biennially thereafter to the Administrator and the Congress on the results of the programs authorized in this subsection, together with any appropriate recommendations for legislation or regulation (or both).

"(c) The Director of the National Science Foundation shall encourage and support ongoing stratospheric research programs and continuing research programs that will increase scientific knowledge of the effects of changes in the ozone layer in the stratosphere upon living organisms and ecosystems. Such Director shall transmit reports by January 1, 1978, and biennially thereafter to the Administrator and the Congress on the results of such programs, together with any appropriate recommendations for legislation or regulation (or both).

"(d) The Secretary of Agriculture shall encourage and support continuing research programs that will increase scientific knowledge of the effects of changes in the ozone in the stratosphere upon animals, crops, and other plant life. Such Secretary shall transmit reports by January 1, 1978, and biennially thereafter to the Administrator and the Congress on the results of such programs together with any appropriate recommendations for legislation or regulation (or both).

"(e) The Secretary of Health, Education, and Welfare shall encourage and support continuing research programs that will increase scientific knowledge of the effects of changes in the ozone in the stratosphere upon human health. Such Secretary shall transmit reports by January 1, 1978, and biennially thereafter, to the Administrator and the Congress on the results of such programs, together with any appropriate recommendations for legislation or regulation (or both).

"(f) In carrying out subsections (a) through (e) of this section, the agencies involved (1) shall enlist and encourage cooperation and assistance from other Federal agencies, universities, and private industry, and (2) shall solicit the views of the Administrator with regard to plans for the research involved so that any such research will, if regulatory action by the Administrator is indicated, provide the preliminary information base for such action.

"PROGRESS OF REGULATION

"SEC. 155. The Administrator shall provide an interim report to the Congress by January 1, 1978, shall provide a final report within two years after date of enactment, and shall provide follow-up reports annually thereafter on the actions taken by the Environmental Protection Agency and all other Federal agencies to regulate sources of halocarbon emissions, the results of such regulations in protecting the ozone layer, and the need for additional regulatory action, if any. The reports under this section shall also include recommendations for the control of substances, practices, processes, and activities other than those involving halocarbons, which are found to affect the ozone in the stratosphere and which may cause or contribute to harmful effects on public health or welfare.

"INTERNATIONAL COOPERATION

"SEC. 156. The President shall undertake to enter into international agreements to foster cooperative research which complements studies and research authorized by this part, and to develop standards and regulations which protect the stratosphere consistent with regulations applicable within the United States. For these purposes the President through the Secretary of State and the Assistant Secretary of State for Oceans and International Environmental and Scientific Affairs, shall negotiate multilateral treaties, conventions, resolutions, or other agreements, and formulate, present, or support proposals at the United Nations and other appropriate international forums and shall report to the Congress periodically on efforts to arrive at such agreements.

"REGULATIONS

"SEC. 157. (a) If at any time prior to the submission of the final report referred to in section 155 in the Administrator's judgment, any substance, practice, process, or activity may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere, and such effect may reasonably be anticipated to endanger public health or welfare, the Adminstrator shall promptly promulgate regulations respecting the control of such substance, practice, process, or activity, and shall simultaneously submit notice of the promulgation of such regulations to the Congress.

"(b) Upon submission of the final report referred to in section 155, and after consideration of the research and study under sections 153 and 154 and, consultation with appropriate Federal agencies and scientific entities, the Administrator shall propose regulations for the control of any substance, practice, process, or activity (or any combination thereof) which in his judgment may reasonably be anticipated to affect the stratosphere, especially ozone in the stratosphere, if such effect in the stratosphere may reasonably be anticipated to endanger public health or welfare. Such regulations shall take into account the feasibility and the costs of achieving such control. Such regulations may exempt medical use products for which the Administrator determines there is no suitable substitute. Not later than three months after proposal of such regulations the Administrator shall promulgate such regulations in final form. From time to time, and under the same procedures, the Administrator may revise any of the regulations submitted under this subsection.

"OTHER PROVISIONS UNAFFECTED

"SEC. 158. Nothing in this part shall be construed to alter or affect the authority of the Administrator under section 303 (relating to emergency powers), under section 231 (relating to aircraft emission standards), or under any other provision of this Act or to affect the authority of any other department, agency, or instrumentality of the United States under any other provision of law to promulgate or enforce any requirement respecting the control of any substance, practice, process, or activity for purposes of protecting the stratosphere or ozone in the stratosphere. In the case of any proposed rule respecting ozone in the stratosphere which has been published under the Toxic Substances Control Act prior to the date of enactment of this Act notwithstanding section 9(b) of such Act, nothing in this part shall be construed to prohibit or restrict the Administrator from taking any action under the Toxic Substances Control Act respecting the promulgation or enforcement of such rule.

"STATE AUTHORITY

"SEC. 159. (a) Nothing in this part shall preclude or deny any State or political subdivision thereof from adopting or enforcing any requirement respecting the control of any substance, practice, process, or activity for purposes of protecting the stratosphere or ozone in the stratosphere except as otherwise provided in subsection (h).

"(b) If a regulation of any substance, practice, process, or activity is in effect under this part in order to prevent or abate any risk to the stratosphere, or ozone in the stratosphere, no State or political subdivision thereof may adopt or attempt to enforce any requirement respecting the control of any such substance, practice, process, or activity to prevent or abate such risk, unless the requirement of the State or political subdivision is identical to the requirement of such regulation. The preceding sentence shall not apply with respect to any law or regulation of any State or political subdivision controlling the use of halocarbons as propellants in aerosol spray containers.".

PREVENTION OF SIGNIFICANT DETERIORATION

SEC. 127. (a) Title I of the Clean Air Act is amended by adding the following new part at the end thereof:

"PART C—PREVENTION OF SIGNIFICANT DETERIORATION OF AIR QUALITY

"PURPOSES

"SEC. 160. The purposes of this part are as follow:

"(1) to protect public health and welfare from any actual or potential adverse effect which in the Administrator's judgment may reasonably be anticipated to occur from air pollution (or from exposures to pollutants in other media, which pollutants originate as emissions to the ambient air), notwithstanding attainment and maintenance of all national ambient air quality standards;

"(2) to preserve, protect, and enhance the air quality in national parks, national wilderness areas, national monuments, national seashores, and other areas of special national

or regional natural, recreational, scenic, or historic value;

"(3) to insure that economic growth will occur in a manner consistent with the preservation of existing clean air resources.

"(4) to assure that emissions from any source in any State will not interfere with any portion of the applicable implementation plan to prevent significant deterioration of air quality for any other State; and

"(5) to assure that any decision to permit increased air pollution in any area to which this section applies is made only after careful evaluation of all the consequences of such a decision and after adequate procedural opportunities for informed public participation in the decisionmaking process.

"PLAN REQUIREMENTS

"SEC. 161. In accordance with the policy of section 101(b)(1), each applicable implementation plan shall contain emission limitations and such other measures as may be necessary, as determined under regulations promulgated under this part, to prevent significant deterioration of air quality in each region (or portion thereof) identified pursuant to section 107(d)(1)(D) or (E).

"INITIAL CLASSIFICATIONS

"SEC. 162. (a) Upon the enactment of this part, all—

"(1) international parks,

"(2) national wilderness areas which exceed 5,000 acres in size,

"(3) national memorial parks which exceed 5,000 acres in size, and

"(4) national parks which exceed six thousand acres in size

and which are in existence on the date of enactment of the Clean Air Act Amendments of 1977, and all areas which were redesignated as class I under regulations promulgated before such date of enactment shall be class I areas and may not be redesignated.

"(b) All areas in such State identified pursuant to section 107(d)(1)(D) or (E) which are not established as class I under subsection (a) shall be class II areas unless redesignated under section 163.

"INCREMENTS AND CEILINGS

"SEC. 163. (a) In the case of sulfur oxides and particulates, each applicable implementation plan shall contain measures assuring that maximum allowable increases over baseline concentrations of, and maximum allowable concentrations of, such pollutant shall not be exceeded. In the case of any maximum allowable increase (except an allowable increase specified under 165(d)(2)(C)(iv)) for a pollutant based on concentrations permitted under national ambient air quality standards for any period other than an annual period, such regulations shall permit such maximum allowable increase to be exceeded during one such period per year.

"(b)(1) For any class I area, the maximum allowable increase of sulfur dioxide and particulate matter over the baseline concentration of such pollutants shall not exceed the following amounts:

"Pollutant	Maximum allowable increase (in micrograms per cubic meter)
Particulate matter:	
Annual geometric mean	5
Twenty-four-hour maximum	10
Sulfur dioxide:	
Annual arithmetic mean	2
Twenty-four-hour maximum	25
Three-hour maximum	25

"(2) For any class II area, the maximum allowable increase of sulfur dioxide and particulate matter over the baseline concentration of such pollutants shall not exceed the following amounts:

"Pollutant	Maximum allowable increase (in micrograms per cubic meter)
Particulate matter:	
Annual geometric mean	19
Twenty-four-hour maximum	37
Sulfur dioxide:	
Annual arithmetic mean	20
Twenty-four-hour maximum	91
Three-hour maximum	512

"(3) For each class III area, the maximum allowable increase in concentrations of sulfur dioxide and particulate matter over the baseline concentration of such pollutants shall not exceed the following amounts.

"Pollutant	Maximum allowable increase (in micrograms per cubic meter)
Particulate matter:	
Annual geometric mean	37
Twenty-four-hour maximum	75
Sulfur dioxide:	
Annual arithmetic mean	40
Twenty-four-hour maximum	182
Three-hour maximum	700

"(4) The maximum allowable concentration of any air pollutant in any area to which this part applies shall not exceed a concentration for such pollutant for each period of exposure equal to—

"(A) the concentration permitted under the national secondary ambient air quality standard, or

"(B) the concentration permitted under the national primary ambient air quality standard,

whichever concentration is lowest for such pollutant for such period of exposure.

"(c)(1) In the case of any State which has a plan approved by the Administrator for purposes of carrying out this part, the Governor of such State may, after notice and opportunity for public hearing, issue orders or promulgate rules providing that for purposes of detemining compliance with the maximum allowable increases in ambient concentrations of an air pollutant, the following concentrations of such pollutant shall not be taken into account:

"(A) concentrations of such pollutant attributable to the increase in emissions from stationary sources which have converted from the use of petroleum products, or natural gas, or both, by reason of an order which is in effect under the provisions of sections 2(a) and (b) of the Energy Supply and Environmental Coordination Act of 1974 (or any subsequent legislation which supersedes such provisions) over the emissions from such sources before the effective date of such order.

"(B) the concentrations of such pollutant attributable to the increase in emissions from stationary sources which have converted from using natural gas by reason of a natural gas curtailment pursuant to a natural gas curtailment plan in effect pursuant to the Federal Power Act over the emissions from such sources before the effective date of such plan.

"(C) concentrations of particulate matter attributable to the increase in emissions from construction or other temporary emission-related activities, and

"(D) the increase in concentrations attributable to new sources outside the United States over the concentrations attributable to existing sources which are included in the baseline concentration determined in accordance with section 169(4).

"(2) No action taken with respect to a source under paragraph (1)(A) or (1)(B) shall apply more than five years after the effective date of the order referred to in paragraph (1)(A) or the plan referred to in paragraph (1)(B), whichever is applicable. If both such order and plan are applicable, no such action shall apply more than five years after the later of such effective dates.

"(3) No action under this subsection shall take effect unless the Governor submits the order or rule providing for such exclusion to the Administrator and the Administrator determines that such order or rule is in compliance with the provisions of this subsection.

AREA REDESIGNATION

"SEC. 164. (a) Except as otherwise provided under subsection (c), a State may redesignate such areas as it deems appropriate as class I areas. The following areas may be redesignated only as class I or II:

"(1) an area which exceeds ten thousand acres in size and is a national monument, a national primitive area, a national preserve, a national recreation area, a national wild and scenic river, national wildlife refuge, a national lakeshore or seashore, and

"(2) a national park or national wilderness area established after the date of enactment of this Act which exceeds ten thousand acres in size.

Any area (other than an area referred to in paragraph (1) or (2) or an area established as class I under section 162(a)) may be redesignated by the State as class III if—

"(A) such redesignation has been specifically approved by the Governor of the State, after consultation with the appropriate Committees of the legislature if it is in session or with the leadership of the legislature if it is not in session (unless State law provides that such redesignation must be specifically approved by State legislation) and if general purpose units of local government representing a majority of the residents of the area so redesignated enact legislation (including for such units of local government resolutions where appropriate) concurring in the State's redesignation;

"(B) such redesignation will not cause, or contribute to, concentrations of any air pollutant which exceed any maximum allowable increase or maximum allowable concentration permitted under the classification of any other area; and

"(C) such redesignation otherwise meets the requirements of this part."

Subparagraph (A) of this paragraph shall not apply to area redesignations by Indian tribes.

"(b)(1)(A) Prior to redesignation of any area under this part, notice shall be afforded and public hearings shall be conducted in areas proposed to be redesignated and in areas which may be affected by the proposed redesignation. Prior to any such public hearing a satisfactory description and analysis of the health, environmental, economic, social, and energy effects of the proposed redesignation shall be prepared and made available for public inspection and prior to any such redesignation, the description and analysis of such effects shall be reviewed and examined by the redesignating authorities.

"(B) Prior to the issuance of notice under subparagraph (A) respecting the redesignation of any area under this subsection, if such area includes any Federal lands, the State shall provide written notice to the appropriate Federal land manager and afford adequate opportunity (but not in excess of 60 days) to confer with the State respecting the intended notice of redesigntaion and to submit written comments and recommendations with respect to such intended notice of redesignation. In redesignating any area under this section with respect to which any Federal land manager has submitted written comments and recommendations, the State shall publish a list of any inconsistency between such redesignation and such recommendations and an explanation of such inconsistency (together with the reasons for making such redesignation against the recommendation of the Federal land manager).

"(C) The Administrator shall promulgate regulations not later than six months after date of enactment of this part, to assure, insofar as practicable, that prior to any public hearing on redesignation of any area, there shall be available for public inspection any specific plans for any new or modified major emitting facility which may be permitted to be constructed and operated only

if the area in question is designated or redesignated as class III.

"(2) The Administrator may disapprove the redesignation of any area only if he finds, after notice and opportunity for public hearing, that such redesignation does not meet the procedural requirements of this section. If any such disapproval occurs, the classification of the area shall be that which was in effect prior to the redesignation which was disapproved.

"(c) Lands within the exterior boundaries of reservations of federally recognized Indian tribes may be redesignated only by the appropriate Indian governing body. Such Indian governing body shall be subject in all respect to the provisions of subsection (e).

"(d) The Federal Land Manager shall review all national monuments, primitive areas, and national preserves, and shall recommend any appropriate areas for redesignation as class I where air quality related values are important attributes of the area. The Federal Land Manager shall report such recommendations, with supporting analysis, to the Congress and the affected States within one year after enactment of this section. The Federal Land Manager shall consult with the appropriate States before making such recommendations.

"(e) If any State affected by the redesignation of area by an Indian tribe or any Indian tribe affected by the redesignation of an area by a State disagrees with such redesignation of any area, or if a permit is proposed to be issued for any new major emitting facility proposed for construction in any State which the Governor of an affected State or governing body of an affected Indian tribe determines will cause or contribute to a cumulative change in air quality in excess of that allowed in this part within the affected State or tribal reservation, the Governor or ruling body may request the Administrator to enter into negotiations with the parties involved to resolve such dispute. If requested by any State or Indian tribe involved, the Administrator shall make a recommendation to resolve the dispute and protect the air quality related values of the lands involved. If the parties involved do not reach agreement, the Administrator shall resolve the dispute and his determination, or the results of agreements reached through other means, shall become part of the applicable plan and shall be enforceable as part of such plan. In resolving such disputes relating to area redesignation, the Administrator shall consider the extent to which the lands involved are of sufficient size to allow effective air quality management or have air quality related values of such an area.

"PRECONSTRUCTION REQUIREMENTS

"SEC. 165. (a) No major emitting facility on which construction is commenced after the date of the enactment of this part may be constructed in any area to which this part applies unless—

"(1) a permit has been issued for such proposed facility in accordance with this part setting forth emission limitations for such facility which conform to the requirements of this part;

"(2) the proposed permit has been subject to a review in accordance with this section, the required analysis has been conducted in accordance with regulations promulgated by the Administrator, and a public hearing has been held with opportunity for interested persons including representatives of the Administrator to appear and submit written or oral presentations on the air quality impact of such source, alternatives thereto, control technology requirements, and other appropriate considerations;

"(3) the owner or operator of such facility demonstrates that emissions from construction or operations of such facility will not cause, or contribute to, air pollution in excess of any (A) maximum allowable increase or maximum allowable concentration for any pollutant in any area to which this part applies more than one time per year, (B) national ambient air quality standard in any air quality control region, or (C) any other applicable emission standard or standard of performance under this Act;

"(4) the proposed facility is subject to the best available control technology for each pollutant subject to regulation under this Act emitted from, or which results from, such facility;

"(5) the provisions of subsection (d) with respect to protection of class I areas have been complied with for such facility;

"(6) there has been an analysis of any air quality impacts projected for the area as a result of growth associated with such facility;

"(7) the person who owns or operates, or proposes to own or operate, a major emitting facility for which a permit is required under this part agrees to conduct such monitoring as may be necessary to determine the effect which emissions from any such facility may have, or is having, on air quality in any area which may be affected by emissions from such source; and

"(8) in the case of a source which proposes to construct in a class III area, emissions from which would cause or contribute to exceeding the maximum allowable increments applicable in a class II area and where no standard under section 111 of this Act has been promulgated subsequent to enactment of the Clean Air Act Amendments of 1977, for such source category, the Administrator has approved the determination of best available technology as set forth in the permit.

"(b) The demonstration pertaining to maximum allowable increases required under subsection (a)(3) shall not apply to maximum allowable increases for class II areas in the case of an expansion or modification of a major emitting facility which is in existence on the date of enactment of the Clean Air Act Amendments of 1977, whose actual allowable emissions of air pollutants after compliance with subsection (a)(4), will be less than fifty tons per year and for which the owner or operator of such facility demonstrates that emissions of particulate matter and sulfur oxides will not contribute to ambient air quality levels in excess of the national secondary ambient air quality standard for either of such pollutants.

"(c) Any completed permit application under section 110 for a major emitting facility in any area to which this part applies shall be granted or denied not later than one year after the date of filing of such completed application.

"(d)(1) Each State shall transmit to the Administrator a copy of each permit application relating to a major emitting facility received by such State and provide notice to the Administrator of every action related to the consideration of such permit.

"(2)(A) The Administrator shall provide notice of the permit application to the Federal Land Manager and the Federal official charged with direct responsibility for management of any lands within a class I area which may be affected by emissions from the proposed facility.

"(B) The Federal Land Manager and the Federal official charged with direct responsibility for management of such lands shall have an affirmative responsibility to protect the air quality related values (including visibility) of any such lands within a class I area and to consider, in consultation with the Administrator, whether a proposed major emitting facility will have an adverse impact on such values.

"(C)(i) In any case where the Federal official charged with direct responsibility for management of any lands within a class I area or the Federal Land Manager of such lands, or the Administrator, or the Governor of an adjacent State containing such a class I area files a notice alleging that emissions from a proposed major emitting facility may cause or contribute to a change in the air quality in such area and identifying the potential adverse impact of such change, a permit shall not be issued unless the owner or operator of such facility demonstrates that emissions of particulate matter and sulfur dioxide will not cause or contribute to concentrations which exceed the maximum allowable increases for a class I area.

"(ii) In any case where the Federal Land Manager demonstrates to the satisfaction of the State that the emissions from such facility will have an adverse impact on the air quality-related values (including visibility) of such lands, notwithstanding the fact that the change in air quality resulting from emissions from such facility will not cause or contribute to concentrations which exceed the maximum allowable increases for a class I area, a permit shall not be issued.

"(iii) In any case where the owner or operator of such facility demonstrates to the satisfaction of the Federal Land Manager, and the Federal Land Manager so certifies, that the emissions from such facility will have have no adverse impact on the air quality related values of such lands (including visibility), notwithstanding the fact that the change in air quality resulting from emissions from such facility will cause or contribute to concentrations, which exceed the maximum allowable increases for class I area, the State may issue a permit.

"(iv) In the case of a permit issued pursuant to clause (ii), such facility shall comply with such emission limitations under such permit as may be necessary to assure that emissions of sulfur oxides and particulates from such sources together with all other sources, will not exceed the following maximum allowable increases over the baseline concentration for such pollutants.

	Maximum allowable increase (in micrograms per cubic meter)
Particulate matter:	
Annual geometric mean	19
Twenty-four hour maximum	37
Sulfur dioxide:	
Annual arithmetic mean	20
Twenty-four hour maximum	91
Three-hour maximum	325

"(D)(i) In any case where the owner or operator of a proposed major emitting facility who has been denied a certification under subparagraph (C)(iii) demonstrates to the satisfaction of the Governor, after notice and public hearing, and the Governor finds, that the facility cannot be constructed in any class I area by reason of any maximum allowable increase for sulfur dioxide for periods of 24 hours or less applicable to such area and, in the case of Federal mandatory class I areas, that a variance under this clause will not adversely affect the air quality related values of the area (including visibility), the Governor, after consideration of the federal land manager's recommendation (if any) and subject to his concurrence, may grant a variance from such maximum allowable increase. If such variance is granted, a permit may be issued to such source pursuant to the requirements of this subparagraph.

"(ii) In any case in which the Governor recommends a variance under this subparagraph in which the Federal land manager does not concur, the recommendations of the Governor and the Federal land manager shall be transmitted to the President. The President may approve the Governor's recommendation if he finds that such variance is in the national interest. No Presidential finding shall be reviewable in any court. The variance shall take effect if the President approves the Governor's recommendations. The President shall approve or disapprove

such recommendation within 90 days after his receipt of the recommendations of the Governor and the Federal land manager.

"(iii) In the case of a permit issued pursuant to this subparagraph, such facility shall comply with such emission limitations under such permit as may be necessary to assure that emissions of sulfur oxides from such source, together with all other sources, will not exceed the otherwise applicable maximum allowable increases for a period of exposure of 24 hours or less on not more than 18 days during any annual period and that during such day such emissions will not exceed the following maximum allowable increases over the baseline concentration for such pollutant:

Maximum allowable increase

[In micrograms per cubic meter]

Period of exposure	*Low terrain areas*	*High terrain areas*
Twenty-four-hour maximum	36	62
Three-hour maximum	130	221

"(e)(1) The review provided for in subsection (a) shall be preceded by an analysis in accordance with regulations of the Administrator, promulgated under this subsection, which may be conducted by the State (or any general purpose unit of local government) or by the major emitting facility applying for such permit, of the ambient air quality at the proposed site and in areas which may be affected by emissions from such facility for each pollutant subject to regulation under this Act which will be emitted from such facility.

"(2) Effective one year after date of enactment of this part, the analysis required by this subsection shall include continuous air quality monitoring data gathered for purposes of determining whether emissions from such facility will exceed the maximum allowable increases or the maximum allowable concentration permitted under this part. Such data shall be gathered over a period of one calendar year preceding the date of application for a permit under this part unless the State, in accordance with regulations promulgated by the Administrator, determines that a complete and adequate analysis for such purposes may be accomplished in a shorter period. The results of such analysis shall be available at the time of the public hearing on the application for such permit.

"(3) The Administrator shall within six months after the date of enactment of this part promulgate regulations respecting the analysis required under this subsection which regulations—

"(A) shall not require the use of any automatic or uniform buffer zone or zones.

"(B) shall require an analysis of the ambient air quality, climate and meteorology, terrain, soils and vegetation, and visibility at the site of the proposed major emitting facility and in the area potentially affected by the emissions from such facility for each pollutant regulated under this Act which will be emitted from, or which results from the construction or operation of, such facility, the size and nature of the proposed facility, the degree of continuous emission reduction which could be achieved by such facility, and such other factors as may be relevant in determining the effect of emissions from a proposed facility on any air quality control region.

"(C) shall require the results of such analysis shall be available at the time of the public hearing on the application for such permit, and

"(D) shall specify with reasonable particularity each air quality model or models to be used under specified sets of conditions for purposes of this part.

Any model or models designated under such regulations may be adjusted upon a determination, after notice and opportunity for public hearing, by the Administrator that such adjustment is necessary to take into account unique terrain or meteorological characteristics of an area potentially affected by emissions from a source applying for a permit required under this part.

"OTHER POLLUTANTS

"SEC. 166. (a) In the case of the pollutants hydrocarbons, carbon monoxide, photochemical oxidants, and nitrogen oxides, the Administrator shall conduct a study and not later than two years after the date of enactment of this part, promulgate regulations to prevent the significant deterioration of air quality which would result from the emissions of such pollutants. In the case of pollutants for which national ambient air quality standards are promulgated after the date of the enactment of this part, he shall promulgate such regulations not more than 2 years after the date of promulgation of such standards.

"(b) Regulations referred to in subsection (a) shall become effective one year after the date of promulgation. Within 21 months after such date of promulgation such plan revision shall be submitted to the Administrator who shall approve or disapprove the plan within 25 months after such date or promulgation in the same manner as required under section 110.

"(c) Such regulations shall provide specific numerical measures against which permit applications may be evaluated, a framework for stimulating improved control technology, protection of air quality values, and fulfill the goals and purposes set forth in section 101 and section 160.

"(d) The regulations of the Administrator under subsection (a) shall provide specific measures at least as effective as the increments established in section 163 to fulfill such goals and purposes, and may contain air quality increments, emission density requirements, or other measures.

"(e) With respect to any air pollutant for which a national ambient air quality standard is established other than sulfur oxides or particulates, an area classification plan shall not be required under this section if the implementation plan adopted by the State and submitted for the Administrator's approval or promulgated by the Administrator under section 110(c) contains other provisions which when considered as a whole, the Administrator finds will carry out the purposes in section 160 at least as effectively as an area classification plan for such pollutant. Such other provisions referred to in the preceding sentence need not require the establishment of maximum allowable increases with respect to such pollutant for any area to which this section applies.

"ENFORCEMENT

"SEC. 167. The Administrator shall, and a State may, take such measures, including issuance of an order, or seeking injunctive relief, as necessary to prevent the construction of a major emitting facility which does not conform to the requirements of this part, or which is proposed to be constructed in any area included in the list promulgated pursuant to paragraph (1)(D) or (E) of subsection (d) of section 107 of this Act and which is not subject to an implementation plan which meets the requirements of this part.

"PERIOD BEFORE PLAN APPROVAL

"SEC. 168. (a) Until such time as an applicable implementation plan is in effect for any area, which plan meets the requirements of this part to prevent significant deterioration of air quality with respect to any air pollutant, applicable regulations under this Act prior to enactment of this part shall remain in effect to prevent significant deterioration of air quality in any such area for any such pollutant except as otherwise provided in subsection (b).

"(b) If any regulation in effect prior to enactment of this part to prevent significant deterioration of air quality would be inconsistent with the requirements of section 162(a), section 163(b) or section 164(a), then such regulations shall be deemed amended so as to conform with such requirements. In the case of a facility on which construction was commenced in accordance with this definition after June 1, 1975, and prior to the enactment of the Clean Air Act Amendments of 1977, the review and permitting of such facility shall be in accordance with the regulations for the prevention of significant deterioration in effect prior to the enactment of the Clean Air Act Amendments of 1977.

"DEFINITIONS

"SEC. 169. For purposes of this part—

"(1) The term 'major emitting facility' means any of the following stationary sources of air pollutants which emit, or have the potential to emit, one hundred tons per year or more of any air pollutant from the following types of stationary sources: fossil-fuel fired steam electric plants of more than two hundred and fifty million British thermal units per hour heat input, coal cleaning plants (thermal dryers), kraft pulp mills, Portland Cement plants, primary zinc smelters, iron and steel mill plants, primary aluminum ore reduction plants, primary copper smelters, municipal incinerators capable of charging more than two hundred and fifty tons of refuse per day, hydrofluoric, sulfuric, and nitric acid plants, petroleum refineries, lime plants, phosphate rock processing plants, coke oven batteries, sulfur recovery plants, carbon black plants (furnace process), primary lead smelters, fuel conversion plants, sintering plants, secondary metal production facilities, chemical process plants, fossil-fuel boilers of more than two hundred and fifty million British thermal units per hour heat input, petroleum storage and transfer facilities with a capacity exceeding three hundred thousand barrels, taconite ore precessing facilities, glass fiber processing plants, charcoal production facilities. Such term also includes any other source with the potential to emit two hundred and fifty tons per year or more of any air pollutant. This term shall not include new or modified facilities which are nonprofit health or education institutions which have been exempted by the State.

"(2)(A) The term 'commenced' as applied to construction of a major omitting facility means that the owner or operator has obtained all necessary preconstruction approvals or permits required by Federal, State, or local air pollution emissions and air quality laws or regulations and either has (i) begun, or caused to begin, a continuous program of physical on-site construction of the facility or (ii) entered into binding agreements or contractual obligations, which cannot be canceled or modified without substantial loss to the owner or operator, to undertake a program of construction of the facility to be completed within a reasonable time.

"(B) The term 'necessary preconstruction approvals or permits' means those permits or approvals, required by the permitting authority as a precondition to undertaking any activity under clauses (i) or (ii) of subparagraph (A) of this paragraph.

"(3) The term 'best available control technology' means an emission limitation based on the maximum degree of reduction of each pollutant subject to regulation under this Act emitted from or which results from any major emitting facility, which the permitting authority, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such facility through application of production processes and available methods, systems, and techniques,

including fuel cleaning or treatment or innovative fuel combustion techniques for control of each such pollutant. In no event shall application of 'best available control technology' result in emissions of any pollutants which will exceed the emissions allowed by any applicable standard established pursuant to section 111 or 112 of this Act.

"(4) The term 'baseline concentration' means, with respect to a pollutant, the ambient concentration levels which exist at the time of the first application for a permit in an area subject to this part, based on air quality data available in the Environmental Protection Agency or a State air pollution control agency and on such monitoring data as the permit applicant is required to submit. Such ambient concentration levels shall take into account all projected emissions in, or which may affect, such area from any major emitting facility on which construction commenced prior to January 6, 1975, but which has not begun operation by the date of the baseline air quality concentration determination. Emissions of sulfur oxides and particulate matter from any major emitting facility on which construction commenced after January 6, 1975, shall not be included in the baseline and shall be counted against the maximum allowable increases in pollutant concentrations established under this part.".

(b) Within one year from the date of enactment of this Act, the Administrator shall report to the Congress on the consequences of that portion of the definition of "major emitting facility" under the amendment made by subsection (a) which applies to facilities with the potential to emit two hundred and fifty tons per year or more. Such study shall examine the type of facilities covered, the air quality benefits of including such facilities, and the administrative aspect of regulating such facilities.

(c) Not later than one year after the date of enactment of this Act, the Administrator shall publish a guidance document to assist the States in carrying out their functions under part C of title I of the Clean Air Act (relating to prevention of significant deterioration of air quality) with respect to pollutants, other than sulfur oxides and particulates, for which national ambient air qualing standards are promulgated. Such guidance document shall include recommended strategies for controlling photochemical oxidants on a regional or multistate basis for the purpose of implementing part C and section 110 of such Act.

(d) Not later than two years after the date of enactment of this Act, the Administrator shall complete a study and report to the Congress on the progress made in carrying out part C of title I of the Clean Air Act (relating to significant deterioration of air quality) and the problems associated with carrying out such section, including recommendations for legislative changes necessary to implement strategies for controlling photochemical oxidants on a regional or multistate basis.

VISIBILITY PROTECTION

SEC. 128. (a) Part C of title I of the Clean Air Act, is amended by adding the following new section after section 168.

"VISIBILITY PROTECTION FOR FEDERAL CLASS I AREAS

"SEC. 169A. (a)(1) Congress hereby declares as a national goal the prevention of any future, and the remedying of any existing, impairment of visibility in mandatory class I Federal areas which impairment results from manmade air pollution.

"(2) Not later than six months after the date of the enactment of this section, the Secretary of the Interior in consultation with other Federal land managers shall review all mandatory class I Federal areas and identify those where visibility is an important value of the area. From time to time the Secretary of the Interior may revise such identifications. Not later than one year after such date of enactment, the Administrator shall, after consultation with the Secretary of the Interior, promulgate a list of mandatory class I Federal areas in which he determines visibility is an important value.

"(3) Not later than eighteen months after the date of enactment of this section, the Administrator shall complete a study and report to Congress on available methods for implementing the national goal set forth in paragraph (1). Such report shall include recommendations for—

"(A) methods for identifying, characterizing, determining, quantifying, and measuring visibility impairment in Federal areas referred to in paragraph (1), and

"(B) modeling techniques (or other methods) for determining the extent to which manmade air pollution may reasonably be anticipated to cause or contribute to such impairment, and

"(C) methods for preventing and remedying such manmade air pollution and resulting visibility impairment.

Such report shall also identify the classes or categories of sources and the types of air pollutants which, alone or in conjunction with other sources or pollutants, may reasonably be anticipated to cause or contribute significantly to impairment of visibility.

"(4) Not later than twenty-four months after the date of enactment of this section, and after notice and public hearing, the Administrator shall promulgate regulations to assure (A) reasonable progress toward meeting the national goal specified in paragraph (1), and (B) compliance with the requirements of this section.

"(b) Regulations under subsection (a)(4) shall—

"(1) provide guidelines to the States; taking into account the recommendations under subsection (a)(3) on appropriate techniques and methods for implementing this section (as provided in subparagraphs (A) through (C) of such subsection (a)(3)), and

"(2) require each applicable implementation plan for a State in which any area listed by the Administrator under subsection (a)(2) is located (or for a State the emissions from which may reasonably be anticipated to cause or contribute to any impairment of visibility in any such area) to contain such emission limits, schedules of compliance and other measures as may be necessary to make reasonable progress toward meeting the national goal specified in subsection (a), including—

"(A) except as otherwise provided pursuant to subsection (c), a requirement that each major stationary source which is in existence on the date of enactment of this section, but which has not been in operation for more than fifteen years as of such date, and which, as determined by the State (or the Administrator in the case of a plan promulgated under section 110(c)) emits any air pollutant which may reasonably be anticipated to cause or contribute to any impairment of visibility in any such area, shall procure, install, and operate, as expeditiously as practicable (and maintain thereafter) the best available retrofit technology, as determined by the State (or the Administrator in the case of a plan promulgated under section 110(c)) for controlling emissions from such source for the purpose of eliminating or reducing any such impairment, and

"(B) a long-term (ten to fifteen years) strategy for making reasonable progress toward meeting the national goal specified in subsection (a).

In the case of a fossil fuel fired generating powerplant having a total generating capacity in excess of 750 megawatts, the emission limitations required under this paragraph shall be determined pursuant to guidelines, promulgated by the Administrator under paragraph (1).

"(c)(1) The Administrator may, by rule, after notice, and opportunity for public hearing, exempt any major stationary source from the requirement of subsection (b)(2)(A), upon his determination that such source does not or will not, by itself or in combination with other sources, emit any air pollutant which may be reasonably be anticipated to cause or contribute to a significant impairmment of visibility in any mandatory class I Federal area.

"(2) Paragraph (1) of this subsection shall not be applicable to any fossil-fuel fired powerplant with total design capacity of 750 megawatts or more, unless the owner or operators of any such plant demonstrates to the satisfaction of the Administrator that such powerplant is located at such distance from all areas listed by the Administrator under subsection (a)(2) that such powerplant does not or will not, by itself or in combination with other sources, emit any air pollutant which may reasonably be anticipated to cause or contribute to significant impairment of visibility in any such area.

"(3) An exemption under this subsection shall be effective only upon concurrence by the appropriate Federal land manager or managers with the Administrator's determination under this subsection.

"(d) Before holding the public hearing on the proposed revision of an applicable implementation plan to meet the requirements of this section, the State (or the Administrator, in the case of a plan promulgated under section 110(c)) shall consult in person with the appropriate Federal land manager or managers and shall include a summary of the conclusions and recommendations of the Federal land managers in the notice to the public.

"(e) In promulgating regulations under this section, the Administrator shall not require the use of any automatic or uniform buffer zone or zones.

"(f) For purposes of section 304(a)(2), the meeting of the national goal specified in subsection (a)(1) by any specific date or dates shall not be considered a 'non-discretionary duty' of the Administrator.

"(g) For the purpose of this section—

"(1) in determining reasonable progress there shall be taken into consideration the costs of compliance, the time necessary for compliance, and the energy and non-air quality environmental impacts of compliance, and the remaining useful life of any existing source subject to such requirements;

"(2) in determining best available retrofit technology the State (or the Administrator in determining emission limitations which reflect such technology) shall take into consideration the costs of compliance, the energy and nonair quality environmental impacts of compliance, any existing pollution control technology in use at the source, the remaining useful life of the source, and the degree of improvement in visibility which may reasonably be anticipated to result from the use of such technology;

"(3) the term 'manmade air pollution' means air pollution which results directly or indirectly from human activities;

"(4) the term 'as expeditiously as practicable' means as expeditiously as practicable but in no event later than five years after the date of approval of a plan revision under this section (or the date of promulgation of such a plan revision in the case of action by the Administrator under section 110(c) for purposes of this section);

"(5) the term 'mandatory class I Federal areas' means Federal areas which may not be designated as other than class I under this part.

"(6) the term 'visibility impairment' and 'impairment of visibility' shall include reduction in visual range and atmospheric discoloration; and

"(7) the term 'major stationary source' means the following types of stationary sources with the potential to emit 250 tons or more of any pollutant: fossil-fuel fired steam electric plants of more than 250 million British thermal units per hour heat input, coal cleaning plants (thermal dryers), kraft pulp mills, Portland Cement plants, primary zinc smelters, iron and steel mill plants, primary aluminum ore reduction plants, primary copper smelters, municipal incinerators capable of charging more than 250 tons of refuse per day, hydrofluoric, sulfuric, and nitric acid plants, petroleum refiners, lime plants, phosphate rock processing plants, coke oven batteries, sulfur recovery plants, carbon black plants (furnace process), primary lead smelters, fuel conversion plants, smeltering plants, secondary metal production facilities, chemical process plants, fossil-fuel boilers of more than 250 million British thermal units per hour heat input, petroleum storage and transfer facilities with a capacity exceeding 300,000 barrels, taconite ore processing facilities, glass fiber processing plants, charcoal production facilities.".

NONATTAINMENT AREAS

SEC. 129. (a) (1) Before July 1, 1979, the interpretative regulation of the Administrator of the Environmental Protection Agency published in 41 Federal Register 55524–30, December 21, 1976, as may be modified by rule of the Administrator, shall apply except that the baseline to be used for determination of appropriate emission offsets under such regulation shall be the applicable implementation plan of the State in effect at the time of application for a permit by a proposed major stationary source (within the meaning of section 302 of the Clean Air Act).

(2) Before July 1, 1979, the requirements of the regulation referred to in paragraph (1) shall be waived by the Administrator with respect to any pollutant if he determines that the State has—

(A) an inventory of emissions of the applicable pollutant for each nonattainment area (as defined in section 171 of the Clean Air Act) that identifies the type, quantity, and source of such pollutant so as to provide information sufficient to demonstrate that the requirements of subparagraph (C) are being met;

(B) an enforceable permit program which—

(i) requires new or modified major stationary sources to meet emission limitations at least as stringent as required under the permit requirements referred to in paragraphs (2) and (3) of section 173 of the Clean Air Act (relating to lowest achievable emission rate and compliance by other sources) and which assures compliance with the annual reduction requirements of subparagraph (C) and

(ii) requires existing sources to achieve such reduction in emissions in the area as may be obtained through the adoption, at a minimum of reasonably available control technology, and

(C) a program which requires reductions in total allowable emissions in the area prior to January 1, 1979, so as to provide for the same level of emission reduction as would result from the application of the regulation referred to in paragraph (1).

The Administrator shall terminate such waiver if in his judgment at the reduction in emissions actually being attained is less than the reduction on which the waiver was conditioned pursuant to subparagraph (C), or if the Administrator determines that the State is no longer in compliance with any requirement of this paragraph. Upon application by the State, the Administrator may reinstate a waiver terminated under the preceding sentence if he is satisfied that such State is in compliance with all requirements of this subsection.

(3) Operating permits may be issued to those applicants who were properly granted construction permits, in accordance with the law and applicable regulations in effect at the time granted, for construction of a new or modified source in areas exceeding national primary air quality standards on or before the date of the enactment of this Act if such construction permits were granted prior to the date of the enactment of this Act and the person issued any such permit is able to demonstrate that the emissions from the source will be within the limitations set forth in such construction permit.

(b) Title I of such Act is amended by adding the following new part at the end thereof:

"PART D—PLAN REQUIREMENTS FOR NONATTAINMENT AREAS

"DEFINITIONS

"SEC. 171. For the purpose of this part and section 110(a)(2)(I)—

"(1) The term 'reasonable further progress' means annual incremental reductions in emissions of the applicable air pollutant (including substantial reductions in the early years following approval or promulgation of plan provisions under this part and section 110(a)(2)(I) and regular reductions thereafter) which are sufficient in the judgment of the Administrator, to provide for attainment of the applicable national ambient air quality standard by the date required in section 172(a).

"(2) The term 'nonattainment area' means, for any air pollutant an area which is shown by monitored data or which is calculated by air quality modeling (or other methods determined by the Administrator to be reliable) to exceed any national ambient air quality standard for such pollutant. Such term includes any area identified under paragraphs (A) through (C) of section 107(d)(1).

"(3) The term 'lowest achievable emission rate' means for any source that rate of emissions which reflects—

"(A) the most stringent emission limitation which is contained in the implementation plan of any State for such class or category of source, unless the owner or operator of the proposed source demonstrates that such limitations are not achievable, or

"(B) the most stringent emission limitation which is achieved in practice by such class or category of source, whichever is more stringent.

In no event shall the application of this term permit a proposed new or modified source to emit any pollutant in excess of the amount allowable under applicable new source standards of performance.

"(4) The terms 'modification' and 'modified' mean the same as the term 'modification' as used in section 111(a)(4) of this Act.

"NONATTAINMENT PLAN PROVISIONS

"SEC. 172. (a)(1) The provisions of an applicable implementation plan for a State relating to attainment and maintenance of national ambient air quality standards in any nonattainment area which are required by section 110(a)(2)(I) as a precondition for the construction or modification of any major stationary source in any such area after July 1, 1979, shall provide for attainment of each such national ambient air quality standard in each such area as expeditiously as practicable, but, in the case of national primary ambient air quality standards, not later than December 31, 1982.

"(2) In the case of the national primary ambient air quality standard for photochemical oxidants or carbon monoxide (or both) if the State demonstrates to the satisfaction of the Administrator (on or before the time required for submission of such plan) that such attainment is not possible in an area with respect to either or both of such pollutants within the period prior to December 31, 1982, despite the implementation of all reasonably available measures, such provisions shall provide for the attainment of the national primary standard for the pollutant (or pollutants) with respect to which such demonstration is made, as expeditiously as practicable but not later than December 31, 1987.

"(b) The plan provisions required by subsection (a) shall—

"(1) be adopted by the State (or promulgated by the Administrator under section 110(c)) after reasonable notice and public hearing;

"(2) provide for the implementation of all reasonably available control measures as expeditiously as practicable;

"(3) require, in the interim, reasonable further progress (as defined in section 171(1)) including such reduction in emissions from existing sources in the area as may be obtained through the adoption, at a minimum, of reasonably available control technology;

"(4) include a comprehensive, accurate, current inventory of actual emissions from all sources (as provided by rule of the Administrator) of each such pollutant for each such area which is revised and resubmitted as frequently as may be necessary to assure that the requirements of paragraph (3) are met and to assess the need for additional reductions to assure attainment of each standard by the date required under paragraph (1);

"(5) expressly identify and quantify the emissions, if any, such pollutant which will be allowed to result from the construction and operation of major new or modified stationary sources for each such area;

"(6) require permits for the construction and operation of new or modified major stationary sources in accordance with section 173 (relating to permit requirements);

"(7) identify and commit the financial and manpower resources necessary to carry out the plan provisions required by this subsection;

"(8) contain emission limitations, schedules of compliance and such other measures as may be necessary to meet the requirements of this section;

"(9) evidence public, local government, and State legislative involvement and consultation in accordance with section 174 (relating to planning procedures) and include (A) an identification and analysis of the air quality, health, welfare, economic, energy, and social effects of the plan provisions required by this subsection and of the alternatives considered by the State, and (B) a summary of the public comment on such analysis;

"(10) include written evidence that the State, the general purpose local government or governments, or a regional agency designated by general purpose local governments for such purpose, have adopted by statute, regulation, ordinance, or other legally enforceable document, the necessary requirements and schedules and timetables for compliance, and are committed to implement and enforce the appropriate elements of the plan;

"(11) in the case of plans which make a demonstration pursuant to paragraph (2) of subsection (a)—

"(A) establish a program which requires, prior to issuance of any permit for construction or modification of a major emitting facility, an analysis of alternative sites, sizes, production processes, and environmental control techniques for such proposed source which demonstrates that benefits of the proposed source significantly outweigh the environmental and social costs imposed as a result of its location, construction, or modification.

"(B) establish a specific schedule for implementation of a vehicle emission control inspection and maintenance program; and

"(C) identify other measures necessary to provide for attainment of the applicable na-

tional ambient air quality standard not later than December 31, 1987.

"(c) In the case of a State plan revision required under the Clean Air Act Amendments of 1977 to be submitted before July 1, 1982, by reason of a demonstration under subsection (a)(2), effective on such date such plan shall contain enforceable measures to assure attainment of the applicable standard not later than July 1, 1987.

"PERMIT REQUIREMENTS

"SEC. 173. The permit program required by section 172(b)(6) shall provide that permits to construct and operate may be issued if—

"(1) the permitting agency determines that—

"(A) by the time the facility is to commence operation, total allowable emissions from existing sources in the region, from new sources which are not major emitting facilities, and from the proposed facility will be sufficiently less than total emissions from existing sources allowed under the implementation plan prior to the application for such permit to construct or modify so as to represent (when considered together with the plan provisions required under section 172) reasonable further progress (as defined in section 171); or

"(B) that emissions of such pollutant resulting from the proposed new or modified major stationary source will not cause or contribute to emissions levels which exceed the allowance permitted for such pollutant for such area from new or modified major stationary sources under section 172(b);

"(2) the proposed source is required to comply with the lowest achievable emission rate; and

"(3) the owner or operator of the proposed new or modified source has demonstrated that all major stationary sources owned or operated by such person (or by any entity controlling, controlled by, or under common control with such person) in such State are subject to emission limitations and are in compliance, or on a schedule for compliance, with all applicable emission limitations and standards under this Act.

Any emission reductions required as a precondition of the issuance of a permit under paragraph (1)(A) shall be legally binding before such permit may be issued.

"PLANNING PROCEDURES

"SEC. 174. (a) Within six months after the enactment of the Clean Air Act Amendments of 1977, for each region in which the national primary ambient air quality standard for carbon monoxide or photochemical oxidants will not be attained by July 1, 1979, the State and elected officials of affected local governments shall jointly determine which elements of a revised implementation plan will be planned for and implemented or enforced by the State and which such elements will be planned for and implemented or enforced by local governments or regional agencies, or any combination of local governments, regional agencies, or the State. Where possible within the time required under this subsection, the implementation plan required by this part shall be prepared by an organization of elected officials of local governments designated by agreement of the local governments in an affected area, and certified by the State for this purpose. Where such an organization has not been designated by agreement within six months after the enactment of the Clean Air Act Amendments of 1977, the Governor (or, in the case of an interstate area, Governors), after consultation with elected officials of local governments, and in accordance with the determination under the first sentence of this subparagraph, shall designate an organization of elected officials of local governments in the affected area or a State agency to prepare such plan. Where feasible, such organization shall be the metropolitan planning organization designated to conduct the continuing, cooperative and comprehensive transportation planning process for the area under section 134 of title 23, United States Code, or the organization responsible for the air quality maintenance planning process under regulations implementing this section, or the organization with both responsibilities.

"(b) The preparation of implementation plan provisions under this part shall be coordinated with the continuing, cooperative, and comprehensive transportation planning process required under section 134 of title 23, United States Code, and the air quality maintenance planning process required under section 110, and such planning processes shall take into account the requirements of this part.

"ENVIRONMENTAL PROTECTION AGENCY GRANTS

"SEC. 175. (a) The Administrator shall make grants to any organization of local elected officials with transportation or air quality maintenance planning responsibilities recognized by the State under section 174(a) for payment of the reasonable costs of developing a p'an revision under this part.

"(b) The amount granted to any organization under subsection (a) shall be 100 percent of any additional costs of developing a plan revision under this part for the first two fiscal years following receipt of the grant under this paragraph, and shall supplement any funds available under Federal law to such organization for transportation or air quality maintenance p'anning. Grants under this section shall not be used for construction.

"LIMITATIONS ON CERTAIN FEDERAL ASSISTANCE

"SEC. 176. (a) The Administrator shall not approve any projects or award any grants authorized by this Act and the Secretary of Transportation shall not approve any projects or award any grants under title 23, United States Code, other than for safety, mass transit, or transportation improvement projects related to air quality improvement or maintenance, in any air quality control region—

"(1) in which any primary ambient air quality standard has not been attained,

"(2) where transportation control measures are necessary for the attainment of such standard, and

"(3) where the Administrator finds after July 1, 1979, that the Governor has not submitted an implementation plan which considers each of the elements required by section 172 or that reasonable efforts toward submitting such an implementation plan are not being made (or, after July 1, 1982, in the case of an implementation plan revision required under section 172 to be submitted before July 1, 1982).

"(b) In any area in which the State or, as the case may be, the general purpose local government or governments or any regional agency designated by such general purpose local governments for such purpose, is not implementing any requirement of an approved or promulgated plan under section 110, including any requirement for a revised implementation plan under this part, the Administrator shall not make any grants under this Act.

"(c) No department, agency, or instrumentality of the Federal Government shall (1) engage in, (2) support in any way or provide financial assistance for, (3) license or permit, or (4) approve, any activity which does not conform to a plan after it has been approved or promulgated under section 110. No metropolitan planning organization designated under section 134 of title 23, United States Code, shall give its approval to any project, program, or plan which does not conform to a plan approved or promulgated under section 110. The assurance of conformity to such a plan shall be an affirmative responsibility of the head of such department, agency, or instrumentality.

"(d) Each department, agency, or instrumentality of the Federal Government having authority to conduct or support any program with air-quality related transportation consequences shall give priority in the exercise of such authority, consistent with statutory requirements for allocation among States or other jurisdictions, to the implementation of those portions of plans prepared under this section to achieve and maintain the national primary ambient air quality standard. This paragraph extends to, but it not limited to, authority exercised under the Urban Mass Transportation Act, title 23 of the United States Code, and the Housing and Urban Development Act.

"NEW MOTOR VEHICLE EMISSION STANDARDS IN NONATTAINMENT AREAS

"SEC. 177. Notwithstanding section 209(a), any State which has plan provisions approved under this part may adopt and enforce for any model year standards relating to control of emissions from new motor vehicles or new motor vehicle engines and take such other actions as are referred to in section 209(a) respecting such vehicles if—

"(1) such standards are identical to the California standards for which a waiver has been granted for such model year, and

"(2) California and such State adopt such standards at least two years before commencement of such model year (as determined by regulations of the Administrator.)

"GUIDANCE DOCUMENTS

"SEC. 178. The Administrator shall issue guidance documents under section 108 for purposes of assisting States in implementing requirements of this part respecting the lowest achievable emission rate. Such a document shall be published not later than nine months after the date of enactment of this part and shall be revised at least every two years thereafter."

(c) Notwithstanding the requirements of section 406(d)(2) (relating to date required for submission of certain implementation plan revisions), for purposes of section 110(a)(2) of the Clean Air Act, each State in which there is any nonattainment area (as defined in subpart D of the Clean Air Act) shall adopt and submit an implementation plan revision which meets the requirements of section 101(a)(2)(I) and subpart D of the Clean Air Act not later than January 1, 1979. In the case of any such State plan revision adopted and submitted before such date which has made the demonstration required under section 172(a)(2) of the Clean Air Act (respecting impossibility of attainment before 1983), such State shall adopt and submit to the Administrator a plan revision before July 1, 1982, which meets the requirements of section 172(b) and (c) of such Act.

LIGHT-DUTY MOTOR VEHICLE EMISSIONS

SEC. 201. (a) Subparagraph (A) of section 202(b)(1) of the Clean Air Act is amended to read as follows:

"(A) The regulations under subsection (a) applicable to emissions of carbon monoxide and hydrocarbons from light-duty vehicles and engines manufactured during model years 1977 through 1979 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.5 grams per vehicle mile of hydrocarbons and 15.0 grams per vehicle mile of carbon monoxide. The regulation under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during the model year 1980 shall contain standards which provide that such emissions may not exceed 7.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of hydrocarbons from light-duty vehicles and engines manufactured during or after model year 1980 shall contain standards which require a reduction of at least 90 percent from emissions of such pollutant allowable under the standards under this section applicable

to light-duty vehicles and engines manufactured in model year 1970. Unless waived as provided in paragraph (5), regulations under subsection (a) applicable to emissions of carbon monoxide from light-duty vehicles and engines manufactured during or after the model year 1981 shall contain standards which require a reduction of at least 90 percent from emissions of such pollutant allowable under the standards under this section applicable to light-duty vehicles and engines manufactured in model year 1970.".

(b) Subparagraph (B) of section 202(b)(1) of such Act is amended to read as follows:

"(B) The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during model years 1977 through 1980 shall contain standards which provide that such emissions from such vehicles and engines may not exceed 2.0 grams per vehicle mile. The regulations under subsection (a) applicable to emissions of oxides of nitrogen from light-duty vehicles and engines manufactured during the model year 1981 and thereafter shall contain standards which provide that such emissions from such vehicles and engines may not exceed 1.0 gram per vehicle mile. The Administrator shall prescribe standards in lieu of those required by the preceding sentence, which provide that emissions of oxides of nitrogen may not exceed 2.0 grams per vehicle mile for any light-duty vehicle manufactured during model years 1981 and 1982 by any manufacturer whose production, by corporate identity, for model year 1976 was less than 300,000 light-duty motor vehicles worldwide if the Administrator determines that—

"(i) the ability of such manufacturer to meet emission standards in the 1975 and subsequent model years was, and is, primarily dependent upon technology developed by United States manufacturers and purchased from such manufacturers; and

"(ii) such manufacturer lacks the financial resources and technological ability to develop such technology.".

(c) Section 202(b) of such Act is amended by striking out paragraph (5) thereof and substituting the following:

"(5)(A) At any time after August 31, 1978, any manufacturer may file an application requesting the waiver for model years 1981 and 1982 of the effective date of the emission standard required by paragraph (1)(A) for carbon monoxide applicable to any model (as determined by the Administrator) of light-duty motor vehicles and engines manufactured in such model years. The Administrator shall make his determination with respect to any such application within 60 days after such application is filed with respect to such model. If he determines, in accordance with the provisions of this paragraph, that such waiver should be granted, he shall simultaneously with such determination prescribe by regulation emission standards which shall apply (in lieu of the standards required to be prescribed by paragraph (2)(A) of this subsection) to emissions of carbon monoxide from such class or category of vehicles or engines manufactured during model years 1981 and 1982.

"(B) Any standards prescribed under this paragraph shall not permit emissions of carbon monoxide from vehicles and engines to which such waiver applies to exceed 7.0 grams per vehicle per mile.

"(C) Within 60 days after receipt of the application for any such waiver and after public hearing, the Administrator shall issue a decision granting or refusing such waiver. The Administrator may grant such waiver if he finds that protection of the public health does not require attainment of such 90 percent reduction for carbon monoxide for the model years to which such waiver applies in the case of such vehicles and engines and if he determines that—

"(i) such waiver is essential to the public interest or the public health and welfare of the United States;

"(ii) all good faith efforts have been made to meet the standards established by this subsection;

"(iii) the applicant has established that effective control technology, processes, operating methods, or other alternatives are not available or have not been available with respect to the model in question for a sufficient period of time to achieve compliance prior to the effective date of such standards, taking into consideration costs, driveability, and fuel economy; and

"(iv) studies and investigations of the National Academy of Sciences conducted pursuant to subsection (c) and other information available to him has not indicated that technology, processes, or other alternatives are available (within the meaning of clause (iii)) to meet such standards.

"(6)(A) Upon the petition of any manufacturer, the Administrator, after notice and opportunity for public hearing, may waive the standard required under subparagraph (B) of paragraph (1) to not exceed 1.5 grams of oxides of nitrogen per vehicle mile for any class or category of light-duty vehicles or engines manufactured by such manufacturer during any period of up to four model years beginning after the model year 1980 if the manufacturer demonstrates that such waiver is necessary to permit the use of an innovative power train technology, or innovative emission control device or system, in such class or category of vehicles or engines and that such technology or system was not utilized by more than 1 percent of the light-duty vehicles sold in the United States in the 1975 model year. Such waiver may be granted only if the Administrator determines—

"(i) that such waiver would not endanger public health,

"(ii) that there is a substantial likelihood that the vehicles or engines will be able to comply with the applicable standard under this section at the expiration of the waiver, and

"(iii) that the technology or system has a potential for long-term air quality benefit and has the potential to meet or exceed the average fuel economy standard applicable under the Energy Policy and Conservation Act upon the expiration of the waiver.

No waiver under this subparagraph granted to any manufacturer shall apply to more than 5 percent of such manufacturer's production or 50,000 vehicles or engines, whichever is greater.

"(B) Upon the petition of any manufacturer, the Administrator, after notice and opportunity for public hearing, may waive the standard required under subparagraph (B) of paragraph (1) to not to exceed 1.5 grams of oxides of nitrogen per vehicle mile for any class or category of light-duty vehicles and engines manufactured by such manufacturer during the four model year period beginning with the model year 1981 if the manufacturer can show that such waiver is necessary to permit the use of diesel engine technology in such class or category of vehicles or engines. Such waiver may be granted if the Administrator determines—

"(i) that such waiver will not endanger public health.

"(ii) that such waiver will result in significant fuel savings at least equal to the fuel economy standard applicable in each year under the Energy Policy and Conservation Act, and

"(iii) that the technology has a potential for long-term air quality benefit and has the potential to meet or exceed the average fuel economy standard applicable under the Energy Policy and Conservation Act at the expiration of the waiver.".

STUDIES AND RESEARCH OBJECTIVE FOR OXIDES OF NITROGEN

SEC. 202. (a) The Administrator of the Environmental Protection Agency shall conduct a study of the public health implications of attaining an emission standard on oxides of nitrogen from light duty vehicles of 0.4 gram per vehicle mile, the cost and technological capability of attaining such standard, and the need for such a standard to protect public health or welfare. The Administrator shall submit a report of such study to the Congress, together with recommendations not later than July 1, 1980.

(b) Section 202(b) of the Clean Air Act is amended by adding a new paragraph (7) as follows:

"(7) The Congress hereby declares and establishes as a research objective, the development of propulsion systems and emission control technology to achieve standards which represent a reduction of at least 90 per centum from the average emissions of oxides of nitrogen actually measured from light duty motor vehicles manufactured in model year 1971 not subject to any Federal or State emission standard for oxides of nitrogen. The Administrator shall, by regulations promulgated within one hundred and eighty days after enactment of the Clean Air Act Amendments of 1977, require each manufacturer whose sales represent at least 0.5 per centum of light duty motor vehicle sales in the United States, to build and, on a regular basis, demonstrate the operation of light duty motor vehicles that meet this research objective, in addition to any other applicable standards or requirements for other pollutants under this Act. Such demonstration vehicles shall be submitted to the Administrator no later than the end of model year 1978 and in each model year thereafter. Such demonstration shall, in accordance with applicable regulations, to the greatest extent possible, (A) be designed to encourage the development of new powerplant and emission control technologies that are fuel efficient, (B) assure that the demonstration vehicles are or could reasonably be expected to be within the productive capability of the manufacturers, and (C) assure the utilization of optimum engine, fuel, and emission control systems.".

STUDY AND REPORT OF FUEL CONSUMPTION

SEC. 203. (a) Following each motor vehicle model year, the Administrator of the Environmental Protection Agency shall report to the Congress respecting the motor vehicle fuel consumption associated with the standards applicable for the immediately preceding model year.

(b) The Secretary of Transportation and the Secretary of Energy shall each submit to Congress, as promptly as practicable following submission by the Administrator of the fuel consumption report referred to in subsection (a), separate reports respecting such fuel consumption.

STATE GRANTS

SEC. 204. Section 210 of such Act is amended by adding the following at the end thereof: "Grants may be made under this section by way of reimbursement in any case in which amounts have been expended by the State before the date on which any such grant was made.".

COST OF CERTAIN EMISSION CONTROL PARTS

SEC. 205. Section 207(a) of the Clean Air Act is amended by adding the following new sentences at the end thereof: "The cost of any part, device, or component of any light-duty vehicle that is designed for emission control and which in the instructions issued pursuant to subsection (c)(3) of this section is scheduled for replacement during the useful life of the vehicle in order to maintain compliance with regulations under section 202 of this Act, the failure of which shall not interfere with the normal performance of the vehicle, and the expected retail price of which, including installation costs, is greater than 2 per cent of the suggested retail price of such vehicle, shall be borne or reimbursed at the time of replacement by the vehicle manufacturer and such replacement shall be provided without cost to the ulti-

mate purchaser, subsequent purchaser, or dealer. The term 'designed for emission control' as used in the preceding sentence means a catalytic converter, thermal reactor, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions (not including those vehicle components which were in general use prior to model year 1968 and the primary function of which is not related to emission control).".

WARRANTIES

SEC. 206. (a) Section 203(a)(4) of the Clean Air Act is amended by striking "or" at the end of subparagraph (A), by striking the period at the end of subparagraph (B) and inserting a comma and by adding the following new subparagraphs:

"(C) except as provided in subsection (c)(3) of section 207, to provide directly or indirectly in any communication to the ultimate purchaser or any subsequent purchaser that the coverage of any warranty under this Act is conditioned upon use of any part, component, or system manufactured by such manufacturer or any person acting for such manufacturer or under his control, or conditioned upon service performed by any such person, or

"(D) to fail or refuse to comply with the terms and conditions of the warranty under section 207 (a) or (b) with respect to any vehicle, or to fail or refuse to comply with any requirement under subsection (b)(5) or (b)(6) of section 207.".

CALIFORNIA WAIVER

SEC. 207. Section 209(b) of the Clean Air Act is amended to read as follows:

"(b)(1) The Administrator shall, after notice and opportunity for public hearing, waive application of this section to any State which has adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicle engines prior to March 30, 1966, if the State determines that the State standards will be, in the aggregate, at least as protective of public health and welfare as applicable Federal standards. No such waiver shall be granted if the Administrator finds that—

"(A) the determinations of the State is arbitrary and capricious,

"(B) such State does not need such State standards to meet compelling and extrordinary conditions, or

"(C) such State standards and accompanying enforcement procedures are not consistent with section 202(a) of this part.

"(2) If each State standard is at least as stringent as the comparable applicable Federal standard, such State standards shall be deemed to be at least as protective of health and welfare as such Federal standards for purposes of paragraph (1).

"(3) In the case of any new motor vehicle or new motor vehicle engine to which State standards apply pursuant to a waiver granted under paragraph (1), compliance with such State standards shall be treated as compliance with applicable Federal standards for purposes of this title.".

MAINTENANCE INSTRUCTIONS

SEC. 208. Paragraph (3) of subsection (c) of section 207 of the Clean Air Act is amended to read as follows:

"(3)(A) The manufacturer shall furnish with each new motor vehicle or motor vehicle engine written instructions for the proper maintenance and use of the vehicle or engine by the ultimate purchaser and such instructions shall correspond to regulations which the Administrator shall promulgate. The manufacturer shall provide in boldface type on the first page of the written maintenance instructions notice that maintenance, replacement, or repair of the emission control devices and systems may be performed by any automotive repair establishment or individual using any automotive part which has been certified as provided in subsection (a)(2).

"(B) The instruction under subparagraph (A) of this paragraph shall not include any condition on the ultimate purchaser's using, in connection with such vehicle or engine, any component or service (other than a component or service provided without charge under the terms of the purchase agreement) which is identified by brand, trade, or corporate name; or directly or indirectly distinguishing between service performed by the franchised dealers of such manufacturer or any other service establishments with which such manufacturer has a commercial relationship, and service performed by independent automotive repair facilities with which such manufacturer has no commercial relationship; except that the prohibition of this subsection may be waived by the Administrator if—

"(i) the manufacturer satisfies the Administrator that the vehicle or engine will function properly only if the component or service so identified is used in connection with such vehicle or engine, and

"(ii) the Administrator finds that such a waiver is in the public interest.

"(C) In addition, the manufacturer shall indicate by means of a label or tag permanently affixed to such vehicle or engine that such vehicle or engine is covered by a certificate of conformity issued for the purpose of assuring achievement of emissions standards prescribed under section 202 of this Act. Such label or tag shall contain such other information relating to control of motor vehicle emissions as the Administrator shall prescribe by regulation.".

WARRANTIES AND MOTOR VEHICLE PARTS CERTIFICATION

SEC. 209. (a) Section 207(b)(2) of the Clean Air Act is amended by adding the following at the end thereof: "No such warranty shall be invalid on the basis of any part used in the maintenance or repair of a vehicle or engine if such part was certified as provided under subsection (a)(2).".

(b) Section 207(a) of such Act is amended by striking out "(1)" and "(2)" and inserting in lieu thereof "(A)" and "(B)" respectively, by inserting "(1)" and "(a)" and by adding the following new paragraph at the end thereof:

"(2) In the case of a motor vehicle part or motor vehicle engine part, the manufacturer or rebuilder of such part may certify that use of such part will not result in a failure of the vehicle or engine to comply with emission standards promulgated under section 202. Such certification shall be made only under such regulations as may be promulgated by the Administrator to carry out the purposes of subsection (b). The Administrator shall promulgate such regulations no later than two years following the date of the enactment of this paragraph.".

(c) Section 207(b) of such Act is amended by adding the following at the end thereof: "For purposes of the warranty under this subsection, for the period after 24 months or 24,000 miles (whichever first occurs) the term 'emission control device or system' means a catalytic converter, thermal reactor, or other component installed on or in a vehicle for the sole or primary purpose of reducing vehicle emissions. Such term shall not include those vehicle components which were in general use prior to model year 1968.".

REPAIR AT OWNER'S PLACE OF CHOOSING

SEC. 210. Section 207 of the Clean Air Act is amended by adding the following new subsection:

"(g) For the purposes of this section, the owner of any motor vehicle or motor vehicle engine warranted under this section is responsible in the proper maintenance of such vehicle or engine to replace and to maintain, at his expense at any service establishment or facility of his choosing, such items as spark plugs, points, condensers, and any other part, item, or device related to emission control (but not designed for emission control under the terms of the last three sentences of section 207(a)(1)), unless such part, item, or device is covered by any warranty not mandated by this Act.".

HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

SEC. 211. (a) Section 203(a) of the Clean Air Act is amended by adding the following at the end thereof: "No action with respect to any element of design referred to in paragraph (3) (including any adjustment or alteration of such element) shall be treated as a prohibited Act under such paragraph (3) if such action is in accordance with section 215".

(b) Part A of title II of such Act is amended by inserting the following new section after section 214:

HIGH ALTITUDE PERFORMANCE ADJUSTMENTS

"SEC. 215. (a)(1) Any action taken with respect to any element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title (including any alteration or adjustment of such element), shall be treated as not in violation of section 203(a) if such action is performed in accordance with high altitude adjustment instructions provided by the manufacturer under subsection (b) and approved by the Administrator.

"(2) If the Administrator finds that adjustments or modifications made pursuant to instructions of the manufacturer under paragraph (1) will not insure emission control performance with respect to each standard under section 202 at least equivalent to that which would result if no such adjustments or modifications were made, he shall disapprove such instructions. Such finding shall be based upon minimum engineering evaluations consistent with good engineering practice.

"(b)(1) Instructions respecting each class or category of vehicles or engines to which this title applies providing for such vehicle and engine adjustments and modifications as may be necessary to insure emission control performance at different altitudes shall be submitted by the manufacturer to the Administrator pursuant to regulations promulgated by the Administrator.

"(2) Any knowing violation by a manufacturer of requirements of the Administrator under paragraph (1) shall be treated as a violation by such manufacturer of section 203(a)(3) for purposes of the penalties contained in section 205.

"(3) Such instructions shall provide, in addition to other adjustments, for adjustments for vehicles moving from high altitudes areas to low altitude areas after the initial registration of such vehicles.

"(c) No instructions under this section respecting adjustments or modifications may require the use of any manufacturer parts (as defined in section 203(a)) unless the manufacturer demonstrates to the satisfaction of the Administrator that the use of such manufacturer parts is necessary to insure emission control performance.

"(d) Before January 1, 1981 the authority provided by this section shall be available in any high altitude State (as determined under regulations of the Administrator under regulations promulgated before the date of the enactment of this Act) but after December 31, 1981, such authority shall be available only in any such State in which an inspection and maintenance program for the testing of motor vehicle emissions has been instituted for the portions of the State where any national ambient air quality standard for auto-related pollutants has not been attained."

DEALER CERTIFICATION

SEC. 212. Section 207 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

"(g)(1) Upon the sale of each new light-duty motor vehicle by a dealer, the dealer shall furnish to the purchaser a certificate that such motor vehicle conforms to the applicable regulations under section 202, including notice of the purchaser's rights under paragraph (2).

"(2) If at any time during the period for which the warranty applies under subsection (b), a motor vehicle fails to conform to the applicable regulations under section 202 as determined and subsection (b) of this section, such nonconformity shall be remedied by the manufacturer at the cost of the manufacturer pursuant to such warranty as provided in section 207(b)(2) (without regard to subparagraph (C) thereof)."

HIGH ALTITUDE REGULATIONS

SEC. 213. (a) Section 206 of the Clean Air Act is amended by adding the following new subsection:

"(f)(1) All light duty vehicles and engines manufactured during or after model year 1984 shall comply with the requirements of section 202 of this Act regardless of the altitude at which they are sold.

"(2) By October 1, 1978, the Administrator shall report to the Congress on the economic impact and technological feasibility of the requirements found in subparagraph (1) of this subsection. The report is also to evaluate the technological feasibility and the health consequences of separate proportional emission standards for light duty vehicles and engines in high altitude areas that would reflect a comparable percentage of reduction in emissions to that achieved by light duty vehicles and engines in low altitude areas.".

(b) Section 202 of such Act is amended by adding the following new subsection at the end thereof:

"(f)(1) The high altitude regulation in effect with respect to model year 1977 motor vehicles shall not apply to the manufacture, distribution, or sale of 1978 and later model year motor vehicles. Any future regulation affecting the sale or distribution of motor vehicles or engines manufactured before the model year 1984 in high altitude areas of the country shall take effect no earlier than model year 1981.

"(2) Any future regulation applicable to high altitude vehicles or engines shall not require a percentage of reduction in the emissions of such vehicles which is greater than the required percentage of reduction in emissions from motor vehicles as set forth in section 202(b). This percentage reduction shall be determined by comparing any proposed high altitude emission standards to high altitude emissions from vehicles manufactured during model year 1970. In no event shall regulations applicable to high altitude vehicles manufactured before the model year 1984 establish a numerical standard which is more stringent than that applicable to vehicles certified under non-high altitude conditions.

"(3) Section 307(d) shall apply to any high altitude regulation referred to in paragraph (2) and before promulgating any such regulation, the Administrator shall consider and make a finding with respect to—

"(A) the economic impact upon consumers, individual high altitude dealers, and the automobile industry of any such regulation, including the economic impact which was experienced as a result of the regulation imposed during model year 1977 with respect to high altitude certification requirements:

"(B) the present and future availability of emission control technology capable of meeting the applicable vehicle and engine emission requirements without reducing model availability; and

"(C) the likelihood that the adoption of such a high altitude regulation will result in any significant improvement in air quality in any area to which it shall apply.".

be used to conform to standards prescribed under this subsection without causing or contributing to such unreasonable risk. The Administrator shall include in the consideration required by this paragraph all relevant information developed pursuant to section 214.

(b) Section 206(a) of such Act is amended by adding at the end thereof the following:

"(3)(A) A certificate of conformity may be issued under this section only if the Administrator determines that the manufacturer (or in the case of a vehicle or engine for import, any person) has established to the satisfaction of the Administrator that any emission control device, system, or element of design installed on, or incorporated in, such vehicle or engine conforms to applicable requirements of section 202(a)(4).

"(B) The Administrator may conduct such tests and may require the manufacturer (or any such person) to conduct such tests and provide such information as is necessary to carry out subparagraph (A) of this paragraph. Such requirements shall include a requirement for prompt reporting of the emission of any unregulated pollutant from a system, device, or element of design if such pollutant was not emitted, or was emitted in significantly lesser amounts, from the vehicle or engine without use of the system, device, or element of design.".

(c)(1) Section 206(b)(2)(A)(i) of such Act is amended by inserting "and with the requirements of section 202(a)(4)" after "conformity was issued".

(2) Section 206(b)(2)(A) of such Act is amended by inserting "and requirements" after "such regulations" in each place it appears.

FILL PIPE STANDARDS

SEC. 215. Section 202(a) of the Clean Act is amended by adding the following new paragraph at the end thereof;

"(5)(A) If the Administrator promulgates final regulations which define the degree of control required and the test procedures by which compliance could be determined for gasoline vapor recovery of uncontrolled emissions from the fueling of motor vehicles, the Administrator shall, after consultation with the Secretary of Transportation with respect to motor vehicle safety, prescribe, by regulation, fill pipe standards for new motor vehicles in order to insure effective connection between such fill pipe and any vapor recovery system which the Administrator determines may be required to comply with such vapor recovery regulations. In promulgating such standards the Administrator shall take into consideration limits on fill pipe diameter, minimum design criteria for nozzle retainer lips, limits on the location of the unleaded fuel restrictors, a minimum access zone surrounding a fill pipe, a minimum fill pipe or nozzle insertion angle, and such other factors as he deems pertinent.

"(B) Regulations prescribing standards under subparagraph (A) shall not become effective until the introduction of the model year for which it would be feasible to implement such standards, taking into consideration the restraints of an adequate lead-time for design and production.

"(C) Nothing in subparagraph (A) shall (i) prevent the Administrator from specifying different nozzle and fill neck sizes for gasoline with additives and gasoline without additives or (ii) permit the Administrator to require a specific location, contiguation, modeling, or styling of the motor vehicle body with respect to the fuel tank fill neck or fill nozzle clearance envelope.

"(D) For the purpose of this paragraph, the term 'fill pipe' shall include the fuel tank fill pipe, fill neck, fill inlet, and closure."

ONBOARD HYDROCARBON TECHNOLOGY

SEC. 216. Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(6) The Administrator shall determine the feasibility and desirability of requiring new motor vehicles to utilize onboard hydrocarbon control technology which would avoid the necessity of gasoline vapor recovery of uncontrolled emissions emanating from the fueling of motor vehicles. The Administrator shall compare the costs and effectiveness of such technology to that of implementing and maintaining vapor recovery systems (taking into consideration such factors as fuel economy, economic costs of such technology, administrative burdens, and equitable distribution of costs). If the Administrator finds that it is feasible and desirable to employ such technology, he shall, after consultation with the Secretary of Transportation with respect to motor vehicle safety, prescribe, by regulation, standards requiring the use of onboard hydrocarbon technology which shall not become effective until the introduction to the model year for which it would be feasible to implement such standards, taking into consideration compliance costs and the restraints of an adequate lead time for design and production.".

TEST PROCEDURES FOR MEASURING EVAPORATIVE EMISSIONS

SEC. 217. Section 202(b)(1) of the Clean Air Act is amended by adding a new subparagraph (C) as follows:

"(C) Effective with respect to vehicles and engines manufactured after model year 1978 (or in the case of heavy-duty vehicles or engines, such later model year as the Administrator determines is the earliest feasible model year), the test procedure promulgated under paragraph (2) for measurement of evaporative emissions of hydrocarbons shall require that such emissions be measured from the vehicle or engine as a whole. Regulations to carry out this subparagraph shall be promulgated not later than two hundred and seventy days after date of enactment of this subparagraph."

CERTAIN MINOR AND TECHNICAL AND CONFORMING AMENDMENTS

SEC. . (a) Section 203(a)(2) of the Clean Air Act is amended by inserting the following before the semicolon: "or for any person to fail or refuse to permit entry, testing, or inspection authorized under section 203(e)".

(b) Section 204(a) of such Act is amended by striking out "paragraph (1), (2), (3), or (4) of".

(c) Section 302(d) of such Act is amended by inserting before the period at the end thereof the following: "and includes the Commonwealth of the Northern Mariana Islands".

(d) Section 203(b)(3) of such Act is amended by striking out "subsection (a)" the second time it appears and inserting in lieu thereof "section 202" and by striking out "country of export" in each place it appears and inserting "country which is to receive such vehicle or engine".

TAMPERING

SEC. 219. (a) Section 203(a)(3) of the Clean Air Act is amended by inserting "(A)" after "(3)" and by adding the following new subparagraph (B) at the end thereof;

"(B) for any person engaged in the business of repairing, servicing, selling, leasing, or trading motor vehicles or motor vehicle engines, or who operates a fleet of motor vehicles, knowingly to remove or render inoperative any device or element of design installed on or in a motor vehicle or motor vehicle engine in compliance with regulations under this title following its sale and delivery to the ultimate purchaser, or".

(b) Section 203(a) of such Act is amended by adding the following at the end thereof:

"Nothing in paragraph (3) shall be construed to require the use of manufacturer parts in maintaining or repairing any motor vehicle or motor vehicle engine. For the purposes of the preceding sentence, the term 'manufacturer parts' means, with respect to a motor vehicle engine, parts produced or sold by the manufacturer of the motor vehicle or motor vehicle engine.".

(c) Section 205 of such Act is amended to read as follows:

"PENALTIES

"SEC. 205. Any person who violates paragraph (1), (2), or (4) of section 203(a) or any manufacturer, dealer, or other person who violates paragraph (3)(A) of section 203(a) shall be subject to a civil penalty of not more than $10,000. Any person who violates paragraph (3)(B) of such section 203(a) shall be subject to a civil penalty of not more than $2,500. Any such violation with respect to paragraph (1), (3), or (4) of section 203(a) shall constitute a separate offense with respect to each motor vehicle or motor vehicle engine.".

TESTING BY SMALL MANUFACTURERS

SEC. 220. Section 206(a)(1) of the Clean Air Act is amended by adding at the end thereof the following: "In the case of any manufacturer of vehicles or vehicle engines whose projected sales in the United States for any model year (as determined by the Administrator) will not exceed three hundred, the regulations prescribed by the Administrator concerning testing by the manufacturer for purposes of determining compliance with regulations under section 202 for the useful life of the vehicle or engine shall not require operation of any vehicle or engine manufactured during such model year for more than five thousand miles or one hundred and sixty hours, respectively, but the Administrator shall apply such adjustment factors as he deems appropriate to assure that each such vehicle or engine will comply during its useful life (as determined under section 202(d)) with the regulations prescribed under section 202 of this Act.".

PARTS STANDARDS; PREEMPTION OF STATE LAW

SEC. 221. Section 209 of the Clean Air Act (relating to State standards) is amended by redesignating subsection (c) as (d) and by inserting after subsection (b) the following new subsection:

"(c)(1) Whenever a regulation with respect to any motor vehicle part or motor vehicle engine part is in effect under section 207(a)(2), no State or political subdivision thereof shall adopt or attempt to enforce any standard or any requirement of certification, inspection, or approval which relates to motor vehicle emissions and is applicable to the same aspect of such part. The preceding sentence shall not apply in the case of a State with respect to which a waiver is in effect under subsection (b).".

TESTING OF FUELS AND FUEL ADDITIVES

SEC. 221. (a) Section 211 of the Clean Air Act is amended by adding the following new subsections at the end thereof:

"(e)(1) Not later than one year after the date of enactment of this subsection and after notice and opportunity for a public hearing, the Administrator shall promulgate regulations which implement the authority under subsection (b)(2)(A) and (B) with respect to each fuel or fuel additive which is registered on the date of promulgation of such regulations and with respect to each fuel or fuel additive for which an application for registration is filed thereafter.

"(2) Regulations under subsection (b) to carry out this subsection shall require that the requisite information be provided to the Administrator by each such manufacturer—

"(A) prior to registration, in the case of any fuel or fuel additive which is not registered on the date of promulgation of such regulations; or

"(B) not later than three years after the date of promulgation of such regulations, in the case of any fuel or fuel additive which is registered on such date.

"(3) In promulgating such regulations, the Administrator may—

"(A) exempt any small business (as defined in such regulations) from or defer or modify the requirements of, such regulations with respect to any such small business;

"(B) provide for cost-sharing with respect to the testing of any fuel or fuel additive which is manufactured or processed by two or more persons or otherwise provide for shared responsibility to meet the requirements of this section without duplication; or

"(C) exempt any person from such regulations with respect to a particular fuel or fuel additive upon a finding that any additional testing of such fuel or fuel additive would be duplicative of adequate existing testing.

"(f)(1) Effective upon March 31, 1977, it shall be unlawful for any manufacturer of any fuel or fuel additive to first introduce into commerce, or to increase the concentration in use of, any fuel or fuel additive for general use in light duty motor vehicles manufactured after model year 1974 which is not substantially similar to any fuel or fuel additive utilized in the certification of any model year 1975, or subsequent model year, vehicle or engine under section 206.

"(2) Effective November 30, 1977, it shall be unlawful for any manufacturer of any fuel to first introduce into commerce any gasoline which contains a concentration of manganese in excess of .0625 grams per gallon of fuel.

"(3) Any manufacturer of any fuel or fuel additive which prior to March 31, 1977, and after January 1, 1974, first introduced into commerce or increased the concentration in use of a fuel or fuel additive that would otherwise have been prohibited under paragraph (1) if introduced on or after March 31, 1977 shall, not later than September 15, 1978, cease to distribute such fuel or fuel additive in commerce. During the period beginning 180 days after the date of the enactment of this subsection and before September 15, 1978, the Administrator shall prohibit or restrict the concentration of any fuel additive which he determines will cause or contribute to the failure of an emission control device or system (over the useful life of any vehicle in which such device or system is used) to achieve compliance by the vehicle with the emission standards with respect to which it has been certified under section 206.

"(4) The Administrator, upon application of any manufacturer of any fuel or fuel additive, may waive the prohibitions established under paragraph (1) or (3) of this subsection if he determines that the applicant has established that such fuel or fuel additive or a specified concentration thereof, and the emission products of such fuel or additive or specified concentration thereof, will not cause or contribute to a failure of any emission control device or system (over the useful life of any vehicle in which such device or system is used) to achieve compliance by the vehicle with the emission standards with respect to which it has been certified pursuant to section 206. If the Administrator has not acted to grant or deny an application under this paragraph within one hundred and eighty days of receipt of such application, the waiver authorized by this paragraph shall be treated as granted.

"(5) No action of the Administrator under this section may be stayed by any court pending judicial review of such action.".

(b) Section 211(d) of such Act is amended by inserting "or (f)" after

SMALL REFINERIES

SEC. 222. Section 211 of the Clean Air Act is amended by adding the following new subsection at the end thereof:

"(g)(1) For the purposes of this subsection:

"(A) The terms 'gasoline' and 'refinery' have the meaning provided under regulations of the Administrator promulgated under this section.

"(B) The term 'small refinery' means a refinery or a portion of a refinery producing gasoline—

"(i) the gasoline producing capacity of which was in operation or under construction at any time during the one-year period immediately preceding October 1, 1976, and

"(ii) which has a crude oil or bona fide feed stock capacity (as determined by the Administrator) of 5,000 barrels per day or less, and

"(iii) which is owned or controlled by a refiner with a total combined crude oil or bona fide feed stock capacity (as determined by the Administrator) of 137,500 barrels per day or less.

"(2) No regulations of the Administrator under this section (or any amendment or revision thereof) respecting the control or prohibition of lead additives in gasoline shall require a small refinery prior to October 1, 1982, to reduce the average lead content per gallon of gasoline refined at such refinery below the applicable amount specified in the table below:

"If the average gasoline production of the small refinery for the immediately preceding calendar year (or, in the case of refineries under construction, half the designed crude oil capacity) was (in barrels per day):	The applicable amount is (in grams per gallon)
5,000 or under	2.65.
5,001 to 10,000	2.15.
10,001 to 15,000	1.65.
15,001 to 20,000	1.30.
20,001 to 25,000	.80.
25,001 or over	as prescribed by the Administrator, but not greater than 0.80.

The Administrator may promulgate such regulations as he deems appropriate with respect to the reduction of the average lead content of gasoline refined by small refineries on and after October 1, 1982, taking into account the experience under the preceding provisions of this paragraph.

"(3) Effective on the date of the enactment of this subsection, the regulations of the Administrator under this section respecting fuel additives (40 CFR part 80) shall be deemed amended to comply with the requirement contained in paragraph (2).

"(4) Nothing in this section shall be construed to preempt the right of any State to take action as permitted by section 211(c)(4) of this Act.".

EMISSION STANDARDS FOR HEAVY DUTY VEHICLES OR ENGINES AND CERTAIN OTHER VEHICLES OR ENGINES

SEC. 223. (a) Section 202(a) of the Clean Air Act is amended by adding the following new paragraph at the end thereof:

"(3)(A)(i) The Administrator shall prescribe regulations under paragraph (1) of this subsection applicable to emissions of carbon monoxide, hydrocarbons, and oxides of nitrogen from classes or categories of heavy-duty vehicles or engines manufactured during and after model year 1979. Such regulations applicable to such pollutants from such classes or categories of vehicles or engines manufactured during model years 1979 through 1982 shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to the cost of applying such technology within the period of time available to manufacturers and to noise, energy, and safety factors associated with the application of such technology.

"(ii) Unless a different standard is temporarily promulgated as provided in subparagraph (B) or unless the standard is changed as provided in subparagraph (E), regulations under paragraph (1) of this subsection applicable to emissions from vehicles or engines manufactured during and after model year—

"(1) 1983, in the case of hydrocarbons and carbon monoxide, shall contain standards which require a reduction of at least 90 per cent, and

"(II) 1985, in the case of oxides of nitrogen, shall contain standards which require a reduction of at least 75 per cent from the average of the actually measured emissions from heavy-duty gasoline-fueled vehicles or engines, or any class or category thereof, manufactured during the baseline model year.

"(iii) The Administrator shall prescribe regulations under paragraph (1) of this subsection applicable to emissions of particulate matter from classes or categories of vehicles manufactured during and after model year 1981 (or during any earlier model year, if practicable). Such regulations shall contain standards which reflect the greatest degree of emission reduction achievable through the application of technology which the Administrator determines will be available for the model year to which such standards apply, giving appropriate consideration to the cost of applying such technology within the period of time available to manufacturers and to noise, energy, and safety factors associated with the application of such technology. Such standards shall be promulgated and shall take effect as expeditiously as practicable taking into account the period necessary for compliance.

"(iv) In establishing classes or categories of vehicles or engines for purposes of regulations under this paragraph, the Administrator may base such classes or categories on gross vehicle weight, horsepower, or such other factors as may be appropriate.

"(v) For the purpose of this paragraph, the term 'baseline model year' means, with respect to any pollutant emitted from any vehicle or engine, or class or category thereof, the model year immediately preceding the model year in which Federal standards applicable to such vehicle or engine, or class or category thereof, first appleid with respect to such pollutant.

"(B) During the period of June 1 through December 31, 1979, and during each period of June 1 through December 31 of each third year after 1979, the Administrator may, after notice and opportunity for a public hearing promulgate regulations revising any standard prescribed as provided in subparagraph (A)(ii)) for any class or category of heavy-duty vehicles or engines. Such standard shall apply only for the period of three model years beginning four model years after the model year in which such revised standard is promulgated. In revising any standard under this subparagraph for any such three model year period, the Administrator shall determine the maximum degree of emission reduction which can be achieved by means reasonably expected to be available for production of such period and shall prescribe a revised emission standard in accordance with such determination. Such revised standard shall require a reduction of emissions from any standard which applies to previous model year.

"(C) Action revising any standard for any period may be taken by the Administrator under subparagraph (B) only if he finds—

"(i) that compliance with the emission standards otherwise applicable for such model year cannot be achieved by technology, processes, operating methods, or other alternatives reasonably expected to be available for production for such model year without increasing cost or decreasing fuel economy to an excessive and unreasonable degree; and

"(ii) the National Academy of Sciences has not, pursuant to its study and investigation under subsection (c), issued a report substantially contrary to the findings of the Administrator under clause (i).

"(D) A report shall be made to the Congress with respect to any standard revised under subparagraph (B) which shall contain—

"(i) a summary of the health effects found, or believed to be associated with, the pollutant covered by such standard,

"(ii) an analysis of the cost-effectiveness of other strategies for attaining and maintaining national ambient air quality standards and carrying out regulations under part C of title I (relating to significant deterioration) in relation to the cost-effectiveness for such purposes of standards which, but for such revision, would apply.

"(iii) a summary of the research and development efforts and progress being made by each manufacturer for purposes of meeting the standards promulgated as provided in subparagraph (A)(ii) or, if applicable, subparagraph (E), and

"(iv) specific findings as to the relative costs of compliance, and relative fuel economy, which may be expected to result from the application for any model year of such revised standard and the application for such model year of the standard, which, but for such revision, would apply.

"(E)(i) The Administrator shall conduct a continuing pollutant-specific study concerning the effects of each air pollutant emitted from heavy-duty vehicles or engines and from other sources of mobile source related pollutants on the public health and welfare. The results of such study shall be published in the Federal Register and reported to the Congress not later than June 1, 1979, and before June 1 of each third year thereafter.

"(ii) On the basis of such study and such information as is available to him (including the studies under section 214), the Administrator may, after notice and opportunity for a public hearing, promulgate regulations under paragraph (1) of this subsection changing any standard prescribed in subparagraph (A)(ii) (or revised under subparagraph (B) or previously changed under this subparagraph). No such changed standard shall apply for any model year before the model year four years after the model year during which regulations containing such changed standard are promulgated.

"(F) For purposes of this paragraph, motorcycles and motorcycle engines shall be treated in the same manner as heavy-duty vehicles and engines (except as otherwise permitted under section 206(f)(1)) unless the Administrator promulgates a rule reclassifying motorcycles as light-duty vehicles within the meaning of this section or unless the Administrator promulgates regulations under subsection (a) applying standards applicable to the emission of air pollutants from motorcycles as a separate class or category. In any case in which such standards are promulgated for such emissions from motorcycles as a separate class or category, the Administrator, in promulgating such standards, shall consider the need to achieve equivalency of emission reductions between motorcycles and other motor vehicles to the maximum extent practicable.".

(b) Section 202(b)(3) of such Act is amended by adding the following new subparagraph at the end thereof:

"(C) The term 'heavy duty vehicle' means a truck, bus, or other vehicle manufactured primarily for use on the public streets, roads, and highways (not including any vehicle operated exclusively on a rail or rails) which has a gross vehicle weight (as determined under regulations promulgated by the Administrator) in excess of six thousand pounds. Such term includes any such vehicle which has special features enabling off-street or off-highway operation and use.".

(c) Section 312 of such Act is amended by inserting "AND STUDIES OF COST-EFFECTIVENESS ANALYSES" at the end of the heading thereof and by adding the following new subsection at the end thereof:

"(c) Not later than January 1, 1979, the Administrator shall study the possibility of increased use of cost-effectiveness analyses in devising strategies for the control of air pollution and shall report its recommendations to the Congress, including any recommendations for revisions in any provision of this Act. Such study shall also include an analysis and report to Congress concerning whether or not existing air pollution control strategies are adequate to achieve the purposes of this Act."

(d) Part A of title II of such Act is amended by redesignating section 214 as section 222 and by inserting after section 213 the following new section:

"STUDY OF PARTICULATE EMISSIONS FROM MOTOR VEHICLES

"SEC. 214. (a)(1) The Administrator shall conduct a study concerning the effects of health and welfare of particulate emissions from motor vehicles or motor vehicle engines to which section 202 applies. Such study shall characterize and quantify such emissions and analyze the relationship of such emissions to various fuels and fuel additives.

"(2) The study shall also include an analysis of particulate emissions from mobile sources which are not related to engine emissions (including, but not limited to tire debris, and asbestos from brake lining).

"(b) The Administrator shall report to the Congress the findings and results of the study conducted under subsection (a) not later than two years after the date of the enactment of the Clean Air Act Amendments of 1977. Such report shall also include recommendations for standards or methods to regulate particulate emissions described in paragraph (2) of subsection (a).".

(e) Section 206 of such Act (relating to compliance testing and certification) is amended by adding the following new subsection at the end thereof.

"(f)(1) In the case of any class or category of heavy-duty vehicles or engines to which a standard promulgated under section 202(a) of this Act applies, except as provided in paragraph (2), a certificate of conformity shall be issued under subsection (a) and shall not be suspended or revoked under subsection (b) for such vehicles or engines manufactured by a manufacturer notwithstanding the failure of such vehicles or engines to meet such standard if such manufacturer pays a nonconformance penalty as provided under regulations promulgated by the Administrator after notice and opportunity for public hearing. In the case of motorcycles to which such a standard applies, such a certificate may be issued notwithstanding such failure if the manufacturer pays such a penalty.

"(2) No certificate of conformity may be issued under paragraph (1) with respect to any class or category of vehicle or engine if the degree by which the manufacturer fails to meet any standard promulgated under section 202(a) with respect to such class or category exceeds the percentage determined under regulations promulgated by the Administrator to be practicable. Such regulations shall require such testing of vehicles or engines being produced as may be necessary to determine the percentage of the classes or categories of vehicles or engines which are not in compliance with the regulations with respect to which a certificate of conformity was issued and shall be promulgated not later than one year after the date of enactment of the Clean Air Act Amendments of 1977.

"(3) The regulations promulgated under paragraph (1) shall, not later than one year after the date of enactment of the Clean Air Act Amendments of 1977, provide for nonconformance penalties in amounts determined under a formula established by the Administrator. Such penalties under such formula—

"(A) may vary from pollutant-to-pollutant:

"(B) may vary by class or category or vehicle or engine;

"(C) shall take into account the extent to which actual emissions of any air pollutant exceed allowable emissions under the standards promulgated under section 202;

"(D) be increased periodically in order to create incentives for the development of production vehicles or engines which achieve the required degree of emission reduction; and

"(E) shall remove any competitive disadvantage to manufacturers whose engines or vehicles achieve the required degree of emission reduction (including any such disadvantage arising from the application of paragraph (4)).

"(4) In any case in which a certificate of conformity has been issued under the subsection, any warranty required under section 207(b)(2) and any action under section 207(c) shall be required to be effective only for the emission levels which the Administrator determines that such certificate was issued and not for the emission levels required under the applicable standard.

"(5) The authorities of section 208(a) shall apply, subject to the conditions of section 208(b), for purposes of this subsection.".

(g) Section 202(d) of such Act is amended by striking out "and" at the end of paragraph (1) thereof; by inserting "(other than motorcycles or motorcycle engines)" after "engines" in paragraph (2) thereof; by striking out the period at the end of paragraph (2) and inserting in lieu thereof "; and"; and by adding a new paragraph (3) to read as follows:

"(3) in the case of any motorcycle or motorcycle engine, be a period of use the Administrator shall determine.".

AIRCRAFT EMISSIONS STANDARDS

SEC. 224. Section 231(c) of the Clean Air Act is amended to read as follows:

"(c) Any regulations in effect under this section on date of enactment of the Clean Air Act Amendments of 1977 or proposed or promulgated thereafter, or amendments thereto, with respect to aircraft shall not apply if disapproved by the President, after notice and opportunity for public hearing, on the basis of a finding by the Secretary of Transportation that any such regulation would create a hazard to aircraft safety. Any such finding shall include a reasonably specific statement of the basis upon which the finding was made.".

CARBON MONOXIDE INTRUSION INTO SUSTAINED USE VEHICLES

SEC. 225. (a) The Administrator, in conjunction with the Secretary of Transportation, shall study the problem of carbon monoxide intrusion into the passenger area of sustained-use motor vehicles. Such study shall include an analysis of the sources and levels of carbon monoxide in the passenger area of such vehicles and a determination of the effects of carbon monoxide upon the passengers. The study shall also review available methods of monitoring and testing for the presence of carbon monoxide and shall analyze the cost and effectiveness of alternative methods of monitoring and testing. The study shall analyze the cost and effectiveness of alternative strategies for attaining and maintaining acceptable levels of carbon monoxide in the passenger area of such vehicles. Within one year the Administrator shall report to the Congress respecting the results of such study.

(b) For the purpose of this section, the term "sustained-use motor vehicle" means any diesel or gasoline fueled motor vehicle (whether light or heavy duty) which, as determined by the Administrator (in conjunction with the Secretary), is normally used and occupied for a sustained, continuous, or extensive period of time, including buses, taxicabs, and police vehicles.

TITLE III—AMENDMENTS RELATING PRIMARILY TO TITLE III OF THE CLEAN AIR ACT

DEFINITIONS

SEC. 301. (a) Section 302 of the Clean Air Act is amended by adding the following new subsections at the end thereof:

"(i) The term 'Federal land manager' means with respect to any lands in the United States the Secretary of the department with authority over such lands.

"(j) Except as otherwise expressly provided, the terms 'major stationary source' and 'major emitting facility' mean any stationary facility or source of air pollutants which directly emits, or has the potential to emit, one hundred tons per year or more of any air pollutant (including any major emitting facility or source of fugitive emissions of any such pollutant, as determined by rule by the Administrator).

"(k) The terms 'emission limitation' and 'emission standard', means a requirement established by the State or the Administrator which limits the quantity, rate, or concentration of emissions of air pollutants on a continuous basis, including any requirement relating to the operation or maintenance of a source to assure continuous emission reduction.

(l) The term 'standard of performance' means a requirement of continuous emission reduction, including any requirement relating to the operation or maintenance of a source to assure continuous emission reduction.

"(m) The term 'means of emission limitation' means a system of continuous emission reduction (including the use of specific technology or fuels with specified pollution characteristics).

"(n) The term 'primary standard attainment date' means the date specified in the applicable implementation plan for the attainment of a national primary ambient air quality standard for any air pollutant.

"(o) The term 'delayed compliance order' means an order issued by the State or by the Administrator to an existing stationary source, postponing the date required under an applicable implementation plan for compliance by such source with any requirement of such plan.

"(p) The term 'schedule and timetable of compliance' means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an emission limitation, other limitation, prohibition, or standard."

(b) Section 302(e) of such Act is amended to read as follows:

"(e) The term 'person' includes an individual corporation, partnership, association, State, municipality, political subdivision of a State, and any agency, department, or instrumentality of the United States and any officer, agent, or employee thereof.".

(c) Section 302(g) of such Act is amended to read as follows:

"(g) The term 'air pollutant' means any air pollution agent or combination of such agents, including any physical, chemical, biological, radioactive (including source material, special nuclear material, and byproduct material) substance or matter which is emitted into or otherwise enters the ambient air.".

EMERGENCY POWERS

SEC. 302. (a) Section 303 of the Clean Air Act is amended by inserting "(a)" after "303" and by adding the following at the end thereof: "If it is not practicable to assure prompt protection of the health of persons solely by commencement of such a civil action, the Administrator may issue such orders as may be necessary to protect the health of persons who are, or may be affected by such pollution source (or sources). Prior to taking any action under this section, the Administrator shall consult with the State and local authorities in order to confirm the correctness of the information on which action proposed to be taken is based and to ascertain the action which such authorities are or will be taking. Such order shall be effective for a period of not more than twenty-four hours unless the Administrator brings an action under the first sentence of this subsection before the expiration of such period. Whenever the Administrator brings such an action within such period, such order shall be effective for a period of forty-eight hours or such longer period as may be authorized by the court pending litigation or thereafter.

"(b) Any person who willfully violates or fails or refuses to comply with any order issued by the Administrator under subsection (a) may, in an action brought in the appropriate United States district court to enforce such order, be fined not more than $5,000 for each day during which such violation occurs or failure to comply continues.".

(b) Section 313 of the Clean Air Act is amended by striking out "and" at the end of clause (9) and adding after clause (10): "and (11)(A) the status of plan provisions developed by States as required under section 110(a)(2)(F)(v), and an accounting of States failing to develop suitable plans; (B) the number of annual incidents of air pollution reaching or exceeding levels determined to present an imminent and substantial endangerment to health (within the meaning of section 303) by location, date, pollution source, and the duration of the emergency; (C) measures taken pursuant to section 110(a)(2)(F)(v), and an evaluation of their effectiveness in reducing pollution, and (D) an accounting of those instances in which an air pollution alert, warning, or emergency is declared as required under regulations of the Administrator and in which no action is taken by either the Administrator, State, or local officials, together with an explanation for the failure to take action".

CITIZEN SUITS

SEC. 303. (a) Section 304(a) of the Clean Air Act is amended—

(1) by striking out the period at the end of paragraph (2) and inserting in lieu thereof ", or"; and

(2) by inserting immediately after paragraph (2) the following new paragraph:

"(3) against any person who proposes to construct or constructs any new major emitting facility without a permit required under part C (relating to significant deterioration of air quality) or part D of title 1 (relating to nonattainment) or who is alleged to be in violation of any condition of such permit.".

(b) Section 304(f) of such Act is amended by striking out "or" at the end of paragraph (1), striking out the period at the end of paragraph (2) and substituting ", or", and

by adding the following new paragraph at the end thereof:

"(3) any condition or requirement of a permit under part C of title I (relating to significant deterioration of air quality) or part D of title I (relating to nonattainment), any condition or requirement of section 113(d) (relating to enforcement orders). 119 (relating to primary nonferrous smelter orders), requirements under an applicable implementation plan relating to vehicle inspection and maintenance programs or vapor recovery requirements. Section 211 (e) and (f) (relating to fuels and fuel additives), or section 169A (relation to visibility protection), any condition or requirement under part B of title I (relating to ozone protection), any requirement under section 111 or 112 without regard to whether such requirement is expressed as an emission standard or otherwise, trans,".

(c) Section 304(e) of such Act is amended by inserting at the end thereof the following: "Nothing in this section or in any other law of the United States shall be construed to prohibit, exclude, or restrict any State, local, or interstate authority from—

"(1) bringing any enforcement action or obtaining any judicial remedy or sanction in any State or local court, or

"(2) bringing any administrative enforcement action or obtaining any administrative remedy or sanction in any State or local administrative agency, department or instrumentality,

against the United States, any department, agency, or instrumentality thereof, or any officer, agent, or employee thereof under State or local law respecting control and abatement of air pollution. For provisions requiring compliance by the United States, departments, agencies, instrumentalities, officers, agents, and employees in the same manner as nongovernmental entities, see section 118.".

(b) Section 307 of such Act is amended by adding the following at the end thereof:

"(e) nothing in this Act shall be construed to authorize judicial review of regulations or orders of the Administrator under this Act, except as provided in this section."

CIVIL LITIGATION

SEC. 304. (a) Section 305 of the Clean Air Act is amended to read as follows:

"REPRESENTATION IN LITIGATION

"SEC. 305. (a) The Administrator shall request the Attorney General to appear and represent him in any civil action instituted under this Act to which the Administrator is a party. Unless the Attorney General notifies the Administrator that he will appear in such action, within a reasoanble time, attorneys appointed by the Administrator shall appear and represent him.

"(b) In the event the Attorney General agrees to appear and represent the Administrator in any such action, such representation shall be conducted in accordance with, and shall include participation by attorneys appointed by the Administrator to the extent authorized by, the memorandum of understanding between the Department of Justice and the Environmental Protection Agency, dated June 13, 1977, respecting representation of the agency by the department in civil litigation.".

ADMINISTRATIVE PROCEDURES AND JUDICIAL REVIEW

SEC. 305. (a) Section 307 of the Clean Air Act is amended by adding the following new subsection at the end thereof.

"(d)(1) This subsection applies to—

"(A) the promulgation or revision of any national ambient air quality standard under section 109,

"(B) the promulgation or revision of an implementation plan by the Administrator under section 110(c),

"(C) the promulgation or revision of any standard of performance under section 111 or emission standard under section 112,

"(D) the promulgation or revision of any regulation pertaining to any fuel or fuel additive under section 211,

"(E) the promulgation or revision of any aircraft emission standard under section 231,

"(F) promulgation or revision of regulations pertaining to orders for coal conversion under section 113(d)(E) (but not including orders granting or denying any compliance date extensions),

"(G) promulgation or revision of regulations pertaining to primary nonoffensive smelter orders under section 119 (but not including the granting or denying of any such order),

"(H) promulgation or revision of regulations under subtitle B of title I (relating to stratosphere and ozone protection),

"(I) promulgation or revision of regulations under subtitle C of title I (relating to prevention of significant deterioration of air quality and protection of visibility),

"(J) promulgation or revision of regulations under section 202 and test procedures for new motor vehicles or engines under section 206, and the revision of a standard, under section 202(a)(3),

"(K) promulgation or revision of regulations for noncompliance penalties under section 120,

"(L) promulgation or revision of any regulations promulgated under section 207 (relating to warranties and compliance by vehicles in actual use),

"(M) action of the Administrator under section 126 (relating to interstate pollution abatement), and

"(N) such other actions as the Administrator may determine.

The provisions of section 553 through 557 and section 706 of title 5 of the United States Code shall not, except as expressly provided in this subsection, apply to actions to which this subsection applies. This subsection shall not apply in the case of any rule or circumstance referred to in subparagraphs (A) or (B) of subsection 553(b) of title 5 of the United States Code.

"(2) Not later than the date of proposal of any action to which this subsection applies, the Administrator shall establish a rulemaking docket for such action (hereinafter in this subsection referred to as a 'rule'). Whenever a rule applies only within a particular State, a second (identical) docket shall be simultaneously established in the appropriate regional office of the Environmental Protection Agency.

"(3) In the case of any rule to which this subsection applies, notice of proposed rulemaking shall be published in the Federal Register, as provided under section 553(b) of title 5, United States Code, shall be accompanied by a statement of its basis and purpose and shall specify the period available for public comment (hereinafter referred to as the 'comment period'). The notice of proposed rulemaking shall also state the docket number, the location or locations of the docket, and the times it will be open to public inspection. The statement of basis and purpose shall include a summary of—

"(A) the factual data on which the proposed rule is based;

"(B) the methodology used in obtaining the data and in analyzing the data; and

"(C) the major legal interpretations and policy considerations underlying the proposed rule.

The statement shall also set forth or summarize and provide a reference to any pertinent findings, recommendations, and comments by the Scientific Review Committee established under section 109(d) and the National Academy of Sciences, and, if the proposal differs in any important respect from any of these recommendations, an explanation of the reasons for such differences. All data, information, and documents referred to in this paragraph on which the proposed rule relies shall be included in the docket on the date of publication of the proposed rule.

"(4)(A) The rulemaking docket required under paragraph (2) shall be open for inspection by the public at reasonable times specified in the notice of proposed rulemaking. Any person may copy documents contained in the docket. The Administrator shall provide copying facilities which may be used at the expense of the person seeking copies, but the Administrator may waive or reduce such expenses in such instances as the public interest requires. Any person may request copies by mail if the person pays the expenses, including personnel costs to do the copying.

"(B)(i) Promptly upon receipt by the agency, all written comments and documentary information on the proposed rule received from any person for inclusion in the docket during the comment period shall be placed in the docket. The transcript of public hearings, if any, on the proposed rule shall also be included in the docket promptly upon receipt from the person who transcribed such hearings. All documents which become available after the proposed rule has been published and which the Administrator determines are of central relevance to the rulemaking shall be placed in the docket as soon as possible after their availability.

"(ii) The drafts of proposed rules submitted by the Administrator to the Office of Management and Budget for any interagency review process prior to proposal of any such rule, all documents accompanying such drafts, and all written comments thereon by other agencies and all written responses to such written comments by the Administrator shall be placed in the docket no later than the date of proposal of the rule. The drafts of the final rule submitted for such review process prior to promulgation and all such written comments thereon, all documents accompanying such drafts, and written responses thereto shall be placed in the docket no later than the date of promulgation.

"(5)(A) In promulgating a rule to which this subsection applies (i) the Administrator shall allow any person to submit written comments, data, or documentary information; (ii) the Administrator shall give interested persons an opportunity for the oral presentation of data, views, or arguments, in addition to an opportunity to make written submissions; (iii) a transcript shall be kept of any oral presentation; and (iv) the Administrator shall keep the record of such proceeding open for thirty days after completion of the proceeding to provide an opportunity for submission of rebuttal and supplementary information.

"(6)(A) The promulgated rule shall be accompanied by (i) a statement of basis and purpose like that referred to in paragraph (3) with respect to a proposed rule and (ii) an explanation of the reasons for any major changes in the promulgated rule from the proposed rule.

"(B) The promulgated rule shall also be accompanied by a response to each of the significant comments, criticisms, and new data submitted in written or oral presentations during the comment period.

"(C) The promulgated rule may not be based (in part or whole) on any information or data which has not been placed in the docket as of the date of such promulgation.

"(7)(A) The record for judicial review shall consist exclusively of the material referred to in paragraph (3), clause (i) of paragraph (4)(B), and subparagraphs (A) and (B) of paragraph (6).

"(B) Only an objection to a rule or procedure which was raised with reasonable specificity during the period for public comment

(including any public hearing) may be raised during judicial review. If the person raising an objection can demonstrate to the Administrator that it was impracticable to raise such objection within such time or if the grounds for such objection arose after the period for public comment (but within the time specified for judicial review) and if such objection is of central relevance to the outcome of the rule, the Administrator shall convene a proceeding for reconsideration of the rule and provide the same procedural rights as would have been afforded had the information been available at the time the rule was proposed. If the Administrator refuses to convene such a proceeding, such person may seek review of such refusal in the United States court of appeals for the appropriate circuit (as provided in subsection (b)). Such reconsideration shall not postpone the effectiveness of the rule. The effectiveness of the rule may be stayed during such reconsideration, however, by the Administrator or the court for a period not to exceed three months.

"(8) The sole forum for challenging procedural determinations made by the Administrator under this subsection shall be in the United States court of appeals for the appropriate circuit (as provided in subsection (b)) at the time of the substantive review of the rule. No interlocutory appeals shall be permitted with respect to such procedural determinations. In reviewing alleged procedural errors, the court may invalidate the rule only if the errors were so serious and related to matters of such central relevance to the rule that there is a substantial likelihood that the rule would have been significantly changed if such errors had not been made.

"(9) In the case of review of any action of the Administrator to which this subsection applies, the court may reverse any such action found to be—

"(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law;

"(B) contrary to constitutional right, power, privilege, or immunity;

"(C) in excess of statutory jurisdiction, authority, or limitations or short of statutory right; or

"(D) without observance of procedure required by law if (1) such failure to observe such procedure is arbitrary or capricious, (ii) the requirement of paragraph (7)(B) has been met, and (iii) the condition of the last sentence of paragraph (8) is met.

"(10) Each statutory deadline for promulgation of rules to which this subsection applies which requires promulgation less than six months after date of proposal may be extended to not more than six months after date of proposal by the Administrator upon a determination that such extension is necessary to afford the public, and the agency, adequate opportunity to carry out the purposes of this subsection.

"(11) The requirements of this subsection shall take effect with respect to any rule the proposal of which occurs after ninety days after the date of enactment of the Clean Air Act Amendments of 1977.".

(b) Section 105 of such Act is amended by adding the following new subsection at the end thereof:

"(e) No application by a State for a grant under this section may be disapproved by the Administrator without prior notice and opportunity for a public hearing in the affected State, and no commitment or obligation of any funds under any such grant may be revoked or reduced without prior notice and opportunity for a public hearing in the affected State (or in one of the affected States if more than one State is affected).".

(c)(1) The first sentence of section 307(b)(1) of such Act is amended by striking out "or" after "211," and by inserting after "231" the following: ", any other nationally applicable regulations promulgated, or final action taken, by the Administrator under this Act".

(2) The second sentence of section 307(b)(1) of such Act is amended by inserting after "thereunder," the following: "or any other final action of the Administrator under this Act which is locally or regionally applicable".

(3) The last sentence of section 307(b)(1) of such Act is amended to read as follows: "Any petition for review under this subsection shall be filed within sixty days from the date notice of such promulgation, approval, or action appears in the Federal Register, except that if such petition is based solely on grounds arising after such sixtieth day, then any petition for review under this subsection shall be filed within sixty days after such grounds arise.".

(4) Section 307(b)(1) of such Act is further amended by inserting the following after the second sentence thereof: "Notwithstanding the preceding sentence a petition for review of any action referred to in such sentence may be filed only in the United States Court of Appeals for the District of Columbia if such action is based on a determination of nationwide scope or effect and if in taking such action the Administrator finds and publishes that such action is based on such a determination.".

(d)(1) Clause (iii) of section 114(a) of such Act relating to inspection, monitoring, and entry, is amended by striking out "section 119 or 303" and inserting in lieu thereof the following: "any provision of this Act (except with respect to a manufacturer of motor vehicles or motor vehicle engines)".

(2) Section 114(a)(1) of such Act is amended by striking out "the owner or operator of any emission source" and inserting in lieu thereof "any person subject to any requirement of this Act (other than a manufacturer subject to the provisions of section 206(c) or 208)".

(3) Section 114(a)(2)(A) of such Act is amended by striking out "in which an emission source is located" and by inserting in lieu thereof "of such person".

(4) Section 114(a)(2)(B) of such Act is amended by striking out "the owner or operator of such source" and by inserting in lieu thereof "such person".

(e) Section 301 of such Act is amended by inserting "(1)" after "(a)" and by inserting a new paragraph (2) to read:

"(2) Not later than one year after the date of enactment of this paragraph, the Administrator shall promulgate regulations establishing general applicable procedures and policies for regional officers and employees (including the Regional Administrator) to follow in carrying out a delegation under paragraph (1), if any. Such regulations shall be designed—

"(A) to assure fairness and uniformity in the criteria, procedures, and policies applied by the various regions in implementing and enforcing the Act;

"(B) to assure at least an adequate quality audit of each State's performance and adherence to the requirements of this Act in implementing and enforcing the Act, particularly in the review of new sources and in enforcement of the Act; and

"(C) to provide a mechanism for identifying and standardizing inconsistent or varying criteria, procedures, and policies being employed by such officers and employees in implementing and enforcing the Act.".

(f) Section 307 of such Act is amended by adding the following new subsection at the end thereof:

"(f) In any judicial proceeding under this section, the court may award costs of litigation (including reasonable attorney and expert witness fees) whenever it determines that such award is appropriate.".

(g) Section 307 of such Act is amended by adding the following new subsection at the end thereof:

"(g) In any action respecting the promulgation of regulations under section 120 or the administration or enforcement of section 120 no court shall grant any stay, injunctive, or similar relief before final judgment by such court in such action.".

(h) Section 307(b) of such Act is amended by inserting after "231" the following: "or any rule issued under section 120 (relating to noncompliance penalties)" and by inserting "any order under section 120," after "111(d)".

SEWAGE TREATMENT GRANTS

SEC. 306. Title III of the Clean Air Act is amended by striking out section 316 and adding the following new section at the end thereof:

"SEWAGE TREATMENT GRANTS

SEC. 316. (a) No grant which the Administrator is authorized to make to any applicant for construction of sewage treatment works in any area in any State may be withheld, conditioned, or restricted by the Administrator on the basis of any requirement of this Act except as provided in subsection (b).

"(b) The Administrator may withhold, condition, or restrict the making of any grant for construction referred to in subsection (a) only if he determines that—

"(1) such treatment works will not comply with applicable standards under section 111 or 112,

"(2) the State does not have in effect, or is not carrying out, a State implementation plan approved by the Administrator which expressly quantifies and provides for the increase in emissions of each air pollutant (from stationary and mobile sources in any area to which either part C or Part D of title I applies for such pollutant) which increase may reasonably be anticipated to result directly or indirectly from the new sewage treatment capacity which would be created by such construction,

"(3) the construction of such treatment works would create new sewage treatment capacity which—

"(A) may reasonably be anticipated to cause or contribute to, directly or indirectly, an increase in emissions of any air pollutant in excess of the increase provided for under the provisions referred to in paragraph (2) for any such area, or

"(B) would otherwise not be in conformity with the applicable implementation plan, or

"(4) such increase in emissions would interfere with, or be inconsistent with, the applicable implementation plan for any other State.

In the case of construction of a treatment works which would result, directly or indirectly, in an increase in emissions of any air pollutant from stationary and mobile sources in an area to which part D of title I applies, the quantification of emissions referred to in paragraph (2) shall include the emissions of any such pollutant resulting directly or indirectly from areawide and nonmajor stationary source growth (mobile and stationary) for each such area.

"(c) Nothing in this section shall be construed to amend or alter any provision of the National Environmental Policy Act or to affect any determination as to whether or not the requirements of such Act have been met in the case of the construction of any sewage treatment works.".

ECONOMIC IMPACT ASSESSMENT

SEC. 307. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

"ECONOMIC IMPACT ASSESSMENT

"SEC. 317. (a) This section applies to action of the Administrator in promulgating or revising—

"(1) any new source standard of performance under section 111(b),

"(2) any regulation under section 111(d),

"(3) any regulation under part B of title I (relating to stratosphere protection),

"(4) any regulation under part C of title I (relating to prevention of significant deterioration of air quality),

"(5) any regulation establishing emission standards under section 202 and any other regulation promulgated under that section,

"(6) any regulation controlling or prohibiting any fuel or fuel additive under section 211(c), and

"(7) any aircraft emission standard under section 231.

Nothing in this section shall apply to any standard or regulation described in paragraphs (1) through (7) of this subsection unless the notice of proposed rulemaking in connection with such standard or regulation is published in the Federal Register after the date ninety days after the date of enactment of this section. In the case of revisions of such standards or regulations, this section shall apply only to revisions which the Administrator determines to be subtantial revisions.

"(b) Before publication of notice of proposed rulemaking with respect to any standard or regulation to which this section applies, the Administrator shall prepare an economic impact assessment respecting such standard or regulation. Such assessment shall be included in the docket required under section 307(d)(2) and shall be available to the public as provided in section 307(d)(4). Notice of proposed rulemaking shall include notice of such availability together with an explanation of the extent and manner in which the Administrator has considered the analysis contained in such economic impact assessment in proposing the action. The Administrator shall also provide such an explanation in his notice of promulgation of any regulation or standard referred to in subsection (a). Each such explanation shall be part of the statements of basis and purpose required under sections 307(d)(3) and 307(d)(6).

"(c) Subject to subsection (d), the assessment required under this section with respect to any standard or regulation shall contain analysis of—

"(1) the costs of compliance with any such standard or regulation, including extent to which the costs of compliance will vary depending on (A) the effective date of the standard or regulation, and (B) the development of less expensive, more efficient means or methods of compliance with the standard or regulation;

"(2) the potential inflationary or recessionary effects of the standard or regulation;

"(3) the effects on competition of the standard or regulation with respect to small business;

"(4) the effects of the standard or regulation on consumer costs; and

"(5) the effects of the standard or regulation on energy use.

Nothing in this section shall be construed to provide that the analysis of the factors specified in this subsection affects or alters the factors which the Administrator is required to consider in taking any action referred to in subsection (a).

"(d) The assessment required under this section shall be as extensive as practicable, in the judgment of the Administrator taking into account the time and resources available to the Environmental Protection Agency and other duties and authorities which the Administrator is required to carry out under this Act.

"(e) Nothing in this section shall be construed—

"(1) to alter the basis on which a standard or regulation is promulgated under this Act;

"(2) to preclude the Administrator from carrying out his responsibility under this Act to protect public health and welfare; or

"(3) to authorize or require any judicial review of any such standard or regulation, or any stay or injunction of the proposal, promulgation, or effectiveness of such standard or regulation on the basis of failure to comply with this section.

"(f) The requirements imposed on the Administrator under this section shall be treated as nondiscretionary duties for purposes of section 304(a)(2), relating to citizens suits. The sole method for enforcement of the Administrator's duty under this section shall be by bringing a citizen suit under such section 304(a)(2) for a court order to compel the Administrator to perform such duty. Violation of any such order shall subject the Administrator to penalties for contempt of court.

"(g) In the ease of any provision of this Act in which costs are expressly required to be taken into account, the adequacy or inadequacy of any assessment required under this section may be taken into consideration, but shall not be treated for purposes of judicial review of any such provision as conclusive with respect to compliance or noncompliance with the requirement of such provision to take cost into account.".

FINANCIAL DISCLOSURE; CONFLICTS OF INTEREST

SEC. 308. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

"FINANCIAL DISCLOSURE; CONFLICTS OF INTEREST

"SEC. 318. (a) Each person who—

"(1) has any known financial interest in (A) any person subject to this Act, or (B) any person who applies for or receives any grant, contract, or other form of financial assistance pursuant to this Act, and

"(2) is (A) an officer or employee of the Environmental Protection Agency who performs any function or duty under this Act, (B) a member of the National Commission on Air Quality appointed as a member of the public, or (C) a member of the Scientific Review Committee under section 109(d)

shall, beginning six months after the date of enactment of this section, annually file with the Administrator a written statement concerning all such interests held by such officer, employee, or member during the preceding calendar year. Such statement shall be available to the public.

"(b) The Administrator shall—

"(1) act within ninety days after the date of enactment of the Clean Air Act Amendments of 1977—

"(A) to define the term 'known financial interest' for purposes of subsection (a) of this section;

"(B) to establish the methods by which the requirement to file written statements specified in subsection (a) of this section will be monitored and enforced, including appropriate provisions for the filing by such officers, employees and members of such statements and the review by the Administrator (or the Commission in the case of members of the Commission) of such statements; and

"(2) report to the Congress on June 1 of each calendar year with respect to such statements to the Administrator and the actions taken in regard thereto during the preceding calendar year.

"(c) After the date one year after the date of the enactment of this section, no person who—

"(1) is employed by, serves as attorney for, acts as a consultant for, or holds any other official or contractual relationship to—

"(A) the owner or operator of any major stationary source or any stationary source which is subject to a standard of performance or emission standard under section 111 or 112,

"(B) any manufacturer of any class or category of mobile sources if such mobile sources are subject to regulation under this Act,

"(C) any trade or business association of which such owner or operator referred to in subparagraph (A) or such manufacturer referred to in subparagraph (B) is a member, or

"(D) any organization (whether or not nonprofit) which is a party to litigation, or engaged in political, educational, or informational activities, relating to air quality, or

"(2) owns, or has any financial interest in, any stock, bonds, or other financial interest which ownership or interest may be inconsistent with a position as an officer or employee of the Environmental Protection Agency, as determined under regulations of the Administrator.

may concurrently serve as such an officer or employee of the Environmental Protection Agency.

"(d) The Administrator shall promulgate rules for purposes of subsections (b) and (c) which—

"(1) identify specific offices or positions within such agency which are of a nonregulatory or nonpolicymaking nature and provide that officers or employees occupying such positions shall be exempt from the requirements of this section, and

"(2) identify the ownership or financial interests which may be inconsistent with particular regulatory or policymaking offices or positions within the Environmental Protection Agency.

"(e) Any officer or employee of the Environmental Protection Agency or member of the National Commission on Air Quality or of the Scientific Review Committee under section 109(d) who is subject to, and knowingly violates this section or any regulation issued thereunder, shall be fined not more than $2,500 or imprisoned not more than one year, or both.

"(f) Nothing in this section shall be construed to affect or impair any other federal statutory requirements respecting disclosure or conflict of interest applicable to the Environmental Protection Agency. Subsections (c) and (d) of this section shall not apply after the effective date of any such requirements respecting conflicts of interest which are generally applicable to departments, agencies, and instrumentalities of the United States.".

AIR QUALITY MONITORING BY ENVIRONMENTAL PROTECTION AGENCY

SEC. 309. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

"AIR QUALITY MONITORING

"SEC. 319. Not later than one year after the date of enactment of the Clean Air Act Amendments of 1977 and after notice and opportunity for public hearing, the Administrator shall promulgate regulations establishing an air quality monitoring system throughout the United States which—

"(1) utilizes uniform air quality monitoring criteria and methodology and measures such air quality according to a uniform air quality index.

"(2) provides for air quality monitoring stations in major urban areas and other appropriate areas throughout the United States to provide monitoring such as will supplement (but not duplicate) air quality monitoring carried out by the States required under any applicable implementation plan.

"(3) provides for daily analysis and reporting of air quality based upon such uniform air quality index, and

"(4) provides for recordkeeping with respect to such monitoring data and for periodic analysis and reporting to the general public by the Administrator with respect to air quality based upon such data.

The operation of such air quality monitoring system may be carried out by the Administrator or by such other departments, agencies, or entities of the Federal Government (including the National Weather Service) as the President may deem appropriate. Any air

quality monitoring system required under any applicable implementation plan under section 110 shall, as soon as practicable following promulgation of regulations under this section, utilize the standard criteria and methodology, and measure air quality according to the standard index, established under such regulations.".

MODELING

SEC. 310. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

"STANDARDIZED AIR QUALITY MODELING

"SEC. 320. (a) Not later than six months after the date of the enactment of the Clean Air Act Amendments of 1977, and at least every three years thereafter, the Administrator shall conduct a conference on air quality modeling. In conducting such conference, special attention shall be given to appropriate modeling necessary for carrying out part C of title I (relating to prevention of significant deterioration of air quality).

"(b) The conference conducted under this section shall provide for participation by the National Academy of Sciences, representatives of State and local air pollution control agencies, and appropriate Federal agencies, including the National Science Foundation; the National Oceanic and Atmospheric Administration, and the National Bureau of Standards.

"(c) Interested persons shall be permitted to submit written comments and a verbatim transcript of the conference proceedings shall be maintained.

"(d) The comments submitted and the transcript maintained pursuant to subsection (c) shall be included in the docket required to be established for purposes of promulgating or revising any regulation relating to air quality modeling under part C of title I.".

EMPLOYMENT EFFECTS

SEC. 311. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

"EMPLOYMENT EFFECTS

"SEC. 321. (a) The Administrator shall conduct continuing evaluations of potential loss or shifts of employment which may result from the administration or enforcement of the provision of this Act and applicable implementation plans, including where appropriate, investigating threatened plant closures or reductions in employment allegedly resulting from such administration or enforcement.

"(b) Any employee, or any representative of such employee, who is discharged or laid off, threatened with discharge or layoff, or whose employment is otherwise adversely affected or threatened to be adversely affected because of the alleged results of any requirement imposed or proposed to be imposed under this Act, including any requirement applicable to Federal facilities and any requirement imposed by a State or political subdivision thereof, may request the Administrator to conduct a full investigation of the matter. Any such request shall be reduced to writing, shall set forth with reasonable particularity the grounds for the request, and shall be signed by the employee, or representative of such employee, making the request. The Administrator shall thereupon investigate the matter and, at the request of any party, shall hold public hearings on not less than five days' notice. At such hearings, the Administrator shall require the parties, including the employer involved, to present information relating to the actual or potential effect of such requirements on employment and the detailed reasons or justification therefor. If the Administrator determines that there are no reasonable grounds for conducting a public hearing he shall notify (in writing) the party requesting such hearing of such a determination and the reasons therefor. If the Administrator does convene such a hearing, the hearing shall be on the record. Upon receiving the report of such investigation, the Administrator shall make findings of fact as to the effect of such requirements on employment and on the alleged actual or potential discharge, layoff, or other adverse effect on employment, and shall make such recommendations as he deems appropriate. Such report, findings, and recommendations shall be available to the public.

"(c) In connection with any investigation or public hearing conducted under subsection (b) of this section or as authorized in section 119 (relating to primary nonferrous smelter orders), the Administrator may issue subpenas for the attendance and testimony of witnesses and the production of relevant papers, books and documents, and he may administer oaths. Except for emission data, upon a showing satisfactory to the Administrator by such owner or operator that such papers, books, documents, or information or particular part theref, if made public, would divulge trade secrets or secret processes of such owner, or operator, the Administrator shall consider such record, report, or information or particular portion thereof confidential in accordance with the purposes of section 1905 of title 18 of the United States Code, except that such paper, book, document, or information may be disclosed to other officers, employees, or authorized representatives of the United States concerned with carrying out this Act, or when, relevant in any proceeding under this Act. Witnesses summoned shall be paid the same fees and mileage that are paid witnesses in the courts of the United States. In cases of contumacy or refusal to obey a subpena served upon any person under this subparagraph, the district court of the United States for any district in which such person is found or resides or transacts business, upon application by the United States and other notice to such person, shall have jurisdiction to issue an order requiring such person to appear and give testimony before the Administrator, to appear and produce papers, books, and documents before the Administrator, or both, and any failure to obey such order of the court may be punished by such court as a contempt thereof.

"(d) Nothing in this section shall be construed to require or authorize the Administrator, the States, or political subdivisions thereof, to modify or withdraw any requirement imposed or proposed to be imposed under this Act.".

EMPLOYEE PROTECTION

SEC. 312. Title III of the Clean Air Act is amended by adding at the end thereof the following new section:

"EMPLOYEE PROTECTION

"SEC. 322. (a) No employer may discharge any employee or otherwise discriminate against employee with respect to his compensation, terms, conditions, or privileges of employment because the employee (or any person acting pursuant to a request of the employee)—

"(1) commenced, caused to be commenced, or is about to commence or cause to be commenced a proceeding under this Act or a proceeding for the administration or enforcement of any requirement imposed under this Act or under any applicable implementation plan,

"(2) testified or is about to testify in any such proceeding, or

"(3) assisted or participated or is about to assist or participate in any manner in such a proceeding or in any other action to carry out the purposes of this Act.

"(b)(1) Any employee who believes that he has been discharged or otherwise discriminated against by any person in violation of subsection (a) may, within thirty days after such violation occurs, file (or have any person file on his behalf) a complaint with the Secretary of Labor (hereinafter in this subsection referred to as the 'Secretary') alleging such discharge or discrimination. Upon receipt of such a complaint, the Secretary shall notify the person named in the complaint of the filing of the complaint.

"(2)(A) Upon receipt of a complaint filed under paragraph (1), the Secretary shall conduct an investigation of the violation alleged in the complaint. Within thirty days of the receipt of such complaint, the Secretary shall complete such investigation and shall notify in writing the complainant (and any person acting in his behalf) and the person alleged to have committed such violation of the results of the investigation conducted pursuant to this subparagraph. Within ninety days of the receipt of such complaint the Secretary shall, unless the proceeding on the complaint is terminated by the Secretary on the basis of a settlement entered into by the Secretary and the person alleged to have committed such violation, issue an order either providing the relief prescribed by subparagraph (B) or denying the complaint. An order of the Secretary shall be made on the record after notice and opportunity for public hearing. The Secretary may not enter into a settlement terminating a proceeding on a complaint without the participation and consent of the complainant.

"(B) If, in response to a complaint filed under paragraph (1), the Secretary determines that a violation of subsection (a) has occurred, the Secretary shall order the person who committed such violation to (i) take affirmative action to abate the violation, and (ii) reinstate the complainant to his former position together with the compensation (including back pay), terms, conditions, and privileges of his employment, and the Secretary may order such person to provide compensatory damages to the complainant. If an order is issued under this paragraph, the Secretary, at the request of the complainant, shall assess against the person against whom the order is issued a sum equal to the aggregate amount of all costs and expenses (including attorneys' and expert witness fees) reasonably incurred, as determined by the Secretary, by the complainant for, or in connection with, the bringing of the complaint upon which the order was issued.

"(c)(1) Any person adversely affected or aggrieved by an order issued under subsection (b) may obtain review of the order in the United States court of appeals for the circuit in which the violation, with respect to which the order was issued, allegedly occurred. The petition for review must be filed within sixty days from the issuance of the Secretary's order. Review shall conform to chapter 7 of title 5 of the United States Code. The commencement of proceedings under this subparagraph shall not, unless ordered by the court, operate as a stay of the Secretary's order.

"(2) An order of the Secretary with respect to which review could have been obtained under paragraph (1) shall not be subject to judicial review in any criminal or other civil proceeding.

"(d) Whenever a person has failed to comply with an order issued under subsection (b)(2), the Secretary may file a civil action in the United States district court for the district in which the violation was found to occur to enforce such order. In actions brought under this subsection, the district courts shall have jurisdiction to grant all appropriate relief including, but not limited to, injunctive relief, compensatory, and exemplary damages.

"(e)(1) Any person on whose behalf an order was issued under paragraph (2) of subsection (b) may commence a civil action against the person to whom such order was issued to require compliance with such order. The appropriate United States district court shall have jurisdiction, without regard

to the amount in controversy or the citizenship of the parties, to enforce such order.

"(2) The court, in issuing any final order under this subsection, may award costs of litigation (including reasonable attorney and expert witness fees) to any party whenever the court determines such award is appropriate.

"(f) Any nondiscretionary duty imposed by this section shall be enforceable in a mandamus proceeding brought under section 1361 of title 28 of the United States Code.

"(g) Subsection (a) shall not apply with respect to any employee who, acting without direction from his employer (or the employer's agent), deliberately causes a violation of any requirement of this Act.".

NATIONAL COMMISSION ON AIR QUALITY

SEC. 313. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

"NATIONAL COMMISSION ON AIR QUALITY

"SEC. 323. (a) There is established a National Commission on Air Quality which shall study and report to the Congress on—

"(1) available alternatives, including enforcement mechanisms to protect and enhance the quality of the Nation's air resources so as to promote the public health and welfare and to achieve the other purposes of the Act, including achievement and maintenance of national ambient air quality standards and in accordance with subsection (b)(2) of this section the prevention of significant deterioration of air quality;

"(2) the economic, technology, and environmental consequences of achieving or not achieving the purposes of this Act and programs authorized by it;

"(3) the technological capability of achieving and the economic, energy, and environmental and health effects of achieving or not achieving required emission control levels for mobile sources of oxides of nitrogen in relation to and independent of regulation of emissions of oxides of nitrogen from statutory sources;

"(4) air pollutants not presently regulated, which pose or may in the future pose a threat to public health or public welfare and options available to regulate emissions of such pollutants;

"(5) the adequacy of research, development, and demonstrations being carried out by Federal, State, local, and nongovernmental entities to protect and enhance air quality;

"(6) the ability of (including financial resources, manpower, and statutory authority) Federal, State, and local institutions to implement the purposes of the Act;

"(7) the extent to which the reduction of hydrocarbon emissions is an adequate or appropriate method to achieve primary standards for photochemical oxidants. Such study shall include—

"(A) a description and analysis of the various pollutants which are commonly referred to as 'photochemical oxidants' or chemical precursers to photochemical oxidants;

"(B) an analysis of any pollutants or combination of pollutants which need to be reduced to achieve any photochemical oxidant standard, and the amount of such reduction;

"(C) the relationship between the reductions of hydrocarbons, oxides of nitrogen, and any other pollutants and the achievement of applicable standards for photochemical oxidants;

"(D) the degree to which background or natural sources and long-range transportation of pollutants contribute to measured ambient levels of photochemical oxidants;

"(E) any other oxidant-related issues which the Commission determines to be appropriate; and "(8)(A) the special problems of small businesses and government agencies in obtaining reductions of emissions from existing sources in order to offset increases in emissions from new sources for the purposes of this Act; and

"(B) alternative strategies for permitting, without impeding the achievement of national ambient air quality standards as expeditiously as possible, the construction of new facilities and the modification of existing facilities in air quality control regions exceeding the national ambient air quality standard for any pollutant regulated under the Act.

The Commission's study and report under paragraph (4) shall include analysis of the health effects of pollutants which are derivates of oxides of nitrogen.

"(b)(1) Studies and investigations conducted pursuant to subsection (a) shall include the effects of existing or proposed national ambient air quality standards on employment, energy, and the economy (including State and local), their relationship to objective scientific and medical data collected to determine their validity at existing levels, as well as their other social and environmental effects.

"(2) The Commission shall, in carrying out the study authorized under this section, give priority to a study of the implementation of the provisions of part C of this Act (relating to prevention of significant deterioration of air quality) and its effects on the States and the Federal Government. In carrying out such study, the Commission shall study, among other questions, the following:

"(A) whether the provisions relating to the designation of, and protection of air quality in class I regions under part C are appropriate to protect the air quality over lands of special national significance, including recommendations for, and methods to (i) add to or delete lands from such designation, and (ii) provide appropriate protection of the air quality over such lands;

"(B) whether the provisions of part C, including the three-hour and twenty-four-hour increments, (i) affect the location and size of major emitting facilities, and (ii) whether such effects are in conflict or consonance with other national policies regarding the development of such facilities;

"(C) whether the technology is available to control emissions from the major emitting facilities which are subject to regulation under part C, including an analysis of the costs associated with that technology;

"(D) whether the exclusion of nonmajor emitting sources from the regulatory framework under this Act will affect the protection of air quality in class I and class II regions designated under this Act; [class III?]

"(E) whether the increments of change of air quality under this Act are appropriate to prevent significant deterioration of air quality in class I and class II regions designated under this Act; [class III?]

"(F) whether the choice of predictive air quality models and the assumptions of those models are appropriate to protect air quality in the class I and class II [III?], regions designated under this Act for the pollutants subject to regulation under part C; and

"(G) the effects of such provisions on employment, energy, the economy (including State and local), the relationship of such policy to the protection of the public health and welfare as well as other national priorities such as economic growth and national defense, and its other social and environmental effects.

"(c) The Commission shall, as a part of any study conducted under subsection (b)(2) of this section, specifically identify any loss or irretrievable commitment of resources (taking into account economic feasibility), including mineral, agricultural and water resources, as well as land surface-use resources.

"(d) Such Commission shall be composed of eleven members, including the chairman and the ranking minority member of the Senate Committee on Public Works and the House Committee on Interstate and Foreign Commerce (or delegates of such chairmen or member appointed by them from among representatives of such committees) and seven members of the public appointed by the President, by and with the advice and consent of the Senate. The chairman of the Commission shall be elected from among the members thereof. Not more than one third of the members of the Commission may have any interest in any business or activity regulated under this Act.

"(e) The heads of the departments, agencies, and instrumentalities of the executive branch of the Federal Government shall cooperate with the Commission in carrying out the requirements of this section, and shall furnish to the Commission such information as the Commission deems necessary to carry out this section.

"(f) A report, together with any appropriate recommendations, shall be submitted to the Congress on the results of the investigation and study concerning subsection (a)(3) of this section no later than March 1, 1978, and the results of the investigation and study concerning subsection (b)(2) of this section no later than two years after the date of enactment of the Clean Air Act Amendments of 1977. A report, together, with any appropriate recommendations, shall be submitted to the Congress on the results of the investigation and study concerning paragraphs (3) and (8) of subsection (a) of this section no later than March 1, 1978, in order that Congress may have this information in a timely fashion if it deems further changes are needed in the requirements for control of emissions of oxides of nitrogen under this Act, and for other purposes. The Administrator shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct a study of the same matters required to be studied by the Commission under subsection (b)(2) and to submit such study to the Congress at the same time as required for the report of the Commission concerning such subsection. Funds shall be available in the same manner, and the Administrator shall have the same authorities and duties respecting such study, as provided in the case of the study authorized pursuant to section 202(c).

"(g) A report shall be submitted with regard to all Commission studies and investigations other than those referred to in subsection (f), together with any appropriate recommendations, not later than three years after the date of enactment of this section. Upon submission of such report or upon expiration of such three-year period, whichever is sooner, the Commission shall cease to exist. The members of the Commission who are not officers or employees of the United States, while attending conferences or meetings of the Commission or while otherwise serving at the request of the Chairman shall be entitled to receive compensation at a rate not in excess of the maximum rate of pay for grade GS-18, as provided in the General Schedule under section 5332 of title V of the United States Code, including traveltime and while away from their homes or regular places of business they may be allowed travel expenses, including per diem in lieu of subsistence as authorized by law (5 U.S.C. 73b-2) for persons in the Government service employed intermittently.

"(j) In the conduct of the study, the Commission is authorized to contract with nongovernmental entities that are competent to perform research or investigations in areas within the Commission's mandate, and to hold public hearings, forums, and workshops to enable full public participation. The Commission may contract with nonprofit technical and scientific organizations, including the National Academy of Sciences, for the purpose of developing necessary technical information for the study authorized by subsection (a)(7) of this section.".

VAPOR RECOVERY

SEC. 314. (a) Title III of the Clean Air Act is amended by adding the following

new section at the end thereof: "COST OF EMISSION CONTROL FOR CERTAIN VAPOR RECOVERY TO BE BORNE BY OWNER OF RETAIL OUTLET

"SEC. 324. (a) The regulations under this Act applicable to vapor recovery with respect to mobile source fuels at retail outlets of such fuels shall provide that the cost of procurement and installation of such vapor recovery shall be borne by the owner of such outlet (as determined under such regulations). Except as provided in subsection (b), such regulations shall provide that no lease of a retail outlet by the owner thereof which is entered or renewed after the date of enactment of the Clean Air Act Amendments of 1977 may provide for a payment by the lessee of the cost of procurement and installation of vapor recovery equipment. Such regulations shall also provide that the cost of procurement and installation of vapor recovery equipment may be recovered by the owner of such outlet by means of price increases in the cost of any product sold by such owner, notwithstanding any provision of law.

"(b) The regulations of the Administrator referred to in subsection (a) shall permit a lease of a retail outlet to provide for payment by the lessee of the cost of procurement and installation of vapor recovery equipment over a reasonable period (as determined in accordance with such regulations), if the owner of such outlet does not sell, trade in, or otherwise dispense any product at wholesale or retail at such outlet.".

(b) Title III of such Act is amended by adding the following new section at the end thereof:

"VAPOR RECOVERY FOR SMALL BUSINESS MARKETERS OF PETROLEUM PRODUCTS

"SEC. 325. (a) The regulations under this Act applicable to vapor recovery from fueling of motor vehicles at retail outlets of gasoline shall not apply to any outlet owned by an independent small business marketer of gasoline having monthly sales of less than 50,000 gallons. In the case of any other outlet owned by an independent small business marketer, such regulations shall provide, with respect to independent small business marketers of gasoline, for a three-year phase-in period for the installation of such vapor recovery equipment at such outlets under which such marketers shall have—

"(1) 33 percent of such outlets in compliance at the end of the first year during which such regulations apply to such marketers.

"(2) 66 percent at the end of such second year, and

"(3) 100 percent at the end of the third year.

"(b) Nothing in subsection (a) shall be construed to prohibit any State from adopting or enforcing, with respect to independent small business marketers of gasoline having monthly sales of less than 50,000 gallons, any vapor recovery requirements for mobile source fuels at retail outlets. Any vapor recovery requirement which is adopted by a State and submitted to the Administrator as part of its implementation plan may be approved and enforced by the Administrator as part of the applicable implementation plan for that State.

"(c) For purposes of this section, an independent small business marketer of gasoline is a person engaged in the marketing of gasoline who would be required to pay for procurement and installation of vapor recovery equipment under section 324 of this Act or under regulations of the Administrator, unless such person—

"(1)(A) is a refiner, or

"(B) controls, is controlled by, or is under common control with, a refiner,

"(C) is otherwise directly or indirectly affiliated (as determined under the regulations of the Administrator) with a refiner or with a person who controls, is controlled by, or is under a common control with a refiner (unless the sole affiliation referred to herein is by means of a supply contract or an agreement or contract to use a trademark, trade name, service mark, or other identifying symbol or name owned by such refiner or any such person), or

"(2) receives less than 50 percent of his annual income from refining or marketing of gasoline.

For the purpose of this section, the term 'refiner' shall not include any refiner whose total refinery capacity (including the refinery capacity of any person who controls, is controlled by, or is under common control with, such refiner) does not exceed 65,000 barrels per day. For purposes of this section, 'control' of a corporation means ownership of more than 50 percent of its stock.".

AUTHORIZATION

SEC. 315. Title III of the Clean Air Act is amended by adding the following new section at the end thereof:

APPROPRIATIONS

SEC. 325. (a) There are authorized to be appropriated to carry out this Act (other than provisions for which amounts are authorized under subsection (b)), relating to training, $200,000,000 for the fiscal year 1978 and for each of the three fiscal years beginning thereafter.

"(b)(1) There are authorized to be appropriated to carry out section 175 beginning in fiscal year 1978, $75,000,000 to be available until expended.

"(2) There are authorized to be appropriated for use in carrying out section 323 (relating to National Commission on Air Quality), not to exceed $10,000,000 beginning in fiscal year 1998."

(3) For the study authorized under this subsection there shall be made available by contract to the National Commission on Air Quality from the appropriation to the Environmental Protection Agency for fiscal year 1977 the sum of $1,000,000.

"(3) There are authorized to be appropriated to carry out section 127 (relating to grants for public notification) $4,000,000 for the fiscal year 1978 and each of the three succeeding fiscal years.

"(4) For purposes of section 103(b)(5), there are authorized to be appropriated $7,500,000 for the fiscal year 1978 and each of the three fiscal years beginning after the date of enactment of the Clean Air Act Amendments of 1977.

"(5) For the purpose of carrying out the provisions of part B relating to studies and reports, there are authorized to be appropriated—

"(A) to the National Aeronautics and Space Administration, the National Science Foundation, and the Department of State, such sums as may be necessary for the fiscal year ending September 30, 1977, and the fiscal year ending September 30, 1978;

"(B) to the Environmental Protection Agency, $157,000,000 for fiscal year 1978; and

"(C) to all other agencies such sums as may be necessary.

"(6) There are authorized to be appropriated for carrying out research, development and demonstration under sections 103 and 104 of this Act $120,000,000 for fiscal year 1978.".

TITLE IV—GENERAL AND MISCELLANEOUS PROVISIONS

BASIS OF ADMINISTRATIVE STANDARDS

SEC. 401. (a) Section 108(a)(1)(A) of the Clean Air Act is amended to read as follows:

"(A) emissions of which, in his judgment, cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare;".

(b) The second sentence of section 111(b)(1)(A) of such Act is amended to read as follows: "He shall include a category of sources in such list if in his judgment it causes, or contributes significantly to air pollution which may reasonably be anticipated to endanger public health or welfare.".

(c) Paragraph (1) of section 112(a) of such Act is amended to read as follows:

"(1) The term 'hazardous air pollutant' means an air pollutant to which no ambient air quality standard is applicable and which in the judgment of the Administrator causes, or contributes to, air pollution which may reasonably be anticipated to result in an increase in mortality or an increase in serious irreversible, or incapacitating reversible illness.".

(d)(1) Section 202(a)(1) of such Act is amended to read as follows:

"(a)(1) Except as otherwise provided in subsection (b) the Administrator shall by regulation prescribe (and from time to time revise) in accordance with the provisions of this section, standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles or new motor vehicle engines, which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare. Such standards shall be applicable to such vehicles and engines for their useful life (as determined under subsection (d)(8), relating to useful life of vehicles for purposes of certification), whether such vehicles and engines are designed as complete systems or incorporate devices to prevent or control such pollution.".

(2) Section 202(c) of such Act is amended by striking out "which cause or contribute to, or are likely to cause or contribute to, air pollution which endangers" and substituting "which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger".

(e) Section 211(c)(1)(A) of such Act is amended to read as follows: "(A)" if in the judgment of the Administrator any emission product of such fuel or fuel additive causes, or contributes, to air pollution which may reasonably be anticipated to endanger the public health or welfare, or".

(f) Section 231(a)(2) of such Act is amended to read as follows:

"(2) The Administrator shall, from time to time, issue proposed emission standards applicable to the emission of any air pollutant from any class or classes of aircraft engines which in his judgment causes, or contributes to, air pollution which may reasonably be anticipated to endanger public health or welfare."

INTERAGENCY COOPERATION ON PREVENTION OF ENVIRONMENTAL CANCER AND HEART AND LUNG DISEASE

SEC. 402. (a) Not later than three months after the date of enactment of this section, there shall be established a Task Force on Environmental Cancer and Heart and Lung Disease (hereinafter referred to as the 'Task Force'). The Task Force shall include representatives of the Environmental Protection Agency, the National Cancer Institute, the National Heart, Lung, and Blood Institute, the National Institute of Occupational Safety and Health, and the National Institute on Environmental Health Sciences, and shall be chaired by the Administrator (or his delegate).

(b) The Task Force shall—

(1) recommend a comprehensive research program to determine and quantify the relationship between environmental pollution and human cancer and heart and lung disease;

(2) recommend comprehensive strategies to reduce or eliminate the risks of cancer or such other diseases associated with environmental pollution;

(3) recommend research and such other measures as may be appropriate to prevent or reduce the incidence of environmentally related cancer and heart and lung diseases;

(4) coordinate research by, and stimulate cooperation between, the Environmental Protection Agency, the Department of Health, Education, and Welfare, and such other

agencies as may be appropriate to prevent environmentally related cancer and heart and lung diseases; and

(5) report to Congress, not later than one year after the date of enactment of this section and annually thereafter, on the problems and progress in carrying out this section.

STUDIES

SEC. 403. (a) Not later than eighteen months after the date of the enactment of the Clean Air Act Amendments of 1977, the Administrator of the Environmental Protection Agency, in cooperation with the National Academy of Sciences, shall study and report to Congress on (1) the relationship between the size, weight, and chemical composition of suspended particulate matter and the nature and degree of the endangerment to public health or welfare presented by such particulate matter (especially with respect to fine particulate matter) and (2) the availability of technology for controlling such particulate matter.

(B) The Administrator of the Environmental Protection Agency shall conduct a study and report to the Congress not later than January 1, 1979, on the effects on public health and welfare of odors or odorous emissions, the sources of such emissions, the technology or other measures available for control of such emissions and the costs of such technology or measures, and the costs and benefits of alternative measures or strategies to abate such emissions. Such report shall include an evaluation of whether air quality criteria or national ambient air quality standards should be published under the Clean Air Act for odors, and what other strategies or authorities under the Clean Air Act are available or appropriate for abating such emissions.

(c)(1) Not later than twelve months after the date of enactment of this Act the Administrator of the Environmental Protection Agency shall publish throughout the United States a list of all known chemical contaminants resulting from environmental pollution which have been found in human tissue including blood, urine, breast milk, and all other human tissue. Such list shall be prepared for the United States and shall indicate the approximate number of cases, the range of levels found, and the mean levels found.

(2) Not later than eighteen months after the date of enactment of this Act the Administrator shall publish in the same manner an explanation of what is known about the manner in which the chemicals described in paragraph (1) entered the environment and thereafter human tissue.

(3) The Administrator, in consultation with the National Institutes of Health, the National Center for Health Statistics, and the National Center for Health Services Research and Development, shall, if feasible, conduct an epidemiological study to demonstrate the relationship between levels of chemicals in the environment and in human tissue. Such study shall be made in appropriate regions or areas of the United States in order to determine any different results in such regions or areas. The results of such study shall, as soon as practicable, be reported to the appropriate committees of the Congress.

(d) The Administrator of the Environmental Protection Agency shall conduct a study of air quality in various areas throughout the country including the gulf coast region. Such study shall include analysis of liquid and solid aerosols and other fine particulate matter and the contribution of such substances to visibility and public health problems in such areas. For the purposes of this study, the Administrator shall use environmental health experts from the National Institutes of Health and other outside agencies and organizations.

(e)(1) The Secretary of Labor, in consultation with the Administrator, shall conduct a study of potential dislocation of employees due to implementation of laws administered by the Administrator. Such study shall estimate the number of employees so affected, identify existing sources of assistance available to such employees, assess the adequacy of such assistance, and recommend additional adjustment measures, if justified.

(2) The Secretary shall submit to Congress the results of the study conducted under paragraph (1) not more than one year after the date of enactment of this section.

(f) The Administrator of the Environmental Protection Agency shall undertake to enter into appropriate arrangements with the National Academy of Sciences to conduct continuing comprehensive studies and investigations of the effects on public health and welfare of emissions subject to section 202(a) of the clean air act (including sulfur compounds) and the technological feasibility of meeting emission standards required to be prescribed by the Administrator by section 202(b) of such Act. The Administrator shall report to the Congress within six months of the date of enactment of this section and each year thereafter regarding the status of the contractual arrangements and conditions necessary to implement this paragraph.

(g) The Administrator of the Environmental Protection Agency shall conduct a study and report to Congress by the date one year after the date of the enactment of this section, on the emission of sulfur-bearing compounds from motor vehicles and motor vehicle engines and aircraft engines. Such study and report shall include but not be limited to a review of the effects of such emissions on public health and welfare and an analysis of the costs and benefits of alternatives to reduce or eliminate such emissions (including desulfurization of fuel, short-term allocation of low sulfur crude oil, technological devises used in conjunction with current engine technologies, alternative engine technologies, and other methods) as may be required to achieve any proposed or promulgated emission standards for sulfur compounds.

RAILROAD EMISSION STUDY

SEC. 404. (a) The Administrator of the Environmental Protection Agency shall conduct a study and investigation of emissions of air pollutants from railroad locomotives, locomotive engines, and secondary power source on railroad rolling stock, in order to determine—

(1) the extent to which such emissions affect air quality in air quality control regions throughout the United States,

(2) the technological feasibility and the current state of technology for controlling such emissions, and

(3) the status and effect of current and proposed State and local regulations affecting such emissions.

(h) Within one hundred and eighty days after commencing such study and investigation, the Administrator shall submit a report of such study and investigation, together with recommendations for appropriate legislation, to the Senate Committee on Environment and Public Works and the House Committee on Interstate and Foreign Commerce.

STUDY AND REPORT CONCERNING ECONOMIC APPROACHES TO CONTROLLING AIR POLLUTION

SEC. 405. (a) The Administrator, in conjunction with the Council of Economic Advisors (hereinafter in this section referred to as 'the Council'), shall undertake a study and assessment of economic measures for the control of air pollution which could—

(1) strengthen the effectiveness of existing methods of controlling air pollution,

(2) provide incentives to abate air pollution to a greater degree than is required by existing provisions of the Clean Air Act (and regulations thereunder), and

(3) serve as the primary incentive for controlling air pollution problems not addressed by any provision of the Clean Air Act (or any regulation thereunder).

(b) The study of measures referred to in paragraph (1) of subsection (a) shall concentrate on (1) identification of air pollution problems for which existing methods of control are not effective because of economic incentives to delay compliance and (2) formulation of economic measures which could be taken with respect to each such air pollution problem which would provide an incentive to comply without interfering with such existing methods of control.

(c) The study of measures referred to in paragraph (2) of subsection (a) shall concentrate on (1) identification of air pollution problems for which existing methods of control may not be sufficiently extensive to achieve all desired environmental goals and (2) formulation of economic measures for each such air pollution problem which would provide additional incentives to reduce air pollution without—

(A) interfering with the effectiveness of existing methods of control, or

(B) creating problems similar to those which prevent alternative regulatory methods from being used to reach such environmental goals.

(d) The study of the measures referred to in paragraph (3) of subsection (a) shall concentrate on (1) identification of air pollution problems for which no existing methods of control exist, (2) formulation of economic measures to reduce such pollution, and (3) comparison of the environmental and economic impacts of the economic measures with those of any alternative regulatory methods which can be identified.

(e) In conducting the study under this section, a preliminary screening should be made of the problems referred to in subsections (b)(1), (c)(1), and (d)(1) and economic measures should be formulated under subsections (b)(2), (c)(2), and (d)(2) in the most promising cases, giving special attention to structural and administrative problems. In formulating any such measure which provides for a charge, the appropriate level of the charge should be determined, if possible, and the environmental and economic impacts should be identified.

(f) Within one year after the date of enactment of this Act, the Administrator shall complete a study and report to the Congress on the advantages and disadvantages (including an analysis of the feasibility) of establishing a system of penalties for stationary sources on emissions of oxides of nitrogen and make recommendations regarding the establishment of such a system. Such study shall determine if such a system will effectively encourage the development of more effective systems and technologies for control of emissions of oxides of nitrogen for new major emitting facilities, or existing major emitting facilities, or both. In any case in which a proposed penalty system is recommended by the Administrator, the report should include—

(1) a recommendation respecting the appropriate period during which such system of penalties should apply and the appropriate termination date or dates for such system, if any, taking into account—

(A) the time at which adequate technology may reasonably be anticipated to be available to control oxides of nitrogen for that category of facilities,

(B) the degree to which such technology can be expected to be used on such facilities, and

(C) the Administrator's authorities to require the use of such technology, and

(2) recommendations respecting the compilation of records by facilities subject to such penalties for purposes of determining the applicability and amount of such penalty.

(g) Not later than two years after the date of the enactment of this section, the Administrator and the Council shall conclude the study and assessment under this section

and submit a report containing the results thereof to the President and to the Congress. Interim reports on specific pollution problems and solutions recommended shall be made available to the President and the Congress by the Administrator whenever available.

SAVINGS PROVISIONS; EFFECTIVE DATE

SEC. 406. (a) No suit, action, or other proceeding lawfully commenced by or against the Administrator or any other officer or employee of the United States in his official capacity or in relation to the discharge of his official dates under the Clean Air Act, as in effect immediately prior to the date of enactment of this Act shall abate by reason of the taking effect of the amendments made by this Act. The court may, on its own motion or that of any party made at any time within twelve months after such taking effect, allow the same to be maintained by or against the Administrator or such officer or employee.

(b) All rules, regulations, orders, determinations, contracts, certifications, authorizations, delegations, or other actions duly issued, made, or taken by or pursuant to the Clean Air Act as in effect immediately prior to the date of enactment of this Act, and pertaining to any functions, powers, requirements, and duties under the Clean Air Act, as in effect immediately prior to the date of enactment of this Act, and not suspended by the Administrator or the courts, shall continue in full force and effect after the date of enactment of this Act until modified or rescinded in accordance with the Clean Air Act as amended by this Act.

(c) Nothing in this Act nor any action taken pursuant to this Act shall in any way affect any requirement of an approved implementation plan in effect under section 110 of this Act or any other provision of the Act in effect under the Clean Air Act before the date of enactment of this section until modified or rescinded in accordance with the Clean Air Act as amended by this Act.

(d)(1) Except as otherwise expressly provided, the amendments made by this Act shall be effective on date of enactment.

(2) Except as otherwise expressly provided, each State required to revise its applicable implementation plan by reason of any amendment made by this Act shall adopt and submit to the Administrator of the Environmental Protection Administration such plan revision before the later of the date—

(A) one year after the date of enactment of this Act, or

(B) nine months after the date of promulgation by the Administrator of the Environmental Protection Administration of any regulations under an amendment made by this Act which are necessary for the approval of such plan revision.

And the Senate agree to the same.

JOINT EXPLANATORY STATEMENT OF THE COMMITTEE ON CONFERENCE

The managers on the part of the House and the Senate at the conference on the disagreeing votes of the two Houses on the amendment of the Senate to the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes, submit the following joint statement to the House and the Senate in explanation of the effect of the action agreed upon by the managers and recommended in the accompanying conference report:

The Senate amendment struck out all of the House bill after the enacting clause and inserted a substitute text.

The House recedes from its disagreement to the amendment of the Senate with an amendment which is a substitute for the House bill and the Senate amendment. The differences between the House bill, the Senate amendment, and the substitute agreed to in conference are noted below, except for clerical corrections, conforming changes made necessary by agreements reached by the conferees, and minor drafting and clarfiying changes.

TRAINING

House bill

Prohibits EPA from charging fees for training courses provided to personnel of State and local air pollution control agencies. Permits reasonable fees to be charged for persons other than employees of such public agencies.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

MAINTENANCE OF EFFORT

House bill

Authorizes the Administrator to waive on a case-by-case basis the existing requirement that a State air pollution agency must maintain its level of program support the previous year in order to get Federal grants.

Senate amendment

Provides that a State air pollution agency whose budget is reduced as part of an overall State budget reduction shall not lose its Federal grants as a result of the existing maintenance of effort requirement.

Also provides that no State air pollution agency shall receive less than one half of one percent of the total Federal grant money available.

Conference agreement

The House concurs in the Senate amendment with an amendment to require notice and opportunity for hearing prior to the Administrator's determination that a reduction in air pollution expenditures is due to a nonselective reduction in a State budget.

AIR QUALITY CONTROL REGIONS

House bill

Authorizes the Governor of each State to revise the boundaries of air quality control regions designated under the 1970 Act. The boundary revisions shall be effective only with the approval of the Administrator, and, if applicable, the approval of Governors of nearby States which may be affected by any such revision.

Senate amendment

Each State must submit to the Administrator within 120 days after enactment, a list identifying air quality levels of its air quality control regions or portions thereof. The Administrator shall promulgate such list within 60 days with any necessary modifications, and after notifying and receiving any comment from the State.

Conference agreement

The House concurs in the Senate amendment which requires listing of regions with an amendment to delete the provision relating to air quality sampling procedures which is incorporated in the House amendment on air quality monitoring.

The Senate concurs in the House provision which authorizes the Governor to revise the boundaries of air quality control regions for the purpose of improved air quality management. Revisions of boundaries for purposes other than improving the capacity of air pollution control agencies to perform authorized functions would be inconsistent with this provision and should not be approved by the Administrator. Where subdivisions of regions allow for effective air quality management, the Administrator should approve State redesignation which reduce the size of existing regions.

CRITERIA AND CONTROL

House bill

No comparable provision.

Senate amendment

Requires the inclusion of information on the cost of installation and operation, energy requirements, air quality benefits and environmental impact of emission control technology in air quality control techniques document now issued by the Administration under section 108(b) of existing law.

Conference agreement

The House concurs in the Senate amendment with an amendment to substitute "emission reduction" for the reference to "air quality" benefits.

TRANSPORTATION PLANNING AND GUIDELINES

House bill

No comparable provision.

Senate amendment

Section 5 requires the Administrator to publish information on four basic transportation control measures within 180 days after enactment and, within one year, information on additional measures, including those enumerated in the statute.

Conference agreement

The House concurs in the Senate provision modified to delete regulation of new offstreet parking facilities as an element of a transportation control program. Such facilities are defined elsewhere in the bill as indirect sources. Regulation of legal onstreet parking continues to be included as a transportation control measure.

AIR QUALITY STANDARDS

House bill

Amends Section 109 of the Clean Air Act to require a review of the air quality criteria for existing ambient air quality standards and a review of the standards themselves by the Administrator 18 months after enactment, and every two years thereafter.

An independent scientific review committee is also established to complete a review of air quality criteria and existing ambient air quality standards no later than one year after enactment and every two years thereafter. The Committee must recommend new ambient air quality standards to the Administrator, as well as revisions to the existing ambient standards.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House amendment with the following modification: (1) the first review of the existing ambient standards shall be completed by December 31, 1980; (2) subsequent reviews of the standards are required every five years. The Administrator is authorized to conduct review of existing ambient standards more frequently than every five years and is expected to revise standards whenever available information justifies a revision. Members of the Scientific Advisory Board are made subject to the same financial disclosures process as applicable to the Environmental Protection Agency personnel.

ENERGY OR ECONOMIC EMERGENCY AUTHORITY

House bill

This provision confers authority upon States to temporarily suspend State implementation plan requirements where neces-

sitated by energy or economic emergencies (such as the 1977 winter natural gas shortage). A State suspension under this emergency authority may take effect without prior approval of the Administrator.

A single suspension, not to exceed 4 months in duration, is authorized by this section.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) require as a prior condition for the Governor's action under this section, a Presidential (non-delegable) finding of the existence of a national or regional energy emergency of such severity that temporary suspension of Clean Air Act applicable implementation plans may be necessary in that area and that other means of dealing with the emergency may not be adequate; (2) authorize the Governor to petition the President for such a finding; (3) prohibit the Governor from suspending, but authorize President to suspend, any federally-promulgated standard or requirement; (4) authorize the Administrator to disapprove any Governor's suspension under this section at any time; (5) limit the Governor's economic emergency suspension authority to a case in which the State has adopted and submitted a proposed plan revision, which it finds will meet the requirements of the Act and is necessary to prevent the closing (for one year or more) of any source, and consequent substantial increases in unemployment which would result absent such plan revision and which would not result if such revision is approved, and the Administrator has failed to approve or disapprove such plan revision within the required four-month period.

IMPLEMENTATION

Senate bill

The Senate bill contains provisions requiring State plans to include enforceable permit programs for nondegradation and nonattainment areas. It also contains requirements for plan revisions to meet the requirements of this bill. Finally, the Senate bill required certain prior considerations by the Administrator before he could impose land use requirements under the Act.

House bill

The House bill contains somewhat similar provisions on permit requirements for prevention of significant deterioration, visibility protection, and nonattainment. The House bill deletes the term "land use" from section 110(a)(2)(B) of the Act, because of its vagueness, and more specifically directs State plans to include air quality maintenance measures, and preconstruction permit requirements to assure compliance with all requirements of the Act.

Conference agreement

The conference agreement incorporates elements of both the House and Senate permit provisions in section 110 of the Act. This provision is regarded as largely technical and conforming in nature, because of the similarity of the two bills.

The conference agreement accepts the House provision on the deletion of "land use" and inclusion of air quality maintenance requirements.

The conference agreement accepts the Senate provision requiring plan revisions to meet the new requirements of the 1977 legislation.

INDIRECT SOURCE REVIEW

Senate amendment

No provision.

House bill

The House bill establishes numerous procedural, factual, and substantive limitations upon the Administrator's authority to impose, or require the States to impose, indirect source review requirements or controls.

The House bill also establishes constraints on the Administrator withholding or limiting sewage treatment grants because of Clean Air Act considerations and also establishes the conditions on which such withholding or limitation is permitted by the Act.

Conference agreement

The Conferees agreed to modify the House provision which restricted the authority of the Administrator to require indirect source review programs as part of state implementation plans. The Administrator, under the conference provision, would be prohibited outright from requiring indirect source review programs, either directly or indirectly, except with respect to federally funded projects.

This prohibition extends to the Administrator's authority to require as a condition for approval the inclusion or retention of these programs in state implementation plans as well as the authority of the Administrator to promulgate plans or regulations which include such programs. An exception to this prohibition is made for major federally funded public works projects such as highways and airports and federally owned and operated indirect sources. The term "federally funded" does not include federal assistance such as loan guarantees and federal deposit insurance programs.

Under the conference provision, any State or local government may adopt and enforce an indirect source review program if it so chooses. Any State or local government which has such a program would be free to leave such a program in effect. The Administrator may approve and enforce an indirect source program if it is adopted and submitted by a State. Any such program which has already been approved by the Administrator may remain part of the applicable implementation plan. However, any State at any time may suspend or revoke such a program.

In addition, the conferees agreed to adopt the House provision's definitions of "indirect source" and "indirect source review program" with the exception that existing on-street-parking was excluded from the definition of "indirect source." An indirect source review program is one which provides for the review of new, existing or modified indirect sources.

With respect to existing "on-street parking", the conference agreement authorizes the Governor of a State to suspend temporarily certain regulations contained in the applicable implementation plan to restrict the supply of on-street parking.

The "on-street parking" suspension authority does not alter or affect the validity or enforcement of traditional municipal traffic and parking ordinances. Nor does it pertain to any requirements which are not included in the applicable implementation plan. Suspensions would be authorized only for implementation plan curtailments of the supply of existing on-street parking; they would not be authorized for measures to restrict double parking or otherwise eliminate impediments to traffic flow.

In authorizing "on-street parking" suspensions by the Governor, the conferees intend to permit a period for reevaluation of control strategies in nonattainment areas prior to the plan revision required by January 1, 1979, for such areas. Where a court order has been issued compelling enforcement of "on street parking" supply reductions, the effect of the Governor's temporary suspension of such measures may be in the discretion of the court to stay the court's order in that respect. However, the conferees do not intend the Governor's temporary suspension to constitute a permanent revocation of that aspect of the plan. Thus, if the Governor fails to submit a revised plan by January 1, 1979, which the Administrator approves as meeting the requirements of this Act, the "on street parking" supply reduction requirements could no longer be suspended and the court's stay on enforcement, if any, should terminate.

LAND USE

House bill

Section 201(f) deletes the phrase "land-use" from section 110(a)(2)(B) of the Act, which sets out requirements for State implementation plans. The words "air quality maintenance plans, and preconstruction review of direct sources of air pollution" are substituted.

Senate amendment

Section 6(b) limits land-use controls to the maintenance of, or to prevent further deterioration from, primary ambient air quality standards and provides they may be included in a plan only after consideration of their energy, environmental and economic impacts.

Conference agreement

The Senate concurs in the House provision with the understanding that preconstruction reviews of direct sources are to include consideration of energy, environmental and economic impacts and that the only land-use regulations which may result from implementation of this Act are those which are needed to assure attainment and maintenance of ambient air quality standards and prevent significant deterioration of air quality.

INTERNALIZATION OF COST

House bill

Provides that each applicable implementation plan must require the payment of permit fees by the owner or operator of any major stationary source required to obtain a permit under the Act.

Senate amendment

No comparable provision.

Conference agreement

The conference agreement adopts the House provision with a modification. This modification makes clear that court costs and other costs associated with the filing and prosecution of judicial or administrative enforcement proceedings may not be recovered through permit fees. Costs of implementing the permit conditions, however, would be covered by the permit fee requirement as in the House bill. Other provisions of the conference agreement make clear that preconstruction permits are required by the Act for all new or modified major stationary sources, whether locating in significant deterioration or nonattainment areas.

DELEGATION TO LOCAL GOVERNMENT UNDER FEDERAL PLAN

House bill

Authorizes the Administrator to delegate enforcement authority to local government in the case of a plan promulgated by the Administrator.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

IMPLEMENTATION PLANS REQUIRING BRIDGE TOLLS

House bill

Any implementation plan which contains a measure requiring a toll for the use of a bridge located entirely in one city shall be revised to eliminate such measure, upon the application of a Governor to the Administrator. The Governor shall certify in such application that the implementation plan shall be revised not later than one year after enactment.

Senate amendment

Any implementation plan which contains a measure requiring a toll for use of a bridge located entirely in one city shall be revised to eliminate such measure, upon application of a Governor to the Administrator. The Governor shall certify in such application that the implementation plan shall be revised not later than one year after enactment to include measures to provide emission reductions equivalent to the reductions identified with the tolls or charges eliminated.

Conference agreement

The House concurs in the Senate amendment with an amendment to substitute for the reference to emission reductions "identified" as a result of application of bridge tolls, a reference to emission reductions "which may be reasonably expected to be achieved" through use of bridge tolls.

LOSS OF PAY

House bill

This section provides that one of the conditions for use of supplemental or intermittent control measures or other dispersion enhancement methods would be that the owner or operator of the source proposing to use such measures or methods agree not to make employees bear any of the costs of periodic shutdowns or production curtailments which may result from use of such methods or measures.

Senate amendment

This section bars the loss of pay to workers that could result from the implementation of supplementary control systems for nonferrous smelters, as authorized in this legislation. Each State implementation plan which contains provisions for supplemental controls for a source must also include a requirement that no reduction in production can result in a loss of pay to the workers.

Conference agreement

The Senate concurs in the House provision.

NEW SOURCE STANDARDS OF PERFORMANCE

House bill

Section 111 amends existing section 111 requiring the promulgation and revision of new source performance standards to further require that major new sources use the best technological continuous emission controls to meet standards and percentage reduction requirements.

The House provision makes numerous significant changes in existing law. First, it clarifies that intermittent or alternative control measures are not permissible means of compliance. Second, it indicates that the best adequately demonstrated technology, including precombustion cleaning or treatment of fuels, is to be the basis of the standard, not merely reliance on use of untreated fuels. Third, it requires the Administrator to take into account energy requirements (in addition to costs) in determining which technologies have been adequately demonstrated. It also requires the Administrator to consider non-air quality health and environmental impacts in making that determination.

The section also makes clear that standards adopted for existing sources under section 111(d) of the Act are to be based on available means of emission control (not necessarily technological) and must, unless the State decides to be more stringent, take into account the remaining useful life of the existing sources.

This section also contains authority for the Governor of a State to petition the Administrator to compel the Administrator to issue new source performance standards for industries which have not yet been covered by such standards to revise priorities for standard setting, to issue revised standards when better technology becomes adequately demonstrated, or to issue standards for unregulated hazardous pollutants, or sources thereof under Section 112. The House's intended purposes in adopting this amendment are: (1) to provide a greater role for the States in standard setting under the Act; (2) to assure that industries do not play off States with weak or no environmental controls against States with stronger controls in decisions to locate new sources; and (3) to provide a check on the Administrator's inaction or failure to control emissions adequately. Not later than nine months after enactment of this Act, the Administrator shall promulgate regulations specifying the categories of unregulated major stationary sources. One year after enactment and annually thereafter for 3 years, the Administrator shall list 25% of such categories under section 111(b).

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with minor amendments. The agreement requires (1) that the standards of performance for fossil fuel-fired boilers be substantially upgraded to require the use of the best technological system of continuous emission reduction and to preclude use of untreated low sulfur coal alone as a means of compliance; (2) that specific technological requirements may be required in lieu of performance standards only under the same conditions as the Conferees have established for hazardous emission design standards; and (3) that for fossil fuel-fired sources, the new source performance standards must be comprised of both a standard of performance for emissions and an enforceable requirement for a percentage reduction in pollution from untreated fuel.

In calculating the percentage reduction requirement, the Administrator is authorized to give credit for accepted minemouth and other precombustion fuel cleaning processes, whether they occur at, or are achieved by, the source or by another party. The Conferees intend that the granting of such credit shall be in accordance with regulations promulgated by the Administrator, and shall be consistent with the purposes of the House provision. Moreover, in establishing a national percent reduction for new fossil fuel-fired sources, the Conferees agreed that the Administrator may, in his discretion, set a range of pollutant reduction that reflects varying fuel characteristics. Any departure from the uniform national percentage reduction requirement, however, must be accompanied by a finding that such a departure does not undermine the basic purposes of the House provision and other provisions of the Act, such as maximizing the use of locally available fuels.

The Conferees also agreed to a modification of the House provision to give the Administrator more time in the early stages of promulgating new additional source performance standards: (1) to allow one year for initial listing of categories of sources; and (2) to delete the requirement for 25 percent of standards to be set each year and require, instead, that at least one-quarter of standards must be promulgated by the end of the second year after listing, at least three-quarters by the end of the fourth year after listing.

WAIVER FOR TECHNOLOGY INNOVATION

House bill

Authorizes the Administrator to grant variances of up to 10 years from Federal new source performance standards to permit a source to use innovative continuous emission control technology. In order to grant the variance, the Administrator must find: (1) a substantial likelihood that the new technology will achieve greater emission reduction than that required under the new source performance standards or an equivalent reduction at lower economic, energy or environmental costs; (2) the new technology will not cause or contribute to an unreasonable risk to public health, welfare or safety; (3) the Governor of the State in which the source requesting the variance is located consents to the variance; (4) the variance will not prevent the attainment or maintenance of any national ambient air quality standard.

The number of variances authorized to be granted is limited to the number necessary to test the new technology.

Senate amendment

Authorizes the Administrator to grant a waiver of up to three years from Federal new source performance standards to a person proposing a construction of a new source which would incorporate a technological system likely to achieve greater continuous emission reduction or achieve at least equivalent reduction at lower cost compared to existing systems.

The Administrator must also find that the new technology will not cause or contribute to an unreasonable risk to public health, welfare or safety; that the waiver will not prevent the attainment or maintenance of any national ambient air quality standard, and that the Governor of the State in which the source is located has consented to the variance.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) the term "waiver" is substituted for "variance" throughout the section; (2) waivers are authorized to be granted on a unit-by-unit or source-by-source basis; however, waivers may only be granted for that unit or portion of the source on which the innovative technology is to be used; (3) one or more waivers may be granted for any unit or source, but the cumulative effective period of all waivers for any unit or source may not exceed the earlier of, seven years after the date on which the first waiver is granted for that unit or source, or four years after commencement of operation of that unit or source; (4) the Administrator must find that the proposed system has not been adequately demonstrated; (5) in determining the substantial likelihood of a new system achieving greater emission reduction, the Administrator must take into account any previous failures of the system; and (6) if a waiver is terminated, the Administrator shall grant the source an extension of no longer than 3 years in order to comply to applicable emission standards.

HAZARDOUS DESIGN STANDARDS

House bill

No comparable provision.

Senate amendent

Amends Section 112 of existing law to specify design, equipment, or operational standards for the control of a source of hazardous emissions, where an emission limitation is not possible or feasible to measure hazardous emissions or to capture them through appropriate devices for control.

Conference agreement

The House concurs in the Senate provision with an amendment to clarify that the Administrator may specify a hazardous design standard if the emission of hazardous pollutants through a conveyance designed to emit or capture such pollutants would be inconsistent with any Federal, State or local law and minor clarifying modifications in the language.

The language in this section with respect to technological or economic limitations defines what is not feasible *only* for purpose of prescription or enforcement by EPA.

ENFORCEMENT PROVISIONS

Conference agreement

The conference agreement includes a section entitled enforcement provisions which

includes various amendments to Section 113 of the Clean Air Act.

CIVIL PENALTIES

House bill

This section authorizes the courts to impose civil penalties of up to $25,000 per day for violations of the Act. The courts are directed to take into account the size of the business and the seriousness of the violation, in setting the amount of the penalty.

Senate amendment

Section 113, the Federal enforcement provision of the Clean Air Act, is amended to provide for a civil penalty of not more than $10,000 per day of violation, in addition to injunctive relief, for violations of enforcement orders or various requirements of the Act. In addition, the criminal penalty provision of section 113 is revised to include violations of section 113(d) enforcement orders involving compliance date extensions, and to add to the definition of "person" for the purpose of criminal sanctions, any responsible corporate officer.

The section is also amended to provide a fine or not more than $25,000 per day for knowing violation of implementation plan requirements where there has been no request for a section 113(d) enforcement order extending the compliance date, filed within 180 days after enactment, and for violations of the provisions of section 120 which require submission of information by October 1, 1977, on the cost of compliance and which require the payment of the delayed compliance penalty.

Conference agreement

The conferees agreed to accept the House provision on civil penalties, with the following changes: (1) include the Senate requirement that the Administrator give notice of the commencement of any action to the appropriate State air pollution control agency; (2) require the Administrator to commence a civil action against a major stationary source; (3) include the Senate residence venue provision in the case of a suit against an individual.

The conferees agreed to accept the Senate provisions on criminal sanctions, with the following changes: (1) delete subsection (e), requiring a fine of not more than $25,,000 per day for a knowing violation of certain requirements; (2) delete subsection (f) relating to interstate pollution abatement by the Administrator; and (3) amend section 113(c) to make a knowing violation of the delayed compliance penalty provisions subject to criminal sanctions.

COMPLIANCE DATE EXTENSIONS

House bill

Section 121 of the House bill authorizes the State or the Administrator to issue delayed compliance orders to stationary sources which directly emit pollution. A delayed compliance order may postpone any compliance deadline under an applicable implementation plan. Thus an order would allow continued operation of a source not in final compliance with its emission limitations, even though the violation of the emission limitations by the source may have the effect of delaying the actual date for attainment of a national ambient air quality standard or may violate provisions for prevention of significant deterioration.

An order under section 121 may not postpone any deadline or requirement applicable to stationary sources under section 111 or 112 of the Act. Nor may a delayed compliance order under this section postpone any transportation control or indirect source review program requirement which is part of an applicable implementation plan. The section also provides authority to extend compliance dates to allow sources to utilize new means of emission control, and to extend requirements for prevention of significant deterioration after a new source has been in operation and has become an existing source.

Senate amendment

Section 12(a) amends Section 113 to authorize a State, and after 30 days notice, EPA, to issue enforcement orders to sources not in compliance with applicable emission limitations. Such orders shall require compliance as expeditiously as practicable, but in no event later than July 1, 1979.

If a non-complying source intends to comply with an applicable emission limitation by closing or replacing a facility, or changing its production process, the State or the Administrator may issue an order permitting such source to operate until July 1, 1979, upon the posting of a bond or other surety. If the source fails to close or replace the specified facility, or fails to change its production process, the bond shall be forfeited.

If a source intends to comply with an applicable emission limitation with an innovative control technique which will reduce emissions more than the applicable standard, or which has potential industrywide application at significantly lower costs than demonstrated control technology, such facility must be in compliance by July 1, 1981.

Any enforcement order in effect on the date of enactment of these amendments shall remain in effect to the extent that it is consistent with section 113(d) but shall adhere to the compliance date of July 1, 1979.

Conference agreement

The conference adopts the Senate provision on issuance of enforcement orders; the House provision on review of orders; and the Senate provision which requires the Administrator to issue an order simultaneously in case of any disapproval. Orders are limited to not more than 3 years delay, except in case of innovative technology (5 years), coal conversion extensions, or smelter orders.

No order may be issued after July 1, 1979 unless it establishes a delayed compliance penalty.

Also adopted is the language on the replacement of facilities. The Senate language dealing with inconsistent enforcement orders which have been issued is adopted with a modification to give all States one year to modify such orders.

The provision in the Senate bill continuing the administrative orders on consent for the Louisville Gas and Electric Company's facilities is clarified to specify the dates on which such orders were actually issued. Such orders are the only exception from the July 1, 1979 deadline.

The House language on interim measures and on revocation procedures is adopted.

COAL CONVERSION

House bill

This section amends section 119 of the Clean Air Act, as adopted by the Energy Supply and Environmental Coordination Act of 1974 (Public Law 93-319). It permits compliance date extensions for sources converting to coal to last until 1981, instead of 1979, as under existing law. A further extension up to as late as 1986 could be granted under section 103 of the bill.

The amendments to Public Law 93-319 also permit extensions for those coal burning sources (subject to an FEA order not to switch to oil or natural gas), which had earlier intended to meet applicable emission limits by switching to one of these fuels and had earlier received a variance or plan revision to do so. Under existing law extensions are not authorized for these sources.

Also under current law, a source which is ordered to convert from burning petroleum products or natural gas to coal may not receive an extension of an emission limitation for any pollutant if the air quality anywhere in the region exceeds the primary health standard for that pollutant. This is called the "regional limitation". This section would make the "regional limitation" rebuttable (and thus permit extension) upon certain findings.

This section also requires concurrence by the Governor as a condition for granting this type of extension. Concurrence by the Governor is not required under existing law.

The amendments would also affirm the decisions of four U.S. court of appeals cases that the Act requires continuous emission reduction measures to be applied. Thus, intermittent control measures (to be applied only in case of adverse weather conditions), increasing stack heights, or other pollution dispersion techniques would not be permitted as final compliance strategies.

Senate amendment

The bill includes two amendments dealing with coal conversion. The first is a provision within the new section 113(d) compliance date extension procedure for sources converting to coal. The other repeals section 119 of the Clean Air Act originally added by the Energy Supply and Environmental Coordination Act of 1974, and provides that the certifications and notifications required to establish the date for effectiveness of FEA prohibition orders shall be provided by the appropriate States rather than by the EPA Administrator. These provisions replace the current means of providing compliance date extensions for sources ordered to convert to coal by the Federal Energy Administration with the compliance date extension procedure established for all stationary sources under these new amendments. In addition, this section preserves the approach of section 19(d)(5) by adding similar language to section 111 of the Act.

Any source ordered to convert under section 2 of the Energy Supply and Environmental Coordination Act of 1974 or which converts to coal as a primary energy source because of actual curtailment of natural gas supplies under a curtailment plan approved by the Federal Power Commission or, for intrastate gas supplies, by a State regulatory commission, can receive an extension of the time for compliance with the applicable emission limitations until July 1, 1979, or 3 years after the date on which the conversion order is issued. In no event may the compliance date be extended beyond December 31, 1980.

This section repeals section 119 and provides that certifications and notifications to the Federal Energy Administrator shall be provided by the appropriate States rather than by the Administrator of EPA.

The section further provides that references to section 119 in section 2 of the Energy Supply and Environmental Coordination Act shall be construed to refer to section 113(d) of the Clean Air Act (on delayed compliance orders) and to paragraph (5) thereof in particular.

Conference agreement

The House conferees agreed to:

(1) Accept the Senate approach incorporating in the delayed compliance order an extension (to December 31, 1980) for any source that can't meet State implementation plan requirement because of order to convert to coal, with authority for an additional delay up to five years as in the House bill;

(2) Allow sources ordered to convert to actually begin to burn coal only when they can do so without causing or contributing to concentrations of any pollutant in excess of primary air quality standards (the "primary standard condition" contained in both bills);

(3) Require the Administrator to certify the date on which the primary standard condition can be met, subject to disapproval by the State;

(4) Eliminate the required special showing that conversion will not pose a significant risk to public health from non-criteria pollutants, as the Senate bill did;

(5) Make the existing "regional limitation" a rebuttable presumption rather than an absolute, as the House bill did;

(6) Delete the Senate scrubber allocation provision.

NOTICE TO STATE REGARDING CERTAIN INSPECTIONS

House bill

This section requires the Administrator to give reasonable notice to the States prior to carrying out an entry, inspection or monitoring, where the Administrator intends to check on compliance with a standard adopted by the State and approved by the Administrator.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) delete the requirement that the Administrator must give a statement of reasons for his actions and take into account a showing by a State agency that such action would be detrimental to the administration of the State enforcement program, but require the Administrator to inform the State of the purpose for his action; (2) add a provision that failure of the Administrator to comply will not be a defense in an enforcement action, nor would it make inadmissible any evidence obtained in violation of this provision.

The intent of this provision is to improve Federal-State relations and to minimize duplication of effort. It is intended to be a protection for States, not for sources, and to encourage cooperation and consultation. Under this provision, oral notice would be permitted.

INTERNATIONAL POLLUTION

House bill

No comparable provision.

Senate amendment

Provides a mechanism for the Administrator to trigger a revision of a State Implementation Plan under Section 110(a)(2)(H) upon the petition of an international agency or the Secretary of State if he finds that emissions originating in a State endanger the health or welfare of persons in a foreign country.

Representatives of the foreign country shall be invited to appear at the public hearing upon any such revision.

The section does not apply unless the foreign country has afforded the United States essentially the same rights.

The recommendations of any international abatement conference conducted before enactment remain in effect unless rescinded on the grounds of obsolescence.

Conference agreement

The House concurs in the Senate amendments to (1) reflect the test of "reasonably may be anticipated" to endanger public health adopted in this legislation; (2) require a request by a duly constituted international agency as a condition for the Administrator to act; and (3) require a plan revision only to the extent necessary to prevent or eliminate the endangerment in the foreign country.

PRESIDENT'S AIR QUALITY ADVISORY BOARD

House bill

No provision.

Senate amendment

Abolishes the President's Air Quality Board.

Conference agreement

The House concurs in the Senate amendment.

FEDERAL FACILITIES

House bill

Clarifies the intent of the 1970 Clean Air Act that Federal facilities must comply with all substantive and procedural air pollution requirements of Federal, State, interstate, or local law to the same extent as any person subject to such requirements. Any Federal employee, officer or agency may be held liable personally for civil penalties as well as in his official capacity for a violation of this provision.

Senate amendment

Clarifies the intent of Section 118 of existing law that all Federal facilities must comply with all substantive and procedural requirements of applicable State implementation plans. Certain procedural requirements with which Federal facilities must comply are specified: construction and operating permits, reporting and monitoring; injunctive relief and sanction provisions and the payment of reasonable service charges. Personal liability is not extended to Federal employees, officers or agents.

Conference agreement

The Senate concurs in the House provision with the amendments (1) to assure that Federal employees, officers and agents are not made personally liable for civil penalties to which such person is not otherwise liable; (2) to assure that no judicial review of an EPA action in State or local courts is authorized; and (3) to delete a provision which barred removal of suits against Federal facilities to Federal courts. The conferees intend, by adopting the House amendment, to require compliance with all procedural and substantive requirements, to authorize States to sue Federal facilities in State courts, and to subject such facilities to State sanctions.

SMELTER ORDERS

House bill

Authorizes the use of enforceable supplementary control strategies for existing nonferrous smelters. Supplemental controls are to be used only after the installation of continuous emission control technology, after the Administrator and the State are satisfied as to the reliability and enforceability of a particular system, and after the State or the Administrator has adequate resources to oversee the use of supplemental control strategies. Existing nonferrous smelters in operation before January 1, 1910 may be granted up to two extensions not to exceed five years each for the use of enforceable intermittent control systems if the Administrator finds that the imposition of continuous emission controls would result in a cessation of smelter operations.

Senate amendment

Authorizes the Administrator or State to issue up to two delayed compliance orders for existing nonferrous smelters. The first enforcement order could not delay compliance with the applicable implementation plan beyond January 1, 1983, and the second order could not delay compliance beyond January 1, 1988. A smelter under such an order must employ reasonably available continuous emission reduction measures, i.e. acid plants, with a supplementary system. Where, however, the smelter could show that continuous emission reduction measures would necessitate permanent shut down, an intermittent control system alone would be allowed. In either case, a smelter would be held liable for any violation of a national ambient air quality standard within a predetermined area. No delayed compliance penalty would apply to any smelter in compliance with any order, but the requirements to do research and develop needed control technology would be applicable.

Conference agreement

The Conference agreement adopts the basic format of the House amendment with several modifications. First, State or Federal enforcement orders may be issues for an initial five year extension without public hearings except (1) where the source wants to avoid the imposition of any continuous controls because of possible shutdowns that would exceed at least one year, or (2) where the Administrator disapproves a State order. Second, where a smelter is using enforced supplemental controls on the date of enactment, no additional continuous controls may be required in an initial five year order. However, during the course of any order, the Administrator may trigger a public hearing when he believes that additional continuous controls have become reasonably available for the nonferrous smelting industry.

Prior to granting a second order for any nonferrous smelter, there must be notice and a public hearing. Such a hearing must be preceded by a submission by the applicant of a documentation of the grounds for the second order which must be available to the public. A second order must require the smelter to install technology as expeditiously as practicable after it has been determined by the Administrator to be reasonably available and adequately demonstrated.

NONCOMPLIANCE PENALTY

House bill

This section of the bill creates a new section 122 of the Act, which establishes a system for the assessment and collection of penalties from noncomplying stationary sources by the States or by the Administrator.

The penalty under this section would not apply to nonmajor stationary sources, unless they violate hazardous emission standards or unless they contribute significantly to pollution or violate a requirement under section 111 of the Act. Procedural due process is afforded with judicial review. The penalty only applies to violations which occur after mid-1979.

If a source can show that its noncompliance occurs for reasons entirely beyond its control, then it would be exempt from the penalty. Expenditures by the source to come into compliance may be offset, as provided in this section, against the amount which represents the value of noncompliance to the source.

The penalty would be imposed against major stationary sources which violate emission limits set out in an applicable implementation plan, and against stationary sources which are not in compliance with standards of performance or hazardous emission standards under section 111 or 112 of the Act, respectively. Additionally, any source which is granted compliance date extensions (under section 119 of the Act), a delayed compliance order (under section 121(b)(1) or (2)) or a smelter order (under section 121(b)(3) or a temporary emergency suspension (under section 110(f)) and which is not in compliance with an interim emission control requirement or schedule of compliance mandated by the above respective provisions, would be subject to the penalty.

This section provides for the granting of exemptions from the section 122 penalty under the following narrowly defined circumstances. First, an exemption would be granted if the source has an extension under section 119 of the Act and the source demonstrates that is noncompliance is solely due

to the FEA order under the Energy Supply and Environmental Coordination Act, which preceded the section 119 extension. Next, an exemption must be granted if the source has a section 121(b)(1) delayed compliance order for inability to comply and the source bears the burden of proof that such inability to comply is due to circumstances entirely beyond the control of the owner or operator of the source.

Another basis for a source to be exempted from the section 122 penalty is if it has a delayed compliance order pursuant to section 121(b)(2) to permit the use of innovative control technology. Finally, an exemption must be granted if the violation is "de minimis".

Any source which violates an interim control requirement or schedule of compliance while operating under an extension, order or waiver issued pursuant to the act, would be subject to the section 122 penalty provision.

The section sets forth a detailed procedure to permit due process prior to any penalty becoming payable, including provision of a formal adjudicatory hearing if a source wishes to challenge a determination by the Administrator or the State that the source is liable for a penalty. The provision authorizes review by the Administrator of a State assessment of a penalty and mandates review by the Administrator upon petition by any person showing that the requirements of this section have not been met.

Section 122 further provides that violating sources become liable for the penalty only if the violation continues beyond the date which is two years after the date of enactment of this section. The amount of the penalty is predicated upon the equivalent of the costs which would be necessary for the source to attain and maintain compliance with the requirement with respect to which the penalty is assessed.

The penalty would be paid on a quarterly basis. In no event may the penalty exceed $5,000 per day. Any person who fails to pay on a timely basis the amount of any penalty assessed under section 122 would be required to pay an additional quarterly nonpayment penalty equal to 20 percent of any amount which the person has failed to pay.

Senate amendment

The Senate provision adds a delayed compliance penalty provision under which any source which receives an enforcement order under Section 12(a) but does not comply with its regulation by July 1, 1979, shall be automatically subject to a delayed compliance penalty in the form of monthly payments equal to at least the cost of compliance, including capital costs, debt service costs, operation and maintenance costs, and the additional economic value gained by delay.

Any source which receives an enforcement order with a compliance date later than July 1, 1978, shall furnish to the State prior to October 1, 1977, detailed information on its proposed method of compliance, including all costs. After publication by the State of a proposed delayed compliance penalty and an opportunity for a public hearing, the State shall amend such source's enforcement order to include such penalty, to accrue after July 1, 1979.

If the Administrator objects to such penalty established by the State, he shall give written notice of his objection within 90 days after the proposal, and shall substitute his own penalty.

A source which fails to make a penalty payment shall be subject to a penalty of not more than $25,000 per day of violation, as provided in section 113(e). Judicial review of a penalty is available to a source in district court, but such review shall in no case delay the imposition of a delayed compliance penalty unless bond is posted. Financial relief shall be provided to a source which successfully challenges its established penalty after partial payment.

Conference agreement

Adopts the House provisions which authorize the Administrator or the State to assess and collect a noncompliance penalty with a modification that the EPA regulations setting forth the basic regulations must be promulgated within six months rather than one year. The State may develop a plan to carry out the section and the Administrator may delegate the authority to the State. Language from the Senate bill is adopted requiring that if the Administrator disapproves any penalty established by a State, the Administrator must immediately substitute a noncompliance penalty for the source (Senate section 120(b)).

Adopts the Senate language establishing that actions pursuant to this section shall be considered final actions for the purpose of section 307, assuring that the use of the penalty provision in no way affects further enforcement proceedings, and establishing that emission limitations promulgated after enactment shall have penalties established no later than three years after the approval of such emission limitation. The establishment of the penalty shall be calculated in accordance with provision of the Senate bill with an addition to clarify that the penalty must cover any additional economic value which delay in compliance brings to the owner.

Includes the House provision allowing for a reduction from the penalty for payments made to place a source in compliance with additional language to assure that the economic benefit of noncompliance is recovered from the source.

Adopts the provisions of the House bill requiring payment to begin two years after enactment and definitions and a required resettlement at the end of the completion of penalty payments. Adopts the provision authorizing Judicial review of the Administrator's regulations only in the U.S. Court of Appeals for the District of Columbia. Judicial review of the specific amount of any individual source's penalty is reviewable in the appropriate Circuit of Appeals.

CONSULTATION

House bill

Requires each State to establish a consultation process to assure adequate opportunity for general purpose local governments, regional agencies and Federal Land Managers to present views prior to adoption of measures of concern to them.

Senate amendment

Requires the States to provide satisfactory consultation with local governments in carrying out the requirements of Sections 110 and 113 of existing law. EPA must promulgate regulations to assure the adequacy of such consultation. Thereafter, the Administrator may disapprove any plan not in compliance with such regulations. Such disapproval may be petitioned only by local governments.

Conference agreement

The House concurs in the Senate amendment with amendments to (1) include the Federal Land Manager in the consultation process with respect to Federal lands; (2) assure that the scope of the consultation requirement includes all measures required in the House bill; (3) limit the consultation requirements to regulations promulgated more than one year after the date of enactment; (4) permit 6 months for EPA to promulgate regulations under this section; and (5) include House provision which allows the Administrator eight months after submission of an implementation plan to promulgate a consultation process for a State.

UNREGULATED POLLUTANTS

House bill

Section 101 requires the Administrator to promulgate an ambient air quality standard for one-hour concentrations of nitrogen dioxide (NO_2) within one year after enactment unless he finds no significant evidence that such a standard is required to protect public health. The Administrator must first revise and reissue air quality criteria for 1-hour NO_2 concentrations within six months after enactment.

For radioactive pollutants, cadmium, arsenic and polycyclic organic matter, the Administrator must include such substances in a list under Section 108 within one year, thus triggering the issuance of air quality criteria, or a list under Section 112 or Section 111 of existing law, unless he finds that a substance will not cause or contribute to air pollution which may be reasonably anticipated to endanger public health. He shall also conduct with other appropriate agencies, a study of the health and welfare effects of sulfates, radioactive pollutants, cadmium, arsenic and polycyclic organic matter.

Within six months after listing any radioactive material, the Administrator and the Nuclear Regulatory Commission shall enter into an interagency agreement regarding facilities under the jurisdiction of the Nuclear Regulatory Commission.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) For radioactive pollutants, cadmium, arsenic and polycyclic organic matter, the Administrator shall make a determination within one year of date of enactment (two years for radioactive pollutants) that such a substance causes or contributes to air pollution which may be reasonably anticipated to endanger public health or result in an increase in mortality of serious, irreversible or incapacitating reversible illness before listing such pollutants under Section 108, Section 111, or Section 112; (2) With respect to the short-term NO_2 standard, the Administrator shall within one year after date of enactment of this Act, promulgate a national primary ambient air quality standard for a period not to exceed 3 hours.

(3) The conference agreement adopts the House provision which classifies radioactive substances (including, but not limited to, naturally occurring radioactive materials, accelerator produced isotopes, and source material, special nuclear material, and byproduct material as defined by the Atomic Energy Act, as amended) as air pollutants. This brings them under the various provisions of the Clean Air Act and allows their regulation as criteria pollutants under ambient air quality standards, as hazardous air pollutants, or under new source performance standards, as appropriate. In the past there has been doubt about the authority for regulation of radioactive air pollutants under the Clean Air Act. This provision makes it clear that the full regulatory framework of the Act is available for radioactive pollutants.

Further, as in the case of the other named pollutants, EPA is required to make an affirmative decision within two years, whether or not to list radioactive pollutants under section 108, 111 or 112 of the Act.

The provision of the House bill requiring EPA consultation with the NRC prior to listing any source material, special nuclear or byproduct material is retained. The purpose of this provision is only to make available to the Administrator, prior to listing a radioactive pollutant, relevant information from the NRC, and to inform the NRC of action contemplated by EPA.

The House provision requiring an interagency agreement between EPA and NRC and the House provision requiring an EPA study of radioactive pollutants are also retained.

With regard to facilities licensed by the NRC, the Atomic Energy Act of 1954 and the Energy Reorganization Act of 1974 mandate licensees to observe such safety standards as the NRC may require to protect health and to minimize danger to life or property. In order to avoid unnecessary confusion and delay in the licensing process and to recognize the prior existence of Federal regulation of nuclear sources and facilities, EPA may choose to promulgate identical standards to those previously established by the NRC, but only to the extent that EPA finds that such standards are adequate to fulfill the requirements of this Act.

A provision is also included in this bill which permits the NRC to disapprove any EPA, State or local standard promulgated under the Clean Air Act if the Commission finds, after notice and opportunity for public hearing that the application of such standard to a source or facility within its jurisdiction would endanger public health or safety. The President may overturn a disapproval within 90 days, upon appeal by the agency which promulgated the disapproved standard. In this connection, sources and facilities shall be construed to mean only those sources and facilities actually licensed by the NRC, or an "agreement State" under agreement with NRC, whether the license is issued to an individual, institution, agency, corporation, or other entity.

As for other Federal facilities, not licensed by the NRC, there is no new authority for disapproval of clean air regulations. Section 118 of the Clean Air Act already provides for exemption of Federal facilities from certain air pollution emission requirements when it is determined by the President to be in the paramount interest of the United States.

Under this provision, radioactive pollutants, including source material, special nuclear material, and byproduct material are covered by Section 116 of the Clean Air Act. Thus, any State, or political subdivision thereof, may establish standards more stringent than Federal, or where a Federal standard has not been established. may establish any standards they deem appropriate. Thus the provision would not preempt States and localities from setting and enforcing stricter air pollution standards for radiation than the Federal standards, and would not follow the holding of Northern States Power Co. v. State of Minnesota, 447 F. 2d 1143 (8th cir. 1971) aff'd 405 U.S. 1035 (1972) in the context of radioactive air pollution.

In addition, this provision is not intended to reduce or remove any authority which EPA now has under the Clean Air Act, the Atomic Energy Act, or Reorganization Plan No. 3. It is also not intended to prevent the NRC from setting more stringent standards than those set under this Act.

The conferees intended that judicial review of any NRC decision to preempt state standards shall be advanced on the docket of the reviewing court and shall be decided as expeditiously as is practicable and shall be given preference with respect to other cases on the court's docket.

TALL STACKS

House bill

The stack height of any stationary source which exceeds good engineering practice, defined as a 2½ times the height of the source, shall not be credited toward the amount of emission reduction required under the State implementation plan.

The Administrator may waive such restriction for a source which demonstrates that a stack height greater than 2½ times the source is necessary to insure against excessive air pollutant concentrations resulting from areodynamic downwash.

This restriction on stack height affects only the degree of credit a source may receive for air pollution control purposes; it does not affect the height of a stack for any other purpose.

No stack height in existence prior to the enactment of the Clean Air Act of 1970 shall be affected by this provision.

Senate amendment

The Senate bill established one exception to the requirement of the 1970 Act that tall stacks are not a means of emission limitation and cannot be taken into account for that purpose. For any coal-fired steam electric generating units subject to Section 118 which commenced operation prior to July 1, 1957, emission limitations established may take into account the effect of the entire stack height of stacks for which a construction contract was awarded before February 8, 1974.

Conference agreement

The conferees agreed to adopt both the House and Senate provisions. The adoption of these provisions is intended to reaffirm the mandate of the 1970 amendments that atmospheric loading through dispersion technology is not an acceptable means of meeting State Implementation Plan emission limitations. This is consistent with the policy enunciated in the House Report (95–294) at p. 92; due to a typographical error appearing in the last paragraph though, the word "acceptable" was changed to "unacceptable."

Tall stacks are not a means of emission limitation under the Clean Air Act of 1970. That policy is continued in these 1977 amendments, with the exception to this policy established by the adoption of the Senate provision.

ASSURANCE OF ADEQUACY OF STATE PLANS

House bill

This provision requires each State, not later than one year after enactment, to review the provisions of its implementation plan relating to major fuel burning sources. The State shall determine the extent to which its plan is dependent upon petroleum products, natural gas and coal not locally available and submit its findings to the Administrator.

Senate amendment

The Senate bill contains a provision identical to the House provision.

Conference agreement

The conferees agreed to adopt this provision.

MEASURES TO PREVENT ECONOMIC DISRUPTION OR UNEMPLOYMENT

House bill

This provision authorizes the State, the Administrator or the President to require any major fuel burning stationary source not in compliance with an implementation plan or under a coal conversion order to use local coal to prevent severe local or regional economic disruption or unemployment which might otherwise result. Each source so ordered must (1) enter into long term contracts for local or regional coal; (2) enter into contracts for any additional pollution controls which may be necessary, and (3) must comply with requirements necessary to assure compliance with this Act.

A major fuel-burning stationary source is one with a design capacity to produce 100,000,000 B.t.u./hour.

Senate amendment

This provision authorizes the State, the Administrator or the President to require any major fuel burning stationary source not in compliance with an implementation plan or under a coal conversion order to use local coal to prevent severe local or regional economic disruption or unemployment which might otherwise result. Each source so ordered must (1) enter into long term contracts for local or regional coal; (2) enter into contracts for any additional pollution controls which may be necessary, and (3) must comply with requirements necessary to assure compliance with this Act.

The cost to the consumer must be considered prior to the issuance of an order under this provision.

A major fuel burning stationary source is one with a design capacity to produce 250,000,000 B.t.u./hour.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) the initial finding that action under this section is necessary may be based on economic disruption or unemployment which would result not only from use of other than local or regional coal, but also petroleum products, or natural gas, or a combination thereof; (2) a regionally or locally available coal requirement rule or order may be issued by the President, or Governor of the State in which the source is located, or by the Governor with the written consent of the President's designee; (3) the President may delegate his authority on a case-by-case or across the board basis; (4) require cost to be taken into account in issuing any rule or order as in the Senate provision; and (5) accept the Senate's facility size limitation on the applicability of this section.

INTERSTATE POLLUTION ABATEMENT

House bill

Modifies Section 110(a)(2)(E) of the Act to provide specific requirements in State Implementation Plans prohibiting any stationary source within a State from emitting pollutants which will prevent attainment or maintenance of standards in another State or which will interfere with measures in another State designed to prevent significant deterioration or protect visibility.

Adds a new section 126 to the Act requiring State Implementation Plans to:

1. Require new (or modified) sources which may contribute to interstate pollution to obtain a permit to construct at least 90 days prior to commencement of construction:

2. Provide for notice to all nearby States which may be affected of the proposed commencement of construction of such a source at least 60 days prior to commencement of construction;

3. Review and identify all major existing stationary sources which may have interstate impacts and to provide notice of such sources to any State potentially affected within 18 months after enactment.

Affected neighboring States may petition the Administrator for a finding of violation which must be granted or denied, after public hearing, within 60 days. If granted, the source must shut down, unless the Administrator permits continued operation on a compliance schedule designed to abate the violation as expeditiously as is practicable.

Senate amendment

Requires that each State Implementation Plan prohibit any stationary source within that State from emitting air pollutants which would interfere with measures in another State to prevent significant deterioration, prevent attainment and maintenance of ambient air quality standards in another State, or endanger the health or welfare of the citizens of another State.

The following provisions implement the basic prohibition:

Each State implementation plan must identify each new or existing source which may have the adverse air quality impact on another State prohibited under this section, and notice must be given to all nearby States of the identity of such sources.

Any State or political subdivision may petition the Administrator for a finding that a major stationary source in another State emits pollutants which would adversely affect the air quality in the petitioning State. The Administrator must make such a finding or dismiss the petition within 60 days. If a finding of violation is made, the Administrator shall proceed to abate the pollution in the host State as a violation of that State's implementation plan.

Conference agreement

The House concurs in the Senate amendment with the following amendments: (1) delete the requirement that a failure by the Administrator to act on a petition by a State to make a finding that any major source would emit a pollutant in violation of this provision, or to deny such petition in the required time period shall be deemed to be the making of such a finding; (2) delete reference to levels "in excess of the national air quality standards" as a circumstance under which one State must notify another of any new source subject to significant deterioration requirements which may affect air pollution levels in the other State; (3) include references to visibility protection; (4) delete provision contained in Senate significant deterioration section providing a mechanism for interstate abatement by the Administrator; and (5) provide that a delayed compliance order would be available for a source unable to comply with the requirements of this provision after three years.

CONFLICT OF INTEREST (STATE BOARDS)

House bill

Section 319 requires each State plan to require financial disclosure and to prohibit conflicts of interest by State air pollution board personnel with policymaking, regulatory, or enforcement responsibility.

Senate bill

No comparable provision.

Conference agreement

The Senate concurs in the House provision as modified to require only that, within one year after enactment, State implementation plans shall require that: (1) any board or body with permit issuance or enforcement authority under the Clean Air Act shall have a majority of members who do not have a significant financial interest in persons subject to regulation by such board or body; and (2) members of such board or body, and heads of executive agencies with similar powers, shall disclose any potential conflicts of interest. It is the responsibility of each State to determine the specific requirements to meet the general requirements of this section, and any State may adopt more stringent requirements if it so chooses.

PUBLIC NOTIFICATION

House bill

No provision.

Senate amendment

Within 90 days of the enactment of the Act the Administrator must initiate a program which will provide for public notification of potential health hazards at major access points to metropolitan areas where primary ambient air quality standards are not being met. Notification should cease once the Administrator determines the area is meeting all primary standards.

Conference agreement

States are required to include in their implementation plans effecitve measures to notify the public of air pollution levels exceeding primary standards and to educate the public as to the hazards of such levels and measures which can be taken to improve air quality. The Administrator is authorized to make grants to States and localities to assist in making these notifications and to educate the public on transportation and other control measures needed to improve air quality.

OZONE PROTECTION

House bill

Provides for a 2-year study by the Administrator, in cooperation with the National Academy of Sciences, and an interagency task force on the effects of various substances and activities on the stratospheric ozone layer. Then EPA may promulgate regulations to protect the stratospheric ozone layer if the Administrator finds that public health or welfare may reasonably be anticipated to be endangered. Regulations must take into consideration feasibility and costs of control.

Senate amendment

Includes research studies as follows: EPA is to conduct a continuing study with an initial report to Congress October 1, 1977, and biennial reports thereafter. EPA will chair an inter-agency committee to coordinate research, including National Oceanic Atmospheric Administration, National Aeronautics and Space Administration, Federal Aviation Administration, Department of Agriculture, National Science Foundation, National Cancer Institute, and National Institute of Environmental Health Sciences. Recognizing that the National Academy of Sciences has already issued one report, in September 1976, EPA shall contract with the National Academy of Sciences to continue their study and report October 1, 1977. No regulation except "safety net" amendment to Toxic Substances Control Act.

Conference agreement

The House concurs in the Senate research provision, with the dates adjusted to conform to the date of final passage. Thus the studies by the National Academy of Sciences and by various agencies are due January 1, 1978, with biennial follow-up studies by the agencies.

EPA is to provide an interim report January 1, 1978, a final report within two years of enactment and annual follow-up reports thereafter.

The Senate concurs in the House regulatory provision with the addition of a provision that the grant of authority in the Conference substitute to the Environmental Protection Agency to regulate substances that may reasonably be anticipated to endanger the public health or welfare because of their effect on the stratosphere is not intended to supersede or preempt authority that other agencies may have under existing law to take regulatory action with respect to the same or similar hazards presented by products or activities subject to their jurisdiction.

With respect to EPA, the intent of the provision is that any rulemaking commenced by the Administrator to protect the stratospheric ozone under the Toxic Substances Control Act prior to the date of enactment of this provision shall proceed as though this provision had not been enacted.

Thus, the regulatory authority granted under this provision is designed only to fill regulatory gaps and not to supersede any existing authority of other agencies.

REQUIREMENT TO PREVENT SIGNIFICANT DETERIORATION

House bill

The bill requires State implementation plans to be amended to include requirements that will prevent the significant deterioration of air quality where such air quality is presently cleaner than existing ambient air quality standards. Increments were established for all pollutants for which national ambient air quality standards exist. States were required to classify nondegradation areas under the following classification scheme:

Class I: 2% of the lowest national standard for all pollutants except 10% of the lowest national standard for particulate.

Class II: 25% of lowest national standard for each pollutant.

Class III: 50% of lowest national standard for each pollutant.

The State may develop measures to prevent significant deterioration other than the classification and increment scheme for pollutants other than sulfur dioxide or particulate. The Administrator must approve a State's plan for such pollutant if he determines that it will carry out the purpose of this section at least as effectively as an area classification plan.

Initially most areas which are cleaner than the national ambient air standards with respect to any pollutant would be classified as Class II with respect to that pollutant. Areas where air quality is worse than these minimal Federal standards would not be classified at all, and would not be affected by this section.

Existing national parks and national wilderness areas over 25,000 acres in size and national monuments, national primitive areas, and national receration areas exceeding 100,000 acres in size would be designated a mandatory Class I and would remain permanently as Class I. The following areas would begin as Class I but could be redesignated by the State as Class II: national parks and national wilderness areas between 1,000 and 25,000 acres, international parks over 1,000 acres, and national monuments, national recreation areas, national preserves, and national primitive areas all in excess of 10,000 acres.

To redesignate lands from Class I to Class II or from Class II to Class III, the State must conduct hearings and present extensive description and analysis of the effects of redesignation. The approval of affected local governments representing majority of the population is required. Prior consultation with the Federal land manager is required before Federal lands may be redesignated.

The bill identifies 8 categories of Federal lands that cannot be redesignated as Class III; national wild and scenic rivers, national lakeshores or seashores, national wildlife refuges, national forests, and national monuments, national recreation areas, national preserves, national parks, national wilderness areas, and national primitive areas.

Major emitting facilities proposing to construct facilities must receive State permits. All sources with the design capacity to emit 100 tons per year or more of any pollutant must receive a permit. Exclusion of nonprofit schools and hospitals from this requirement is allowed at the State's discretion. EPA may review and disapprove permits only on a limited basis. In the event that the State fails to submit an approvable plan, EPA shall substitute and implement a plan.

At the discretion of the Governor, a State may exempt certain sources of pollution from being counted against the increment. The States must adopt plans for the control of sulfur oxide, sulfur dioxide and particulates within 12 months of the date of enactment. For other pollutants the period is 24 months.

Sources in one area may not cause or contribute to increases in pollutants that exceed the applicable increments in any other areas. The levels in such other areas may be exceeded no more than one time per year. The only exception to this rule is that a Governor may allow a variance which would allow in Class I areas the increment to be exceeded no more than 18 days per year, with a further limitation that in no case could the Class II increment ever be exceeded under such a variance.

If increments are exceeded, the State is required to revise the State implementation plan to ensure that the increment is not exceeded. Sources receiving new emission limitations would be eligible for compliance date extensions under the compliance date extension section of the bill.

Senate amendment

This section adds a new subsection (g) to section 110 of existing law. Each State which contains an area in which the levels of sulfur oxides or particulates are better than any secondary air quality standards (or primary standard, if that standard is more stringent) for that pollutant must adopt and enforce as part of its implementation plan provisions to prevent significant deterioration of air quality.

Such protection is defined by maximum numerical pollution increments for sulfur dioxide and particulates, which can be added to existing levels of those two pollutants in designated areas. A second test of protection is provided in specified Federal land areas (class I areas), such as national parks and wilderness areas; these areas are also subjected to a review process based on the effect of pollution on the area's air quality related values.

The Environmental Protection Agency is required to study the establishment of such increments for other pollutants and to recommend within 1 year increments for stationary source emissions of nitrogen oxides and hydrocarbons.

All international parks regardless of size and each national memorial park and wilderness areas, exceeding 5,000 acres, and each national park which exceeds 6,000 acres, which exist on the date of enactment are designated as class I areas. All other lands, including other Federal lands and new national parks and wilderness areas shall be designated class II areas, but may be redesignated class I by the State. Indian tribes have similar redesignation authority. The concurrence of the Federal land manager is not required where Federal lands are involved.

Each new source with the potential to emit more than 11 tons of a pollutant per year and identified by category in the statute must apply to the State for a permit to construct a class II area. EPA is informed of the application and gives notice of it to Federal land managers and supervisors of potentially affected class I areas.

Any Federal land manager or supervisor of an affected class I area, or the Administrator of EPA, or a Governor of an adjacent State, is authorized to notify the State of potential adverse impact on the air quality within the class I area with a statement identifying potential impacts from the proposed facility. If no such notice is forthcoming, the applicant is required only to meet best available control technology requirements as statutorily defined and show that the class II increment will not be exceeded.

If there is such notice, the applicant would be required to demonstrate whether the class I increments would be exceeded in the class I areas, and—

If the permit applicant meets the class I increments, but the Federal land manager (not the supervisor) demonstrates to the satisfaction of the State that the applicant's emissions would nevertheless have an adverse effect on the air quality-related values of the Federal lands, the State must deny the permit; or

If the permit applicant does not meet the class I increments but demonstrates, to the satisfaction of the Federal land manager (not the supervisor), that there would be no adverse impact on the air quality-related values of the Federal lands, the State may issue the permit.

In the event a dispute occurs over any development or activity in an adjacent State, the Governor of the affected State may request the Administrator to enter into negotiations. If this is not successful, the Administrator shall then resolve the dispute.

The Senate concurs in the House regulatory provision with the addition of a provision that the grant of authority in the Conference substitute to the Environmental Protection Agency to regulate substances that may reasonably be anticipated to endanger the public health or welfare because of their effect on the stratosphere is not intended to supersede or preempt authority that other agencies may have under existing law to take regulatory action with respect to the same or similar hazards presented by products or activities subject to their jurisdiction.

With respect to EPA, the intent of the provision is that any rulemaking commenced by the Administrator to protect the stratospheric ozone under the Toxic Substances Control Act prior to the date of enactment of this provision shall proceed as though this provision had not been enacted.

Thus, the regulatory authority granted under this provision is designed only to fill regulatory gaps and not to supersede any existing authority of other agencies.

In the event that the emissions from any new major emitting facility will cause or contribute to a pollutant increase greater than a class II increment for such pollutant, the Administrator shall, and a Governor may, seek injunctive relief to prevent the issuance of a permit or construction of that facility.

Conference agreement

The conference agreement adopts the statement of purpose from the House bill. Increments setting forth the maximum allowable increase in pollutants are stated in the statute for particulates and sulfur dioxide.

Within two years EPA is to propose regulations for increments or other means for preventing significant deterioration which would result from nitrogen oxides, hydrocarbons, carbon monoxide and oxidant. These proposed regulations would not go into effect for one year. At the end of that year, revision of State Implementation Plans would begin unless there was contrary Congressional action. If the Administrator finds that establishing and implementing significant deterioration regulations for HC, CO, NO_x, or Oxidants would present special difficulties or problems of practicality, he is required to report to Congress. This report shall not act to stay the Administrator's duty to proceed with these regulations. States may adopt strategies other than increments for these other pollutants if the strategies taken as a whole, accomplish the purposes of this provision.

The proposed regulations are to provide: (a) specific numerical measures against which permits may be tested; (b) a framework for stimulating improved control technology; (c) protection of air quality values; and (d) fulfill the goals set forth in the purposes provisions.

Regulations for new ambient air quality standards are to be followed within 2 years by measures to prevent significant deterioration.

The specific increments are set forth in the statute as in the Senate bill, as follows: (a) Class I, Senate bill; (b) Class II, House bill except the 3 hour SO_2 increment, which becomes 512 micrograms per cubic meter; (c) Class III, House bill except the 3 hour SO_2, which becomes 700 micrograms per cubic meter. Increments may not be exceeded more than once per year, except as provided in Sec. 165, which provides for variance from Class I increments in Federal mandatory Class I areas.

The listing of lands to be included in mandatory Class I areas is as in the Senate bill.

All other nondegradation areas are initially designated Class II by statute upon enactment.

The Federal Land Manager is required to review national monuments, primitive areas, national preserves, and recreation areas and shall recommend any appropriate areas for Class I designation where air quality related values are an important attribute of the area. The recommendations must be made within one year, with recommendations going to the State involved and to Congress. The Federal Land Manager shall consult with the states in determining these recommendations.

The procedural requirements for redesignating an area Class III are accepted from the House bill. The following areas are not eligible for Class III designation if the area is over 10,000 acres; national monuments, national primitive areas, national preserves, national wild and scenic rivers, national wildlife refuges, national lakeshores and national seashores, new national parks, new national wilderness areas, and any other new areas in these categories created after enactment.

The House requirement for consultation with the Federal Land Manager prior to redesignation of Federal lands is adopted.

The State Plan must require permits for: (a) All 28 categories listed in the Senate bill if the source has the potential (design capacity) to emit over 100 tons per year; and (b) any other source with the design capacity to emit more than 250 tons per year of any air pollutant. The state may exempt nonprofit health or educational institutions from the permit requirement.

The conditions of the permit are as in the Senate bill, with the following additions: (a) A one year monitoring requirement may be waived by the State; (b) the language of the House prohibiting uniform or automatic buffer zones; (c) a completed permit application must be approved or denied not later than one year after filing an adequate application; and (d) for permits where the source proposes to exceed the Class II increment, EPA approval of the States' determination of best available technology is required for sources not covered by adequate New Source Performance Standards.

EPA is to establish within one year by regulation the models to be used in analyzing air quality impact.

Indian tribes shall have the authority to redesignate tribal reservation lands as Class I or Class III. If an affected State disagrees with such a designation, the Governor may appeal to the Administrator to resolve the dispute. Indian tribes have the same appeals rights regarding redesignations by States and permits issued by States. In resolving such disputes, the Administrator must consider the extent to which the areas are of sufficient size to allow effective air quality management and whether the proposed area has the air quality values of such an area.

All major emitting facilities must perform analysis of air quality impact in Class I areas. The air quality related values test, including visibility, is applied to sources affecting Class I areas.

The Administrator shall issue orders and seek other action to prevent the issuance of an improper permit.

The conference adopted the air quality modeling conference in the House bill and expects that EPA will seek the full participation of representatives of private and public interests. The definitions of "baseline" and "commenced construction" of the Senate bill were accepted, with a slight modification of the "commenced construction" definition to clarify the intent that a source must have approval before construction may begin, and that any source that has begun construction without approval may not argue that construction activity alone (within the meaning of clauses (i) and (ii)) is adequate to meet the requirement of paragraph (2A).

The House provision for emissions which the Governors may exempt from being counted against the increment is accepted for emissions from coal conversions, natural gas curtailments, temporary construction, and emissions from sources outside the United States.

The House provision requiring that the State Implementation Plan must contain measures to insure that significant deterioration, as defined, will be prevented was accepted.

The conference adopted a modified version of the House provision which allows a variance to be granted from the nondegradation increments for up to 18 days a year. The variance would be available only for the sulfur dioxide 3 hour and 24 hour Class I increments. The variance would allow Class I increments to be exceeded on a total of 18 days per year. A violation of 3 hours in one day is considered a violation for the entire day. High terrain areas are defined as terrain 900 feet above the stack of the facility applying for the waiver.

A notice and public hearing must be held prior to granting the variance. The applicant must demonstrate, and the Governor must find, that the proposed facility cannot be built without the variance and, in the Federal Class I mandatory lands, that the variance will not adversely affect air quality-related values in the area. Before granting a variance, the Governor must consider the Federal Land Manager's recommendations and obtain his concurrence. If the Governor recommends a variance for Federal mandatory Class I areas contrary to the recommendation of the Federal Land Manager, the Governor's recommendation and the recommendation of the Federal Land Manager are to be transmitted promptly to the President. The President may approve the variance if he finds that such a variance is in the national interest. The President must act in ninety days to affirm or deny the variance. The President's decision is a final, nonreviewable decision.

VISIBILITY

House bill

Section 116 of the bill would establish a national goal of remedying existing impairments of visibility in these areas and of preventing future visibility problems from arising in such areas.

Within 18 months of enactment, the Administrator must submit a report to Congress detailing available methods whereby the national goal of visibility protection can be attained. The report must include recommendations for: Identifying sources which cause or contribute to visibility impairment; measuring visibility impairment; modeling techniques to determine manmade contribution to visibility impairment; methods of preventing visibility impairment.

Twenty-four months after enactment, the Administrator must promulgate regulations which assure attainment of the national goal. These regulations must provide guidelines to the States for implementing appropriate visibility protection techniques. Specifically, the regulations must require that States which contain mandatory Class I areas, and States whose emissions cause or contribute to visibility problems in such areas, revise their implementation plan to include two elements. The first element of the plan revision is that the State plan must provide for installation of "best available retrofit technology" for existing major stationary sources which cause or contribute to visibility impairment in such areas. Second, the plan must be revised to incorporate a long-term (10–15 year) strategy for making maximum reasonable progress toward attaining the national goal. Prior to holding public hearings on a prospective plan revision, the State must consult in person with the Federal land manager concerning the revision and make the land manager's conclusions available to the public.

In determining best available retrofit technology, costs, energy requirements, non-air-quality environmental impacts of the technology, the remaining useful life of the source, and the anticipated degree of visibility improvement that would result from control must be considered.

The Administration may not require States to apply the best retrofit technology to sources which have been in existence more than 15 years. States may do so if they choose, but could not be required to do so by the Administrator.

The bill prohibited the Administrator from requiring scrubbers to be retrofitted on existing fossil-fuel-fired powerplants with less than 750 megawatts total generating capacity, regardless of the current age of such plants.

This section provides authority for the Administrator to exempt by rule from the retrofit requirement a source that he determines will not emit, by itself or in conjunction with other sources, pollutants which will cause or contribute to significant visibility impairment in a Federal mandatory Class I area. The purposes of this authority are to permit exemption for smaller, isolated sources which make an insignificant contribution to visibility impairment.

An exemption issued by the Administrator would be effective upon the concurrence of the appropriate Federal land manager. The exemption provision would not apply to fossil-fuel-fired powerplants with total generating capacity of 750 megawatts or more.

The section would prohibit citizen suits to compel attainment of the national goal by a specific date and would prohibit the Administrator from imposing any mandatory or uniform buffer zone aronud a Class I area to accomplish the purpose of this section.

Senate amendment

No comparable provision.

Conference agreement

The Conferees agreed to the House provision with modifications. The Secretary of Interior in consultation with appropriate Federal land managers is to identify within six (6) months all Federal Mandatory Class I areas where visibility is an important value of the area. The Administrator shall, after consultation with the Secretary of Interior, promulgate a list of such areas within one (1) year. The Administrator and the Secretary of Interior may update the applicable recommendations and list periodically when appropriate.

The requirement for a State plan to require the Best Available Retrofit Technology to be installed is limited to the 28 major sources contained in the Senate bill's definition of major emitting facilities, exempting any such which has the maximum potential to emit less than 250 tons per year. The Best Available Retrofit technology requirement is to be stated as an emission limitation, and is to be included in a revised State plan.

The agreement clarifies that the State, rather than the Administrator, identifies the source that impairs visibility in the Federal Class I areas identified and thereby fall within the requirements of this section.

The term "maximum feasible progress" is changed to read "reasonable progress" whenever it appears in the section.

In establishing emission limitations for any source which impairs visibility, the State shall determine what constitutes "Best Available Retrofit Technology" (as defined in this section) in establishing emission limitations on a source-by-source basis to be included in the State implementation plan so as to carry out the requirements of this section. The regulations and Federal guidelines required by the House passed bill for determining this technology are eliminated for all sources other than fossil fuel fired electric generating plants with a total generating capacity in excess of 750 megawatts.

A major concern which prompted the House to adopt the visibility protection provision was the need to remedy existing pollution in Federal mandatory Class I areas from existing sources. Issues with respect to visibility as an air quality value in application to new sources are to be resolved within the procedures for prevention of significant deterioration.

NONATTAINMENT AREAS

House bill

Section 117 affords a State the option of complying offset policy (41 Federal Register 55524–30, December 21, 1976) or promulgating a revised implementation plan containing several mechanisms to assure attainment by the specified dates. The plan would be required to: identify all nonattainment areas; assure attainment as expeditiously as practicable, but not later than December 31, 1982, for sulfur dioxide, carbon monoxide, particulates and oxides of nitrogen, and no later than December 31, 1987, for oxidants; requires, in the interim, "reasonable further progress", defined as equal, incremental reductions in emissions every 2 years; identify several types of emissions from a wide variety of sources which must be taken into account in order to attain the standards and permit new growth; and require a permit program for all new or modified facilities in the area. The permit program must demonstrate: that the emissions from the proposed source will not exceed the allowance permitted from such area; that the latest revised inventory demonstrates the achievement of reasonable further progress toward attainment; that all sources owned by the permit applicant are in compliance or on a compliance schedule; and that issuance of the permit will not result in concentrations of any pollutant for which a national ambient air quality has not been promulgated.

Additionally, the plan would have to evidence public consultation and involvement in the formation of the plan and public cognizance of the economic, energy and social effects of the plan.

The section also requires that EPA within one year and biennially thereafter, report to Congress on the air quality, health, welfare, economic, energy and social effects of nonattainment policy.

Additionally, the House provision provides that States with automotive-related air pollution problems could adopt auto emission standards which are identical to the California standards. Additionally, the section states the Administrator may not use requirements in the Clean Air Act to restrict or impose conditions on sewage treatment grants unless a treatment plant fails to meet Federal emission standards or unless the State failed, in its implementation plan, to provide for increases in emissions likely to result from the treatment plant's increased capacity.

Senate bill

Section 14 prohibits issuance of permits for new or modified major sources prior to 1979 unless offsets are achieved and certain other conditions are met. After 1979, permits are allowed only if a State has an approved implementation plan revision including offset requirements and is carrying out plan provisions. A waiver from offset provisions is available if a State implements certain other control strategies.

Revised plans must provide for attainment of standards within three years after approval, except that with respect to carbon monoxide and oxidants, a plan may show that attainment is not possible in that time.

Section 8 requires plan revisions for areas not meeting oxidant or carbon monoxide standards and specifies provisions the plans must contain. For areas which show that attainment of standards by 1982 is not possible, in addition to requiring implementation of all reasonable controls, a plan is required to list such other measures as would

be necessary to achieve standards by 1987. A second plan revision to be submitted in 1982 for these areas must commit the State and locality to whatever controls are needed to meet standards.

Certain highway funds and air pollution grants may be withheld from States where a Governor fails to submit the required plan revision. Air pollution grants must be withheld from local governments failing to implement provisions of an approved revision.

Conference agreement

As a condition for permitting major new sources to locate in a nonattainment area, States are required to have approved revised implementation plans. The plans must provide for attainment of primary ambient standards no later than December 31, 1982, except that with respect to especially severe oxidants and carbon monoxide problems, the deadline may be as late as December 31, 1987. Providing for attainment in the context of a 1987 deadline means a State must submit a plan in 1979 requiring implementation of all reasonably available control measures. In addition, the plan must list other measures, if any, which may not be reasonably available but which would be needed to meet a 1987 deadline. The State need not make a commitment in 1979 to implement these latter measures. A second plan revision must be submitted by July 1, 1982, if implementation of all reasonable measures contained in the earlier revisions are not sufficient to meet the 1987 deadline. The plan revision submitted in 1982 must require implementation of all available measures needed to attain the primary standards by 1987.

A plan submission in 1979 which demonstrates that oxidant or carbon monoxide standards will not be met by 1982 must contain certain specified provisions: (1) it must require alternative site analyses for major emitting facilities proposing to locate in a nonattainment area; (2) it must establish a schedule for implementing a vehicle inspection and maintenance program; and (3) it must require that funds reasonably available to the State or local government be used to improve public transportation.

All implementation plan revisions must contain a permit program for new or modified major facilities similar to the program required in the House bill. In order to issue a permit the State must show either that offset requirements are met or that the new source will not cause to be exceeded the allowance for new growth built into the State plan revision.

Prior to 1979, the offset policy published by EPA on December 21, 1976, will be in effect in nonattainment areas unless a State complies with a waiver procedure similar to the one contained in the Senate bill. The baseline for calculating offsets is the implementation plan in effect at the time of an application for a permit for a new or modified source.

The House definition of "lowest achievable emission rate" is adopted for purposes of this section. In determining whether an emission rate is achievable, cost will have to be taken into account, but cost factors in the nonattainment context will have somewhat less weight than in determining new source performance standards under section 11. Of course, health considerations are of primary importance. Facilities seeking to locate or expand in areas not meeting air quality health standards should be required to use the best control technology and processes available. The definition is intended to describe the lowest rate which is actually, not theoretically, possible. If the cost of a given control strategy is so great that a major new source could not be built or operated, then such a control would not be achievable and could not be required by the Administrator.

The definition of "reasonable further progress" in the House bill is modified to remove the requirement for equal emissions reductions every 2 years.

However, the conferees intend that regular, consistent emission reductions will be demonstrated through the mechanism of the implementation plan throughout the period prior to the respective attainment date.

House provisions relating to California standards for motor vehicles and withholding sewage treatment grants were adopted. The Administrator may provide guidance to any State which wishes to revise its implementation plan to provide for the increases in emissions that may be indirectly caused by treatment plants with excess capacity.

The Senate highway and air pollution fund sanctions were retained.

A Governor is given authority to suspend portions of existing transportation control plans which deal with on-street parking restrictions, gas rationing and retrofit of noncommercial vehicles until a revised plan is submitted or until January 1, 1979, whichever is earlier, so long as the State is in the process of revising its plan at the time the suspension takes effect. (Adapted from section 202 of the House bill, relating to extension of transportation control dates.)

Sources properly issued construction permits prior to enactment of the 1977 amendments will be permitted to obtain operating permits. (Section 307A of the House bill.)

ASSURANCE OF PROTECTION OF PUBLIC HEALTH AND SAFETY

House bill

Requires as a condition of certification of new motor vehicles or engines that the manufacturer establish to the satisfaction of the Administrator that the emission control system used will not cause or contribute to an unreasonable risk to public health, welfare or safety.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

FILL PIPE STANDARDS

House bill

Authorizes EPA to prescribe fill pipe standards for new motor vehicles to assure effective connection with certified vapor recovery systems.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with amendments to require consultation with the Secretary of DOT regarding motor vehicle safety and to delete the House provision requiring consultation with the Secretary of the Department of Transportation prior to promulgation of any standards or regulations.

ONBOARD HYDROCARBON TECHNOLOGY

House bill

Requires EPA to consider use of onboard hydrocarbon control technology on new vehicles to minimize the necessity for vapor recovery requirements, and to promulgate such standards if it makes certain findings.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with amendments to (1) require consultation with the Secretary of DOT regarding motor vehicle safety before the Administrator promulgates a regulation and (2) delete the provision authorizing the Secretary of Transportation to disapprove EPA regulations under this section if he finds they would create a hazard to vehicle safety.

EVAPORATIVE EMISSIONS

House bill

Requires the Administrator of EPA to revise for model year 1978 the existing evaporative emissions test procedure to measure hydrocarbon emissions from the vehicle as a whole.

If such revision applicable to heavy duty engines and vehicles is infeasible by model year 1978, it may be delayed until it becomes feasible.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

TECHNICAL AND CONFORMING AMENDMENTS

House bill

This section includes miscellaneous technical and conforming amendments.

Senate amendment

No comparable provision.

Conference agreement

The conferees agreed to accept the House provision, with any additional technical and conforming amendments to conform the two bills.

TAMPERING

House bill

Broadens the prohibition against removal of or tampering with auto emission controls to cover independent auto repair operations. A civil penalty of up to $2500 is established for any violation of this provision.

This amendment also states that nothing in this provision shall require the use of manufacturer's parts in maintaining or repairing any motor vehicle.

Senate amendment

Broadens the existing prohibition against removal of or tampering with auto emission controls to cover independent repair and service businesses and selling, leasing, trading and fleet operations.

A civil penalty of up to $2500 is established for any violation of this amendment.

Conference agreement

The Senate concurs in the House provision.

TESTING BY SMALL MANUFACTURERS

House bill

Exempts vehicle manufacturers with projected annual U.S. sales of 300 or less from the requirement for 50,000 mile certification testing of such vehicles.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

PARTS STANDARDS; PREEMPTION OF STATE LAW

House bill

This section provides that whenever a parts certification program is promulgated by the Administrator, States and political subdivisions will be preempted from adopting or enforcing any parts testing or certification program. This provision does not apply to California if it has received a waiver under section 209(b).

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House amendment (1) with the understanding that the parts preemption does not apply in California so long as it adopts and enforces more stringent emission standards than the Federal requirements; and (2) with clarifying language to indicate that no preemption of safety or other parts is authorized.

FUELS AND FUEL ADDITIVES

House bill

Makes mandatory the Administrator's existing discretionary authority to require manufacturers of fuels and fuel additives to (1) conduct tests to determine the potential health effects of their products and (2) to supply EPA with information necessary to determine the effect of a substance on emission control performance on public health.

Senate amendment

Prohibits, after March 31, 1977, the introduction into commerce of new fuel additives, and requires the removal, 180 days after enactment, of fuel additives that were introduced after January 1, 1974. The Administrator may waive the prohibition if the applicant establishes that the additive will not impair the emission performance of vehicles produced in model year 1975 and subsequent years.

Conference agreement

The Senate concurs in the House provision. The House concurs in the Senate amendment with the following amendments: (1) Any fuel or fuel additive first introduced into commerce or increased in concentration after January 1, 1974 but prior to March 31, 1977 must be removed no later than September 15, 1978; (2) the Administrator shall prohibit such additive or restrict its concentration during the period after 180 days after enactment but prior to September 15, 1978 if he finds that such additive or given concentration of such additive will cause or contribute to the failure over its useful life of an emission control device or system to comply with emission standards to which it has been certified pursuant to section 206; (3) the maximum concentration of manganese in a gallon of gasoline shall be no greater than .0625 grams after November 30, 1977; (4) an applicant for a waiver must demonstrate that such a fuel or fuel additive or a given concentration of it will not cause or contribute to the failure over its useful life of an emission control device or system to comply with emission standards to which it has been certified pursuant to section 206; and (5) no action of the Administrator shall be stayed by any court pending judicial review of such action.

In view of the strict time limitation imposed by the September 15, 1978 deadline, it is expected that the Administrator will, if requested, monitor the progress of tests conducted by a manufacturer pursuant to an application for waiver and take such actions as may be reasonably necessary to expedite consideration of such applications.

The conferees intend that in the event the Administrator takes action to prohibit an additive or to restrict its concentration, any vehicle previously certified, or in the process of being certified, which used certification fuel containing such additive need not be recertified for that model year.

The conferees also intend that the words "cause or contribute to the failure of an emission control device or system to meet emission standards over its useful life to which it has been certified pursuant to section 206" mean the noncompliance of an engine or device with emission levels to which it was certified, taking into account the deterioration factors employed in certifying the engine. The term "emission control device or system" means the entire emission performance of a vehicle. Thus, if a fuel or fuel additive causes an increase in engine emissions so as to increase tail pipe emissions or interferes with performance of a specific device or element of emission control so as to cause or contribute to the vehicle's failure to meet the standards at any point in its useful life, the Administrator could not waive the prohibition.

The prohibition of manganese at levels of concentration greater than .0625 grams per gallon of gasoline is not intended to imply that a concentration of .0625 grams per gallon should be required for use in certification fuel, nor is it intended to imply that the required concentration of manganese in certification fuel should restrict, or be equated with the maximum concentration of manganese in use in gasoline in the field.

The conferees recognize the right of the State of California under section 211 of existing law to prescribe and enforce a control or prohibition respecting any fuel or fuel additive if the State has received a waiver from Federal preemption of emission standards, under section 209. Nothing in this provision is intended to affect that authority, or to alter any action taken by the State of California under the authority of Section 211.

SMALL REFINERIES

House bill

Section 219 establishes relaxed standards on lead levels in gasoline produced by small refineries of crude capacity up to 50,000 barrels per day, owned by refiners with total crude capacity up to 175,000 barrels per day.

Senate bill

Section 40 provides until October 1, 1982 relaxed limits on lead in gasoline produced by small refineries or crude capacity up to 50,000 barrels per day, owned by refiners with total crude capacity up to 100,000 barrels per day.

Conference agreement

The House concurs in the Senate provision with the following amendments: (1) the provision is to be applicable only to that capacity which was in existence and devoted to gasoline production or under construction during the one year period ending October 1, 1976. Thus, new capacity or existing capacity newly diverted to gasoline production by a small refinery is not eligible for the relaxed lead requirement provided by this section; (2) the provision is revised to apply to refineries owned by refiners with capacity up to 137,500 barrels per day; (3) the table of applicable amounts is revised to levels intermediate between the House and Senate values, and extended to set explicit numeral requirements for refineries with gasoline production up to 25,000 barrels per day. By including this provision, the Congress does not intend to limit the authority of EPA to set lead standards before or after October 1, 1982 for refineries and refiners not covered by this provision. And, on the basis of experience under this provision, the Administrator shall promulgate such standards as he sees fit for the period beyond October 1, 1982 for refineries herein defined.

HEAVY DUTY VEHICLES AND OTHER VEHICLES

House bill

This provision requires EPA to set standards for 1979–1984 for classes or categories of heavy duty vehicles (trucks, buses and motorcycles) based on the best technology which has been adequately demonstrated. For 1985 and subsequent model years, standards must require a 90 percent reduction of hydrocarbons and carbon monoxide, and a 65 percent reduction of oxides of nitrogen from baseline levels, i.e. uncontrolled levels emitted by gasoline-powered vehicles or engines of a comparable category. EPA would be permitted to revise 1985–1987 standards on the basis of technical infeasibility or fuel economy penalties. Additional revisions of up to three years each could be granted at three-year intervals thereafter. A vehicle or engine failing to meet the revised standards could be sold if the non-conformity is within a prescribed range and the manufacturer pays a non-conforming technology penalty. Production line testing of heavy-duty vehicles or engines is required. EPA must report in 2 years on the effects on health and welfare of particulate emissions from motor vehicles.

Senate amendment

This provision requires the Administrator to promulgate hydrocarbon, carbon monoxide, nitogen oxide and particulate emission standards by 1979 and 1980 model heavy duty trucks, buses and motorcycles which reflect essentially the best practicable control technology. After 1971 standards must reflect the reductions required for automobiles. Section 27 allows EPA to define the useful life for motorcycles.

Conference agreement

The Senate concurs in the House provision, with modifications to provide for interim administrative standard for HC and CO to be effective from 1979–1982, with statutory HC and CO standards becoming effective in model year 1988, and the statutory NO_x standard becoming effective in model year 1985. The statutory standards mandate a 90% reduction from baseline for hydrocarbons and carbon monoxide and a 75% reduction from baseline for nitrogen oxides. However, in establishing the NO_x standard, the conferees are not prejudging the present or prospective technological feasibility of attaining the ultimate standard the conferees emphasis that they are not thereby making a determination whether or not the statutory NO_x standard is or will be technologically feasible.

The conference agreement provides four years lead time before temporary or permanent revision of any statutory standard and requires the Administrator to promulgate particulate standards based on criteria set forth in the House interim standards provision. These standards are to become effective as expeditiously as practicable taking into account the lead time necessary to comply, but in no event later than 1981 model year. The conferees adopted the Senate provision requiring any temporarily revised standards to be more stringent than the interim (administratively-prescribed) standards. The Conference agreement requires that the nonconforming technology penalty be increased periodically as any vehicle or engine fails to conform, so as to provide a graduated incentive for compliance. The manufacturer who certifies nonconforming vehicles or engines will be required to assure, for the purpose of warranty and recall obligations, that the vehicle conforms to the standards to which the vehicle or engine is certified.

The provision requires the nonconforming technology penalty to be set at a level which will eliminate the competitive advantage, if any, for the manufacturer of a nonconforming vehicle or engine. Thus, its calculation would include such items as the actual cost of compliance for complying vehicles, the capital costs foregone as a result of noncompliance, the market value of any fuel economy gains made by non-complying vehicles compared to complying vehicles and the competitive advantage that may arise because of the lesser warranty and recall obligations for noncomplying vehicles compared to complying vehicles. The conference agreement permits the Administrator to utilize the authority under section 208(a) of the Act in order to assure full access to any financial or technical data so as to implement the nonconforming technology penalty.

The Administrator is specifically authorized to subdivide heavy duty vehicles into classes or categories for purposes of this section. For example, the recent classification of vehicles between 6,000 and 8,500 pounds as light duty trucks would continue to be appropriate, provided regulations developed for such vehicles conform to this section.

In regard to motorcycles, the provision accepts the Senate definition of "useful life" for motorcycles, as determined by the Administrator; authorizes but does not re-

quire, the Administrator to permit the sale of nonconforming motorcycles upon payment of a nonconforming technology penalty; and requires the Administrator, in setting separate standards for motorcycles, if any, to consider the need for achieving equivalency of emission reductions or emission standards between motorcycles and other new motor vehicles. Thus motorcycles could adhere to the percentage reduction requirement of this section for hydrocarbons and carbon monoxide, while applying the light duty vehicle nitrogen oxide standard but meet the same emission standard in grams per mile of nitrogen oxides as light duty vehicles.

The conferees recognize that the Administrator is authorized to set standards for classes or categories of vehicles affected by this section and that the Administrator recently promulgated standards for motorcycles. The conferees intend that EPA's promulgated approach is consistent with the authority granted in this section. The Administrator is authorized to continue to perform such functions as consistent with this section. Additionally, the health effects study in the House bill is expanded to cover other sources of mobile source related pollutants.

AIRCRAFT EMISSION STANDARDS

House bill

Authorizes the Secretary of Transportation to disapprove any aircraft emission standard promulgated by EPA, if the standard would create a hazard to aircraft safety.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with an amendment to delete the authority for disapproval of EPA regulations by the Secretary of Transportation and to provide for disapproval by the President upon a finding by the Secretary of the Department of Transportation that such regulations would create a hazard to safety.

CARBON MONOXIDE INTRUSION INTO SUSTAINED USE VEHICLES

House bill

Requires EPA together with DOT to report within one year on carbon monoxide levels inside sustained-use vehicles such as school buses, taxis and police cruisers, including the sources and means of control of such pollutants.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

LIGHT DUTY MOTOR VEHICLE EMISSIONS

House bill

Section 203 extends the existing 1977 auto emission standards of 1.5 HC, 15 CO, and 2.0 NOx for two additional years, through model year 1978 and 1979. For model year 1980 and thereafter, the standards are .41 HC, and 9.0 CO. For model years 1980 and 1981, the NOx standard continues at 2.0 grams per mile (gpm). The NOx standard for model years 1982 and thereafter is 1.0 gpm, unless revised by the Environmental Protection Agency, The NOx standard may be relaxed to not more than 2.0 gpm for any two year period if the Administrator finds that practicable technology is not available, or on the basis of cost or fuel economy, but not if the revision would endanger public health.

In addition, EPA may waive the NOx standard to as much as 2.0 gpm for any class of light duty vehicles for a period of four or more model years beginning in 1982 or thereafter if he determines the waiver is necessary to permit use of innovative, energy-saving power train technology, but not if it would endanger public health.

The House emission standards are summarized in the table below:

Emissions (grams per mile)

Model year	HC	CO	NO_x
1977–79	1.5	15.0	2.0
1980–81	.41	9.0	2.0
1982 and thereafter	.41	9.0	[1] 1.0

[1] The NO_x standard may be waived or relaxed to 2.0 .

Senate amendment

Sections 22 and 23 extend the existing 1977 auto emission standards of 1.5 HC, 15 CO, and 2.0 NO_x for two additional years, through model years 1978 and 1979, except that Section 24 requires that 10% of the projected total sales of each major manufacturer in model year 1979 shall meet the statutory standards. The statutory standards, for model year 1980 and thereafter are 0.41 HC, 3.4 CO and 1.0 NO_x.

The NO_x standard for 1980–81 shall be waived by EPA to not more than 2.0 gpm for small manufacturers which rely on others for emission control technology.

In addition, EPA shall waive the NO_x standard to as much as 2.0 gpm for a period of two model years beginning in 1980 for any light duty vehicle which uses an innovative engine or emission control system and which meets the fuel economy standards prescribed in the Energy Policy and Conservation Act.

The Senate emission standards are summarized in the table below:

Emissions (grams per mile)

Model year	HC	CO	NO_x
1977–79	1.5	15	[1] 2.0
1980 and thereafter	.41	3.4	[2] 1.0

[1] Ten percent of projected sales must meet 1980 standards in 1979.

[2] Innovative technology waiver to 2.0 gpm.

Conference agreement

The House concurs in the Senate amendment such that: the existing 1977 auto emission standards are extended for two additional years, through model years 1978 and 1979; the statutory standard of 0.41 HC is required in model year 1980; an interim standard of 7.0 CO is required and the interim standard of 2.0 NO_x is continued through model year 1980; statutory standards of 3.4 1.0 NO_x are required in model year 1981 and thereafter; and the small manufacturer NO_x waiver applies to model years 1981–82.

However, the CO standard for model years 1981 and 1982 may be waived up to 7.0 grams per mile by EPA for any model line of vehicles if the Administrator finds (for such vehicles): that public health does not require attainment of the statutory standard; that the water is essential to the public interest; that all good faith efforts have been made to meet the statutory standard; that control technology to meet the statutory standard will not be available, taking into account cost, driveability and fuel economy; and the study by the National Academy of Science does not disagree with his finding on availability of technology.

The Senate concurs in the provision of the House bill for a waiver of the NO_x standard to allow use of innovative technology, with an amendment to allow the waiver up to a level of 1.5 NO_x, beginning in model year 1981 under certain conditions, including the potential for long term air quality benefit while meeting national average fuel economy standards. The innovative technology waiver is limited to not more than 5 percent of a manufacturer's production or 50,000 vehicles or engines, whichever is greater. A similar waiver is available for any class of light duty vehicles or engines using diesel engines, but only for model years 1981–84 and only if necessary to permit the use of diesel technology in that class of vehicles or engines.

The conference emission standards are summarized in the table below:

Emissions (grams per mile)

Model year	HC	CO	NO_x
1977–79	1.5	15.0	2.0
1980	0.41	7.0	2.0
1981 and thereafter	0.41	[1] 3.4	[2] 1.0

[1] Possible 2 year waiver to 7.0 gpm.

[2] Innovative technology or diesel waiver to 1.5 gpm.

WARRANTIES AND MOTOR VEHICLE PARTS CERTIFICATION

House bill

The House bill contained the following provisions relating to warranty requirements: 1) a reduction of the performance warranty to 18 months or 18,000 miles; (2) a requirement that the Administrator promulgate regulations within 2 years to establish an aftermarket parts certification program; 3) a prohibition on the invalidation of a warranty by the use of certified aftermarket parts; 4) a requirement that the vehicle manufacturer include in new car maintenance instructions a boldface statement that maintenance may be performed at any service shop, with any certified part, without invalidating the warranty; 5) an authorization to the vehicle manufacturers to specify parts to be used, or persons to perform labor, required to be provided at the cost of the manufacturer under the ultimate purchaser, for purposes of the "defect" to include only defects which existed at the time of sale of a new motor vehicle to the ultimate purchaser, for purposes of the defects warranty; and 7) a definition of "emission control device or system" to include for warranty purposes, a catalyst, thermal reactor, or other component installed in a vehicle primarily for emission control purposes, and excluding vehicle components in general use prior to model year 1968.

Senate amendment

The Senate bill contains the following provisions relating to warranties:

(1) The manufacturer is required to furnish to the ultimate purchaser of a new motor vehicle written instructions for the proper maintenance and use of the vehicle which conform to the regulations which the Administrator shall promulgate.

(2) The Administrator of the Environmental Protection Agency must promulgate regulations implementing a program to certify that motor vehicle parts made by other than an auto manufacturer will meet the performance standards of the original equipment installed by the manufacturer.

No warranty shall be invalid on the basis of the use of any such certified part, nor shall such warranty be invalid on the basis of the installation or use of any air-conditioning system, if a model car has been previously certified by EPA with an allowance for the addition of such air-conditioning system.

(3) The manufacturer may not condition the warranty of an emission control system upon the use of any component, system or service of such manufacturer unless the Administrator finds under section 207(c)(3) that such specific component or service is essential to the proper functioning of the vehicle.

(4) The cost of any part principally used for emission control which is scheduled for replacement during the useful life of the vehicle and whose cost is greater than 2 percent of the vehicle's retail cost shall be borne by the manufacturer at the time of replacement.

(5) The owner of an automobile warranted under the Clean Air Act is responsible, in the proper maintenance of his vehicle, for replacing and maintaining emission control components scheduled for replacement prior to the expiration of its useful life. The car owner may go anywhere to have such maintenance performed.

(6) A study of the impact on competition of any warranty required pursuant to the Clean Air Act shall be made by the Bureau of Competition of the Federal Trade Commission, in consultation with the Bureau of Consumer Affairs, the Environmental Protection Agency, and the Department of Justice.

Conference agreement

The conferees have agreed to adopt the following provisions:

(1) The Senate replacement cost provision, with a modification to exclude vehicle components in general use prior to model year 1968 and the primary function of which is not related to emission control;

(2) The Senate provision making it a prohibited act to communicate to the vehicle purchaser that any warranty coverage is conditioned on the use of manufacturer's parts or services;

(3) The Senate provision on maintenance instructions, with the addition of the House requirement that the manufacturer furnish in instructions for each new car a boldface statement that maintenance may be performed at any service shop, with any certified part without invalidating the warranty.

(4) The House section providing that no warranty shall be invalidated by the use of any part certified under regulations promulgated by the Administrator not to result in failure of an engine to comply with emission standards;

(5) The Senate provision requiring the owner to properly maintain his car.

(6) A reduction of the performance warranty to 24 months or 24,000 miles, except that with respect to the "emission control system or device", as defined in the House bill, shall be covered by the performance warranty for 5 years or 50,000 miles.

The conferees agreed to set the 207(b) performance warranty at 24 months/24,000 miles. During this warranty period, the vehicle manufacturer would be required to bring into compliance with emission standards any car which failed an inspection and maintenance test. The warranty could be invalidated only upon a showing by the manufacturer that the owner did not perform the required maintenance or repair as set forth in the owner's manual or abused the vehicle in its operation. Requisite repairs and maintenance could be performed by any establishment (including an independent garage or service station) that uses parts certified in accordance with section 207(a). After the 24 month, 24,000 mile warranty terminates, the performance warranty on the emission control system under section 207(b) would require the repair or replacement only of an "emission control device" or "component designed for emission control". The vehicle manufacturer's warranty after 24,000 miles, thus, would be limited to the catalytic converter, thermal reactor or other component installed on or in a vehicle for the sake or primary purpose of reducing vehicle emissions and would be invoked in the event of failure of the vehicle to meet emission standards at any time up to 60 months. Such limitation does not apply to section 207(a) warranties or to section 207(c) recall actions.

To the extent permitted by the Moss-Magnuson Act any establishment that uses certified parts could provide parts and services as specified in the warranty at any time during or after the warranty. This would include the right to perform work covered by the section 207(b) warranty with the right to reimbursement by the vehicle manufacturer, to the extent permitted by the Moss-Magnuson Act or by subsequently enacted legislation which amends or supersedes that Act. The provisions of this section are not intended to supersede or alter warranty provisions provided under any other law.

IMPLEMENTATION OF MOTOR VEHICLE STANDARDS AND WARRANTIES

House bill

This provision amends existing law to clarify that it is a prohibited act for new motor vehicle manufacturers to fail to comply with the terms of a warranty required by this Act.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

HIGH ALTITUDE REGULATIONS

House bill

The House bill suspends implementation of high altitude regulations until 1981. Automobiles produced in model year 1981 and thereafter must meet standards based on percentage reduction no greater than those for all automobiles, based on high altitude emissions from 1970 model cars operating at high altitudes.

Senate amendment

The Senate bill suspends high altitude regulations for two years. For model year 1980 and thereafter, cars must meet statutory emission standards at all altitudes.

Conference agreement

The conferees agreed to adopt the House provision for new cars produced before model year 1984. For model year 1984 and thereafter, the conferees agreed to adopt the Senate provision.

HIGH ALTITUDE ADJUSTMENTS

House bill

The House Bill provides that adjustments to automobiles are not to be prohibited by section 203(a) if they are performed in accordance with manufacturer instructions which have been approved by the Administrator. Such instructions shall insure an emission control performance at least equivalent to that which would result if no such adjustment had been made.

Senate amendment

The Senate bill had no comparable provision.

Conference agreement

The Conference agreement provides that adjustments to automobiles are not to be prohibited by section 203(a) if they are performed in accordance with manufacturer instructions which have been approved by the Administrator. Such instructions shall insure an emission control performance for each pollutant which is at least equivalent to that which would result if no adjustments had been made. With regard to used automobiles, it is the conferees intention that the baseline for determining equivalent emission performance shall be an automobile which has been properly maintained and restored.

High altitude adjustments are permitted only in high altitude states. Furthermore, after January 1, 1981, adjustments are permitted only in those high altitude states which have implemented inspections and maintenance programs in their nonattainment areas.

CALIFORNIA WAIVER

House bill

This provision authorizes the Administrator to grant the State of California a section 209 waiver from federal preemption for a set of standards which he determines are in the aggregate as protective of public health and welfare as the federal standards.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

DEALER CERTIFICATION AND PRESALE TESTING

House bill

No provision.

Senate amendment

Section 36 amends existing law to allow States with emission inspection and maintenance programs to require autos to pass a State inspection test prior to sale, with the cost obligation, if any, to be borne by the manufacturer.

Conference agreement

The conferees agreed to replace the Senate provision by a requirement that the dealer furnish to the purchaser of any new light duty vehicle a certificate that such vehicle does conform to the emission standards applicable to it. This is intended to provide assurance to the purchaser of a new motor vehicle that the car meets the emission standards at the time of sale, similar to the assurance that would have been provided under the Senate amendment.

The operative portion of the conference agreement requires that if at any time within the duration of the warranty period under section 207(b) a motor vehicle fails an in-use emissions test as described in Section 207(b) such nonconformity shall be remedied by the manufacturer at the cost of the manufacturer. Such in-use emission test may be adopted by any State as part of its implementation plan and may be applied for purposes of this section at any time from immediately after sale to the end of the specified warranty period.

PRODUCTION LINE TEST

House bill

No provision.

Senate amendment

Section 30 requires that EPA establish, within 6 months, a test procedure for a production line test of new motor vehicles or engines, to begin by model year 1977.

Conference agreement

The conferees did not include a new legislative provision for production line testing. Rather, they recognize the existence of authority under Section 206(b) of the Clean Air Act for the Administrator to test or require the manufacturer to test new motor vehicles or engines to determine whether they do in fact comply with the emission standards for which a certificate of conformity was issued. EPA has taken a first step to meet the intent of that provision by promulgating a random-sampling test, the so-called Selective Enforcement Audit. However, the conferees intend that the Administrator revise current test procedures expeditiously to provide a short production line test. That test is to be designed, and applied in such a way as to assure reasonable statistical certainty that each car produced will be able to pass an emissions inspection based on a test which is the same as or comparable to the short production line test. The conferees did not create any new requirement beyond that in existing law for each and every vehicle or engine to actually pass a production line test. However, as required by section 206(b) of the Act, any vehicle or engine which actually fails the production line test must be brought into conformity before any certificate of conformity shall apply to that vehicle or engine, and before it may be introduced into commerce.

STUDIES AND RESEARCH OBJECTIVE FOR OXIDES OF NITROGEN

House bill

Section 203 requires EPA to report to Congress by June 30, 1980 on the need for a more stringent NO_x standard to protect public health.

Senate amendment

Section 25 retains the 0.4 NO_x level as a research objective to which each major auto manufacturer must build demonstration vehicles for annual submission to EPA starting in model year 1978.

Section 24 requires EPA to report to Congress by July 1, 1980 on the need for a 0.4 NO_x standard to protect public health or welfare, and on the cost and technological capability of attaining such a standard.

Conference agreement

The House concurs in the Senate amendment with respect to provisions for a 0.4 NO_x study and a 0.4 NO_x research objective.

DEFINITIONS

House bill

Defines a major stationary source as any stationary source of air pollutant which directly emits or has the design capacity to emit 100 tons annually of any pollutant for which an ambient air quality standard is promulgated.

Senate amendment

Defines emission limitation as a requirement which limits the quantity, rate or concentration of emissions of air pollutants on a continuous basis, including a detailed schedule and timetable of compliance. "Schedule and timetable for compliance" is defined as a schedule of enforceable actions in an implementation plan which leads to compliance with the specified emission limitation or other standard in the plan.

A major emitting facility is defined as any stationary source with an annual potential to emit 100 tons of any pollutant, for the general purposes of the bill, such as the delayed compliance provision.

Other definitions are discussed in the report where the applicable provision is discussed.

Conference agreement

Section 301 collects definitions placed throughout the bill in both the House bill and Senate amendment. The term Federal Land Manager is defined as the Secretary of the Department which has authority over any specific Federal land.

Defines major stationary source and major emitting facility as defined in the Senate bill. For the purposes of prevention of significant deterioration, a modification of this term is used. That modification appears in the part on prevention of significant deterioration.

The term "emission limitation" is a combination of definitions from both bills and is defined as the requirement that limits the quantity, the rate, or the concentration of emissions of air pollutants on a continuous basis. This term also includes requirements relating to operation and maintenance required to assure continuous emission reduction.

The term standard of performance is defined to mean continuous emission reduction, including operation and maintenance. Additional terms defined include means of emission limitation, primary standard attainment date, delayed compliance order, person, and air pollutant.

EMERGENCY POWERS

House bill

Broadens the authority of the Administrator to issue emergency orders to any person whose action or inaction requires prompt regulation to protect public health. The Administrator is required to consult with States prior to commencing any emergency action.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) restore the provision of existing law authorizing the Administrator to commence a civil action in an emergency situation to protect public health; and (2) require the Administrator to bring suit within 24 hours after issuance of an order and require that the court uphold such court order within 48 hours (including any court order leaving the Administrator's order in effect pending litigation) as a condition on the effectiveness of the Administrator's order.

CITIZEN SUITS

House bill

No provision.

Senate amendment

Section 304 of the Clean Air Act is amended to allow a citizen to bring suit to prevent construction of a major emitting facility without a permit in compliance with section 110(g), the nondeterioration provisions of the act, or to enforce against any violation of a condition of such a permit or other requirements of the act such as those of sections 110(a)(4) and 110(g).

Conference agreement

The House concurs in the Senate amendment with the following amendments: citizen suits are authorized against sources to enforce compliance only with respect to (1) "emission standards or limitations", including schedules and timetables for compliance, not subject to citizen suits under the Act; (2) any proposal to construct or the construction of any new or modified major emitting facility without a permit under the prevention of significant deterioration provision or the non-attainment provision; and (3) the violation of any condition or requirement specified by the State or the Administrator under a significant deterioration or non-attainment permit or under a delayed compliance order, enforcement order, smelter order, or compliance date extension: any design standard to regulate hazardous emissions, or under section 111; stratosphere and ozone protection regulations; transportation control plans or indirect source review requirements, vehicle inspection and maintenance programs; vapor recovery requirements; fuels and fuel additives registration; air quality maintenance plan requirements; and visibility protection requirements.

CIVIL LITIGATION

House bill

Section 311 authorized attorneys of the Environmental Protection Agency to represent the Administrator in civil litigation under the Act in the district courts and courts of appeals.

Senate bill

The Senate bill contained no comparable provision.

Conference agreement

The conference bill retains the basic provision of existing law which places in the Department of Justice primary responsibility for the control and supervision of civil litigation involving EPA. However, the conference bill adds a new provision requiring that the conduct of such litigation by the Justice Department be in accordance with the memorandum of understanding, dated June 13, 1977, which has been signed by the Attorney General and the Administrator of EPA.

The purpose of this new provision is to encourage and enhance a new spirit of cooperation, consultation, and shared responsibility which the Agency and the Department have sought to foster.

In the past, concern was expressed about the absence of such a cooperative spirit and procedures to assure proper participation by agency attorneys in litigation under the Clean Air Act. See H. Rep. No. 95-294, May 12, 1977, pp. 332-336. This concern was not only directed to the Justice Department. Concern was also expressed about EPA's role and performance in several respects.

In an attempt to reconcile these past differences and to assure a more cooperative arrangement for the future, representatives of the Department and the Agency have formulated a new interagency agreement. This memorandum of understanding has been signed by the Administrator of EPA and by the Attorney General on June 13, 1977. The memorandum represents a new effort to provide for shared responsibility in the conduct of litigation under the Act, and the conferees commend both the Department and the Agency for the efforts to assure greater cooperation in the future.

The conferees considered simply deleting the House provision and retaining section 305 of the existing law in unamended form. Instead, the conferees agreed that the statutory sanction for the memorandum of understanding should be provided to assure the continuing effectiveness of the provisions of the memorandum. The conferees agreed that the memorandum of understanding should be applied to all cases filed after date of enactment of the 1977 amendments. Hopefully, the provisions of the agreement also can be applied in most presently pending cases involving EPA, taking into account the current status of each such case. Furthermore, the conferees agreed to ratify the interagency memorandum with the understanding that its provisions will be interpreted by the Department and the Agency in accordance with the following statement of legislative intent.

First, the memorandum does not expressly address the question of what procedure would apply if the Department is requested to represent both the Administrator and other federal agencies holding different views in the same litigation. In such a case, the conferees intend that the decision of the Attorney General to represent any other federal agency would be deemed a refusal to represent the Administrator, and the Administrator would be authorized to be represented exclusively by his own attorneys.

Second, implicit in the memorandum is that the Agency will be afforded the opportunity to review, comment on, and (if warranted) object to any briefs, or other documents prior to their filing by the Department. This would include the opportunity to review the final version as well as earlier drafts. No document should be filed in court without EPA attorneys reviewing the document and having their comments on it considered. Without an assurance of such consultation, the right to appeal disagreements to the Attorney General under item 5 of the memorandum would be hollow. If there is serious disagreement and EPA refuses to concur in the filing of any document, the disputes resolution provision of item 5 would come into play. In establishing working timetables to implement this provision, the Department and Agency should allow sufficient time for preparation of drafts; review of drafts; identification of disputes (if any); consultation; and, if need be, appeal of any unresolved dispute; and final preparation, review, and submission of the document. Such a procedure should be followed in all cases, and the memorandum should be construed to so require.

Third, item 4 of the memorandum assigns "the right to allocate tasks" in the litigation to the Attorney General. This is an appropriate provision in light of the Attorney Gen-

eral's basic responsibility to control and supervise the Agency's litigation.

On the other hand, this right to allocate tasks must not be used to limit or undermine the right of Agency attorneys to participate fully in the litigation. Moreover, in exercising this "task allocation" authority, the Attorney General would be expected to permit Agency attorneys to play the greatest role with respect to factual, technical, policy or judgment issues which bear most importantly on the Agency's role, programs, or expertise. This is how the "due consideration" provision in the last sentence of item 4 of the agreement must be construed and administered. Department attorneys should be given the greatest responsibility with respect to issues of law arising under other legislation, such as the Administrative Procedure Act, or legal issues which relate to matters directly affecting other agencies authority or the interest of the United States Government. The "task allocation" provision of item 4 of the memorandum will be subject to the disputes resolution provision of item 5, in the event the Agency strongly disagrees with the task allocation in a particular case or cases. As a result of this agreement, there is likely to be a substantial increase in the number of cases in which Agency attorneys are assigned the lead role in presenting the Agency's position to the courts, particularly in cases involving challenges to Agency rules and orders. The conferees anticipate an increasing volume of enforcement actions will be referred by the Agency and filed by the Department in the near future. By permitting greater use of Agency attorneys in judicial review litigation, there should be greater availability of Department attorneys to press enforcement actions.

In implementing the review procedure in item 5, the Attorney General is expected to use the qualification of the last sentence sparingly. In the conferees view, this final sentence should be used only where he determines that it is essential to avoid prejudicing the government's case or to prevent substantial disruption of an ongoing trial. The provision should not be construed to limit the effect of the review procedure to subsequent cases.

Fourth, item 14 of the memorandum indicates that the Attorney General is required to defer the Agency interpretation of scientific and technical matters. This is consistent with the broader recognition of the special expertise of Agency attorneys, contained in the fifth "whereas" clause of the agreement. In representing the Agency, the Department ought to grant the deference to the Agency's views not only in scientific, factual and technical matters, but also in matters of judgment, risk balancing, policy choice and interpretation of Agency regulations. This deference has been accorded by the courts. See *Ethyl Corp.* v. *EPA*, 541 F.2d 1 (D.C. Cir. 1976). Even on issues of law which arise under the Act which the Administrator is charged with implementing and enforcing, courts will defer to reasonable Agency interpretations, even if alternative interpretations would also be reasonable. See *Train* v. *NRDC*, 421 U.S. 60 (1975). Similar deference to reasonable Agency legal interpretations should be afforded by the Department in its representation of the Agency in litigation.

Fifth, and related to the previous point, any instance in which the Justice Department chooses to confess error contrary to the Agency's wishes or otherwise acts in fundamental opposition to the Agency's position would constitute in effect a decision by the Department to decline to represent the Agency within the meaning of the fourth "whereas" clause in the agreement. In such a case, the Agency would be authorized to be represented entirely by its own attorneys.

Sixth, the effect of item 13 is merely to assure that negotiation procedures which may lead to a settlement of an enforcement action pending in court will involve attorneys for the Department.

Seventh, the memorandum requires annual review of its implementation by the Agency and the Department. However, neither the Agency, nor the Department, may abrogate the agreement or alter its basic thrust without legislative sanction. This is the intent and effect of subsection (b) of new section 305 of the Act. Of course, minor clarifying or technical changes may be made in the agreement. The memorandum of agreement may also be changed with the written consent of both the Department and the Agency to make the procedure more efficient, to improve cooperation between the two, or to permit more effective participation by the Agency, so long as the change does not violate the intent described in this section—i.e. to insure full and meaningful participation by EPA attorneys in civil litigation under this Act subject to Justice Department supervision.

Eighth, it is very clearly provided in item 9 that the 150-day period for the commencement of enforcement actions must not apply to emergency actions. The Agency and the Department must act rapidly in emergency situations. The requirement for prompt filing of emergency actions applies to all EPA authorities, not merely those expressly referred to in item 9.

The conferees also intend that the Agency's review and the Department's review will result in a report to the Interstate and Foreign Commerce Committee of the House of Representatives and the Environment and Public Works Committee of the Senate on how this agreement is being executed and whether both the Department and the Agency are satisfied with its operation. The conferees expect, in light of the new cooperative relationship which has emerged between the Department and the Agency that the new agreement, as construed here, will prove satisfactory to both.

Finally, it should be noted that this memorandum of understanding between the Department and the Agency, does not restrict or limit any authority which the Administrator may have under any other provision of law to be represented by attorneys employed by the Agency—e.g. the Toxic Substances Control Act to the extent permitted under that Act.

COSTS OF LITIGATION

House bill

This provision authorizes the award of attorneys fees and other costs in judicial review proceedings under section 307 of the Act.

Senate amendment

This provision authorizes courts to award reasonable attorneys fees to any party against whom EPA acts unreasonably in initiating an enforcement action. Attorney's fees and other costs may also be awarded in judicial review proceedings brought under section 307 of the Clean Air Act whenever the court determines that such an award is appropriate.

Conference agreement

The conferees agreed to accept both the House provision, which is identical to one portion of the Senate provision, as well as the entire Senate provision.

ADMINISTRATIVE PROCEDURES

House bill

Adds to section 307 new provisions which modify existing administrative procedures followed in EPA rulemaking, and changes the standard of judicial review.

(1) The Record. This provision specifies the documents that must be contained in the rulemaking docket of any proposed rule. These documents are:

a statement of the basis and purpose of the rule;

all written comments and documentary information received on the proposed rule during the comment period; and all documents received after the comment period which the Administrator deems to be of central relevance to the rulemaking;

the transcript of any public hearing held on the proposed rule;

the draft proposals and accompanying documents submitted by the Administrator to OMB, all interagency comments on the proposal and all EPA responses to those comments.

(2) Hearings and Hearing Procedures. The House bill would make available an opportunity for a public hearing on additional specified categories of rulemaking not covered under existing law.

Any interested person would be given the right to make an oral presentation, and an opportunity to cross-examine any person making such an oral presentation.

(3) Standard of Review. The House bill would change the standard under which courts review an EPA rulemaking from the existing "arbitrary and capricious" test to one of whether the rule conforms to the "substantial evidence" on the record.

(4) Judicial Review. The House bill would extend from thirty to sixty days the available time for petitioning for judicial review of an EPA promulgation.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with the following amendments: (1) delete application of this section to the approval or disapproval of State implementation plans and applications for State program grants; (2) delete the requirement for opportunity for cross-examination during public hearings; (3) substitute for cross-examination a requirement that the hearing docket remain open for 30 days after completion of the hearing to provide an opportunity for submission of rebuttal and supplementary information; (4) delete the change in the standard of review to the "substantial evidence" test; (5) make this provision applicable to rules proposed after ninety days after enactment.

(7) Delete the reference to "evaluations of competing risks" required to be included in notices of proposed rulemaking, and substitute policy "options" for policy "considerations" required in such proposals.

The conferees intend by the use of the word "options" that EPA should include in its proposals a summary of possible alternatives considered, including an evaluation of significant competing risks associated with the proposal, which were examined in arriving at the proposal. Such an evaluation of risks is not intended to be exhaustive; nor is the extent of such discussion intended to provide a basis on which to challenge a rule.

With respect to the "arbitrary and capricious" scope of review retained in these amendments, the conferees intend that the courts continue their thorough, comprehensive review which has characterized judicial proceedings under the Clean Air Act thus far.

In changing the scope of review as contained in the House bill, the conferees were aware that there may be little practical difference between the "substantial evidence" scope of review and the "arbitrary and capricious" scope of review and that the two tests tend to converge as described by recent court decisions. See: *Associated Industries* v. *Department of Labor* 487 F.2d 342 (2d Cir. 1973). Therefore, in order to avoid misinterpretations or confusion regarding the intent underlying a change in the existing scope of review, it was the decision of

the conferees to retain the "arbitrary and capricious" scope of review.

CODIFICATION OF STATE PLANS

House bill

This provision requires the Administrator to compile and publish annually copies of each State's air pollution control plan which has been Federally approved or promulgated.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

ECONOMIC IMPACT ASSESSMENT

House bill

No comparable provision.

Senate amendment

Requires the Administrator to prepare an economic impact statement on proposed regulations concerning new source performance standards, excess emissions fees, ozone, significant deterioration, auto emission standards, fuel or fuel additives, aircraft emission standards or railroad emission standards. A standard or regulation shall not be held to be invalid for failure to comply with the requirements of the section unless the Administrator's actions were arbitrary and capricious.

Conference agreement

The Senate concurs in the House provisions with the following modifications. The statement will be called an economic impact assessment. The factors specifically required to be analyzed have been reduced from fourteen to five items, but the listing of specific factors is not exhaustive and does not relieve the Administrator of his obligation to consider additional factors necessary to reach sound decisions under other sections of the Clean Air Act. No legal challenge to a rule of the Administrator may be based on failure to comply with the section, nor may any stay or injunction of a rule be granted on such a basis. The sole method for enforcement of the Administrator's duty under the section is by a citizen's suit seeking a court order to compel performance. Where other sections of the Act expressly require that cost be taken into account, the adequacy of the economic assessment may be considered but is not to be taken by the courts as conclusive for the purpose of those sections.

FINANCIAL DISCLOSURE; CONFLICTS OF INTEREST

House bill

Section 2 requires financial disclosure by officers and employees of the Environmental Protection Agency (except those in nonregulatory or non-policymaking positions) and by public members of the National Commission on Air Quality. It also prohibits conflicts of interest in matters such as contractual relationships and ownership of securities by such persons. A fine of up to $2,500 or imprisonment of up to one year, or both, is the criminal penalty for knowing violations.

Senate bill

No comparable provision.

Conference agreement

The Senate concurs in the House provision with modifications to: (1) require financial disclosure by members of the Scientific Review Committee, established under Section 109(d); (2) apply the conflict of interest provision only to officers and employees of EPA; (3) provide for equitable representation on the National Commission on Air Quality, including a requirement that not more than one-third of the non-congressional members shall be attorneys, employees, or consultants of entities subject to regulation under the Clean Air Act; (4) extend the conflict of interest provision fully to other organizations (including non-profit organizations) engaged in activities related to air quality; (5) prohibit ownership of stocks, bonds or other financal interests by EPA employees only to the extent that they are inconsistent with the particular position held by the employee, as defined in regulations to be promulgated by the Administrator; (6) make the conflict of interest provision applicable one year after enactment; and (7) provide that the conflict of interest provision shall be suspended by any Federal anti-conflict of interest statute, which applies generally to Federal agencies, departments and instrumentalities.

AIR QUALITY MONITORING

House bill

EPA shall promulgate regulations establishing a standard air quality index for monitoring and reporting of air quality data by State and local governments. It also requires the Administrator to supplement State and local monitoring stations with Federal stations where necessary.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision.

MODELING

This section is discussed under prevention of significant deterioration.

EMPLOYMENT EFFECTS, EMPLOYEE PROTECTION

House bill

The employment effects provision authorizes the Administrator to investigate, report and make advisory recommendations concerning employer allegations that requirements under the Clean Air Act will adversely affect employment. No sanction or enforcement authority is provided under this section.

A separate employee protection provision adds a new section to existing law to protect employees who believe they have been fired or otherwise discriminated against as a result of having testified or brought suit under the Clean Air Act. The employee may apply to the Secretary of Labor for review of his case. If the Secretary finds that discrimination did occur, he or she can issue an order for the reinstatement of the employee to his former position, with back pay. The provision does not apply to an employee who acts outside of the direction of his employer.

Senate amendment

The employee protection provision offers protection to employees who believe they have been fired or discriminated against as a result of the fact that they have testified or brought suit under this Act. The employee may apply to the Secretary of Labor for review of his case. The Secretary of Labor can issue an order for the employee to be rehired, or otherwise compensated, if the employee's case is justified. The section does not apply to an employee who acts outside the direction of his employer.

At the request of an employee, the Administrator shall investigate threatened plant closure or reductions in employment allegedly resulting from any Clean Air Act requirement, including public hearings on the record. Such hearings shall be the basis for findings of fact and recommendations by the Administrator.

Conference agreement

The Senate concurs in the House employment effects provision with an amendment to substitute the portion of the Senate employee protection provision related to the Administrator's evaluations and investigations of loss of employment and plant closure.

The Senate concurs in the House employee protection provision with the following amendments: (1) authority for the Secretary to award compensatory damages for violations of this section is made discretionary; (2) the authorization for the Secretary to award exemplary damages is deleted; (3) the Secretary is authorized, but not required to file a civil action for enforcement; for refusal of an employer to comply with an order by the Secretary of Labor to abate a violation of this section; (4) the person on whose behalf the Secretary's order is issued is authorized to sue for enforcement of that order, and in appropriate cases, to receive costs of litigation; (5) the requirements for judicial expedition of civil actions for enforcement and the provision making the Secretary's action "nondiscretionary" for the purpose of citizen suits are deleted.

NATIONAL COMMISSION ON AIR QUALITY

House bill

Section 108(f) establishes a National Commission on Air Quality composed of four members of Congress and seven public members to study and report to Congress in three years on the adequacy of clean air programs, implications of implementing such programs, and, in particular, to study the effects of preventing significant deterioration (report due in two years) and of meeting the auto emission standard for NO_x (report due March, 1978).

Senate bill

Section 46 establishes a National Commission on Air Quality similar to the provision in the House bill, with additional studies of methods to achieve the primary standard for oxidants and the effects of an alternative nonattainment studies. Authorizations for the Commission were $17,000,000, with an additional $1 million to be made available to the Commission from EPA appropriations.

Conference agreement

The agreement incorporates the subjects of study from both bills, provides for four Congressional members of the Commission and nine public members, three of whom may represent interests subject to regulation under the Clean Air Act. In the authorization section of the bill, EPA is directed to make one million dollars available to the Commission, and a total of $10 million for fiscal years 1977, 1978 and 1979 is authorized.

VAPOR RECOVERY

Senate amendment

No comparable provision.

House bill

Requires that the cost of the purchase and installation of vapor recovery equipment for storage and refueling operations must be paid by the owner of the fuel storage tanks and pumps.

This provision also requires that vapor recovery regulations applicable to independent gasoline marketers provide for a three-year phase-in of the installation of vapor recovery equipment for the refueling of motor vehicles.

The effective date of such vapor recovery regulations shall be delayed by two years only for independent gasoline marketers.

In addition, the FTC must complete, within one year, an economic analysis of these vapor recovery regulations on independent marketers. EPA is then required to incorporate the FTC data in a report to the Congress containing recommendations within 6 additional months.

The House bill also authorizes certain extensions or exemptions to be granted by the Administrator to independent small business marketers of gasoline.

Conference agreement

The conferees agreed to the House bill provisions relating to the costs of vapor recovery.

The conferees agreed to a modified version of the House provision on the applicability of vapor recovery requirements to small business independent marketers of gasoline. Under the conference agreement, no station which is owned by an independent

marketer and which has monthly throughput of less than 50,000 gallons of gasoline may be required, directly or indirectly, by the Administrator under this Act to install and use vapor recovery equipment.

States or local governments would be free to adopt and enforce requirements for such stations to install and use such equipment. Any such State or local requirement could be submitted as part of an implementation plan, and the Administrator could approve and enforce any such requirement as part of an applicable implementation plan. But the Administrator may not promulgate such a requirement for an independent marketer station with less than 50,000 gallons per month throughput under section 110(c).

A three year phase-in period would be provided under the conference provision for independent marketers with stations with greater than 50,000 gallons per month throughput. Again, State or local governments could require earlier installation and operation of such equipment, but could not be compelled to do so by the Administrator. The studies and two year delay provision of the House bill were not included in the conference agreement. Nor was the Administrator's authority to grant extensions or exemptions beyond the three year phase-in requirement.

The conferees agreement narrows the definition of "small business independent marketers of gasoline" from that contained in the House bill. The conference definition excludes any person who receives more than 50 percent of his income from sources other than gasoline marketing or refining.

Nothing in the conference agreement authorizes or requires any exemption or phase-in of vapor recovery requirements for persons other than "small business independent gasoline marketers" as defined.

AUTHORIZATIONS

House bill

There are authorized to be appropriated to carry out this act, other than sections 327, 103(b)(5), and authorities providing for research and development, $200,000,000 for each of three fiscal years beginning after the date of enactment of these amendments.

Senate amendment

There are authorized to be appropriated to carry out this act, other than sections 103 (f) and (d), 104, 110(h)(7), 150 through 157, 212, 315, and 403, not to exceed $147,805,000 for fiscal year 1977, and $200,000,000 for each of fiscal years 1978, 1979, and 1980.

There are authorized to be appropriated for carrying out research, development, and demonstration under sections 103 and 104, $120,000,000 for fiscal year 1978.

There are authorized to be appropriated to carry out transportation planning requirements of this act $75,000,000 beginning fiscal year 1978 to be available until expended, and $17 million for the National Commission on Air Quality.

Conference agreement

The conferees agreed to authorize $200,000,,000 for fiscal year 1978 (as in the Senate bill) and for each of the three succeeding fiscal years (as in the House bill), for purposes other than research and development, training, the National Commission on Air Quality, transportation-related planning grants and public notification grants.

The conferees also agreed to accept the Senate authorization of $75 million for transportation-related planning; to provide a $10 million authorization for the National Commission on Air Quality, and to accept the Senate provision authorizing $1 million to EPA for contract authority to assist in starting up the National Commission; and to authorize $4 million for FY 1978 and each of the three succeeding fiscal years for the public notification grants to States.

The research and development authorization is excluded because it is included in other legislation.

BASIS OF ADMINISTRATIVE STANDARDS

House bill

Provides a uniform standard of proof for EPA regulation of air pollutants which applies to the setting of (1) criteria for national ambient air quality standards under Section 108; (2) new stationary source performance standards under Section 111; (3) hazardous stationary source emission standards; (4) new auto emission standards under Section 202; (5) regulations of fuels and fuel additives under Section 211; (6) aircraft emission standards under Section 231.

In all future rulemaking in these areas, the Administrator could regulate any air pollutant from those sources, the emissions of which "in his judgment cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare."

This section also requires that unregulated radioactive pollutants, cadmium, arsenic, polycyclic organic material be automatically listed under Section 198 thus requiring issuance of air quality criteria for those pollutants.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with an amendment to delete reference to Section 120 (unregulated pollutants).

INTERAGENCY COOPERATION ON PREVENTION OF ENVIRONMENTAL CANCER, HEART AND LUNG DISEASE

House bill

Requires the creation of an interagency task force to promote increased cooperation between EPA and HEW to quantify the relationship between environmental pollution and cancer, heart and lung disease and to find methods for preventing environmentally induced cancer, heart and lung disease.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with amendments to (1) make the Environmental Protection Agency the lead agency for the Task Force; (2) include representatives of the National Institute for Occupational Safety and Health on the Task Force; (3) delete the requirement that the Task Force coordinate control efforts of EPA and HEW: (4) require an annual report one year after enactment and annually thereafter; and (5) other minor and clarifying amendments.

FINE PARTICULATE STUDY

House bill

The Administrator shall study and report to Congress in 18 months on the health hazards and means of controlling fine particulates. The National Academy of Sciences shall also participate in this study.

Senate amendment

No comparable provision.

Conference agreement

The Senate concurs in the House provision with an amendment to delete the reference to the degree of "hazards" to public health, and to substitute for it "endangerment" to public health.

ODOR STUDY

House bill

No provision.

Senate amendment

This provision requires the Administrator to conduct a study and report to Congress no later than January 1, 1979, on the public health and welfare effects of odorous emissions, their sources, and measures available to control such emissions.

Conference agreement

The House concurs in the Senate provision.

TISSUE STUDY

House bill

No provision.

Senate amendment

The Administrator shall publish a list of all known chemical contaminants resulting from environmental pollution which have been found in human tissue within twelve months after enactment. Within eighteen months, the Administrator shall publish an explanation of the origin of these chemicals. The Administrator shall also, if feasible, conduct an epidemiological study on the relationship between levels of chemicals in the environment and in human tissue.

Conference agreement

The House concurs in the Senate amendment.

AIR QUALITY STUDY FOR GULF COAST AND OTHER AREAS

House bill

No comparable provision.

Senate amendment

Requires the Administrator to study an analysis of the composition of fine particulate matter in the Gulf Coast region, and the contribution of such subsection to visibility and public health problems.

Conference agreement

The House concurs in the Senate amendment with amendments to (1) delete the separate $5 million authorization for the study; (2) require the study to include various areas throughout the country including the Gulf Coast region; and (3) change the title of the provision to "Air Quality Study for Gulf Coast and Other Areas". Funds for this study are to be made available under the general Clean Air research authorization.

STUDY AND REPORT OF FUEL CONSUMPTION

House bill

EPA and also the Department of Transportation and the Federal Energy Administrator are required to report annually on fuel economy in relationship to the emission standards.

Senate amendment

No comparable provision.

Conference agreement

Senate concurs in the House bill.

ENVIRONMENTAL ADJUSTMENT ASSISTANCE STUDY (SEC. 315A OF HOUSE BILL)

House bill

Directs the Administrator to study alternative systems for providing economic adjustment assistance for employees who are dislocated as result of any law administered by EPA. The report of the study, including the Administrator's recommendations, is to be submitted to the House Interstate and Foreign Commerce Committee and to the Senate Public Works and Environment Committee within one year after date of enactment.

Senate amendment

No comparable provision.

Conference agreement

Senate concurs in the House provision with the following changes: (1) Title is changed to "Study of Potential Employee Dislocation;" (2) Primary responsibility for the study is given to the Secretary of Labor; (3) The study would estimate the number of employees affected, identify existing sources of assistance, assess the adequacy of such assistance, and recommend additional adjustment measures, if justified.

SULFUR EMISSIONS STUDY

House bill

No provision.

Senate amendment

The Administrator shall conduct a 1-year study of the emissions of sulfur compounds from motor vehicles and aircraft. Health and welfare effects of such emissions are to be reviewed and alternative control strategies are to be analyzed. Such study shall be reported to Congress by January 1, 1978.

Conference agreement

The House concurs in the Senate amendment with an amendment to require submission of the report one year after enactment.

NATIONAL ACADEMY OF SCIENCES STUDY

House bill

No provision.

Senate amendment

The Administrator shall contract with the National Academy of Sciences for continuing studies on the health effects of auto-related pollutants, including sulfur compounds, and on the technological feasibility of achieving the emission standards set for such pollutants.

Conference agreement

The House concurs in the Senate amendment.

RAILROAD EMISSION STUDY

House bill

No provision.

Senate amendment

The Administrator shall conduct a study and investigation of the air quality impacts of emissions from railroad locomotives, locomotive engines and secondary power sources on rolling stock, and of the technological feasibility of controlling such emissions.

Such study shall include an investigation of current regulation of railroads by State and local governments, and shall make recommendations for future regulation of railroad emissions. The study shall be published no later than 180 days after enactment of these amendments.

Conference agreement

The House concurs in the Senate amendment.

NO_x EMMISSION PENALTY STUDY/ECONOMIC APPROACHES TO POLLUTION CONTROL STUDY

House bill

This provision requires the Council on Environmental Quality to complete within 2 years a study of various economic measures to control presently unregulated or underregulated pollutants.

Senate amendment

No comparable provision. However, the Senate bill requires EPA to submit to Congress in one year a report on the possibility of creating a system of penalties of NO_x emissions from new and existing major emitting facilities. The purpose would be to encourage the development or more effective control technology.

Conference agreement

The conferees agreed to mandate both studies in a single provision with slight modifications in the required elements of the studies, and a mandate to the Administrator and the Council of Economic Advisors, not the Council on Environmental Quality, to conduct the study on economic approaches to air pollution.

The Administrator, in conjunction with the Council on Economic Advisors, shall study and report to Congress within 2 years on economic measures to control air pollution effectively. Within one year, the Administrator shall report to Congress on the advantages and disadvantages of a system of penalties on NO_x emissions, including recommendations regarding the establishment of such a system.

Included in section 405 is a direction to the Administrator to undertake a study and report to the Congress on the advantages and disadvantages of establishing a system of penalties for stationary sources on emissions of oxides of nitrogen in order to encourage, in a meaningful way, the development of more effective systems and technologies for control of oxides of nitrogen emissions. The conferees made no judgment regarding the need for such a system of penalties and intend that the study provide a complete and thorough analysis of the feasibility and desirability for the creation of such a system. The Administrator is directed to complete the study and report to Congress the results of the study together with any recommendations within one year after the date of enactment of this Act.

SAVINGS: EFFECTIVE DATE

House bill

This section provides that enactment of the 1977 amendments will not invalidate or stay any rule under the Clean Air Act, except to the extent the amendments contain express provisions. The effective date for these amendments shall be the date of enactment unless provided otherwise. Each State required to revise its implementation plan by reason of any amendment to this Act shall adopt and submit a revised plan no later than one year after enactment.

Senate amendment

This section provides that suits, proceedings, regulations, orders, and other items relating to implementation of the Clean Air Act otherwise not affected by provisions of this Act remain in effect.

Conference agreement

The Senate concurs in the House provision.

PROTECTION OF COMPETITION

House bill

This provision authorizes the Administrator to promulgate rules and take other actions necessary to protect competition and assure consumer freedom of choice regarding the implementation of emission control warranties.

Senate amendment

No comparable provision.

Conference agreement

No comparable provision.

REDUCTION OF PAPERWORK

House bill

The Administrator is required to study and report to Congress in one year on ways to reduce paperwork and simplify administration under the Clean Air Act.

Senate amendment

No comparable provision.

Conference agreement

No comparable provision.

RULE REVIEW

House bill

This section provides that any rule or regulation prescribed by the Administrator under the Clean Air Act may be disapproved by either House of Congress adopting a resolution of disapproval within sixty calendar days after promulgation of the rule or regulation.

Senate amendment

No comparable provision.

Conference agreement

No comparable provision.

HARLEY O. STAGGERS,

Managers on the Part of the Senate.

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. WAGGONNER, for 10 minutes today.

(The following Members (at the request of Mr. EDWARDS of Oklahoma) to revise and extend their remarks and include extraneous material:)

Mr. DERWINSKI, for 5 minutes, today.

Mr. BOB WILSON, for 5 minutes, today.

Mr. ANDERSON of Illinois, for 15 minutes, today.

Mr. MCCLOSKEY, for 1 hour, today.

Mr. WHALEN, for 10 minutes, today.

Mr. KEMP, for 5 minutes, today.

Mr. FRENZEL, for 10 minutes, today.

Mr. HARSHA, for 10 minutes, today.

(The following Members (at the request of Mr. RAHALL) to revise and extend their remarks and include extraneous material:)

Mr. RANGEL, for 60 minutes, today.

Mr. ANNUNZIO, for 5 minutes, today.

Mr. GONZALEZ, for 5 minutes, today.

Mr. ASPIN, for 5 minutes, today.

Mr. LE FANTE, for 5 minutes, today.

Mr. PEPPER, for 5 minutes, today.

Mr. MCDONALD, for 5 minutes, today.

Mr. FLOOD, for 5 minutes, today.

Ms. OAKAR, for 5 minutes, today.

Mr. LEGGETT, for 5 minutes, today.

Mr. THOMPSON, for 5 minutes, today.

Mrs. SPELLMAN, for 5 minutes, today.

Mr. VAN DEERLIN, for 5 minutes, today.

EXTENSION OF REMARKS

By unanimous consent, permission to revise and extend remarks was granted to:

Mr. OTTINGER, and to include extraneous material, in his remarks today on H.R. 8444.

Mr. MAHON, in his remarks today on H.R. 8444.

Mr. WAGGONNER, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $2,093.

Mr. ZABLOCKI, and to include extraneous matter, notwithstanding the fact that it exceeds two pages of the RECORD and is estimated by the Public Printer to cost $1,207.50.

(The following Members (at the request of Mr. EDWARDS of Oklahoma) and to include extraneous material:)

Mr. ARMSTRONG.

Mr. COCHRAN of Mississippi.

Mr. KASTEN.

Mr. QUAYLE.

BILL PRESENTED TO THE PRESIDENT

Mr. THOMPSON, from the Committee on House Administration, reported that that committee did on August 2, 1977, present to the President, for his approval, a bill of the House of the following title:

H.R. 7558. Making appropriations for agriculture and related agencies programs for the fiscal year ending September 30, 1978, and for other purposes.

ADJOURNMENT

Mr. RAHALL. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 8 o'clock and 48 minutes p.m.), the House adjourned until tomorrow, Thursday, August 4, 1977, at 10 o'clock a.m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

2075. A letter from the Administrator of General Services, transmitting a building project survey for Knoxville, Tenn., in response to a resolution adopted by the House Committee on Public Works and Transportation on September 16, 1976; to the Committee on Public Works and Transportation.

2076. A letter from the Secretary of Health, Education, and Welfare, transmitting a draft of proposed legislation to limit the period during which a State may file a claim for Federal reimbursement under certain titles of the Social Security Act; jointly, to the Committees on Ways and Means and Interstate and Foreign Commerce.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. MCKAY: Committee of conference. Conference report on H.R. 7589 (Rept. No. 95–560). Ordered to be printed.

Mr. MEEDS: Committee on Rules. House Resolution 733. Resolution providing for the consideration of the conference report on the bill (H.R. 6161) to amend the Clean Air Act, and for other purposes (Rept. No. 95–561). Referred to the House Calendar.

Mr. THOMPSON: Committee on House Administration. House Resolution 729. Resolution to provide funds for the expenses of investigations and studies to be conducted by the House Permanent Committee on Intelligence (Rept. No. 95–562). Referred to the House Calendar.

Mr. ZABLOCKI: Committee of conference. Conference report on H.R. 6179 (Rept. No. 95–563). Ordered to be printed.

Mr. STAGGERS: Committee of conference. Conference report on H.R. 6161 (Rept. No. 95–564). Ordered to be printed.

PUBLIC BILLS AND RESOLUTIONS

Under clause 5 of rule X and clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. ANDERSON of California (for himself and Mr. CORNWELL):

H.R. 8711. A bill to amend title 38, United States Code, to provide for the payment of service pensions to veterans of World War I and to surviving spouses and children of such veterans; to the Committee on Veterans' Affairs.

By Mr. BEARD of Rhode Island:

H.R. 8712. A bill to provide for the establishment and operation of a national lottery to assist in financing the old-age, survivors, and disability insurance program; to the Committee on Ways and Means.

By Mr. COLLINS of Texas:

H.R. 8713. A bill to amend the Employee Retirement Income Security Act of 1974 with respect to certain reporting and disclosure requirements; to the Committee on Education and Labor.

By Mr. ERTEL:

H.R. 8714. A bill to improve the criminal justice system by eliminating and improving overcrowded and unsafe conditions in State, county, and local prisons through the provision of grants to assist in the construction, acquisition, and renovation of such facilities; to the Committee on the Judiciary.

By Mr. HARRINGTON:

H.R. 8715. A bill to provide for the transportation within the United States of passengers in foreign-built inflatable rafts, and for other purposes; to the Committee on Merchant Marine and Fisheries.

By Mr. HAWKINS (for himself, Mr. BLANCHARD, Mr. CARNEY, Mr. MIKVA, Mr. MURPHY of Illinois, Mr. O'BRIEN, Mr. RISENHOOVER, Mr. THONE, Mr. WALGREN, and Mr. YOUNG of Missouri):

H.R. 8716. A bill to amend title VII of the Civil Rights Act of 1964 to prohibit sex discrimination on the basis of pregnancy; to the Committee on Education and Labor.

By Mr. LEGGETT (for himself, Mr. DELLUMS, Mr. DERWINSKI, Mr. DUNCAN of Tennessee, Mr. HARRINGTON, Mr. JENRETTE, and Mr. MURPHY of Pennsylvania):

H.R. 8717. A bill to provide that Federal primary and Federal general elections are held on the last weekend in June and the first weekend in November, respectively, and to provide that polling places are open for at least 8 hours during each day of any such weekend; to the Committee on House Administration.

By Mr. MICHEL (for himself, Mr. ANDREWS of North Dakota, Mr. BAFALIS, Mr. BAUMAN, Mr. EVANS of Delaware, Mr. HARSHA, Mr. HYDE, Mr. LOTT, Mr. MCDONALD, Mr. MANN, Mrs. PETTIS, Mr. SKUBITZ, and Mr. WALSH):

H.R. 8718. A bill to provide for the personal safety of those persons engaged in furthering the foreign intelligence operations of the United States; to the Committee on the Judiciary.

By Mr. MOAKLEY (for himself, Mr. BURKE of Massachusets, Mr. CARNEY, Mr. COHEN, Mr. CORRADA, Mr. EDWARDS of California, Mr. EILBERG, Mr. FISH, Mr. GINN, Mr. HANLEY, Mr. HAWKINS, Mrs. HECKLER, Ms. HOLTZMAN, Mr. JENRETTE, Mr. LEHMAN, Mr. MCKINNEY, Mr. MURPHY of Pennsylvania, Mr. OTTINGER, Mr. PATTERSON of California, Mr. PEPPER, Mr. RANGEL, Mr. ROE, Mr. TSONGAS, Mr. WALGREN, and Mr. CHARLES WILSON of Texas):

H.R. 8719. A bill to provide that the Secretary of Housing and Urban Development shall implement programs designed to provide increased security for public housing projects; to the Committee on Banking, Finance and Urban Affairs.

By Mr. PREYER:

H.R. 8720. A bill to amend the Internal Revenue Code of 1954 with respect to the net operating loss deduction allowable in the case of certain taxpayers; to the Committee on Ways and Means.

By Mr. OBERSTAR:

H.R. 8721. A bill to provide for grants to graduate and professional schools for the establishment of programs for minority, low-income, and culturally disadvantaged individuals for the purpose of providing greater access to graduate and professional education for such individuals; to the Committee on Education and Labor.

H.R. 8722. A bill to designate the Boundary Waters Wilderness, to establish the Boundary Waters National Recreation Area, and for other purposes; jointly, to the Committees on Interior and Insular Affairs, and Agriculture.

By Mr. QUIE:

H.R. 8723. A bill to amend the Internal Revenue Code of 1954 to exempt certain trucks owned by farmers from the tax on the use of certain highway motor vehicles; to the Committee on Ways and Means.

By Mr. ROONEY (for himself, Mr. BIAGGI, Mr. BINGHAM, Mr. FISH, Mr. HANLEY, Mr. KOCH, Mr. LUNDINE, Mr.

PATTISON of New York, Mr. ZEFERETTI, Mr. MURPHY of New York, Mr. MCEWEN, and Ms. HOLTZMAN):

H.R. 8724. A bill to authorize appropriations for the summer Olympic games, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. TAYLOR (for himself, Mr. SEBELIUS, Mr. MCFALL, Mrs. SPELLMAN, Mr. LOTT, Mr. NOLAN, and Mr. BEDELL):

H.R. 8725. A bill to amend title 5, United States Code, to provide for the payment of overtime to certain personnel employed in the Department of Agriculture; to the Committee on Post Office and Civil Service.

By Mr. WHITTEN:

H.R. 8726. A bill to provide for the payment of losses incurred as a result of the ban on the use of the chemical Tris in apparel, fabric, yarn or fiber, and for other purposes; to the Committee on the Judiciary.

By Mr. BOB WILSON:

H.R. 8727. A bill to amend chapter 641 of title 10, United States Code, relating to naval petroleum reserves; to the Committee on Armed Services.

By Mr. ALEXANDER:

H.R. 8728. A bill to amend the Age Discrimination in Employment Act of 1967 to provide that all Federal employees described in section 15 of such act shall be covered under the provisions of such act regardless of their age; to the Committee on Education and Labor.

By Mr. ANDERSON of California (for himself, Mr. JOHNSON of California, Mr. HARSHA, Mr. HAMMERSCHMIDT, Mr. FARY, Mr. HOWARD, Mr. DON H. CLAUSEN, Mr. RAHALL, Mr. LEVITAS, Mr. TAYLOR, Mr. ROE, Mr. MINETA, Mr. YOUNG of Missouri, Mr. GINN, Mr. ERTEL, Mr. HEFNER, Mr. RONCALIO, Mr. FLIPPO, Mr. ROBERTS, Mr. MCCORMACK, Mr. BREAUX, Mr. RISENHOOVER, Mr. WALSH, Mr. OBERSTAR, and Mr. BONIOR):

H.R. 8729. A bill to provide assistance to airport operators to prepare and carry out noise compatibility programs, to provide assistance to aircraft operators to comply with noise standards, and for other purposes; to the Committee on Public Works and Transportation.

By Mr. BEDELL:

H.R. 8730. A bill to amend the Federal Meat Inspection Act for the purpose of requiring that imported meat food products made in whole or in part of imported meat be labeled "imported" at all stages of distribution until delivery to the ultimate consumer, and to require certain eating establishments, which serve imported meat, to inform customers of this fact; to the Committee on Agriculture.

By Mr. BONIOR (for himself, Mr. BRODHEAD, Mr. BADILLO, Mr. BLANCHARD, Mr. MIKVA, Mr. PEASE, Mr. TRAXLER, Mrs. SPELLMAN, Mr. CARR, Mr. VENTO, Mr. BEDELL, Mr. SEIBERLING, Mr. FRASER, and Mr. MAGUIRE):

H.R. 8731. A bill to provide for the regulation of certain detergents in the Great Lakes region of the United States; to the Committee on Public Works and Transportation.

By Mr. BYRON (for himself, Mr. GUYER, Mr. RAHALL, Mr. ROE, Mr. PATTERSON of California, Mr. MANN, Mr. SANTINI, Mr. HAGEDORN, Mr. CUNNINGHAM, Mrs. HECKLER, Mr. FRENZEL, Mr. LEVITAS, Mr. KRUEGER, Mr. HYDE, Mr. JENRETTE, and Mr. EDWARDS of Oklahoma):

H.R. 8732. A bill to improve agency responsiveness to citizen complaints and inquiries, to require submission to Congress of information on administrative procedures used to handle citizen complaints and inquiries, and for other purposes; to the Committee on Government Operations.

By Mr. CONABLE (for himself, Mr. FISHER, Mr. FRENZEL, Mr. LEDERER, Mr. KETCHUM, and Mrs. KEYS):

H.R. 8733. A bill to amend the Internal Revenue Code of 1954 with respect to the treatment of amounts paid to relatives for purposes of the credit for expenses for household and dependent care services necessary for gainful employment; to the Committee on Ways and Means.

By Mr. FRENZEL:

H.R. 8734. A bill to amend the Internal Revenue Code of 1954 to permit heads of households to use the standard deduction used by married persons; to the Committee on Ways and Means.

By Mr. KEMP:

H.R. 8735. A bill to provide that local governments may receive reimbursement from the United States for protection provided by such governments to visiting Federal and foreign governmental officials; to the Committee on Government Operations.

H.R. 8736. A bill to provide for the issuance of a commemorative postage stamp in honor and memory of the Jews persecuted and killed by Nazi Germany before and during the Second World War and by the Soviet Union during the past 60 years; to the Committee on Post Office and Civil Service.

H.R. 8737. A bill to amend the Internal Revenue Code of 1954 to allow a deduction for property improvements designed to prevent shoreline erosion caused by high water levels in the Great Lakes; to the Committee on Ways and Means.

By Mr. LEACH:

H.R. 8738. A bill to provide that a former spouse of a Federal employee who is married to such employee for 5 years or more shall be entitled to a portion of such employee's annuity and to a portion of the annuity of any surviving spouse of such employee, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. LEACH (for himself, Mr. RAILSBACK, Mr. BEDELL, Mr. BRECKINRIDGE, Mrs. COLLINS of Illinois, Mr. CORNWELL, Mr. ERTEL, Ms. HOLTZMAN, Mr. MOAKLEY, Mr. MURPHY of Pennsylvania, Mrs. SPELLMAN, and Mr. VENTO):

H.R. 8739. A bill to prohibit any person from raising as a defense to any proceeding commenced under the laws of the United States that such person was compelled by a foreign state to take the action which is the basis of the proceeding; to the Committee on the Judiciary.

By Mr. MIKVA:

H.R. 8740. A bill to amend the Internal Revenue Code of 1954 to provide that amounts received under certain tuition remission program will be exempt from taxation, and for other purposes; to the Committee on Ways and Means.

By Ms. OAKAR (for herself and Mr. CAVANAUGH):

H.R. 8741. A bill to amend the Older Americans Act of 1965 to provide that the Commissioner of the Administration on Aging may make grants to assist older persons adversely affected by natural disasters, and for other purposes; to the Committee on Education and Labor.

By Mr. ROSENTHAL:

H.R. 8742. A bill to amend title III of the Comprehensive Employment and Training Act of 1977 to establish programs for displaced homemakers; to the Committee on Education and Labor.

By Mr. ROSTENKOWSKI (for himself, Mr. ANNUNZIO, Mr. CAVANAUGH, Mr. GILMAN, Mr. HARRINGTON, Mr. IRELAND, Mr. LEDERER, Mr. MCCLORY, Mr. MCKINNEY, Mr. MAGUIRE, Mr. MICHAEL O. MYERS, Mr. NEAL, Mr. ST GERMAIN, and Mr. ZEFERETTI):

H.R. 8743. A bill to declare a national policy on investment in the private sector of the U.S. economy; to the Committee on Banking, Finance and Urban Affairs.

By Mr. SEIBERLING (for himself, Mr. AUCOIN, Mr. BEARD of Rhode Island, Mr. BLANCHARD, Mr. CARNEY, Mr. HOWARD, Mr. LEVITAS, Mr. LUKEN, Mr. RICHMOND, Mr. WATKINS, Mr. CONTE, and Mr. ROGERS):

H.R. 8744. A bill to amend title II of the Social Security Act to require that procedures be established for the expedited replacement of undelivered benefit checks, to require that decisions on benefit claims be made within specified periods and to require that payment of benefits on approved claims begin promptly; to the Committee on Ways and Means.

By Mr. SYMMS (for himself and Mr. RUNNELS):

H.R. 8745. A bill to provide for the conveyance of certain public domain lands to a State in any case in which land in such State has been designated as wilderness; to the Committee on Interior and Insular Affairs.

By Mr. WAGGONNER:

H.R. 8746. A bill to amend the Internal Revenue Code of 1954 to allow the disclosure of the mailing address of a taxpayer for use in collecting certain unpaid student loans; to the Committee on Ways and Means.

By Mr. WHITEHURST:

H.R. 8747. A bill to modify the navigation project for Lynnhaven Inlet Bay, and connecting waters, Virginia; to the Committee on Public Works and Transportation.

By Mr. WOLFF (for himself and Mr. DICKS):

H.R. 8748. A bill to restore to certain institutions of higher learning their rights to determine academic standards of progress with respect to veterans and to provide counseling to veterans whose educational assistance allowance is discontinued under certain circumstances, and for other purposes; to the Committee of Veterans' Affairs.

By Mr. WOLFF (for himself and Mr. PATTEN):

H.R. 8749. A bill to amend title 38, United States Code, to provide counseling for certain veterans; to permit acceleration of monthly educational assistance payments to eligible veterans and dependents; to revise the criteria for nonaccredited courses; to provide alternative financial and educational assistance to peacetime post-Korean veterans affected by the expiration of their delimiting period; to provide for a conditional extension of the delimiting period for certain Vietnam-era veterans; to provide for the development of additional educational, employment, and readjustment assistance programs for veterans; to provide for the correction and preclusion of, and protection against, abuses and misuse of veterans benefits; and to otherwise enhance and improve the effectiveness, integrity, and utilization of veterans readjustment assistance programs; to the Committee on Veterans' Affairs.

By Mr. ADDABBO:

H.J. Res. 568. Joint resolution to authorize the construction and maintenance of a monument to General Draza Mihailovich in the District of Columbia, in recognition of the role he played in saving the lives of approximately 500 U.S. airmen in Yugoslavia during World War II; to the Committee on House Administration.

By Mr. BIAGGI:

H.J. Res. 569. Joint resolution designating the American rose as the national floral emblem of the United States of America; to the Committee on Post Office and Civil Service.

By Mr. HEFTEL (for himself and Mr. AKAKA):

H.J. Res. 570. Joint resolution relating to the publication of economic and social statistics for Americans of East Asian or Pacific Island origin or descent; jointly, to the Committees on Education and Labor, and Post Office and Civil Service.

By Mr. MURTHA (for himself and Mr. WALGREN):

H.J. Res. 571. Joint resolution to authorize the President to proclaim the 22d day of April of each year as Queen Isabella Day; to the Committee on Post Office and Civil Service.

By Mr. VANDER JAGT (for himself, Mr. KETCHUM, Mr. DEVINE, Mr. ANDREWS of North Dakota, Mr. GUYER, Mr. STANGELAND, and Mr. HARRINGTON):

H.J. Res. 572. Joint resolution proposing an amendment to the Constitution of the United States to give citizens of the United States the right to enact and repeal laws by voting on legislation in a national election; to the Committee on the Judiciary.

By Mr. ZABLOCKI (for himself, Mr. NEDZI, Mr. BOLAND, Mr. DINGELL, Mrs. FENWICK, Mr. RODINO, Mr. ANNUNZIO, Mrs. MEYNER, Mr. KASTEN, Mr. MOAKLEY, Mr. GAYDOS, Mr. MINISH, Mr. PRICE, Mr. THOMPSON, Mr. ROSTENKOWSKI, Mr. GONZALEZ, Mr. NOWAK, Mr. DERWINSKI, Mr. BRADEMAS, Mr. BIAGGI, Mr. FASCELL, Mr. REUSS, Mr. BROOMFIELD, Mr. BUCHANAN, and Mr. MURPHY of Illinois):

H.J. Res. 573. Joint resolution commemorating Gen. Thaddeus Kosciuszko by presenting a memorial plaque in his memory to the people of Poland on behalf of the American people; to the Committee on International Relations.

By Mr. KEMP:

H. Con. Res. 324. Concurrent resolution to call for full freedom and independence for the Baltic States; to the Committee on International Relations.

By Mr. WOLFF:

H. Con. Res. 325. Concurrent resolution to express the sense of the Congress that the United States encourage the self-determination of the captive nations of the Baltic republics of Lithuania, Latvia, and Estonia; to the Committee on International Relations.

By Mr. YOUNG of Alaska:

H. Con. Res. 326. Concurrent resolution providing for the acceptance of a statue of the late Senator Ernest Gruening presented by the State of Alaska for the National Statuary Hall collection, and for other purposes; to the Committee on House Administration.

By Mr. HILLIS (for himself, Mr. BRADEMAS, Mrs. HECKLER, Mr. GEPHARDT, and Mr. PURSELL):

H. Res. 734. Resolution to create a congressional senior citizen intern program; to the Committee on House Administration.

By Mr. MITCHELL of New York:

H. Res. 735. Resolution that Congress move expeditiously to resolve pending issues regarding national telecommunications policy, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. PEPPER:

H. Res. 736. Resolution to express the sense of the House of Representatives that the U.S. delegation to the United Nations should work with the delegations of other member nations to call for a World Assembly on Aging and a World Year on Aging; to the Committee on International Relations.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. KASTEN:

H.R. 8750. A bill for the relief of Lt. Col. Kenneth J. Sawyer; to the Committee on the Judiciary.

By Ms. OAKAR:

H.R. 8751. A bill for the relief of Francesco Giuttari; to the Committee on the Judiciary.

By Mr. BOB WILSON:

H.R. 8752. A bill to direct the Secretary of the department in which the United States Coast Guard is operating to cause the vessel *Bomar* to be documented as a vessel of the United States so as to be entitled to engage in the coastwise trade; to the Committee on Merchant Marine and Fisheries.

By Mr. BARNARD:

H. Res. 737. Resolution to refer the bill H.R. 8114 for the relief of William H. Spratling to the Chief Commissioner of the Court of Claims; to the Committee on the Judiciary.

EXTENSIONS OF REMARKS

REPORT ON THE STATUS OF THE ENVIRONMENTAL PROTECTION AGENCY'S MID-ATLANTIC MONITORING HELICOPTER

HON. EDWIN B. FORSYTHE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. FORSYTHE. Mr. Speaker, during the past year, the Environmental Protection Agency has had the use of a modified Huey helicopter for sampling the water quality in the mid-Atlantic. This helicopter—by detecting or predicting oxygen depressions, red tide blooms, and the chemical and biological quality of the coastal waters in the mid-Atlantic—has played a critical role in EPA's efforts to protect our marine environment. Unfortunately, the Department of the Army, which loaned the helicopter to EPA, announced plans this spring to recall the helicopter as of October 1, 1977.

On July 7, 1977, I wrote to Secretary of the Army Clifford Alexander, urging him to reconsider his decision to terminate the interagency agreement which allowed EPA to utilize an efficient aircraft to comprehensively monitor the waters of the mid-Atlantic. On July 21, 1977, I along with a number of my colleagues from the Merchant Marine and Fisheries Committee and from the New York and New Jersey area—including Senators CLIFFORD CASE and HARRISON WILLIAMS of New Jersey; Senators JACOB JAVITS and DANIEL PATRICK MOYNIHAN of New York; Representatives WILLIAM HUGHES, ROBERT A. ROE, MILLICENT FENWICK, JAMES HOWARD, FRANK THOMPSON, MATTHEW RINALDO, and HAROLD "CAP" HOLLENBECK of New Jersey; NORMAN F. LENT, JOHN J. LAFALCE, FREDERICK W. RICHMOND, THOMAS J. DOWNEY, JOHN W. WYDLER, and ELIZABETH HOLTZMAN of New York; JOEL PRITCHARD of Washington; ROBERT LEGGETT of California; THOMAS B. EVANS of Delaware; and DON YOUNG of Alaska—sent another letter to EPA, again urging the Army to allow EPA continued access to this helicopter.

On July 27, 1977, the Secretary of the Army responded to my letter of July 7, 1977, regarding continuance of the loan of the UH–1H helicopter to EPA. I was extremely pleased to learn that the Army has reversed its earlier decision and will extend the use of this helicopter, and two backups, to EPA for another year. The Army wrote me:

> We will now be able to extend the loan of three U.S. Army helicopters to EPA until September 30, 1978.

In January of 1978, EPA will be asked to rejustify an extension beyond September, a procedure which the Army informed me is routine.

The Army's decision is undoubtedly an important one for our mid-Atlantic region. The waters of this area are an enormous economic and recreational resource—depended upon by millions. These waters must be monitored and protected to the maximum extent possible. Continued use of the Huey helicopter will allow EPA to orchestrate an effective monitoring program.

The use of this helicopter, however, will not prevent pollution of our mid-Atlantic waters. Nevertheless, this helicopter will identify the sources of pollution which must be phased out as rapidly as possible. The phasing out of these pollution sources is a task all of us—the administration, the Congress, and the public—must address. Cleaning up the mid-Atlantic must be our top priority; waters depended upon by millions deserve no less.

ELECTRIC SHORTAGES LOOMING IN RURAL AMERICA?

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ABDNOR. Mr. Speaker, electric power shortages, whether due to an "act of God" storm or to excessive demands on overworked distribution systems, may be an unhappy fact of life for all of America in years to come.

In recent years production of nearly all forms of energy has been stifled in one way or another, yet our Nation's demands for energy are steadily increasing. This week we are attempting to develop a national energy policy through legislation which many of us fear may stifle production even more.

This is not just a problem for cities along the eastern seaboard. It is also a looming problem as this thoughtful editorial from the August 1977 edition of the Guardian, published by the East River Electric Co-Operative, points out:

THE WAY IT IS

(By Loren Zingmark)

During the past two months, I have visited with you on the legislation to create the new Department of Energy within our federal government. The House and Senate have amended the Administration's bill into a more workable piece of legislation than would have been possible under the proposals submitted by the President. The House-Senate conference committee has not met to iron out the differences in the two versions of the bill, but we expect action on that soon.

This new department and the way it is set up and operated is very important to everyone in the energy industry. Its policies, rules and regulations will affect the electric consumers of this country for years to come.

On another front, the construction of new electric generating facilities is an area of increasing concern to us.

Building new generating plants has become a highly complex and expensive program for rural electric cooperatives. The complexity does not necessarily lie in the design of the facilities, but rather with the rules and regulations on the state and Federal levels.

The long process to get all the necessary permits and conduct the hearings has increased the lead time from five to ten years for the planning and constructing of a generating plant to be in commercial operation.

This procedure is often complicated by various lawsuits which can be tossed in anywhere along the way by just about anyone who wants to oppose a power project.

The Laramie River Station in Wyoming is a good example of this process. Even though construction is on schedule, there are still some legal hurdles to clear before this plant can be put into operation, now set for early 1980.

Obtaining a total of 50 local, state and federal permits, participating in more than 38 days of hearings before the various agencies and commissions plus meeting several legal challenges have been part of the process to get this power plant underway.

Power supply for you, the rural people whose cooperatives are members of East River, seems to be adequate at this time. However, we have been told by Basin Electric Cooperative officials that there could be some shortages in 1979 or 1980. Presently over half of the power that East River buys to supply our 24 member systems serving more than 60,000 rural member-consumers in eastern South Dakota and western Minnesota comes from plants operated by Basin Electric.

Because of the many delays in building power plants in the United States, Basin Electric is the only organization that currently has a turbine generator on order with the General Electric Company. Westinghouse has about four orders from utilities. These two companies are the largest manufacturers of turbine generators in the U.S.

So, you can see that many utilities are holding back on construction of new facilities. Yet power loads continue to increase and reserves in generating capacity are getting very low in some areas of the country.

We've always taken pride in being able to supply our distribution systems and you members with an adequate, dependable supply of electric energy and we will anticipate doing so.

However, I would not be surprised if we would be asked to curtail usage of electricity during some peak periods in 1979 or 80. This is not our plan, but we may not have any choice.

The need to conserve all forms of energy, including electricity, is extremely important. We no longer can afford the luxury of any waste in the energy field.

VICKSBURG STUDENT REFLECTS ON CITIZEN'S ROLE IN GOVERNMENT

HON. THAD COCHRAN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. COCHRAN of Mississippi. Mr. Speaker, for the past 3 years, I have conducted a high school essay contest among students in my Fourth Congressional District. The primary purpose of the essay contest is to encourage high school students, who will become the leaders of tomorrow, to devote their best thinking to some of our national issues. This year, 17-year-old Willie Nettle, son of Mrs. Dorothy N. Myles of Vicksburg, submitted the winning essay: "A Citizen's Role in American Government."

Willie has organized his essay into four areas which detail a citizen's responsibility to our American Government. His guidelines should be followed by every citizen who wants to take full advantage of his citizenship and become an active participant in our democratic government.

I commend it to the attention of my colleagues:

A CITIZEN'S ROLE IN AMERICAN GOVERMENT

We, the citizens of the United States, must become increasingly aware of the ever present fact that the federal, state, and local government organizations are not some quiescent creations set up by our forefathers to govern the people in an automatic and unchanging manner. They are, on the contrary, living, breathing, and vital forces composed of industrious and intelligent citizens. They can do no more than responsible citizens are willing to help them do. This very unique system of government which has existed since the time of notable people like George Washington and Thomas Jefferson, will continue to exist as long as there are responsible, hard-working, and interested citizens. To insure that there will always be someone capable of making significant contributions to the government and making it more responsive to everyone's needs, young people should adopt the following basic steps to becoming an active participant in American government: one, obtain a creditable education; two, participate fully in the voting process; three, become fully aware of public affairs; four, do not be afraid to pursue a public office.

The first step on the road to becoming an active participant in American government involves the process of going to school. Many students have asked at one time or another: "Why do I have to go to school?" Well, the answer is quite simple. One of the chief reasons why the American people support free public education is to teach young Americans to become good citizens. This is done by offering such courses as civics and American history, by promoting participation in sports, which teach fair play and the need to obey rules, and by advocating active leadership in school clubs, class work, and student councils. All three of these developments result in industrious, well-trained, and clear thinking citizens.

The second measure that should be taken on the rewarding road to becoming a good American citizen is exercising the right to vote. Intelligent and conscientious young Americans will take complete advantage of this privilege by seeking information on public questions and checking the qualifications of each candidate before voting. Equipped with this vital information, they can then cast their votes for the person they believe will best serve the community, the state, and the federal government. If, by chance, their particular candidate loses the election, they even have the right to try to win others to their point of view. If they are successful, in the next election they may themselves become the majority and can directly influence the making of laws.

A third step that should be taken on the road to becoming a good American citizen involves the willingness of interested people to become fully aware of public affairs. When called upon for jury duty or for service in one of the many capacities where citizens are asked for assistance, the responsible citizen will serve to the best of his ability. He will participate fully in all elections, seeking to understand the issues and voting for courageous officials. He will also express his views on public matters by keeping in close contact with public officials. In so doing, he will realize that the government has its limitations as to what it can accomplish just as the individual citizen cannot do everything.

The fourth, and probably the most important, step that should be taken on the road to becoming a good American citizen involves the following question: "Should I run for this particular public office?" During the two-hundred years that the United States has been in existence, many great Americans have confronted themselves with this question, giving due respect to their qualifications, their willingness to work diligently for the welfare of the people, and their ability to accept unpleasant criticism. The American citizen today must also consider these expedients before running for a public office. He must learn to preserve and extend the democratic principles which have made our nation great. In so doing, he will enrich his own life and strengthen the United States of America also.

In this great day and age, young people must realize that their responsibilities as American citizens are much greater than they were a half-century ago. They must make sure that they are not deprived of their precious right to a free public education. They must also participate fully in the voting process, become increasingly aware of public affairs, and even pursue a public office whenever they feel that they are qualified for the job. In this world of imminent danger and great challenge, they must learn to use their knowledge for the betterment of human life and to govern themselves so that all may enjoy equality and justice.

HONORING GEN. THADDEUS KOSCIUSZKO

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ZABLOCKI. Mr. Speaker, October 17 marks the bicentennial anniversary of the Battle of Saratoga. The contributions of Gen. Thaddeus Kosciuszko in this battle are enormous, and as Americans we are indebted to his service in our revolution.

Thaddeus Kosciuszko fought for American independence for 6 years without a furlough. On October 17, 1977, he courageously held off the British Army at Saratoga causing their surrender and the turning point of the American Revolution.

Mr. Speaker, the American Council of Polish Cultural Clubs under the able leadership and direction of its president, Mr. Walter Zachariasiewicz, has offered a memorial plaque to be erected at the tomb of Gen. Thaddeus Kosciuszko at the Wawel Cathedral in Krakow, Poland, commemorating his role in our independence.

Mr. Speaker, Americans are indebted to General Kosciuszko for his role in preserving the principles of freedom, and the American Council of Polish Cultural Clubs wish this gift to be deemed a gift of the American people to the people of Poland. Accordingly, I am introducing today the following joint resolution commemorating Gen. Thaddeus Kosciuszko by presenting a memorial plaque in his memory to the people of Poland on behalf of the American people:

JOINT RESOLUTION

Whereas October 17, 1977, marks the 200th anniversary of the historic battle of Saratoga;

Whereas General Thaddeus Kosciuszko served in the Continental Army from 1776 through 1783, and played a vital and significant role in the battle of Saratoga;

Whereas the American people are indebted to Thaddeus Kosciuszko for his role in American independence; and

Whereas the American Council of Polish Cultural Clubs has made the arrangements for the erection of a memorial plaque near the sarcophagus of Thaddeus Kosciuszko in the Wawel Cathedral in Krakow, Poland, commemorating his dedication to the principles of freedom, and has obtained the approval of the Governments of Poland and the United States and the appropriate Polish ecclesiastical authorities for the erection of the plaque bearing the words both in Polish and in English: "On the Bicentennial Anniversary of the victory of Saratoga October 17, 1777, grateful America remembers General T. Kosciuszko fighter for your freedom and ours": Now, therefore, be it

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That in an expression of esteem and gratitude by the American people, the plaque to be erected in the Wawel Cathedral in Krakow, Poland, on October 17, 1977, in the memory of General Thaddeus Kosciuszko, shall be presented by the Ambassador of the United States to Poland on behalf of the American people as a gift to the people of Poland.

WHAT RIGHTS?

HON. BILL ARCHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ARCHER. Mr. Speaker, I would like to call attention to the following concerning the abuses of OSHA. I hope article written by one of my constituents my colleagues will take the time to review this article.

WHAT RIGHTS?

The first 10 amendments to our Constitution are called the Bill of Rights. Each of them was designed to protect citizens against the Government, because the framers of our Constitution were well aware of the consequences of a Government not controlled by the governed. We have come to take for granted such rights as that of a trial by jury should we be accused of a crime.

But apparently OSHA is above the Constitution.

Frank Irey, Jr., Inc. was fined $5,000 by OSHA. We do not care why. Irey was denied a trial by jury, so, naturally, appealed to the Supreme Court.

The Supreme Court in an 8–0 ruling, refused to hear the appeal.

Not being lawyers, we don't understand this.

Being citizens, we don't want to understand.

We just want to be certain that if a bureaucrat with OSHA, FBI, CIA, IRS, HEW, or SNAFU levies a fine or other punishment on us, we have as much right to judgment by our peers as if we had gotten a parking ticket.

A wise man wrote, "Eternal vigilance is the price of liberty".

Please take time to write your congressman and Senators.

FUTURE DIRECTIONS OF THE POSTAL SERVICE

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. MURTHA. Mr. Speaker, I would like to share with the Members two items: First, the results of a recent poll I took in my area on the future of the Postal Service; second, a response to that poll by a local newspaper.

I asked two questions to my regular polling list of 7,000. The first question—prepared by the Library of Congress—was:

Because of rising costs and inflation, the Postal Service may shortly face some difficult decisions. How do you think the U.S.P.S. should handle rising costs? Should they:

Increase mailing costs for newspapers and magazines—63%.

Cut back on services such as Saturday delivery—48%.

Seek additional money from Congress—22%.

Increase first class postal rates on letters—17%.

Other (most common response was raise postage on third class "junk" mail)—13%.

The second question was also prepared by the Library and pursued the issue of funding.

Some people regard mail service as part of the government's role which should be supported by taxes. Others view it as a service which should pay for itself. What is your view?

Postal service should pay for itself—65%.

Government funds should be used to support services—35%.

I would also like to insert into the RECORD the following editorial from the July 18 Johnstown Tribune Democrat:

POSTAL RATES

There usually are at least two ways of looking at just about everything, and so it was interesting to read about Congressman Murtha's "instant" poll and what people had to say about postal rates.

Few of them want to see an increase in first-class mail rates, and they would prefer higher mail rates for magazines and newspapers and a cutback in services. Naturally, we don't entirely agree, especially with the part about increased rates for newspapers and magazines.

The postal service has begun legal steps to raise the mail rates next year. At President Carter's request, the service excluded private individuals' letters from the increase. The increases average 22 per cent, but letters sent by individuals would stay at 13 cents while those sent by businesses would cost 16 cents.

However, the postal service already has raised the rates for newspapers—on July 6 to be exact. And it was the sixth time that the second-class rate which covers newspapers, was raised since 1974. This newspaper absorbed the five previous increases but because of the most recent action has had to boost its subscription rates for those who get their paper through the mail. Present customers will not be affected until their present mail subscriptions run out, regardless of how long that might be.

Congressman Murtha's poll revealed that 65 per cent of the people believe that the mail service should be self-supporting; that is, the rates should be high enough to cover the costs of operating the postal service. However, this is an area where there is another school of thought and it is that the delivery of mail, along with other essential public services, is a service and, as such, should be guaranteed by tax monies, if that is necessary. There are many other arms of government that do not show a profit or break even. But we wouldn't disband the Army, Air Force or the National Park Service for that reason.

When newspapers and other businesses are faced with higher costs, they are forced to pass along those costs to the consumer. In the end, the consumer pays for everything. Rep. Murtha said that rate increases for the delivery of magazines and newspapers always have been difficult for Congress because the higher rates could force some of the small publications out of business.

Rate increases aside, there is no reason why there shouldn't be continuing scrutiny of the postal service. It has been subjected to much criticism in the past—some of it justified—and undoubtedly will face more in the future.

Congressman Murtha probably will be one of those keeping an eye on the situation. He said that additional changes are needed in postal operations because reforms of the early 1970s failed to produce the results desired by Congress and the individual mail-user.

ON THE DEATH OF THE PRESIDENT OF CYPRUS

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. DERWINSKI. Mr. Speaker, I was shocked to hear the news of the death of Archbishop Makarios, President of Cyprus, a man renowned not only for his political leadership, but for the great moral integrity that he brought to bear in world affairs. His death is a tremendous loss to his people and, the world has lost one of its truly outstanding statesmen.

There is no doubt that the tragedy that has afflicted his country weighed heavily on President Makarios the last 3 years. Cyprus was a thriving, progressive country, with an impressive list of economic

advances after achieving its independence from Great Britain. The Turkish invasion and subsequent occupation of a substantial part of the island disrupted both the political and economic life of the country.

President Makarios had worked hard to bring about the proper withdrawal of Turkish forces, but the political settlement remained elusive.

President Makarios has earned a prominent position in the history of Cyprus and his memory will continue to be an inspiration to Greek-Cypriots. His passing obviously creates a void that will be most difficult to fill. It is my hope that his successors will continue to pursue the goals of national unification and peace, and that some day, hopefully soon, Cyprus will once again enjoy the political freedom and tranquillity that it so richly deserves.

AIR BAG ISSUE

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. DINGELL. Mr. Speaker, in view of the ongoing debate on the air bag issue, I wish to insert in the RECORD a recent statement delivered by Leonard R. Barnes of the Automobile Club of Michigan.

AUTOMOBILE CLUB OF MICHIGAN STATEMENT ON MOTOR VEHICLE OCCUPANT CRASH PROTECTION

(Delivered for Len Barnes, Editor, Michigan AAA Motor News, Apr. 27, 1977)

Let's begin with a quotation:

"Evaluation of air bags' effectiveness is impossible at this point due to the small number of air bag-equipped cars on the road and the small number of accidents. We cannot quantitatively evaluate them based on field experience."

End quote.

The words of an air bag opponent? No, they are the objective evaluation by William E. Scott, acting director of National Highway Traffic Safety Administration's National Center for Accident Statistics and Analysis and Dr. Russell Smith, project director for evaluating effectiveness of various car restraints for NHTSA. They were made to me on February 10, 1977.

These scientists along with Automobile Club of Michigan then looked forward to the 500,000 air bag car test former Secretary of Transportation Coleman ordered. As a reporter who has covered the auto industry and been a motorist advocate for 30 years, I interviewed them to bring real-life air bag experience up to date and to check printed reports that a film dramatizing bag experience and an article based on the film in an insurance journal contained distortions. The film was produced by an air bag advocate which identifies itself as a scientific and educational organization.

The film exaggerated both in speeds of collisions claimed by persons involved in accidents and in what the air bag did for them. NHTSA records show that speed claimed by one person protected by bags was exaggerated by 25 m.p.h.

I reasoned that if indeed their lives had been saved or serious injury prevented, as claimed in the film and in print, then unbelted, non-air-bag-protected occupants of the other cars with which they collided head-on must be either dead or seriously injured. But in neither collision was anyone seriously injured, and injuries suffered were comparable in both cars.

So I decided to compare what happened to all occupants involved in head-on or near head-on collision deployments of air bag cars with non-air bag cars.

I'd assume that in such collisions, the air bag-protected would come off better if bags were indeed as good as claimed. Considering that air bag-equipped cars are the larger models, and that many of the cars with which they collided are smaller, lighter, there should be a noticeably better experience in air bag cars when they collided with non-air bag cars head-on or almost head-on.

But the record of such collisions so far does not show this. Dr. Smith says the air bag experience is slightly better, while my analysis of available data leads me to conclude that the non-air bag occupants came off slightly better. In most, both had minor injuries.

Dr. Smith counts 21 head-on cases. This isn't enough experience on which to base a decision on mandating bags, Dr. Smith says, and I agree. If a drug company tried to introduce an expensive new cure-all with as few facts as there are on real-life air bag performance, the self-appointed consumer advocates would rise up in protest.

If I understand correctly, in Secretary Adams' rationale in reconsidering the air bag question, cost versus benefit is not a criteria. It must be. Mr. Nader's $50-a-car estimate on original costs is unrealistic. Also, our Insurance Exchange insures more than a million autos in Michigan. It recently replaced a deployed air bag, and it cost $629.26, including $126 in labor. The accident was a minor one with no injury to either vehicle occupants. A safety belt would not have to be replaced.

Those who blithely say air bag reliability is tested should examine reasons for the 12 non-accident deployments. I attach them, and they prove that air bags are delicate mechanisms, a lot more complicated than belts.

I am disturbed that air bag advocates, including the scientific, educational group, are going to such great lengths to publicize obscure surveys in Australia and England to show that sometimes belt wearers get hurt or killed. A definitive study by Dr. B. J. Campbell in North Carolina and many other studies show that belts do protect.

Auto Club agrees with American Automobile Association that auto manufacturers should do a better job of designing belts, and that NHTSA should set a new standard to that end. A recent survey showed 66 percent have the newer, better seat belts and this has caused 44 percent to wear them more often.

While motorist surveys in the past showed opposition to compulsory belt laws, the tide is swinging. Our most recent survey showed 66.6 percent choose a compulsory belt law over air bags and four percent want neither. So if our federal government wants to save lives, why not order us to wear belts instead of putting the monkey on the automakers' backs by mandating bags for which the increasing numbers who wear belts will have to pay and not get as good protection?

Motorists don't want bags, as study after study shows. Most recently is April 1977 AAA Motor News where a cut-out coupon has already brought 1,200 responses. In it, only 1.7 percent said they think air bags should be in all cars. Are the self-appointed consumer advocates going to persuade the federal government they know better than the voters? Finally, President Carter's MPG requirements and tougher emission standards will add importantly to the cost of buying and owning a car. Air bags could be the straw that takes auto ownership out of the market for many who must get to work in cars.

Thank you.

TWELVE NONACCIDENT DEPLOYMENTS

(Approximately 8 percent of total real-life deployments)

Six were in garages, blamed on maintenance problems.

One, which shouldn't count, was triggered by an explosion of propane gas carried in the car's trunk.

One was in an electric fire. A poorly wired CB unit melted the insulation on the bag wiring.

One was in a garage when a young man struck the car with a hard object while the ignition was on.

Three were on-road non-collisions. One was caused by radio frequency interference. One was a power steering attachment rubbing against air bag wiring harness. And one was when the bumper sensor fell off after the bumper was repaired and the mechanic forgot to screw the nuts onto the sensor bolts.

MORE ON PORPOISES

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. KOCH. Mr. Speaker, during the recent tuna-porpoise controversy which culminated in a vote by the House to raise the limit on the number of porpoise kills permitted the American tuna fishing fleet incidental to its operations, I initiated some correspondence with Mr. August Felando, general manager of the American Tuna Boat Association, which I believe may interest my colleagues. I do not agree with the several points made by Mr. Felando; however, I do believe all points of view should be heard.

As I have stated on several occasions, my position is that careful tuna fishermen have demonstrated that the purse seine method of fishing for tuna can be effectively employed without killing many porpoises; therefore, a mortality rate approaching zero should be phased in over the next 2 or 3 years. I was pleased to note recently that the Commerce Department has proposed to halve the porpoise-kill limit by 1980.

My correspondence with Mr. Felando and a Wall Street Journal article announcing the Commerce Department's proposed limits follow:

MAY 6, 1977.

Mr. AUGUST FELANDO,
General Manager, American Tuna Boat Association, San Diego, Calif.

DEAR MR. FELANDO: The enclosed Letter to the Editor appeared in the New York Times on Wednesday, May 4, 1977.

Do you feel that the contentions in this letter are true? If not, then how do you explain them? If, in fact, this letter is accurate, I see no reason why a low limit on the number of porpoises that can be killed per year would adversely affect the tuna industry.

It is my understanding that a handful of tuna boats and their captains are responsible for the vast majority of the porpoises killed in tuna fishing.

I look forward to hearing from you.

All the best.

Sincerely,

EDWARD I. KOCH.

Enclosure.

[From the New York Times, May 4, 1977]

PORPOISES AND OUR TUNA FLEET: NEEDLESS PERILS

TO THE EDITOR:

As scientists actively involved in research on the tuna/porpoise problem we are appalled at the tragic irony in the present situation, a situation which may lead not only to the loss of the American tuna fishing fleet but also to the ultimate loss of the porpoise population involved.

Schools of adult yellowfin tuna aggregate under schools of certain kinds of porpoises in the eastern tropical Pacific, perhaps because tuna and porpoise both feed on the same kinds of small prey. The porpoises can be easily spotted and herded, and the tuna stay beneath them. Fishermen set their nets around both tuna and porpoise, and then sink a portion of the rim of the net to set the porpoises free over the top while retaining the tuna.

By fall of 1976, after some years of effort, improved net designs and new behavioral techniques for release-porpoises from the nets resulted in almost perfect porpoise safety records for some boats. One ship, observed by scientists throughout a single fishing trip in October-November, encircled 45 schools of porpoises and tuna, caught over 1,000 tons of tuna and caught and released unharmed 30,233 porpoises, with a mortality of only 16. We have observed these techniques and dived in the nets far at sea to observe the porpoises, which under this improved system are able to wait safely in the center of the net and then go quietly out the net opening like cattle going through a gate.

The irony is that fishing has been halted, leaving the porpoises to the mercy of unregulated, unmotivated and unimproved foreign fleets, just when a reasonably good way of fishing safely "on porpoise" has been developed.

The American fishermen by now are highly motivated to adopt the new net designs and techniques. They are well aware that they need to preserve the porpoises, and the new techniques are safer for the crew, more efficient and cost-effective. The fishing industry, however, seems reluctant to defend itself on the basis of the new capability, perhaps lest regulations become even tighter before every boat has acquired the new gear and mastered the new techniques. Also, they have been confident of net improvements in the past which were only partially successful; now perhaps they fear they will not be believed in any case. Furthermore, some of the environmental opponents of the industry are ignoring or dismissing the highly successful results of last year's research, perhaps because it is not helpful to their own position.

As a result, an industry is dying and a major piece of ocean is in for more ecological damage than ever. As scientists, citizens and porpoise admirers we urge the Government and the public to find a mechanism for the reasonable management of what has become a remarkably irrational situation.

KAREN PRYOR,
PHILIPPE VERGNE,
Biologists, Porpoise Rescue Foundation.
WARREN STUNTZ,
Program Manager, Tuna/Porpoise Behavior Study, University of California at Santa Cruz.

NEW YORK, *April 26, 1977.*

AMERICAN TUNABOAT ASSOCIATION,
San. Diego, Calif., June 15, 1977.

Hon. EDWARD I. KOCH,
U.S. House of Representatives, Longworth House Office Building, Washington, D.C.

DEAR CONGRESSMAN KOCH: Thank you for your letter of May 6, 1977. I regret this long delay but events prevented an earlier response. I will answer your questions in the order that you asked them.

The facts in the letter to the New York Times by Pryor, et al. are true. The *Elizabeth C.J.* left port on October 7, 1976 and returned on December 9, 1976. The vessel captured 30,200 porpoise on 45 sets, sustained 16 porpoise mortalities and caught 915 tons of tuna and porpoise. Of these 16 porpoise deaths, 4 were attributed to fishermen, the balance to scientists. The purpose of the charter of the vessel to the government was twofold. First, to gather baseline data on the behavior of tuna and porpoise in the net and the second was to test experimental porpoise release gear.

The gear modification tested on the *Elizabeth C.J.* was an appendage to the Medina Panel called a "super-apron." It was very successful in releasing porpoise. This gear has been tested successfully on other vessels as well, although some skippers still feel that there are problems that need to be resolved. The American Tunaboat Association, Porpoise Rescue Foundation and National Marine Fisheries Service (NMFS) are working closely to solve these problems.

Currently, there are 12 seiners testing the "super-apron" but results will not be available for several months.

The "super-apron" requires about 17 percent more fine mesh webbing than the gear required by the 1977 regulations. There are 30 vessels in the U.S. fleet that do not at present have webbing available to meet the 1977 regulations. All of the webbing has to be manufactured and is not commercially available except through special order. We feel all of the vessels should be equipped with the minimum amount of webbing to meet the 1977 regulations before diverting towards the "super-apron."

In addition to the fine mesh and "super-apron," there are other reasons for the success of the *Elizabeth C.J.* cruise.

The vessel was fishing in the area that has been fished before many times. The porpoise were apparently used to the experience of being in a net, so they waited quietly for the set to continue and backdown to begin. One must remember, the boats do not fish for porpoise, but fish for tuna, so when the tuna is available in the area where the porpoise may not be as experienced, higher porpoise mortality could occur.

The *Elizabeth C.J.* trip was within the Inter-American Tropical Tuna Commission Yellowfin Regulatory Area (CYRA), an area the United States fishermen are regulated from fishing in after the Yellowfin tuna conservation quota is reached. Generally they are restricted from fishing within the CYRA if their trip starts after mid-spring. They are then forced to fish "outside the regulatory area," where 95 percent of the fishing is done on porpoise, and where the porpoise may not be as experienced in the net.

Secondly, a lot of the success of the low porpoise mortality on the *Elizabeth C.J.* trip was because crewmen and scientists were diving inside the net to depths of 10–20 feet to hand release the porpoise. Although this release technique is admirable, we do not feel it is safe to order men in the water to release porpoise. National Marine Fisheries Service observers are currently given direct orders not to enter the water for safety reasons and the NMFS gear technicans are paid an extra 25 percent hazardous duty pay for each day they enter the water. Thus, until the experimental gear has been tested successfully on a large number of boats, under a variety of operating conditions, we feel it would be patently unfair to expect that all vessels in the fleet match the performance record of the *Elizabeth C.J.* we feel that the overall quota should be large enough so the fleet can experiment with a variety of gear and freely test the gear, under a variety of conditions for an entire fishing year. The Medina Panel was introduced to the U.S. fleet by Captain Harold Medina in 1971, and since that date the industry and the NMFS have gradually tested and enhanced the effectiveness of the backdown gear and procedure.

In response to your next question, in 1976 there were observers and gear technicians on 75 trips aboard commercial tuna seiners (please see attachment "A"). There were 25 trips, testing experimental porpoise release gear, and 50 trips using two-inch webbing in the Medina Panel. Analyzing the trips that carried the regular two-inch Medina Panel, it can be seen that the morality per trip ranged from 1,472 animals to zero. The number of sets on porpoise ranged from 56 to zero and the number of tons of tuna taken on porpoise ranged from 789 to zero. Many of these boats did not set on porpoise at all, while others fished exclusively on porpoise. The boats that fished outside the CYRA were forced to fish entirely on porpoise. Additionally, many of the trips that carried observers had to drop the observer off when Judge Richey closed the porpoise fishing on May 31, 1976, and again when the fishery on porpoise was closed in late October. Thus, the skippers that carried an observer for a full trip outside the line would appear to be much worse than the skippers who had the good luck of carrying an observer while fishing on school fish, inside the CYRA, early in the year, or skippers who carried an observer on a trip where the observer was returned to port.

In any sample of boats there are going to be some skippers that have a much higher total mortality than others, depending on the type of fishing the boat is doing and the area of the ocean the boat is operating in while the observer is aboard. Thus, we feel it is generally unfair to say that a few skippers are responsible for the majority of the mortality.

There are some skippers/vessels that have much larger mortality rates, i.e., mortality per ton or mortality per set, than others. The Expert Skipper's Panel has zeroed in on these vessel captains and are working intensively with them. The Expert Skipper's Panel has analyzed each trip with a high observed mortality and made recommendations to the captains and managing owners for improving gear or procedures. On all of the vessels with a high observed mortality in 1976, the nets have incorporated, at a minimum, the Fine Mesh Medina Panel and some have installed the "super-apron." Of the 1276 sets observed by government employees in 1976, 32 sets caused about 40% of the observed total mortality. It was these 32 sets that were examined by the Expert Skipper's Panel for purposes of discovering the reasons for the unusual mortality results. Based upon existing government regulations, if any vessel has a high mortality rate, the Export Skipper's Panel will be analyzing the trip and making recommendations to the skipper, the managing owner and NMFS, with regard to reducing the mortality on that vessel.

If you have any further questions, do not hesitate to contact us. Again, I regret the lengthy delay in responding to your inquries.

Sincerely,

AUGUST FELANDO,
General Manager.

[From the Wall Street Journal, July 21, 1977]

UNITED STATES PROPOSES TO HALVE PORPOISE-KILL QUOTA IN TUNA FISHING BY 1980

WASHINGTON.—The Commerce Department proposed to almost halve the number of porpoises that may be killed in tuna fishing operations by 1980.

The plan of the department's National Marine Fisheries Service would set a quota of porpoise kills by U.S. fishermen of 51,930 next year, 41,600 in 1979 and 31,140 in 1980. This year's limit is 59,050.

Porpoises, which often swim with schools of tuna, are killed when they become ensnared in tuna fishermen's nets. The government by law must set limits for the amount of porpoises that are killed, but tuna fishermen argue that the restrictions are severely hampering their operations.

The fisheries service announcement is the first time the agency has proposed quotas over a three-year period rather than on a year-by-year basis. The agency said the reductions in quotas will be possible as fishing gear and techniques improve.

The regulations also require that tuna boats install a "porpoise apron system" that allows the porpoise to escape.

A public hearing on the proposal will be held Aug. 22 in San Diego and later at an unspecified date in Washington.

ON GOVERNMENT SPENDING

HON. DAN QUAYLE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. QUAYLE. Mr. Speaker, for nearly 40 years the American people have been told that the solution to every problem is greater Government spending. Federal dollars have been touted as the magic elixir which will reduce poverty, end racial discrimination, wipe out unemployment and cure every form of social malaise.

Alice Rivlin, the Director of the Congressional Budget Office, recently informed the Senate that the level of Federal spending in addition to the above is also the key to economic prosperity. Dr. Rivlin testified that if outlays are less than $455 billion next year, then the economy can be expected to grow at a reduced rate.

Over the past 24 months, the Government has spent approximately $17½ billion less than anticipated. Despite its best efforts, the executive branch has consistently dispersed less than Congress has appropriated. Many economists—Dr. Rivlin apparently among them—have deplored the unanticipated savings and blamed the reduced outlays for retarding expansion. Unfortunately for those who seek simple-minded solutions, this theory is not borne out by the facts.

A recently completed study, available in my office, evaluates the effects of Government disbursements on real GNP growth during the past 7 years. One aspect of the study includes measuring the impact of overruns and shortfalls on the economy. The study suggests that there is literally no correlation between periods of lower-than-normal growth and periods of lower-than-anticipated outlays. Higher Government spending does not insure prosperity. In fact, during the last 7 years, the opposite conclusion appears to be more valid.

Historical evidence demonstrates that shortfalls are a sign of national health. Last January, the Office of Management and Budget forecast a growth rate in the neighborhood of 5 percent for calendar year 1977. The OMB also predicated that Federal expenditures would total $411 billion. Actual figures for the first half of the year indicate that gross national product rose by 7 percent and that the Federal Government has spent $4 billion less than Congress planned last spring. Despite the shortfall—or perhaps because of it—the economy has performed better than expected. During the recovery, in fact, Government spending has been nearly $20 billion below most estimates. On the other hand, the worst recession in recent years occurred between the summer of 1974 and fall, 1975. This period was marked by overruns amounting to approximately $9 billion.

In view of these recent examples, I am alarmed by Dr. Rivlin's assertions that shortfalls are detrimental to continued prosperity. Such statements reinforce the belief in ever-larger expenditures and encourage action to counteract the shortfalls with larger appropriations. Unless the Congress has a proper understanding of the economic efforts of the budget options available, fiscal policy will continue to be ineffectual and retard growth.

GROWTH IN SPENDING IS COUNTER-PRODUCTIVE

Additional spending will jeopardize our recovery by fostering higher inflation and widening the wedge between pre-tax and after-tax earnings in the private sector. This wedge is the fundamental deterrent to economic growth. It discourages work by lowering the benefits of work effort, renders investments less attractive by making them less profitable and thus prevents the full utilization of the energies and talents of the American people. Ironically, excessive spending diminishes our ability to achieve social objectives by weakening the private sector.

Instead of bemoaning the shortfalls, I believe we should "institutionalize" lower spending through permanent reductions in Federal disbursements. The ultimate result will be lower taxes, a higher standard of living, with prosperity and necessary resources to finance solutions to America's problems.

WISCONSIN FAMILIES SUPPORT HOMEOWNERSHIP BILL

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. KASTEN. Mr. Speaker, the great American dream of homeownership is beginning to fade for millions of families. With the average price of a new home at $51,600, young families in particular are being priced out of the market.

As a positive, practical approach to the problem of homeownership, I have introduced the Young Families Housing Act.

The bill would allow first-time home buyers to save for a downpayment on a home through a tax-free savings account. Homebuyers could save $2,500 a year tax-free, up to a total of $10,000. The bill also provides for graduated monthly mortgage payments.

I would like to share with my colleagues four letters I received from Wisconsin families who are struggling to save for their first homes, and who support the Young Families Housing Act.

Mr. and Mrs. Craig Cerasoli of Milwaukee speak for millions of young families:

Our dream has always been a home of our own someday, but that dream is slowly fading.

The American dream of homeownership is clearly expressed in each of the following letters, which I call to the attention of my colleagues:

JUNE 22, 1977.

DEAR MR. KASTEN: We heard about your proposed bill, Family Housing Act on Channel 6, Carl Zimmerman's editorial.

We just want to let you know we are for it and hope it passes or that something can be done for young couples just starting out. It really surprises us that no one else has thought of this. Maybe because those in office already are lucky enough to have a home. Everyone of us has bills and has to cope with the high cost of things now but for those of us who are still renting it's so very hard to save for a home.

We really do appreciate your concern in this matter and hope and pray something will be done to help anyone out no matter how old, to get a home. Right now my husband and myself would settle for an old shack just so we could call it our own and we'd fix it up ourselves.

We have signatures on the attached notebook paper and they all know what they were signing for. I just decided it would be better to type this letter up formally.

There are many more people who are for this bill who either don't have the time or take the time to write you but believe me there are.

Thank you again and good luck—we are all behind you.

Sincerely,

BOB and SUE LACKOVIC.

MENOMINEE FALLS, WIS.

JUNE 16, 1977.

Congressman ROBERT KASTEN: My husband and I saw your editorial on TV-6 last night and are all in favor. We are in our early 20's, both working and have a fairly good savings account. But, we still can't afford the down payment required for a starter home. We are tired of the rent money going down the drain. We can afford mortgage payments, but it doesn't do any good if you can't meet the down payment. You have us on your side. Thanks.

PAM AND JOHN BRAUKMAN III.

NEW BERLIN, WIS.

JUNE 20, 1977.

DEAR CONGRESSMAN KASTEN: The other night my husband and I were watching the TV-6 news. Carl Zimmerman had given an editorial about your giving approval of a bill on housing for first time buying. Mr. Zimmerman had said to write to you so here is our letter.

My husband and I are both in our mid-twentys. Both of us have tried to save for a house for five years and we still haven't reached a sufficient down payment for a

house. Although we can go through a State Veteran loan we still can't afford the high house payments of today.

We both agree as you have said today's home prices are pricing young people right out of the market. Our dream has always been a home of our own someday but that dream is slowly fading.

We are glad that you understand the problems of today's home buyers and hope that you will be able to get this bill passed.

If there is more information on this bill we would appreciate if you would send it to us.

Thank you.

Mr. and Mrs. CRAIG CERASOLI.

SOUTH MILWAUKEE, WIS.

JUNE 16, 1976.

DEAR CONGRESSMAN BOB KASTEN: This letter is to let you know that my wife and I fully support your efforts regarding legislation helping young couples buy their first house.

My wife and I have been married for two years. During this time, we have been trying to save money for a house, and also make our monthly rental payments for our apartment.—However we get the feeling we are losing ground to the ever rising costs of houses.

We are also expecting our first child in September. Buying a house is our American dream. If you can help us attain our dream we would be grateful.

Mr. and Mrs. RONALD L. SCHAFER.

WEST BEND, WIS.

SOCIALIST WORKERS PARTY'S SPIES ON CLAMSHELL ALLIANCE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. McDONALD. Mr. Speaker, the Socialist Workers Party, a Trotskyite-Communist group, has had a long history of spying on their Marxist-Leninist rivals. When they participate in coalitions they, nevertheless, make reports on those individuals and groups that collaborate with them. The Trotskyites call their spying on rival Marxist-Leninists and their report writing on coalition partners, "an intervention."

The SWP "members only" publication Discussion Bulletin, July 1977, No. 12, contained an interesting informant's report by an SWP member, who had penerated the antinuclear Luddites, who call themselves the Clamshell Alliance. The report contains much interesting information that would be of value to my colleagues in understanding the activities of those who feel that it is their right to invade and take over facilities that do not belong to them. The modern Luddites like their predecessors of centuries ago advocate stopping progress by smashing the machines.

The Socialist Workers Party supports the Clamshell Alliance. The report prepared by Gary Cohen of the Cambridge branch, Boston local of the Socialist Workers Party identified the main group within Clamshell as the American Friends service committee. According to the report, while Clamshell is in sympathy with those groups that use "legal, legislative lobbying and other similar techniques" their method of operation is "direct action" which includes taking over nuclear sites.

The report on Clamshell Alliance follows:

NO NUKES IS GOOD NEWS (OR DIGGING CLAMS)

(By Gary Cohen)

I will not in this contribution attempt to deal with the scientific aspects or more general political aspects of nuclear power. That has been dealt with quite adequately in Discussion Bulletin Vol. 35, No. 7 by Baumann, Murphy, and Weissberg, and I am in agreement with their conclusions. I would like to concentrate on the nature and activities of the Clamshell Alliance and the Boston local's role in relation to those activities.

The mass occupation of Seabrook on April 30 of this year had a major impact on the consciousness of large numbers of people throughout this country, regarding the question of nuclear power. This action in part was motivated by mass actions that have been taking place in other parts of the world, especially in Western Europe, directed at nuclear power plants. The question of nuclear power tied in to the whole energy question (the so-called "energy crisis" etc.) is becoming more of a concern to more and more people. However, at this time I feel that the vast majority of Americans don't really understand what is at stake, and the Clamshell Alliance and other groups like it that are now and will undoubtedly be springing up in various parts of the country will be playing a vital role in getting the message across—that is, in essence, corporation profits before human needs is behind the building of nukes.

WHAT IS THE CLAMSHELL ALLIANCE?

The battle against the Seabrook plant has been going on for 7 years. Various legal actions were undertaken in an attempt to prevent construction at Seabrook. In July of 1976 a group of people who were involved decided that legal actions alone were not sufficient to produce a victory. It was determined that direct, nonviolent action would be the most effective orientation rather than solely relying on legal and legislative processes. At first it was only New Hampshire people who were involved, but they were able to reach out to other people throughout New England and involved them in a couple of small occupations and a petitioning campaign against the Seabrook plant. The American Friends Service Committee played an important role in this process. A small number of people from the Boston area (13 at the outset) got involved and formed a Boston Clamshell group. After the Seabrook occupation the regular weekly unpublicized business meetings were attended by approximately 150 to 200 people.

The major factor which sets Clamshell (whose members refer to themselves as "Clams") apart from other environmental groups is that they are founded on the premise that direct action is the route to follow. They are in sympathy with groups that use legal, legislative lobbying and other similar techniques, but feel that the efficacy of these groups is limited. Clamshell is the only sizable group that I know of in this country that has this orientation and as such it is the cutting edge, the vanguard, of the environmental struggle in this country.

Boston Clamshell has discussed and rejected and orientation toward legal or judicial tactics (for itself, not other groups). It has also rejected an orientation toward broadening its scope to include nuclear arms and export of nuclear technology, and will continue to focus its attention on nuclear power plants. This discussion was reminiscent of the "multi-issue" vs. "single issue" debates in the antiwar movement with the difference being practically unanimous support for the single focus.

Clamshell Alliance is a New England-wide organization consisting of some 40 local groups. It maintains contact with numerous environmental groups throughout New England and groups similar to Clamshell that have begun forming in other parts of the country.

STRUCTURE OF CLAMSHELL

Figuring out the structure and operating mechanisms of Clamshell sometimes feels like trying to grasp a shadow, but I think I can produce a Lamont Cranston. There is a central coordinating committee which has representatives from all the Clamshell groups in New England which meets every 2 weeks in Portsmouth, New Hampshire, the location of the Clamshell headquarters. The committee makes proposals for New England-wide activities. There are no elected officers of the organization, to my knowledge. The staff people in Portsmouth are volunteers, as are the staff people in Boston. There is a degree of autonomy on the part of the local Clam groups, but I have not yet quite figured out what the delimitations are.

Boston area Clam has recently split into 2 groups—Boston and Cambridge, with one central coordinating committee for both. Boston area Clam is the only group I have direct knowledge of, but I assume it functions in the same way as other Clam groups. The 2 staff people are volunteers who work out of the Clam office in the AFSC headquarters, and they are there on a permanent basis. There are no elected officers anywhere in Clamshell that I have been able to discern. Reps. to the Portsmouth coordinating meetings, reps. to the local coordinating meetings, chairpeople for the Clam meetings who prepare the agenda, are all volunteers who perform on a 4 to 6 weeks rotating basis. All decisions are made on a consensus basis, but nonbinding votes are taken which in essence put pressure on the minority, if it is small, to rethink its position. All heads of committees and task forces are volunteers and these various groups meet on a regular basis. Believe it or not, Clamshell functions relately efficiency and democratically so far, but there is an inherent tendency for power to accrue in the hands of a few key people. Contradictions between present structure and democratic, efficient functioning will probably manifest themselves in the near future but it is not a real problem at the present time.

COMPOSITION OF CLAMSHELL—WHO ARE THE CLAMS?

The composition of Clamshell still represents a fairly narrow social stata. Claims are mostly in their early and mid-twenties, practically all white, a lot of ex-students and young professionals, a number of students, a handful of older pacifist types. To me it is reminiscent of the early days of the antiwar movement. The active people in Clam are dedicated, hard-working, talented, serious, and very open to radical ideas. There is no discernible antitechnology current present; as a matter of fact, many Clams are active in the natural sciences. There is a certain countercultural element present but it is by no means a major thrust of the group.

People in Clamshell are very concerned about the narrowness of their base and there are constant discussions about the need for outreach and basebroadening to include workers, Blacks, Hispanics, etc.

The only organized tendency other than the SWP (and the AFSC) openly functioning in Clamshell is YAWF. The total extent so far of their activity is to have one person attend the meetings and hand out free copies of *Workers World*.

CLAMSHELL ACTIVITIES SINCE SEABROOK

In conjunction with the mass occupation of Seabrook, the following day a mass rally was held at Hampton Falls which is adjacent

to Seabrook, which attracted over 1,300 people. This is of course in addition to the over 1,600 who participated in the occupation itself.

The following Saturday a rally in support of the occupiers was held at the State House in Concord which was attended by over 300 people. On May 15, a rally was held in Copley Square in Boston at which Barry Commoner spoke, and which was attended by about 350 people. Lee Artz did an interview with Commoner at the rally which appeared in a subsequent issue of the *Militant*. Diane Jacobs, SWP City Council candidate, gave greetings to the rally.

During the week preceding the final EPA decision to give the green light to Seabrook, it was reported in the press that the decision would be final on Friday, June 17, and it was apparent what that decision would be. An SWPer proposed at the Clam meeting that week that there should be a response to that decision in the form of a picket line at the regional EPA office, and a mass rally. Everyone agreed, and that Friday when the decision was announced, about 40 people showed up to picket the EPA office, and 10 days later a rally of some 400 people was held to protest that decision. Greetings to the rally from Hattie McCutcheon and Diane Jacobs, SWP candidates for Boston School Committee and City Council, were read and warmly accepted by the gathering.

In addition to the main focus on Seabrook, some attention has been given to the proposed building of Pilgrim 2 nuclear power plant in Plymouth. Pilgrim 1 is already in operation. Leafleting by Boston Clams has been going on in the Plymouth area to educate the populace of the danger of nuclear power. No occupation has been discussed for Plymouth for a few reasons:

1. The plans for Pilgrim 2 are not as far along as Seabrook, and therefore it is not as crucial.

2. The people of Plymouth in their majority support the power plant in contradistinction to Seabrook.

3. There is a legally oriented anti-nuke group which exists in the Plymouth area, which is opposed to any occupation-type activities at this time.

4. Some people are afraid of nuclear hazards in doing an occupation in the vicinity of Pilgrim 1.

In addition to political activites, Clamshell has had a couple of large benefit concerts including one by Pete Seeger which have netted them large sums of money. They seem to be doing well financially and there are a number of people who are willing to offer financial support; that will probably increase if they get tax-exempt status, which they are seeking.

BOSTON LOCAL'S ROLE CLAMSHELL

The Boston SWP local did not get involved in Clamshell until a few weeks after Seabrook. My personal feeling was that we should have gotten involved earlier, before Seabrook, but there was some delay. Despite that minor reservation, I think we are in on the ground floor and this is manifested by the impact of our ideas in the short time in which we have been involved. If there are groups or activities in other parts of the country similar to that of Clamshell, I feel very strongly that we should get involved. Based on what has happened in Western Europe, I think we are seeing in this country the rise of a new mass movement, one which we can fully support, build, and give direction to.

PARTY'S GOALS IN ANTI-NUKE MOVEMENT

There are 3 general goals that we should seek to achieve in this struggle against nuclear power. Firstly, the dissemination of socialist propaganda, mainly sales of the Militant and the Young Socialist and also the Intercontinental Press and any pamphlets that will be coming out on this question. The coverage so far has been exemplary. Secondly, we seek to put forward our political orientation to aid in the development of a genuine mass movement, i.e., posing a mass action strategy. We have had tremendous success so far in advancing the aforementioned goals. Last but certainly not least is recruitment. This is a vital aspect of our involvement, but one which will take more time before we can report tangible results of some magnitude.

I have been in the party for a good many years. I have sold Militants in the civil rights movement, the antiwar movement, etc., but never in my entire experience have I ever had a better reception to the Militant than from antinuke people. I mean never under any circumstances, time, place, political struggle, etc., have I ever had such a positive response to the Militant. Let me enlighten you with some details.

April 30, 1977—the day of the occupation. Two comrades went up from Boston early in the morning to sell. We found that we were unable to sell where they were gathering to prepare for the occupation, due to the fact that it was on private property and the owner had stipulated no sales of any publication. The Guardian was there and was told the same thing. The people who informed us of this fact were very friendly and bought three Militants as we were leaving. We were told to return later in the day and sell at the entrance to Seabrook as occupiers were going in. Unfortunately, we got lost coming back and missed the entire group going in. We did not want to get arrested so we did not go onto the site. However, there were a few stragglers and some supporters hanging around the entrance (approximately 100 people to whom we sold over 40 Militants in less than an hour. If only we hadn't gotten lost! I was told by a Guardian supporter that they had 4 people with Guardians on the site. In the morning I saw stacks of about 500 Guardians.

The next day the mass rally of 1,300 took place and comrades sold there with good results. There were a number of opponents selling their press also.

A week later at the rally in Concord, 2 comrades sold over 50 Militants to a crowd of over 300 in about 1½ hours. We were the only ones selling our press and the reception was extremely warm. The following week we sold at the Copley Square rally in Boston and got another good response.

No comrades were able to attend the picket line on the day of the EPA decision, but at the rally 10 days later we not only sold Militants but sold 3 or 4 subscriptions. Also our members in Clamshell sell regularly at the business meetings with good results. The Militant coverage of the anti-nuke movement is of tremendous help in motivating Militant sales.

I think the YSA has an important role to play in the anti-nuke movement, especially come fall; and YS sales are important at Clamshell activities. YS sales have not been consistent and will be improving I am sure. The coverage in the YS has also been exemplary. The party is working together with the YSA and we have a joint fraction.

POLITICAL ORIENTATION—MASS ACTION

The major thrust of our political intervention is to pose a mass action perspective as being the most effective way to win the struggle against the nukes. We have been amazingly successful in winning people to this perspective. As a matter of fact, our general perspective for the upcoming period has been adopted by consensus in both Boston and Cambridge Clamshell. This does not mean that everyone agrees with our mass action perspective, however. Some of the hard-core civil disobedience types just went along because they were in a minority and didn't want to block consensus, but they are long-term members of Clamshell (the majority of members are relatively new) and have prestige and hold key positions as regards implementation of the proposals.

The approach we used was not directly counterpose mass action to civil disobedience. In my opinion we were not opposed to civil disobedience (CD) per se but see it as a tactical question. What we are opposed to is a strategy of civil disobedience (CD), just as we are not opposed to guerrilla warfare as a tactic when appropriate, but oppose a guerrillaist strategy. The reason we are opposed to a CD strategy is that rather than broadening the base of the movement it tends to limit and narrow the base and is counterproductive to the building of a mass movement. We have participated in CD actions in the civil rights movement (sit-ins, etc.) and in the antiwar movement (march on the Pentagon which included aspects of CD) but we viewed these actions as tactical adjuncts to the main thrust of the movement—mass action.

Our attitude toward the Seabrook occupation is that we supported it, especially its massive character and the mass rallies that were held in conjunction with the occupation. However, now that the occupation had made many people aware of the issue of nuclear power, we must embark on a course of mass action designed to educate and involve a broad spectrum of the population—workers, Blacks, Hispanics, trade unionists, etc., as well as college students and young white professionals. This approach has struck a responsive chord in the minds of most of the Clams, especially the newer members.

We explained that although people are now generally aware that nuclear power is an issue, the vast majority do not understand what it means to them, and must be educated and then involved in the movement. To accomplish this we need to draw upon the lessons of the antiwar movement, i.e., having teach-ins, protest actions like picket lines, speakers at Black organizations and at union meetings, and mass marches and rallies. Leafleting to build these actions would constitute an effective form of education for many people. The mass actions of a legal character will not constitute a barrier for many people who are concerned but are afraid to get involved for fear of arrest or confrontations, as CD does.

We did not directly counterpose mass action to CD because most people do not see CD as a strategy but merely as a tactic to be used under certain circumstances. We identified with the strongest sentiment for broadening the base by proposing a mass action strategy, leaving the question of another mass occupation of Seabrook for the future. We did not oppose small CD actions per se in Boston, which were suggested by some people, but cautioned against the possibility of utilizing so much energy on CD that the mass action orientation would be undermined, meaning failure to broaden the base of Clamshell.

Clamshell Alliance was founded on the premise that it would be a "direct action" organization. The meaning attributed to that term by the original members was essentially a CD strategy. We have in the course of discussion of strategy for Clamshell redefined the term "direct action," a redefinition accepted by the majority of Clams. (Just a reminder that this contribution is dealing with Boston-area Clamshell and not New England Clamshell.) We explained that direct action includes a lot of activities besides CD. Direct action means taking our destiny in our own hands and not relying on the legislature, the courts, the Carter administration, the EPA, etc., to guarantee our rights and safety. Direct action means picket lines, teach-ins, leafleting, and mass marches and rallies which will involve thousands, hundreds of thousands, or ultimately even millions of people struggling to take control of their own lives.

The acceptance of our redefinition was

reflected in a series of proposals adopted by consensus by Boston and Cambridge Clamshell.

The proposals were in essence as follows:

1. An educational leafleting campaign around Boston and Plymouth areas focusing on Seabrook and Pilgrim 2 over the summer.

2. Support for activities against nuclear arms on August 6–9, Hiroshima and Nagasaki Days, sponsored by Mobilization for Survival, an anti-nuclear-arms group founded by Sid Lens, Sid Peck, and others of that ilk. Clamshell would take no organizational responsibility for these activities.

3. Formation of an investigative task force to gather information on nuclear-related financial institutions in Boston. Actions will be determined by the nature of the findings. (There will be some people pushing for CD actions in the banks, but that debate has not yet taken place.)

4. In late September after schools open, a broad spectrum press conference (reps. from unions, Black and Hispanic communities, scientists, etc.) would announce a teach-in on nuclear power for a Friday night followed by a Saturday mass march and rally in Boston.

5. All the above activities would build up to a New England-wide regional rally and/or march and rally at Seabrook of a legal character in late October.

6. In addition Clamshell should, in the form of a probe, contact groups throughout the country to get some feedback on the feasibility of organizing a nationwide mass march and rally in Washington, D.C., and San Francisco some time next year, possibly in the fall, preceded by a national conference.

Sounds fantastic, doesn't it? There are, however, some big questions. Because of the loose organizational structure of Clamshell these decisions don't mean anything until they are implemented. A vote one week may be overturned the next. There are still some people who want an occupation of Seabrook this fall and might raise it again. There are some people in key positions who are opposed to the mass action perspective and could possibly prevent its implementation. Another question is the response of New England Clam to the proposal for a mass legal action at Seabrook in October. That decision will probably not be made until late August, when there will be a New England-wide Clam congress.

What we have definitely accomplished is to orient the consciousness of most Boston-area Clamshell members in the direction of mass action. All of our proposals have been receiving overwhelming support. Hopefully, tangible results will follow. A new development that has just occurred and probably reflects our influence is the appearance of red-baiting.

An individual member of Cambridge Clamshell wrote up and distributed a proposal which criticized the supposed degeneration of Clamshell and included within it the statement that this sad state of affairs was reflected by the fact that "the Trotskyites were trying to take over the Action Committee for example." The Action Committee, made up of approximately 8 to 12 people, brings in proposals for action to Clamshell meetings. The individual who made the proposal was directly approached and apologized profusely for his red-baiting. He is not on the Action Committee and stated he received his information second-hand but did not divulge its source. We have not yet determined how we will deal concretely with this situation but this is the first instance of any manifested hostility to the SWP despite the fact that we have been quite open in our participation.

One other orientation was proposed for this fall; that was a referendum. There was little support for the idea and much confusion about Clamshell participating in the electoral arena. There was little discussion on the question and from a purely practical point of view it was really not feasible and we did not participate in the discussion.

RECRUITMENT

Obviously a vital element in any mass work that we do is recruitment of activists to the party. First and foremost in our minds at all times is the necessity to build the revolutionary party. We can introduce activists in the anti-nuke movement to our ideas through our press which we should not be afraid to push audaciously. We attempt wherever possible to have SWP speakers, especially candidates, at anti-nuke rallies. We must establish personal relations with those activitists who are friendly to our ideas and invite them for dinner, out for a drink after meetings, or wherever it is possible to engage in informal political discussion. It is important to have forums on nuclear power. The Fenway branch had a forum with a Clamshell spokesperson before Seabrook, and this week Cambridge is having a forum with a Clam spokesperson. We publicize our events at Clamshell meetings and there is no objection to our doing so. Holding forums and classes on the socialist view of nuclear power (which we plan to do in the near future) is a good way to attract the activists to us. It would be very helpful if a pamphlet were published presenting the socialist view of nuclear power.

CONCLUSION

Our brief involvement in the anti-nuke movement here in Boston has been a rich and rewarding experience. We have had a significant impact on the movement and vice versa. We have reached a large number of talented, dedicated, and radicalizing young people with revolutionally-socialist ideas. These people are open to our views; they are not sectarians, ultralefts, or counter-cultural, antitechnology nuts. The movement has a basically anticapitalist thrust as can be seen from the 2 Appendices attached to this contribution.

This fall when the campuses open, the YSA can play an important role in building Clamshell groups on their respective campuses. YSAs throughout the country should seek out any Clamshell-type groups and try to build them on their campuses. The party should seek out any anti-nuke groups in their areas and work with them, and help them to develop a mass action perspective. Union fractions should try to arrange anti-nuke talks or debates with pro-nuke people at their union meetings.

I believe we are seeing the beginning of a burgeoning mass movement. We have an important opportunity to be in on the ground floor and have a significant impact on its political direction. Our opponents do not seem to be taking this movement seriously for the most part, or else are opposed to it. We should make a firm commitment to supporting the anti-nuke movement, to continue to publicize the issues and activities through our press and election campaigns, and to recruit the best activists to the SWP. Social workers unit! We have nothing to lose but our chain reactions. Human needs before profits—no nukes!

CARTER GIFT TO MARITIME LOBBY

HON. DAVE STOCKMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. STOCKMAN. Mr. Speaker, the President of the United States, while on his long trek toward the White House, was represented as a Washington "outsider", untainted by special interests. After only 6 months in Washington, however, those special interests which rode unnoticed in Mr. Carter's entourage are beginning to emerge, asking their reward for campaign contributions—and Mr. Carter is delivering with alarming frequency.

This weekend, the President announced plans for cargo preferences for U.S. tankers on shipments of foreign oil. He seeks by fiat to triple the volume of oil business for the maritime lobby, perhaps America's least cost-competitive industry. Even if this proposal had no cost implications, such blatant protectionism, in violation of international treaties—not to mention specific campaign promises—is an alarming move. But the bottom line is the vast windwall that the maritime lobby will reap for its modest $100,000 investment in Mr. Carter's campaign. The cost of this effective subsidy of high-priced shipping will add significantly to our already bloated foreign energy bill. The President's own Secretary of the Treasury, and his Under Secretary of State were apparently unsuccessful in discouraging Mr. Carter from rewarding a major contributor in such an expensive fashion.

Mr. Speaker, I commend to the attention of the House the following editorial from the pages of yesterday's Washington Post, one of America's most distinguished newspapers. I congratulate the Post on its timely analysis of the President's proposal:

[From the Washington Post, August 2, 1977]

THE MARITIME LOBBY'S TRIUMPH

The maritime lobby, with its money bags, has scored a great political triumph. The costs will be borne over coming years by everyone who buys oil products. It's another defeat for the enlightened trade policy that President Carter keeps proclaiming but never quite manages to put into practice.

The maritime interests—ship builders, ship operators and unions together—already enjoy more different kinds of subsidy than any other American industry. Despite this torrent of aid, they have worked their freight rates up so high that nobody uses American-flag shipping unless the law requires it. The maritime lobby has now obtained President Carter's misguided support for its perennial bill to force part of this country's oil imports into those American-flag tankers. The proportion of imports affected will be small at first, but it will rise steadily.

It's called a cargo preference bill, and it is 200-proof protectionism. It would violate American treaties with other nations. It would be inflationary. It would add still another layer of subsidy, this time paid directly by consumers in the form of higher oil prices. As national policy, it's got absolutely nothing going for it but the lobbying muscle and the extensive campaign contributions of the people who wanted it. But that turned out to be enough to get the President's support.

Mr. Carter's whole trade policy is rapidly deteriorating. He keeps talking in terms of the most high-minded commitments to open trade and international competition but, unfortunately, the actual record points the other way. There have been three major cases so far, and three times the administration has caved in to the protectionists.

In the case of the color television sets from Japan, Mr. Carter resorted to an Orderly Marketing Agreement. That term is a euphemism for an agreement by the exporting country to limit shipments. In the shoe case, the administration imposed another couple

of Orderly Marketing Agreements on Korea and Taiwan. They will save some jobs in American shoe factories; they will also cost some jobs in American retail stores as well as increase prices to American consumers. But at least an Orderly Marketing Agreement is limited in duration and is a legal procedure under the general trade rules that this country has bound itself to. The cargo preference bill is neither.

It's a strange performance for an administration that foresaw trade troubles and staffed itself with people to meet them constructively. Those people, led by Treasury Secretary Michael Blumenthal and Under secretary of State Richard Cooper, have been walloped in each successive test. The President has been mainly following the advice of Robert S. Strauss, currently his special trade representative and formerly chairman of the Democratic Party. Like most party managers, Mr. Strauss thinks in terms of constituencies and grievances: a factory here, a union there. He apparently does not work in terms of broader concerns, like consumer interests in general, or American productivity, or the future of the highly competitive American industries whose overseas markets are now threatened by foreign retaliation.

If Mr. Carter will not resist protectionist pressure, he cannot expect the fragile governments of Western Europe to do better. He may get heat from aggrieved unions—but unlike, for example, the president of France, he does not face an election next year that might bring the Communists to power. In May, at the London summit conference, Mr. Carter joined in a pledge to support firmly the principle of open trade and a growing world economy. The people who heard him must wonder what he had in mind when they now read the cargo preference bill that he has promised to support.

HELSINKI'S UNFULFILLED PROMISE

HON. MATTHEW F. McHUGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. McHUGH. Mr. Speaker, when the Helsinki Final Act was signed, hopes were raised that families separated by political boundaries would finally be reunited. However, this goal has not been achieved, largely because of the failure of the U.S.S.R. to live up to its written pledge.

That is why we must continue to speak out for the 200,000 Jews who have applied for permission to emigrate from the U.S.S.R. as well as for those whose fear of reprisal has prevented them from requesting permission to emigrate.

If we allow ourselves to be caught up in our daily routines and fail to voice our opposition to this continuing repression, then whom can we expect to defend the cause of human rights?

Human rights is not simply an internal political question, as Soviet leaders would have us believe. We have a right to expect the U.S.S.R. to honor those basic human liberties spelled out in the Helsinki agreement and the Universal Declaration of Human Rights, to both of which it is a signatory.

I have spoken of 200,000 Jews who seek permission to emigrate. I ask my colleagues to consider the case of one, Roman Lazarevich Bernshtein. Roman is a 38-year-old mechanical engineer, presently living with his wife, Ludmilla, and 6-year-old daughter, Marina, in Moscow.

In 1969 he was recalled by the army for 2 years of service as an engineer, service which he completed in 1971. Four years later, in 1975, he applied for a visa to emigrate from the U.S.S.R. His request was denied on the ground that Roman had not completed a 5-year waiting period necessary after a military discharge.

A year later, when the 5-year waiting period had expired, Roman applied for a visa once again, and once again he was refused. The explanation given to him this time was that he had to wait a full year from the date of his previous refusal in order to apply for a visa.

Clearly, Soviet officials were intent on placing stumbling blocks in Roman's way, stumbling blocks designed to prevent his reunion with his mother.

Sarah Bernshtein, Roman's 73-old-mother, has been in Israel for a little more than 2 years. Since her arrival there, she has sought to help her only son leave the U.S.S.R. so that he might be able to join her in Israel. In an anxious plea, she writes to us:

As a 73-old mother, all alone, and with a heart ailment, my suffering is beyond endurance. My son's family in Moscow is beset with great suffering because of his wife's elderly and sick parents, and because my son is anxious over his lonely mother in Israel who needs his help and care. He always displayed a deep sensitivity, love, and concern for me.

On my knees, I beg you to help me in my agonizing torments. Please, please, help me! Help me to regain my dearly beloved son *while I am still alive*—the son whom I alone raised and cared for since he was three years old, because his father died in World War II at Stalingrad.

If at any time you underwent great suffering, you will understand me!

If you have a mother, you will understand me!

If you have children dear to you, you will understand me—and you will comfort an old gray mother.

Please do everything possible within your power. Over the great distance between Israel and America, please listen to my call for help.

Separated and alone, Sarah Bernshtein waits, and we wait with her. Clearly, the suffering and anguish caused to Roman Bernshtein, his family, and so many other Soviet Jews is intolerable to all those committed to the cause of human rights.

As Members of Congress and citizens of the United States, we cannot force the U.S.S.R. to free Roman nor any other Soviet Jew. However, we can attempt, through a vigil such as this, to remind the U.S.S.R. of its obligations, not only to the Helsinki Final Act but to the far more important cause of decency and humaneness.

THE SOUTH KOREAN PROBE

HON. LEE H. HAMILTON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. HAMILTON. Mr. Speaker, I would like to insert my Washington Report for August 3, 1977, into the CONGRESSIONAL RECORD:

THE SOUTH KOREAN PROBE

Can Leon Jaworski, one of the heroes of Watergate, get the troubled investigation of alleged South Korean influence-buying on Capitol Hill back on track?

The presence of the former Watergate Special Prosecutor should help restore credibility to the troubled probe. Since doubts have been raised about Congress' ability to press ahead in areas which could prove embarrassing to some of its own members, his appointment solves, at least temporarily, the problem of public skepticism about the investigation. It is essential, of course, that Mr. Jaworski be able to work from a charter of indepedence with full authority to investigate any wrongdoing, to present any evidence concerning it, to hire, organize and direct the staff and to make such public statements as he deems appropriate.

The road to a complete investigation is not without obstacles. Mr. Jaworski has been assured by the House Ethics Committee of full and complete independence to conduct the inquiry but the recent change of staff leadership could slow the pace of things at least temporarily. Moreover, it will be difficult for the new prosecutor to win the sort of praise he received as the skilled, judicious and determinedly independent Watergate advocate. At 71 years of age, however, Mr. Jaworski has little to gain and much to lose if the investigation falls through. My guess is that the country will be able to count on his very best effort.

Another factor makes the new prosecutor's job a tough one. Unlike the actions of the Watergate criminals, lapses in the ethical conduct of members of Congress are not necessarily criminal Thus, Mr. Jaworski will be forced to make judgments concerning acceptable standards of behavior for public officials and how departures from those standards should be dealt with. It is Attorney General Griffin Bell, however, who has the ultimate responsibility for criminal prosecutions. Mr. Bell has already announced that investigations are about 80% complete and that we can expect indictments in the near future of a few members of Congress. I am hopeful that both the congressional and the executive investigations will proceed quickly. The chips should be allowed to fall wherever they may.

The problems of the Ethics Committee itself should not be overlooked. Key witnesses, like Tongsun Park, are unavailable. Even though the Committee has delegated independence to Mr. Jaworski to find facts and to submit recommendations based on the evidence, the Committee cannot delegate the ultimate power to judge fellow members of the Congress. Members of the Committee must judge difficult cases involving colleagues, not just the obvious cases of cash payoffs in exchange for favors, but more subtle ones involving degrees of contacts, favors, and influence buying. Extraordinarily difficult judgments will have to be made about the propriety of human behavior in a political world.

The Ethics Committee must remove all doubt of its ability to go after the wrongdoers. Their party affiliation or status in the Congress should make no difference. Only a wide-ranging, non-partisan inquiry will preserve the integrity of the Congress. I am encouraged by the events of recent days and I will continue to support the vigorous prosecution of the investigation

Some critics of the South Korean probe have demanded the appointment of a special prosecutor. In my view that would be a mistake. A special prosecutor would be taking over the Justice Department's investigation and there is no evidence, or even charge, that the Department's investigation is foundering. In addition, a special prosecutor cannot take over Congress' job to investigate, pub-

licize and discipline the conduct of members that may not be criminal but does violate the code of ethics and abuse the public trust. A special prosecutor could determine whether any criminal offenses have occurred, but he could not go into the questions of potential impropriety which go beyond determining whether indictable offenses have occurred. Only the House of Representatives can do that disagreeable work. If the investigation, however, should founder it may become necessary to appoint a special prosecutor at a later date.

The South Korean scandal is one of the most serious matters ever to face the Congress. The integrity of Congress rides on its thorough and fair investigation. I am prepared, as are most members of Congress, to see the House of Representatives assumes its responsibility directly and openly without hiding facts or dodging consequences.

"THE SLOW, HARD FIGHT TO CONTROL STRIP MINING"—A TRIBUTE TO LOUISE DUNLAP'S HEROIC EFFORTS

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. OTTINGER. Mr. Speaker, this morning a very heartening event is occurring at the White House. President Carter is signing the strip mine legislation which has for so many years been snaking its way through the legislative process.

That significant event symbolizes the culmination of many long years of hard work by concerned citizens all around the country. People who care about our lands and waters joined with those whose lands were in jeopardy, with people who care about health—of miners and of all our citizens—and with people who care about the society in which we live. All the diverse reasons for why there should be protection against ravishing of the earth, or protection of people have helped.

Last evening I had the privilege of joining with some of those people to celebrate, at a boathouse overlooking the Potomac. People from Appalachia, from the far West, from the Northern Plains, from the Northeast joined with their Washington friends. Now, those people are at the White House where, after so many years they all deserve to be.

No one worked harder or more effectively to bring about passage of the Surface Mining Control and Reclamation Act of 1977 than Louise Dunlap, who lead the fight as head of the Environmental Policy Center.

This morning's Washington Post carries a delightful article by Coleman McCarthy about Louise's successful efforts, which I commend to the attention of my colleagues:

COLMAN MCCARTHY—THE SLOW, HARD FIGHT AGAINST STRIP MINING

As the President signs the strip-mine bill today, he completes a process begun 37 years ago by Rep. Everett Dirksen. In 1940, the downstate Illinois congressman, a booster of both the marigolds of his district and the virid hills on which they grew, introduced a bill to control the plundering strip miners. The bill went nowhere.

Thirty-seven years may seem glacial for even the inert ways of Congress, but along the way it often appeared as if nothing would ease the raw destruction inflicted upon the land. In the last six years, when the debate became intense, the coal industry might not have been cumbered at all if it hadn't been for the determination of a skilled and passionate environmentalist, Louise Dunlap. She did not work alone, but more than anyone in Washington since 1971 Dunlap persistently did the researching, cajoling and inspiring that eventually brought the bill to the White House for today's signing.

Although the quality of the law's enforcement has still to be judged, Dunlap's accomplishment is worth noticing—first, for what it says about the techniques of lobbying for environmental causes and, second, for its illustration that in political Washington idealism and compromise need not be opposites.

Washington environmentalists are often pictured as low-paid romantics working 20-hour days in rat-hole offices papered by "Down With Capitalism" posters. Dunlap's current salary is in the mid-20s, her office is tidy, she is romantic only about her husband and her garden and she has not disowned the capitalism taught at home by her father, a Republican businessman.

Dunlap's commitment began in 1971, when she co-founded the Environmental Policy Center, a small but respected group with two alumni now serving as senior officials in the Carter administration. Six years ago, a few in Congress were talking about a ban on strip mining. However logical and reasonable that was—overwhelmingly, the nation's recoverable coal reserves are in deep mines—a ban was immeditaely portrayed by the industry as anti-energy. With the goal of getting the strongest bill possible, Dunlap visited the coalfields of Appalachia, the Midwest and the Great Plains, learning from individual citizens and citizens' groups. Returning to Washington, she found that lobbying was simplified because it was not her personal feelings she was presenting but those of people being victimized in tragic ways by strip mining. In the current bill, for example, provisions call for controls against blasting the earth to expose the coal seams. This idea came from citizens who had boulders and rocks crash into their homes, or family cemeteries unearthed, or their peace of mind shattered by the constant noise.

In some years, strip-mine bills cleared the Senate but not the House. Other times, subcommittees and committees reported bills but the House Rules Committee blocked them. Gerald Ford, accepting incorrect data from the coal industry, vetoed the bill twice. Amid the stalls and defeats, much of Dunlap's work was, first, persuading one congressman or another to stay with the issue and, second, always having facts available to either support or oppose each of the 800 amendments offered to the bill since 1971. It meant containing her anger when a West Virginia congressman said that strip mining was actually a blessing because it exposed wildlife to the sunshine after the trees were bulldozed away. It meant finding an Irish Catholic bishop to phone an Irish Catholic member of the Rules Committee to persuade him to stop blocking the bill.

Throughout the debate, Dunlap was aware of the immense power of the energy lobby to get its case heard. It had not only easy access to individual politicians and Interior Department officials; it had unlimited funds for ad campaigns as well. When the energy lobby saw that a strip-mine law would be inevitable if Jimmy Carter became President, it took the line that the bad days of reckless stripping were over but that new methods of reclamation not only restored the land but even improved it. The true guardians of the Lord's earth, if only the obtuse public would believe the ads, were the strip miners.

Even with the bill passed, a current ad campaign of the Mobil Oil Corporation persists in repeating the industry's rejected arguments. It warns against "the impediments being thrown in the way of coal development by the shortage-creators in the name of environmental protection." As one of the presumed "shortage-creators," Dunlap is several steps ahead of Mobile. She has been persuasively arguing for years that strip mining is far more than environmental destruction. She marshalled evidence that stripping poses a severe economic threat to the farmers and ranchers of the West and that the trade-offs are not worth it. She pointed to the rise in alcoholism, mental depression and family breakdowns in areas—both East and West—where the energy companies began stripping. The question now is: What are the strip-mine operators' reclamation plans for the ravaged emotions of citizens whose livelihoods and spirits have been as much under assault as their land?

Some of these citizens are joining Dunlap at today's signing in the Rose Garden. The President, who was backed by many in the coalfields precisely because he expressed an understanding of the tragedy of strip mining, has invited farmers, ranchers, Appalachian mountaineers and others to participate in the White House ceremony. For some, the bill is too weak; for others, too late. But for most, including Louise Dunlap, it represents all the good that can be wrenched out of a legislative process that is mastered only by those who do not demand quick results and easy victories.

TESTS DEMONSTRATE AIR BAG SAFETY

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. WAXMAN. Mr. Chairman, on June 30, 1977, Secretary of Transportation Brock Adams announced the issuance of an auto safety standard requiring improved crash protection in automobiles manufactured after the 1981 model year. The proposed rule would require that automobile manufacturers provide automatic crash protection for front seat occupants in 30 m.p.h. frontal collisions.

While the Secretary's proposal does not mandate the use of any specific technology to comply with the Federal standard, recent attention has been focused upon the application of the air bag. One concern expressed about this form of passive restraint is that premature, accidental inflation might cause a driver to lose control of the car.

I recently came across some information which I feel may be of interest to my colleagues in assessing the value of the air bag and, specifically, the danger resulting from premature inflation. The General Motors Corp. conducted a test of just this possibility, the results of which were published in the August 1975 Journal of the American Medical Association. The tests concluded that although drivers are somewhat startled by the premature deployment of the bag, they maintain good control of the vehicle and can im-

mediately see over it to continue their driving.

I would ask that a copy of the AMA Journal article be printed in the RECORD at this point:

STARTLE REACTION TO AIR-BAG RESTRAINTS

(By H. Haskell Ziperman, MD, George R. Smith)

Air bags in vehicles constitute a means of passive restraint for individuals involved in auto accidents. There is fear, however, that the inadvertent nonaccident-connected deployment of one of these air bags might substantially interfere with the handling of a vehicle in which such deployment occurred. We have found that while physiologic and physical evidence of startle accompanies such unexpected deployment, good control of the vehicle continues to be exercised by the test subjects under the conditions of our experimental protocol.

"Startle" is the reaction of the body to a sudden, unexpected, or frightening event. It is, in effect, a reaction to suddenly induced psychological stress and takes the form of muscular activity, such as jerking, jumping, crouching, running, and blinking, as may be appropriate to the event producing the startle phenomenon. Startle is always associated with physiologic alterations in the cardiovascular system mediated through reflex autonomic changes. The physical component of this reaction can be an extremely variable and perhaps unpredictable one depending on the stimulus, the task that the individual is performing at the time and place, and the person's past experience with unexpected events of this or any other type. The physiologic response, since it is mediated through the autonomic nervous system, is more stereotyped and more predictable.

The body's physiologic reaction to psycological stress can be measured and recorded in several ways, but the simplest indicators available for measurement are the changes in blood pressure, pulse rate, and respiration. Change in respiration is less reliable as a gauge of the intensity of a reaction than the other two indicators. Galvanic skin reaction (GSR) has been used by many researchers as a measure of the psychological stress associated with driving.[1,2] It has, however, some limitation in its quantitative usefulness as shown by Lauda.[2] A little utilized measurement of physiologic startle is electrocardiographic change. According to Greybiel et al. and Marriott, the startle phenomenon can produce T-wave changes that are transitory in nature but can on occasion be misinterpreted as representing heart disease. These electrocardiographic changes would probably tend to exaggerate those cardiovascular reactions demonstrated by Simonson et al. to be associated with the stress of driving a car.

For the purposes of this study of the startle effect resulting from unexpected deployment of a steering-wheel-mounted air cushion on unsuspecting drivers, it was elected to use blood-pressure changes, pulse-rate changes, electrocardiographic changes, and GSR as measures of the intensity of this physiological response. We also chose to compare physical and physiological responses to hood fly-up vs air-cushion deployment to determine what—if any—differences could be elicited.

TEST PROTOCOL

From a pool of 75 men and women varying in age from 19 to 75 years, 51 drivers were chosen. Fifty-three tests were performed on these drivers only after they had had normal findings on a physical examination that included an ECG. Informed, written consent was obtained from all volunteers after the nature of the test had been fully explained.

All drivers tested were seated in the driver's seat of a standard 1973, four-door sedan. The rear seat was modified to contain the test monitor and his control panel. Drivers were required to wear lap and over-the-shoulder belts. Electrodes used for ECG and GSR were of the shielded silver/silver chloride type. Those for GSR were glued to the left ankle and instep and those for ECG to the manubrium and to the right and left costal borders. Blood pressure was recorded by an ultrasonic Doppler blood pressure apparatus.

The course driven was located on an inactive airbase near San Antonio, Tex. It consisted of a 3-km (2-mile) circuitous route. Each driver was permitted three to five circuits of the course before the monitor would activate either the air cushion or the hood release. The car was driven at 45 mph on straightaway and from 25 to 35 mph on a curve. The drivers had no forehand knowledge of the upcoming startling event.

During the course of each test, data recorded included a pretest ECG, pulse rate, and blood pressure. These tests were repeated during the course of the cushion deployment or hood fly-up, and data continued to be recorded after the test period for variable durations. Data on GSR were recorded on 20 drivers. Data accumulated on all drivers also included such physical indicators as braking pressure, lane deviations, and steering-wheel rotation. On-board cameras recorded the driver's reactions.

PHYSIOLOGIC RESULTS

Injuries and hearing

Minor injuries consisting of ecchymoses, erythema, minimal abrasions, and superficial lacerations were produced early in testing in ten drivers. These were minimized in this test program by having the volunteers wear long sleeves and by having them sit well back in the seat so as to decrease the slapping contact of the bag against bare skin of forearms and antecubital spaces.

An initial audiometric examination was performed on all candidates during the course of their physical examinations because of the possibility of hearing loss caused by the loud, gunshot-like noise on air-bag deployment. In every instance where a posttest audiometric examination was performed (36 instances), there was no notable change in hearing levels at any of the frequencies tested.

CHANGES MONITORED DURING TESTING

Electrocardiogram.—An ECG was performed during the course of the initial physical examination and was followed by continuous electrocardiographic monitoring during the test period. Readable electrocardiographic tracings were obtained in 48 instances from the direct writer or from the magnetic tape after all test runs had been completed.

The most consistent electrocardiographic change noted during test runs was a decrease in the amplitude of T waves caused by startle. Seven drivers evidenced this phenomenon during and after cushion deployment and two drivers after hood fly-up. Premature ventricular contractions occurred in two drivers in pretest period, in two drivers during the test run, and in two drivers in the posttest period. These recorded changes in ECG indicate that there is psychological tension and stress associated with driving a test car under unknown experimental circumstances. They also indicate that the startle phenomenon can produce electrocardiographic changes in the heart even when the driver continues to maintain control of the car.

It was anticipated that the best and most consistent quantitative physiologic measure of the startle phenomenon would probably turn out to be changes in blood pressure and pulse rate. The results bear this out.

Pulse Rate.—A total of 17 hood fly-ups and 33 single cushion (air cushion on the driver's side only) and double cushion (air cushion on the driver's side and the front seat passenger air cushion, simultaneously actuated) deployments were performed. Complete data in regard to pulse-rate changes were collected in nine of the 17 hood fly-ups and in 32 of the 33 cushion deployments. The average pulse-rate change from initial examination to day of test was +3.9 beats per minute. The maximum observed increase was 24 beats per minute. The average pulse rate increase during testing was 23 beats per minute and was essentially the same for both hood fly-up and air-cushion deployment. This was not reflective of the views of the drivers experiencing both startle effects who believed that the cushion deployment had a far greater subjective startle effect.

Men and women drivers responded with almost identical pulse-rate changes, although pulse-rate data are available on only four women as compared with 28 men, and therefore no firm conclusions can be drawn.

Blood Pressure.—The average blood-pressure change from initial examination to day of test was +8.5/2.8 mm Hg. The average increase of blood pressure for 33 drivers during air-cushion deployment was 20.7/11.7 mm Hg compared with an average increase of 8.1/3.1 for ten drivers during hood fly-up. The women showed no significant difference from the men in blood pressure increase during air cushion deployment. The maximum increase in blood pressure during air-cushion deployment was 64 mm Hg systolic and 34 mm Hg diastolic. The maximum increase for hood fly-up was 36/18 mm Hg.

Galvanic Skin Response —On 10 individuals, ankle electrodes were used because other test indicators precluded the use of the normal palm-finger electrode placement. Approximately 50% of the subjects demonstrated a decrease in skin resistance soon after the event, but there was no opportunity to acquire quantitative data.

PHYSICAL PERFORMANCE

The principal measures of physical performance of the subject drivers that were of interest in this series of tests were those that could be used in evaluating their ability to maintain control of the vehicle after deployment of the startle device. These consisted of the following:

Braking was assessed in relation to the static maximum applied-pressure capability. Each driver, as he took his seat behind the wheel of the car, was asked to press as hard as he could on the foot brake. This pressure capability was recorded as 100 for each. During the test run, the average brake pressure applied during hood fly-up was 48.3 percent of maximum, with a range of 29 percent to 72 percent. With air-cushion deployment, the average brake pressure applied was 59.3 percent of maximum, with a range of 0 to 113 percent.

Lateral movement (lateral deviation) of the vehicle in its lane was measured. The car was instrumented with sensing coils in a tube in front of the front bumper. The drivers were asked to keep the car within the marked driving lane since an electromagnetic field had been established with a wire buried in the pavement. Any deviation of the car from the center of the 4-meter (12-foot) wide driving lane during the event was recorded on tape. The maximum deviation of 2 meters (6 feet) (from 1 meter [3 feet] right of lane center to 1 meter left) occurred with one driver on air-cushion deployment. One other driver had a 1.5-meter (5-foot) deviation (from 1 meter [3 feet] right to 0.5 meters [2 feet] left) on air-cushion deployment. All other drivers showed no more than about 1 meter (3½ feet) of total deviation.

STEERING AND VISIBILITY

Steering-wheel rotation was measured as the angle of turn of the wheel. In a number of instances, one or both hands were forced off the wheel by the expanding bag.

Footnotes at end of article.

This did not result in loss of control since the hands were immediately replaced on the wheel and relatively little rotation of the wheel occurred. As noted in the lateral-deviation criterion, no driver exceeded the limits of the driving lane. The average steering-wheel rotation was 85° during hood fly-up and 72° during cushion deployment. This degree of steering-wheel rotation would correspond to approximately 3 to 4 degrees at the tire. In combination with the lateral-deviation data, it shows that adequate steering control can be and is maintained in the startle modes tested.

Visibility was the ability to see to continue driving after the event. There was no problem in this regard with either startle mode. With hood fly-up, the gap between the hood deck and the frame permitted easy visibility of the road. With cushion deployment, the top rim of the bag was easily depressed by the weight of the hand, permitting good vision. The taller drivers (above 50 percentile in height when seated) could see easily over the bag rim without depressing it.

COMMENT AND CONCLUSIONS

The rapid deployment of an air cushion necessary for proper protection of vehicle occupants during a collision constitutes a typical startling event. The inadvertent activation of an air-cushion restraint module during normal driving, when there is no crash situation impending, has the potential for being even more startling and dangerous because it is completely unexpected. Can the average driver maintain safe control of the vehicle in this situation? It was an attempt to resolve this question that caused us to pursue this line of investigation.

The physiologic responses noted and recorded (blood pressure, pulse rate, ECG, and GSR) merely confirm the fact that there is psychologic stress associated with driving a car in an unknown and experimental situation. The changes produced were greater for the startle event (hood fly-up and cushion deployment) than for the driving itself, a not unexpected finding. An unexpected finding, however, was that the physiologic response to cushion deployment was only minimally greater than that for hood fly-up, since the air cushion was in closer proximity to the driver, sometimes forcefully lifted his hands from the wheel, had an activation that was accompanied by a shot-like noise, and was described by all drivers as being subjectively more startling than hood fly-up. In any event, every physiologic change produced was immediately reversible without ill effect, on termination of the test.

The physical responses noted were recorded in a driving situation not associated with the presence of other vehicles, tests were conducted during daylight hours only and in relative isolation from the stress-producing situation and the hurly-burly of downtown driving. Within these known limitations, it has been shown that air-bag deployment or hood fly-up is not likely to cause such a severe startle reaction as to produce an increase in the incidence of accidents in a car in which such an event occurs.

From our investigation, the following conclusions can be drawn:

1. Startle is a measurable response to unexpected events such as those occurring as an individual drives a car.

2. Both the physical and physiologic responses to startle can be quantitated by various methods easily instrumented in a test car.

3. Findings from monitoring of ECG, pulse rate, blood pressure, and GSR support the concept that both air-cushion deployment and hood fly-up produce physiologic changes caused by the startle phenomenon.

4. Air-cushion deployment is apparently minimally more startling than hood fly-up, based on the more substantial changes in blood pressure, pulse-rate, and ECG with air-bag deployment than with hood fly-up.

5. Under the conditions of these experiments, although considerable physiologic evidence of the startle phenomenon was demonstrated, drivers retained good control of the test vehicle and were lucid on questioning less than ten seconds after cushion deployment.

6. All drivers with hood fly-up or with cushion deployment were easily able to see to guide their car in spite of the minimal obstruction of vision produced by this event.

7. Audiometric examinations performed before and after the test on 36 drivers subjected to both single and double air-cushion deployment showed no change in hearing acuity. (All drivers wore head sets providing some 40 dB of attenuation so that they received less than the usual decibels of noise on deployment.)

John Clark, Director of the Department of Automotive Research, Southwest Research Institute, established the engineering protocol for the study. Roger Hemion, MS, managed the project. Robert Wilbur, MS, provided and maintained all of the biomedical instrumentation.

FILL 'ER UP WITH GASOHOL

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. OTTINGER. Mr. Speaker, one important flaw in the administration's proposed energy program is the short shrift it gives to gasohol. A blend of 90 percent gasoline and 10 percent alcohol which could be burned in automobiles to reduce U.S. dependence on foreign oil—indeed it is being used successfully in the State of Nebraska—gasohol can be made by combining gasoline with alcohol made either from grain and other farm products or from wood wastes. It burns more cleanly than gasoline and, depending on the blend, it can reduce the amount of air pollution created by automobiles.

"Fill 'Er Up With Gasohol," an article by Dick Kirschten in the July 23, 1977, issue of the National Journal, describes the growing recognition, by Congress and by the administration, of gasohol's potential importance as a national oil stretcher. I recommend the article to my colleagues:

FILL 'ER UP WITH GASOHOL

Nebraska's "Prairie Arabs" have been trying for 40 years to sell Americans on the idea of burning alcohol in their automobile engines. Preferably, a large amount of the alcohol would be distilled from Nebraska grain.

Back in the late 1930s, service stations in Nebraska, as well as in Illinois, Kansas and Missouri, sold an alcohol-gasoline mixture called Agrol. The blend apparently gave good results, but Agrol's producers were unable to compete in price with the oil firms that sold their gasoline straight.

Now that President Carter has proposed a national energy policy that calls for a 10 percent reduction in gasoline consumption, the Nebraskans—who now push their concept under the name of gasohol—are starting to win a few rounds on Capitol Hill.

However, they're not offering any thanks to Carter. Even though gasohol—a blend of 90 percent gasoline and 10 percent alcohol—is being offered as a quickly available means for reducing dependence on diminishing petroleum supplies, the Carter energy plan, for all practical purposes, ignores it.

In the 103-page pamphlet describing the President's energy strategy, the use of alcohol receives one sentence on Page 102. And to the distress of the Nebraskans, that sentence is in the chapter entitled, "The Future Beyond 1985." Worse yet, the sentence refers to "methanol," a form of alcohol that is derived not from grain or other farm products, but rather from natural gas, coal or wood.

Despite the Carter energy team's apparent indifference, a trio of minority-party Nebraska legislators have been attracting majority backing for their contention that the time is right for a harder look at alcohol as a renewable, liquid-fuel resource.

The veteran Nebraska Sen. Carl T. Curtis, R, who entered Congress back in 1939, when Agrol was still on the market, started the bill rolling with a bill to authorize $60 million in loan guarantees to support four pilot distilleries for fuel alcohol. In addition, the measure sets up $24 million in research grants for colleges and universities investigating alcohol and problems related to its use as a blended fuel.

Rep. Charles Thone, R-Neb., persuaded his colleagues on the House Agriculture Committee to include the language of Curtis's bill as a section in their farm bill (H.R. 7171). Curtis then followed suit, offering his measure as a successful floor amendment to the Senate farm bill (S. 275).

While Curtis and Thone were moving to get the Agriculture Department more actively involved in support of gasohol research and development, another Nebraska legislator, Rep. Virginia Smith, R, was using her position as a new member of the House Appropriations Committee to increase the budget of the Energy Research and Development Administration (ERDA) by $1.5 million for the expansion of its efforts to develop alcohol fuels.

The victories by the Republicans from the Nebraska plains have not gone unnoticed by Democrats from states with parochial interests in the economic possibilities of alcohol as a "petroleum extender." Although from a state where it is more traditional to make the stuff for drinking rather than driving, Sen. Wendell H. Ford, D-Ky., alertly added an amendment to the ERDA appropriations bill calling for a feasibility study of the role that the liquor industry might play in the gasohol program. Similar interest is being shown from Hawaii (sugar cane) to Maine (forestry residues).

A week ago, an inventor from Fort Smith,, Ark., Stanley Barber arrived in Washington in a car rigged to operate on either straight alcohol or straight gasoline. Interest in Barber's achievement prompted Senate Appropriations Committee chairman John L. McClellan, D-Ark., to call a July 12 meeting in the Capitol to which Administration energy officials and interested Senators were invited.

Federal Energy Administrator John F. O'Leary attended the meeting, along with representatives of ERDA, the Environmental Protection Agency and the White House en-

ergy adviser's office. The chairman of the Senate Energy and Natural Resources Committee, Henry M. Jackson, D-Wash., was among the Senators present to hear Barber's discussion of the merits of domestic alcohol as an alternative to gasoline. Jackson said that the forest products industry in his state is seeking new markets for alcohol made from wood wastes that no longer can be disposed of easily because of water pollution regulations.

Barber said that one of the arguments in favor of alcohol as a fuel for motor vehicles is that it burns more cleanly than gasoline, and depending upon the blends, can reduce the amount of air pollution.

McClellan was not the first to invite the attention of Carter Administration energy officials to the alcohol issue that received such short shrift in their plan. The congressional Office of Technology Assessment (OTA), in its critique of Carter's energy policy, complained, "The plan does not address the transition from a petroleum base to a new liquid base fuel. Stressing the vulnerability of U.S. dependence of a liquid-fueled transportation system, the OTA analysis pointed out that "alcohol can be obtained by fermentation from dispersed biomass and can be used in modern internal combustion engines."

Proponents of gasohol have long accused the petroleum industry of retarding the advance of alcohol as a fuel. The oil companies, on the other hand, have charged that blending problems have not been resolved and that cars will experience operating problems. However, the big obstacle always has been price. As long as petroleum supplies were abundant, gasoline could be made available more cheaply.

If the world oil situation is as grim as Carter has indicated, Americans may soon have to consider seriously whether their farmers and foresters can be put to work as fuel suppliers. For decades, through their state university's research efforts, and the lonesome sales pitches of their politicians, Nebraska's "Prairie Arabs" have been trying to get in on the ground floor of the gasohol business.

THE DEBATE OVER THE BREEDER IN EUROPE

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BROWN of California. Mr. Speaker, our domestic controversy over whether or not to build the Clinch River breeder reactor—CRBR—is intimately tied in with our foreign policy. Because of the threat of a rapid proliferation of nuclear weapons, the President has asked countries of the world to rethink any premature commitments to a commercial plutonium economy and to consider a pause in which to obtain an international framework for dealing with or bypassing plutonium. The only possible domestic decision consistent with a serious international reevaluation was also taken by the President, and that was to defer commercialization of the breeder reactor and the Clinch River project, which is intimately tied in with the commercialization program.

Opponents of the President's deferral of the CRBR claim that the rest of the world, especially our European allies and Japan, will push full-speed ahead with their own breeder programs, regardless of what the United States does. They point to the recent announcement by the French and West Germans who stated that they will set up a company to market breeders.

Such an analysis overlooks a very important component of political decisionmaking in these countries. France and West Germany are both democracies, and there is serious political opposition to the current governments' policy on plutonium and breeders. For example, Francois Mitterand, the Socialist leader, has criticized the French nuclear program and has said that, if elected, his party will call a national referendum on nuclear energy. The recent demonstrations of 30,000 people at the Super-Phenix breeder reactor construction site also indicate that the French people are far from unanimous in support of the French Government's rush to plutonium use. It should be noted, however, that the French Communists and the far left are in full support of both plutonium breeders and France's independent atomic military force. In Germany, the Government is being forced to slow down research on plutonium breeder reactors, primarily because part of the parliamentary ruling coalition said that they would break party discipline and vote against the government budget if the breeder program stayed in. Also, a German court ruling has caused a virtual moratorium on the construction of nuclear plants until the Government can show that it has discovered a safe way to dispose of wastes. In Sweden, debates over nuclear power played a key role in turning out the last government in their recent election.

I have inserted into the record two New York Times articles, one from August 2, 1977, and the other from May 12, 1977, which describe the intense political debate in France and Germany over nuclear power and plutonium breeders. I point this out not because I am opposed to nuclear power. On the contrary, I support both the continued use of light water reactors and a vigorous research and development program on breeders, but I also support the President's decision to postpone the commercialization of plutonium use. The President's nonproliferation initiative is a long-term policy, and we should not be too hasty in judging its success or failure from the first comments of the current European governments or their nuclear bureaucrats. The French and West German decision on plutonium use is far from determined; the current position could be reversed in the next election if not sooner due to domestic political pressure. Also, we should not underestimate the power of the United States to lead the rest of the world in a direction which is eminently rational. The European leaders will have to cope not only with the United States but also with their own people and political parties who are opposed to the current programs aimed at early commercialization of plutonium use.

The two articles follow from the New York Times, the first is from May 12 and the second is from August 2:

BONN, UNDER DOMESTIC PRESSURES, SLOWS BREEDER REACTOR RESEARCH

(By Craig R. Whitney)

BONN, May 11.—The West German Government, faced with political criticism of its nuclear energy policies, is being forced to slow down research on the plutonium-based breeder reactors that President Carter opposes.

The Government still is committed to develop breeders, which produce plutonium, the prime ingredient of nuclear weapons. But, officials said today, $51.7 million in funds for research and development have been frozen until skeptics in Parliament can be convinced that this avenue to nuclear power is neither costly nor dangerous.

Last month President Carter cut off support for breeder development in the United States. He did not call on other nations to follow suit but he clearly hoped that the American example would be taken seriously elsewhere.

DOMESTIC PRESSURES ARE KEY FACTOR

The West German Government, committed to making the nation's nuclear power industry a world leader, announced only two weeks ago that it would request $96 million over the next five years for breeder research and development.

Dr. Armin Gruenwald, an aide of Chancellor Helmut Schmidt, said today that as far as he knew, the Chancellor did not mention the possibility of freezing development funds in talks with President Carter in London last weekend.

The reason for the freeze is more closely connected with domestic politics and with the governing Social Democratic Party's weakness and disunity than with Mr. Carter's opposition to breeder technology.

A small group of left-wing members of Parliament from Schleswig-Holstein, where antinuclear feeling has been particularly strong, said they would break party discipline and vote against the government budget if the breeder program stayed in. This could have meant the end of Mr. Schmidt's precarious majority in Parliament since only five defections could bring the Government down.

The Ministry of Research and Technology agreed to the freeze yesterday, denying any connection with the threatened revolt. According to the ministry's spokesman, the prototype breeder that has been under construction near the Dutch border will not be affected.

WIDE INTEREST IN BREEDER TECHNOLOGY

The French, British and West German governments have all supported research into breeder technology because, unlike the United States, they must import all the nuclear fuel they use, and breeders produce more fissionable material than they burn. The Soviet Union, too, has been developing breeder reactors.

West Germany plans to have 29 nuclear power plants generating 30,000 megawatts of electricity by 1985, and the Government believes that both breeders and reprocessing of spent fuel will be essential after that. President Carter opposes this approach. The industrial democracies at the London meeting did not come to an agreement, but set up a committee that is to report in two months.

As the debate has grown more intense, so has skepticism about whether West Germany's course is realistic. Citizens' lobbies have sprouted in opposition to Mr. Schmidt's plans. A conservative, Christian Lenzer, said today:

"One can have differences of opinion about the necessity of fast breeder reactors but this surprising reversal is a sign that the Minister of Research and Technology can't even get his views through over the objections of leftist comrades in his own party."

ANTINUCLEAR MOVEMENT GROWING IN WEST EUROPE

(By Jonathan Kandell)

PARIS, August 1.—Although later in getting started than in the United States, public opposition to nuclear energy in Western Europe has emerged as a powerful movement cutting across national boundaries, forcing governments to curtail development and compelling political parties to engage in debates on energy programs.

In France, over the weekend, opponents of nuclear energy rallied 30,000 people for an attempt to invade the construction site of the Super Phoenix breeder reactor in Creys-Malville, a rural area on the Rhone River. The protest left one demonstrator dead and a hundred injured in clashes with the police.

Until recently, the controversies over nuclear energy—the development of breeder reactors, the use of plutonium as a fuel, the reprocessing and enrichment of uranium, and, consequently, the potential spread of atomic weapons—have tended to focus on the debate between the governments of the United States and Western European nations.

But grass-roots opposition movements, often unconnected with political parties, have emerged as an even more important factor in slowing the expansion of nuclear generating capacity.

WEST EUROPE MORE DEPENDENT ON IMPORTS

The strength of the antinuclear movement is all the more remarkable because Western Europeans—with few conventional energy sources of their own—have tended to be more concerned than Americans over their reliance on costly oil supplies from abroad.

France's nuclear program dates from de Gaulle and his desire to develop an independent atomic strike force. The program was accelerated in 1974 after the rise in the world oil price. Officials envisioned the installation of nuclear plants that would cover about 20 percent of energy needs by 1985. The program has since been scaled down.

The exports earnings from nuclear technology were also supposed to defray the mounting costs of petroleum imports. Three years ago, the French began to push the sale of reactors in the Middle East, Pakistan and South Korea.

A key element in the government's program has been the breeder reactors. Their attraction is twofold: by producing more fuel than they consume, the breeders, at least theoretically, would cut down dependence on uranium imports; and officials expect to use France's lead in the field to carve out a lucrative slice of the overseas market.

COMMON MARKET ACCORD RECALLED

Despite President Carter's call for a moratorium of breeder reactor development and the use of plutonium, the French have pressed ahead with their program. Last month in Paris, they signed agreements with the West Germans and other Common Market countries to continue research and development of the breeders and eventually to market them abroad.

To deal with domestic opposition, the French Government has sought to either sidestep the debate or steal the thunder of critics with timely public gestures.

Only a day before the rally against the reactor site in Creys-Malville, President Valery Giscard d'Estaing chose to visit a nearby uranium-enrichment plant and assert his commitment to nuclear programs.

In the aftermath of the violence, officials have sought to inject an element of nationalism in the debate by pointing out that some of the protesters were West Germans.

"These people are undeniable anarchists both in their acts and beliefs who know no frontiers and have turned up elsewhere, notably in West Germany," said the Interior Minister, Christian Bonnet, in a television interview last night.

ENVIRONMENTALISTS GAINING STRENGTH

But the majority of the demonstrators were French. They are part of an environmentalist movement, embracing university youths, older middle-class people and even some farmers, that has blossomed into a significant political force in the last three years.

In municipal elections last March, the environmentalists ran an independent slate of candidates who garnered about 10 percent of the votes in the first electoral round. With legislative elections scheduled for next March, both the government majority and the leftist parties are in a quandary as to how to win over the environmentalists.

The Communists have voiced strong views—echoing the government arguments—in favor of the nuclear energy program and the maintenance of an independent atomic military force. Through their labor federation, the Communists have lashed out at opponents of nuclear energy as partisans "of a return to the days of sailboat navies and oil lamps."

But the Socialists, the leading members of the leftist coalition that hopes to gain power next year, appear to have been bending under the growing strength of the environmentalists. The Socialist-dominated labor federation has criticized the nuclear program and joined in demonstrations.

MITTERRAND FAVORS A REFERENDUM

Francois Mitterrand, the Socialist leader, raised the possibility last month that if elected he would call a national referendum on nuclear energy—a move that President Giscard d'Estaing declared to be unconstitutional.

The French Government has withstood the onslaught of the opponents of nuclear energy better than most other Western European governments.

In Sweden, the issue was believed to have played a key role last year in turning out the Social Democrats, who had been in power since 1932.

In the Netherlands, opinion polls indicate that more than half the Dutch have doubts about nuclear energy. The Government has run into opposition to plans for the construction of three new atomic plants and the burial of nuclear wastes.

Both for financial reasons and for domestic political considerations, the Dutch Government has sought to carry out its breeder reactor plans as part of a joint program involving France, Belgium, Italy, and West Germany.

In Italy, a program calling for more than 20 reactors in operation by 1985 appears to be endangered primarily by soaring costs and the near-paralysis brought on by the internal political crisis.

But ecological considerations also became a factor after last year's explosion at a chemical plant in the northern town of Seveso that covered thousands of acres with a deadly toxin. Officials said the accident—though unrelated to nuclear energy—had aroused opposition to the construction of an atomic plant about 30 miles from Seveso.

The most dramatic demonstration of the pressure from opponents of nuclear energy has taken place in Britain and West Germany—the two Western European nations with the most advanced programs.

Rising costs and domestic protests have led British officials to agree to a public debate on the advisability of building a commercial breeder reactor. Britain already has two experimental breeders.

CASES ARE TAKEN TO COURT

But the Government's apparent flexibility on the issue of breeder reactors has not deterred environmentalists from pressing their case against other nuclear programs. Court hearings have been taking place for more than a month over a plan to build a uranium-reprocessing plant at Windscale in northwest England that could handle 1,200 tons of spent fuel a year by the 1980's.

West Germany has been the scene of violent clashes between police and demonstrators. The environmentalists have had even greater impact in court. Last February, a lower court decision brought a virtual moratorium on the construction of nuclear plants until the Government can give show that it has discovered a safe way to dispose of wastes.

Chancellor Helmut Schmidt had planned to have 30 reactors supplying half of the country's electric energy by the mid-1980's. Although 13 plants are in operation, the construction of others has been delayed.

SOCIALIST WORKERS PARTY PLANS EXPLOITATION OF ANTINUCLEAR MOVEMENT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. McDONALD. Mr. Speaker, the Trotskyite Communist Socialist Workers Party—SWP—the American section of the Fourth International, has joined the antitechnology neo-Luddites of the antinuclear power movement with the intention of exploiting its revolutionary potential for the SWP's ends.

While the SWP is just entering the antinuclear movement, its Fourth International comrades in France, West Germany, and Italy have joined with other Marxist-Leninists in battles with police at nuclear powerplant sites.

The SWP Political Committee met on May 27, 1977, and devoted a considerable section of discussion to the implications of the antinuclear movement typified by the Clamshell Alliance in New England and being made national via the American Friends Service Committee—AFSC—a secular socialist-pacifist group which may deplore but does not oppose violence and terrorism on behalf of Marxist causes.

Following the Political Committee meeting, Fred Murphy of the SWP's Bronx branch and Arnold Weissberg of the Lower East Side branch produced an article for circulation among SWP members only in the confidential SWP Discussion Bulletin, volume 35, No. 7, July 1977. Dated June 25, 1977, the article commenced:

The April 30-May 1 demonstrations against the construction of a nuclear power plant in Seabrook, New Hampshire, dramatized the growth of mass opposition to nuclear energy development in the United States. Although opposition to nuclear power has existed among environmentalists for many years, and has often shown itself in the form of lawsuits and challenges within the government's regulatory process (by residents of areas where nuclear plant construction has been proposed), the Seabrook protests were the first direct actions to involve a significant number of persons and the first to gain publicity on a national scale.

More massive direct actions against nuclear power have occurred in Western Europe and Japan in the past several years—sit-ins, occupations, marches, with as many as 50,000

participants in a single demonstration. Antinuclear activists in France are currently projecting a gathering of 100,000 on July 31 at the proposed site of the "Superphenix" fast breeder reactor at Creys-Malville.

The European and Japanese movements are genuine mass movements, not merely limited to students and intellectuals. In Italy, one recent action brought out large numbers of fishermen and farmers. "Ecology" candidates in the French municipal elections this spring won about 10 percent of the vote in Paris, and a plurality in several towns near nuclear plants. The movement is biggest in West Germany, where the question of nuclear power has engendered a deep fissure in the ruling Social Democratic Party.

Following a general survey, the article continues:

THE PARTY'S POSITION

We think the party should adopt a clear and unequivocal position opposing the construction of nuclear power plants, period. ("No nukes!" was the popular formulation at the Seabrook protests.)

This stand will make it clear that we don't think the capitalists should be trusted at all with such an inherently dangerous technology, no matter how many promises they may make about safety measures.

It is unnecessary for us to append "under capitalism" to every formulation of this position, as we have generally done in *Militant* articles and campaign statements up to now. We can safely leave the question of whether or not nuclear power can one day be made both safe and efficient to the free communist scientists of the future.

What we have to say clearly today is that on the day a workers government led by the SWP comes to power, all the nuclear plants in the country will be permanently shut down. Every one of them is a potential catastrophe for all life within hundreds of miles, and it is not in the interests of the working class or humanity to have such dangerous installations in existence.

The "No nukes" slogan will go hand in hand with our call to open the books of the energy trusts. The corporations involved are the same. (Exxon, for example, is both the largest oil company and the largest single supplier of uranium ore.) The capitalists are using their manufactured energy crisis to push the development of nuclear power. When faced with opposition to construction of atomic plants, the energy trusts claim that present fuel supplies are running out. Our reply is then "Open the books!", as well as to demand other, safer forms of energy.

Murphy and Weissberg continue with an analysis of the antinuclear movement and how it can be exploited by the SWP and their front groups like the Young Socialist Alliance—YSA:

THE ANTINUCLEAR MOVEMENT

Like all new movements, the antinuclear movement is contradictory and heterogeneous.

The basic thrust of the movement is altogether positive and eminently in the interests of our class: Human life should not be endangered for the sake of the profits of the utilities and the energy trusts, nor should the natural environment on which all life depends be recklessly destroyed.

At present, the composition of the movement is similar to that of the student antiwar movement. The activists are young and radical-minded, ready to listen to all ideas. We can certainly win a wide hearing, both for our proposals on how to build the movement, and for our socialist ideas.

On the surface, the movement may appear to be heavily countercultural, antitechnology, and shot through with petty-bourgeois utopianism. Such a trend undoubtedly exists ("Split wood, not atoms").

But it would be dead wrong to see only this aspect of the movement, and to justify the party's abstention on such grounds. Many of the leading spokespersons are clear in denying that they are opposed to technology as such. In fact, one indispensable component of the movement up to now has been radical and liberal scientists and engineers, including former employees of the nuclear industry and at least one former member of the Atomic Energy Commission itself.

It's too early to do any real analyzing about the various political trends in the antinuclear movement. Much more information is needed, but this will come when the branches seek out the antinuclear organizations and activists in their areas, get to know them, hold forums, participate in and help build protest activities, write *Militant* articles, and so on.

Opposition to nuclear power is most visible and organized right now on the campuses, so the Young Socialist Alliance can play an especially important role in getting Trotskyists involved in the antinuclear movement.

In addition to learning from the movement, we can bring to it our working-class perspective, and point it in the direction of involving working people, the oppressed nationalities, the trade unions.

An immediate obstacle to this is that the young activitists tend to see the unions as the bureaucracies, which are vehemently pro-nuclear-power. But we can be confident that when working people learn the facts about the dangers of nuclear power, they will join this movement in massive numbers, and we can instill this perspective among antinuclear activists. We can point to Steelworkers Fight Back as an example of the kinds of forces that can be involved.

Our union factions should look for opportunities to raise the issue of nuclear power in their work. It really represents a generalization to the social level of the issue of workers' health and safety—a topic many young union militants are already deeply concerned with.

Most importantly, we can bring to the movement our strategy of independent mass action. We can link up our history and experiences in the antiwar, Black, and women's movements with the salutary example set by the 2,000 Seabrook occupiers, as well as with the painful lesson these activists have just learned about putting confidence in Democratic and Republican Party politicians.

Many of the Seabrook protesters saw Carter as an environmentalist who thought nuclear power should be used only as a "last resort." Now that he has made it clear that the "last resort" is instead a top priority, the way is opening for a real growth in this independent movement.

The statement issued by twenty environmental groups after Carter's EPA appointee gave the Seabrook plant a green light said:

"Jimmy Carter has turned his back on the environmentalists and antinuclear citizens who supported his election.

"In light of what is now happening around the country, it is not unlikely that this White House decision to approve the Seabrook cooling system will bring on a period of domestic turmoil over the nuclear issue similar in scope and depth to what surrounded the Vietnam War.

"That the Carter Administration would allow this construction to go ahead is a Declaration of War against the natural environment and those who are dedicated to protecting it.

"Jimmy Carter may be signalling with this decision that he will make himself the Lyndon Johnson of the 1970s.

"He has turned the EPA [Environmental Protection Agency] into a bad joke. It should be renamed the Profits Protection Agency. He has destroyed his credibility with those who supported him in the name of the natural environment. He has proved less sensitive to environmental needs than John McGlennon [regional EPA director who opposed the Seabrook cooling system] and Russell Train [EPA administrator under Nixon and Ford who has since spoken out against nuclear power], both Republican appointees."

The Seabrook decision can thus be seen as a big step toward reducing illusions in Jimmy Carter's supposed "proenvironment" stand.

The statement also reflects the view of many in the antinuclear movement that what is required is an approach modeled on the movement against the Vietnam War. Nowhere is there a better understanding of the lessons of that movement than in our party, we therefore have an important role to play in educating this new movement about those lessons.

Getting involved in this movement will also mean learning from and about it. Most important in this regard will be for comrades to become acquainted and comfortable with how nuclear power plants work, the effects of radiation on living things, the history of the nuclear industry and the role of the government, and the arguments raised by pronuclear forces. There is a rich literature on the subject—a few books that we have found useful are listed in a bibliography below.

Next is the SWP's analysis of the positions of rival Marxist-Leninist groups toward the antinuclear movement including the Moscow-dominated Communist Party, U.S.A. and its official newspaper, Daily World; In These Times, an "independent socialist" newspaper closely associated with the New American Movement—NAM—and the Maoist newspaper collective, the Guardian, which also retains some ties to Cuba.

OUR OPPONENTS

The initial reactions of most of our major opponents are outlined in the article "The American Left Looks at Nuclear Power," in the July 4 issue of *International Press.*

The currents represented by the *Guardian* and *In These Times* are probably most deeply involved in the movement at present. The *Guardian* was much in evidence at the Seabrook actions, and its supporters have already initiated a debate in the New England coalition over what course the movement should follow ("solidarity with third-world struggles," more "militant" tactics, less clarity on total opposition to nuclear power, [China may want to build nuclear plants!] etc.).

A number of leaders of the Seabrook protests come out of the radical pacifist, left Social Democratic milieu that *In These Times* is seeking to relate to. The American Friends Service Committee provided many of the resources for putting the Seabrook actions together. We have worked with this current closely in the past, particularly in defense work and often in the antiwar movement. We should take as open and friendly an approach as possible toward them.

So far the *Daily World* has been cautiously friendly to the antinuclear movement. The paper didn't report the Seabrook occupation, but it did editorially support the democratic rights of the 1,414 protesters who were arrested and held in poor conditions in state armories.

The CP will have trouble getting involved in the antinuclear movement because the Soviet Union is an enthusiastic builder of breeder reactors. It is hard to be against them in the U.S. and for them in the Soviet Union. They may simply claim that they're safe in the Soviet Union because that's a socialist society, of course, but that false claim won't erase the fact that reactor safety records in the USSR aren't particularly good.

NO NUKES!

To sum up: The antinuclear movement in the United States that emerged in the Seabrook protests is a new component of the present radicalization. Its thrust is anti-capitalist; its demands are in the interests of our class, the working class.

The party should embrace this new movement, champion its demands, help organize and build its activities, and seek to win the leadership of it. In the process we can recruit new layers of activists to our ranks, and enrich our Marxist understanding of the material basis that underlies society at the deepest level—the natural environment.

JUNE 25, 1977.

BUNGLING THE LOCAL PUBLIC WORKS PROGRAM

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SARASIN. Mr. Speaker, many of us in this body enthusiastically supported the extension of the Local Public Works Act early this year in the expectation that the additional funds would be used to extend this short-term jobs creation program to some of our hard-pressed communities which may not have received funding under phase I funding or which were particularly in need of help.

An equitable distribution of the funds, based on the existing applications filed in the first phase, with a refinement of the formula to correct some inequities which cropped up then, was the least we thought we could expect from the extension.

What we got instead was a badly bungled program which left local officials confused and angry, the Commerce Department's Economic Development Administration deservedly embarrassed, and many of us in Congress perplexed at how such a simple program should be so badly mismanaged and why we cannot get better answers as to what went wrong.

Obviously, some arbitrary decisions within the EDA bureaucracy, made late in the administrative process and with little public notice, resulted in significantly changed prospects for the applicants. One department bureaucrat, asked about the fairness of such a change in the rules in the middle of the game, responded simply, "life's not fair."

Arbitrary and unreasonable as the new procedures were in many cases, EDA managed to make matters worse by using erroneous figures in programing their computers, publicly announcing the wrong entitlements, and then blithely rescinding commitments and disavowing responsibility for expenses incurred by the towns on the basis of those figures.

This whole sorry performance has led to justifiable anger and disillusionment on the part of local officials and the public in general. This indignation is graphically demonstrated by the following communication to EDA from Democratic Mayor William C. Rado of the Borough of Naugatuck, Conn. I think this demonstrates convincingly why we in this House must ask for a full and accurate accounting of how this all came about.

The material follows:

NAUGATUCK, CONN., *July 22, 1977.*

Mr. GEORGE T. KARRAS,

Deputy Assistant Secretary for Operations, U.S. Department of Commerce, Economic Development Administration, Washington, D.C.

DEAR MR. KARRAS: Received your letter of 7/21/77 explaining the Public Works allocation and quite frankly feel your explanation, which I assume was given to you by your help, is nothing but a lot of *baloney*.

You explain why Watertown did not get funds but do not explain why you gave more funds to Thomaston, Waterbury and many other cities that have less unemployment than Naugatuck.

Based on the past performance of the E.D.A., President Carter should fire every one of you for incompetence. The general public is sick of political hacks taking care of their own and the hell with the taxpayers.

I will not let this issue die and will continue to let the public know how they are being treated by people who live off of their tax dollars.

Sincerely,

WILLIAM C. RADO,
Mayor.

THE THIRD TRAGEDY IN INDOCHINA

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. DORNAN. Mr. Speaker, on July 21 and 22, I placed in the RECORD two articles detailing the slaughter and oppression being inflicted upon the people of Cambodia and Laos by the Communists.

But in true keeping with the international nature of Marxism, the murder and upheaval are not limited to these two small nations. The tragedy of Communist takeover is evidenced in Vietnam as well and it is this fact which hits a more sensitive nerve in the American people. After all, it is Vietnam where the bulk of our young men died defending freedom. It is from Vietnam that we were finally driven away from helping our ally. And it is Vietnam which is to reap the benefit of the largesse of President Carter's so-called normalization process.

Curiously, the definition of "normalization" seems to have changed once it came in touch with the Carter administration. It now no longer means simply shipping official representatives across the ocean. It now connotes the opening of the U.S. taxpayer's Treasury to ease the Communists' economic sufferings.

This amazing aspect of the current negotiations with the Communists is commented upon in the July 23 issue of TV Guide in an article by John P. Roche. Although I do not agree with all of Mr. Roche's points—he believes, for example, that the recognition of Cuba and the P.R.C. would be no cause for concern—I do concur in his assessment of the biased commentary of many of the news analysts of the major networks. I urge my colleagues to take careful note of the experiences of Vietnamese Assemblyman Nguyen Con Hoan.

The article follows:

TV NEWS MISSING NEW PUBLIC ATTITUDES ON FOREIGN AFFAIRS

(By John P. Roche)

One of the problems with news coverage of the Vietnam War, particularly in its early phases, was the mind-set of correspondents. Most of them had won their spurs in the Korean War where every night there was a nice, neat line across the peninsula: the Main Line of Resistance (MLR). Unfortunately, there never was a "battle front" in Vietnam—the war was always fought on a "leopard-skin map." Thus the fact that Vietcong sappers could ride Hondas into downtown Saigon and throw grenades was an index of total failure in security. It was, as I can testify, unsettling, but as far as the basic balance of military power was concerned, they might as well have been throwing candy bars.

To shift contexts entirely, we now have network news staffs who came of age in the tumultuous late 1960s and 1970s, at a time when prevailing enlightened opinion suggested the United States should avoid "wicked, immoral" involvement in the affairs of the world. To them, President Jimmy Carter's calls for "normalization" with the Chinese People's Republic, Castro's Cuba, the Socialist Republic of Vietnam are the biggest things since sliced bread. And his messianic call for the protection of human rights makes their hearts go pitty-pat. At last the United States has a moral government!

The problem is, as polls and Congressional actions clearly indicate, these analysts are like whales beached on a sand bar. For whatever his intentions in launching "normalization" and "human rights" campaigns, Mr. Carter has brought the American people out of their post-Indochina hangover. They are taking a very hard look at the world.

For starters, let's take the whole question of "normalization." Maybe some television commentator has filed a minority report on this caper, but it surely has not received the 90-minute special it deserves. To "recognize" Fidel Castro is not to award him the Legion of Merit; it is simply an acceptance of the unfortunate fact that he is the present Cuban *caudillo*. Thus if Mr. Carter wants to ship ambassadors to Havana, Hanoi, Peking, Kampala or other strongholds of due process of law, I sleep undisturbed.

However, this is not what the Carter definition of "normalization" seemingly involves: he looks on it as giving these folks a hand. In fairness, it was Richard Nixon who promised Hanoi more than $4 billion in a plain brown envelope if the Communists would behave, but their invasion of the South closed that account. In any case, the President dispatched Richard Holbrooke, Assistant Secretary of State, East Asia & Pacific, to Paris to get our relations with Hanoi back on the track.

From the media, you might get the impression that the only thing holding up a love feast between us and the Vietnamese is the question of the Americans missing in action (MIAs) whose bodies have not been returned, that our real grievance against Hanoi is its refusal to behave like a licensed mortician. Hanoi's behavior on this score is outrageous—even the Nazis during World War II accounted for our MIAs—but they are using it as a ploy, drawing from a warehouse enough fresh caskets to keep us on the string. May God rest the MIAs and comfort their families, but isn't our fundamental concern, given our commitment to human rights, what they are doing to live Vietnamese?

There is a witness, *Nguyen Cong Hoan*, and a very interesting one indeed. A Saigon opponent of President Thieu who fed endless material to the American press on that "ferocious" regime, he was adjudged "progressive" enough to be elected to the new Na-

tional Assembly of the unified Communist Vietnam. Appalled by what he saw, Hoan and two companions, like himself anti-Thieu members of the old Saigon legislature, escaped in a fishing boat, were rescued and taken to Japan. There they are currently isolated in a remote village, awaiting visas to the United States—or expulsion (the Japanese provide no asylum). Hoan held one press conference, which was mind-boggling to the "normalizers" in the United States, and has received no reply to his request for residence in the United States.

He said he applied to the American Embassy for the necessary documents and was told to be "patient." A State Department spokesman in Washington after some shilly-shallying, said there was no record of his formally applying for a visa. Nonsense. Maybe he didn't turn up at the Embassy in a cutaway, but he and his companions want to come here. They should be admitted and invited to testify to Congress and the American people—maybe even on a television news program. But from the viewpoint of the "normalizers" they are dynamite. Their message, like the similar ones emerging from Laos and Cambodia, would undermine any attempt to do business with Hanoi—unless you are prepared to sell oversized pots to cannibals.

While we're in the vicinity, let's spend a few moments on "normalizing" relations with the Peking regime. Communist China is the world's biggest concentration camp run by a military junta. For some unexplained reason Mr. Carter, and his advisers Cyrus Vance and Zbigniew Brzezinski think we should do something for the Chinese. Otherwise they might get annoyed and do something. China, in short, is a Great Power and merits our concern and aid.

Well, China isn't a Great Power—it has a smaller GNP than the German Federal Republic, antique military assets, and is involved in a first-class brawl with the Russians. But back in 1972 didn't Henry Kissinger and Chou En-lai make a deal on a menu in a Shanghai restaurant that we would give them Taiwan? Who knows? Kissinger is inscrutable, Chou is dead, and we have no more right to give them Taiwan than we do to donate Soviet Turkestan. There's another "normalization" we can put on "Hold."

We can worry about other "normalizations" another time. The point is that while the beached whales at the networks are flapping their tails to a 1967–75 tempo, American opinion has shifted almost 180 degrees. Lou Harris' polls show strong opposition to Carter's SALT and African policies; the Senate virtually tells him to keep the troops in Korea; both Houses pass a resolution to protect the family jewels at SALT, and Congress overwhelmingly expresses distaste for providing credits to Vietnam, Laos, Cambodia and several African butcher shops.

In sum, much to President Carter's admitted "surprise," the issue of human rights has revitalized the American sense of purpose. Maybe this new tide of confidence will float the whales off the network sand bars?

SMALL BUSINESS, AN ENDANGERED SPECIES

HON. JOSEPH D. EARLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. EARLY. Mr. Speaker, I insert in the CONGRESSIONAL RECORD an article called to my attention by a constituent of mine, Mr. John J. Connor of Polyvinyl Films, Inc. Mr. Connor recently wrote to me concerning the problems of small business. He included this article which appeared in the Worcester Evening Gazette.

The article deals with a study written by Prof. George A. Doyle, chairman of Assumption College's Department of Economics and Foreign Affairs. Professor Doyle offers some interesting comments on the relation of small business to the Federal Government. I recommend that my colleagues take the time to read this article:

SMALL BUSINESS CALLED ENDANGERED SPECIES

(By Leonard J. Lazure)

Question: What employs about 60 per cent of the American work force, is often thought of as the foundation of the American economy and may join the plight of the bald eagle by the 1980s?

Answer: Small business.

Small business, according to Prof. George A. Doyle, is fast becoming an endangered species.

Unless the United States assumes a "positive, aggressive" strategy to solve its problems, Doyle doubts small business will survive.

That is the basis of a study written by Doyle for the Joint Economic Committee, co-chaired by Sen. Hubert H. Humphrey, D-Minn.

Doyle, a 59-year former Marine major, is chairman of Assumption College's department of economics and foreign affairs.

"We're living in the world of Exxon . . . the world of giants. Yes, they were developed on the free market, but then they went on to stamp it out," Doyle said in a recent interview.

Not only are small businesses facing a shortage of capital, but are overwhelmed with government regulations like the Occupational Safety and Health Act (OSHA) and the Employees Income Security Act (ERISA), he said. Doyle said trying to develop a national policy of "full employment" without protecting small business is unrealistic.

NEW CABINET POST

Among Doyle's recommendations is restructuring the President's Cabinet to include a Department of Small Business.

"Agriculture employs only about 3½ percent of the labor force, but we have a secretary of agriculture. Small business employs 60 per cent of the work force, but there is no representation on the Cabinet level," Doyle said.

"It's time we recognize this."

Doyle will testify this month at a Senate hearing on small business. The Senate is preparing a bill that will ask Congress to implement some of Doyle's findings.

Doyle said the structure of the Cabinet has always leaned toward big business, even under President Carter.

For example, Doyle said, many of Carter's appointees come from a background of IBM and AT&T. Cyrus Vance, secretary of state, Howard Brown, secretary of defense, and Patricia Harris, secretary of housing and urban development, have all been directors of International Business Machines.

"A small businessman doesn't feel he has any access to government," Doyle said.

Government regulations were also hard hit by Doyle.

"The activities of the Occupational Safety and Health Administration may turn out to be a classic case of government frustrating small business as it attempts to deal with survival," Doyle writes in his report.

In his study, Doyle cites the case of a Worcester business—already sinking with the effects of the recession and a lack of capital—closing because of OSHA.

"It was, so to speak, the last straw . . . the marginal firm which may be pushed to the wall by OSHA requirements," he wrote.

Doyle said the intent of the health and safety act was good, but no one sat down to think about its effects on small business.

He also said there is a serious lack of qualified people who enforce the law. OSHA, wrote Doyle, has 100 offices and 2,200 employes.

"Its goals are to have 1,000 compliance officers in the field of safety and 1,000 in the field of health. There are, however, only 2,000 industrial hygienists in the whole country. To fill the gaps, Administrator Corn (Dr. Morton Corn) says OSHA intends to hire college graduates in science and engineering, give them short-term specialized training and send them out to enforce the act. Such a measure stems from haste," Doyle wrote.

HARASSMENT TO BUSINESSMEN

Doyle concludes that if small business is to survive in the "OSHA era," it has to be offered alternative plans to comply. Without more harassment" to the businessman.

Turning to ERISA, Doyle wrote that the pension legislation involved four congres-alternatives, Doyle said, OSHA becomes "one sional committees, took nine years to formulate and covers 200 pages. If a small businessman wants to comply with the law, it means hiring accounts, actuaries and lawyers, Doyle said.

Quoting Bankers Trust Co., Doyle said, "The changes mandated by ERISA are so sweeping and the regulations so complex that most employers will be working through the problems for years to come."

Doyle said the Small Business Administration does not have enough resources to meet problems faced by small business.

"Consider the fact that 90 per cent of our firms are small businesses. Next, consider the fact that under good economic conditions, before the recent recession, half of these firms would fail and go out of business during their first two years. This is the world with which SBA has been trying to work. It has never had sufficient resources," Doyle wrote.

Doyle also urges that unless the federal government sets aside capital for the small businessmen, their future is bleak.

In addition to recommending the creation of a Cabinet-level Department of Small Business, Doyle is also urging:

The development of a small business investment-reserve fund. Small business failures are too high, and sellouts to large corportations too common to ignore, said Doyle. Under his plan, similar to one developed in Sweden, small businesses would be allowed to take 40 percent of its before-tax profits and deposit it in an account with a so-called Small Business Investment-Reserve Fund. Half would be under the control of the secretary, who will release it when investment needs stimulating. The other half would be available to the company for development.

The development of a Small Business Management Institute. The institute would conduct research and provide training for small businessmen. Before new businesses could apply for federal money, the institute would determine if they have the management know-how.

Issuing small business impact statements. Doyle suggests that an impact statement be prepared before federal money is released. He said "we must nip in the bud" any merging of political and large-corporation interest that may harm small business.

"If we permit small business to disappear," said Doyle, "we'll be living in a wholly different country."

INTERVIEW WITH CONGESSMAN JOHN M. MURPHY

HON. RAY ROBERTS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ROBERTS. Mr. Speaker, I recently read an interview with Merchant Marine and Fisheries Committee Chairman JOHN M. MURPHY, in the July issue of Sea Power, the publication of the Navy League of the United States. Navy League Executive Director Vincent C. Thomas, Jr. and Sea Power Editor-in-Chief, James D. Hessman visited Congressman MURPHY to discuss the state of the U.S. Merchant Marine, the Panama Canal situation, Law of the Sea Conference, and U.S. Oceanographic programs, and other matters under the committee's jurisdiction. Following is the text of the interview, entitled "The Panama Canal, LOS, Deepsea Mining and U.S. Oceanographic Programs":

SEAPOWER. Mr. Chairman, you said in a speech on May 21 before the Port Everglades Propeller Club that "I will continue to . . . resist efforts to give away the Panama Canal Zone." What, in your opinion, are the minimum conditions safeguarding U.S. interests which must be included in any treaty modification before, if ever, the House would agree to transfer of any U.S. property in the Canal Zone?

MURPHY. In 1967, at the conclusion of three years of negotiations between the U.S. and Panama, a draft treaty on the Panama Canal was promulgated. This document was formally rejected by Panama in 1970 and was never really taken up in the United States. Since the time of that draft treaty, negotiations have continued, and the key mechanism in these negotiations was the agreement of negotiating principles signed by Mr. Kissinger and former Panamanian Foreign Minister Juan Tack in 1974.

I believe that the United States has said, and should continue to say, that there are two elements in the Canal issue that are basically non-negotiable. One of these is operational control, which must be guaranteed because our responsibilities and obligations to world shipping can only be fulfilled by U.S. authority to deal with the tremendous engineering problems that the Panama Canal entails. This is a canal with constantly changing cuts and bottoms in the non-lock areas and, as such, presents far more difficult problems than the Suez Canal. Lock maintenance is one vital necessity for the Panama Canal, and so is the fresh water that is required with every transit, and the need for this water supply alone creates a difficult engineering problem.

Of course, you also need skilled pilots for the Canal. We've been able to increase the number of ship transits each year, through good management and good pilotage.

So, I feel that U.S. management and control of the Canal is vital, and with that you have the related question of defense. These two issues should be non-negotiable.

SEAPOWER. What is negotiable, then?

MURPHY. We understand, and have understood, that there are many land areas on the Isthmus, in the Zone, the disposition of which could well be negotiated with the Republic of Panama. Panama City and Colon are expanding cities which, in some instances, could most logically expand into areas of the present Canal Zone. So while there is this real estate that could be negotiated, there are also other areas wherein the question of sovereignty is always risky.

I think the treaty arrangement with Panama is pretty clear. Sovereignty is one thing, but another consideration is property rights. The United States purchased the Canal Zone property twice. The 1946 Panamanian Constitution recognizes that fact and retains the right to take property, except for that property in the Canal Zone. So I believe here's a constitutional protection in Panama for the Canal Zone.

SEAPOWER. What are your conclusions, then?

MURPHY. I think there is an area for negotiation, but I don't think the United States can, per se, give away the Panama Canal. That appears to be the way the present negotiations are headed.

I asked [Ambassador-at-large] Ellsworth Bunker [chief neogtiator for the Panama Canal Treaty] recently which country would ratify the treaty first, and what constituency in Panama would be the ratification body. In Panama, he said, it would go to a plebiscite of the people. I reminded him that Panama is a dictatorship, and that there is no bona fide assembly or representative body to evaluate and debate and explain the treaty.

The assembly of community representatives that does exist is nothing more than a puppet body, and everyone knows that. The ratification in Panama would be nothing more than a dictator's statement to the people. So I asked Ambassador Bunker what would happen to the legality of the treaty if the dictator was overthrown the next day. His answer was not clear as I thought it should be.

The American presence in the Canal is vital in the areas that I have mentiond, but I think there are areas in which we can negotiate.

SEAPOWER. Will the House consider certain aspects of this, as well as the Senate, so far as ratification of the treaty is concerned?

MURPHY. Constitutionally, the Senate must consent to ratify the treaty by a two-thirds vote of the Senators present. The House becomes involved whenever there are appropriated funds involved, which is, of course, a matter for the House Appropriations Committee. The hearings I conducted as chairman of the Panama Canal Subcommittee stressed the provision in the U.S. Constitution—Article IV, Section 3, Clause 2—which vests power to dispose of territory and other property of the United States in the Congress, which of course includes the House of Representatives as well as the Senate. This means there must be enabling legislation passed by the House before a treaty can be consummated.

Then, there is a need for a majority vote of the whole House for any transfer of property.

The Committee on Merchant Marine and Fisheries has jurisdiction in many respects over legislation to be acted upon pursuant to a treaty, and that also would require a majority vote in the House. The Post Office and Civil Service Committee would be involved with Canal Zone employees and the terms and conditions of the treaty as they affect this group. So at least three committees of the House would be involved, and it would be quite a complex situation.

SEAPOWER. I don't think this is very much understood by the American people—they believe only the Senate is involved, and these other matters haven't even been brought up in most discussions of the situation.

MURPHY. As chairman of the Panama Canal Subcommittee in the 92nd Congress, I held extensive hearings, and had the Justice Department and the State Department testify, as principal witnesses. Both departments agreed that the House does have jurisdiction in most of these cases.

SEAPOWER. How would you answer those people who charge that the United States has been exploiting the Panamanians, or who consider the Panama Canal to be the last bastion of colonialism?

MURPHY. The Republic of Panama has the highest per capita income in Central America, and the fourth highest in Latin America, excluding the Caribbean. Only Venezuela, Mexico, and Argentina surpass Panama, principally because of their natural resources, Venezuelan oil, and the Argentine agricultural areas.

But we feel the United States has provided tremendous job opportunities for many Panamanians, and has upgraded their educational base.

Annual benefits to Panama, in direct connection with the Canal, are now about 250 million per year, an important part of the Panamanian economy. That includes over $100 million per year we pay to Panamanians working in the Zone and residing in Panama. The $2.3 million per year as outright payment to the government of Panama is only a very small part of their benefits.

The United States did, and still does provide, very extensive aid programs to Panama in education, housing, and the construction of the Darien Gap highway and bridge construction. We have literally poured hundreds of millions of dollars into Panama and that county has been the tremendous beneficiary of the U.S. presence on the Isthmus.

SEAPOWER. You've made several statements of facts that I don't think are known at all to the general public; do you think the American public has been given a balanced view of the Panama situation, either by the administration or by the U.S. media?

MURPHY. In the last Republican presidential primary campaign, both Ronald Reagan and Gerald Ford clearly articulated a position relative to the ongoing negotiations. An issue such as this polarizes people and unfortunately we find extremists on both sides. But I think we should discuss it with the American people. From my own sampling and the national polls that have been taken, the overriding majority of Americans do not want to give up the Panama Canal.

SEAPOWER. If we can shift to another subject which you are very much interested in—that's Law of the Sea—what do you think is the mood of Congress now concerning the deadlock, apparently, which has been reached in New York at the current conference on deep seabed mining? Is it likely that you will go ahead with your proposed legislation on deep seabed mining, even though some other countries have indicated that, if the United States does take action on its own, there will be some type of reprisal taken by them?

MURPHY. The United States would like to conclude a successful Law of the Sea [LOS] treaty with basic equities in areas being addressed by all three committtees at the conference. Committee one in the LOS—which has deep ocean mining as its basic responsibility—has been deadlocked because of the polarization of the Group of 77, or Lesser Developed Countries, and a coalition of landlocked nations that want to share in the "common heritage of mankind." This means that the United States would supply the capital and technology to an international authority to develop the deep seabed. But international law today permits any country the free use of the high seas, and the seabed is part of the high seas. So the law clearly would permit the United States to mine the deep ocean—or Japan, or West Germany, or Russia, or whichever country has the technology. I have discussed with members of the West German and Japanese parliaments legislation, which they have under consideration at this time, to permit those countries to mine unilaterally, or in concert with other countries, certain areas

of the deep ocean. Our Subcommittee on Oceanography will start markup in early July of a deep sea mining bill which provides for the United States to mine unilaterally under certain conditions and terms. The legislation does, however, provide for an end to the program which it establishes if a successful LOS treaty should be concluded and become binding on the United States. There would be no prejudice in American legislation against any LOS treaty, but at the same time we would not be constraining U.S. mining interests that have taken a technical lead and spent $150 million in developing deep ocean mining technology.

SEAPOWER. Two questions from that answer: (1) If there is an LOS treaty agreed upon in New York, will your committee, or the House as a whole, be considering the provisions of that treaty?; and (2) if you authorize deep seabed mining, either under the law you are speaking about or through an LOS agreement, will you require U.S. companies to use U.S.-flag ships and to have the nodules processed in the United States?

MURPHY. Where the United States is the lead partner in a deepsea venture and that deepsea venture would have the guarantees in our legislation, then the transport vessels that are built would be built in the United States and the processing would be done in U.S. processing plants. With respect to your first question, only the Senate has the authority to ratify a treaty, but the House, particularly the Merchant Marine and Fisheries Committee, would have to consider implementation legislation.

SEAPOWER. Going back to your comment about U.S. vessels being used in the mining, would you also include in any legislation you might propose that any support vessels have to be U.S.-registered? I can see an issue developing as to whether you should require U.S.-flag ships to provision the mining ships which would be over the deep seabed.

MURPHY. Where the United States is the lead financial control agency, we feel that U.S. shipping should be used.

SEAPOWER. Do you think you can get something like that through Congress?

MURPHY. Well, it's in the legislation—of course, Congress must work its will on it.

SEAPOWER. Will your committee have jurisdiction over an LOS treaty?

MURPHY. The LOS treaty would go to the Senate, but we would hold oversight hearings on any LOS treaty that is concluded.

SEAPOWER. The questions about deep seabed mining lead to a much broader overall subject: U.S. oceanographic programs in general. Would you say that U.S. federal funding for such programs is now too high, too low, or maybe just about right?

MURPHY. In an overview I would say that we aren't spending anything. The most critically underfunded area of American research and American technology by the federal government has been in the area of ocean resources and ocean technology. And for some reason our Department of Commerce does not support us in our requests. We have constantly, in the congressional committees—and our committee particularly—allocated funds and then find we don't have the Department of Commerce supporting us, except very minimally. We're hoping there will be a new look at this in the executive branch because of the tremendous awareness that people now have regarding the value of ocean resources.

SEAPOWER. Are you happy with the present organizational structure governing oceanographic programs and, if not, as I suspect you're not, what would you recommend as an agency to handle all these programs?

MURPHY. Senator [Ernest F.] Hollings [D.-S.C.] and I have discussed the questions about the ocean programs and are trying to draw them together. We get into the same jurisdictional/traditional battles we saw in the Senate earlier this year when the Senate underwent reorganization. We're trying to draw together all oceanic technology under the overview of our committee. We do have a Science and Technology Committee constantly intruding in the area of research as far as the deep oceans are concerned. We don't mind, but we insist that our committee retain the overall responsibility because of the experience and expertise that has been gained over the years.

SEAPOWER. Have you and Senator Hollings discussed the possibility of setting up a House counterpart to the Senate's National Oceans Policy Study [NOPS]?

MURPHY. I think the Senate's rules are somewhat different than ours. Our Subcommittee on Oceanography has the expertise and the breadth, particularly with its present chairman, John Breaux [D-La.], to encompass those same goals that NOPS has in the Senate.

SEAPOWER. If Chairman Breaux and you are able to persuade your colleagues to grant additional funding for oceanographic programs, where would you put your first emphasis? How would you allocate those funds?

MURPHY. We're in the process of doing that. We're working in acquaculture right now. This year we've had joint hearings with both the Oceanography and Fish and Wildlife Subcommittees to promote that form of resource development, which is a replenishable resource. In the oceanography area we are very interested in undersea stations, and the resources and research necessary to fully appreciate the biological chains as they relate to the fisheries resources particularly, and the mineral resources. I will be in an undersea habitat for three to four days in August with scientists studying this very subject. Those are the programs on which we are contrating at the present time.

SEAPOWER. One issue which we are very interested in is cargo preference, and I'd like to ask one question about that. If the administration takes a position against the legislation you're proposing—I gather it's not done so yet—do you think you'll still get your legislation through the House?

MURPHY. We hope to work with the administration, as we did on the Outer Continental Shelf Bill, resolve differences, and report out an acceptable bill. We're not going to please 100% of the people, but I think there is a valid national security interest at stake here, one that President Carter gave recognition to during the last campaign. We will see a cargo equity program that will meet the basic requirements that we established at the outset.

SEAPOWER. Suppose your legislation does fail and nothing is passed—we have now gone six years in an attempt to get something through Congress—do you think that will result in even greater problems for the U.S. merchant marine?

MURPHY. Well, I have a task force on the American merchant marine working, and cargo equity is only one phase of an overall program. One problem we are currently looking into is the practice of the U.S. government permitting millions of dollars in government cargo to be shipped in foreign-flag bottoms. We've already introduced a resolution on this problem. We will go into the whole question of utilization of the U.S.-flag fleet on our trade routes. We know that many of our ships sail half empty. There is an imbalance in this whole area, and I think that our program, when we finally articulate it late next fall, will be one that will comprehensively address the problems of the American-flag fleet and not just the one phase that we've been discusing, cargo equity, which has gotten so much publicity.

SEAPOWER. This will be the first time ever that Congress has tried to address that subject so comprehensively, am I right?

MURPHY. Well, we've tried to address it. We did pass the Merchant Marine Act of 1970, it was a failure. . . .

SEAPOWER. Not entirely, though. You still got a good many new vessels out of that which wouldn't have come about if you hadn't passed the legislation.

MURPHY. Fortunately, both Maritime Administrators, [Andrew E.] Gibson and [Robert J.] Blackwell, implemented the Act so that some VLCCs [very large crude carriers] and LNG [liquefied natural gas] vessels were constructed. Otherwise, ship construction would have generally been limited to replacement vessels required by operating-differential subsidy contracts.

The basic problem is cargo. If you have the cargo, you will have the vessels to move it. But when foreign-flag carriers freeze you out, as they are doing now, then we will not have the ships required in either peacetime or during periods of national emergency. There is something wrong with the American maritime industry and the U.S. government policy, because of the position we are in now.

SEAPOWER. That's right. Cargo moves ships—that's what the Shipbuilders Council says. Now: do you think it would be in the best interests of the United States for the Departments of Defense, Navy, Transportation, the Coast Guard, and the Maritime Administration, along with the shipping and shipbuilding industries, to get together, take a long careful look at U.S. shipbuilding capabilities and plans for the future, and come up with one, national, coordinated plan? And if you do think that's a good idea, would you propose that such a study be undertaken?

MURPHY. You had better add the Department of Commerce. MarAd is in the Department of Commerce. But I think we have studied it to death. We spent two years in the last Congress in oversight and wound up with more disagreements and divergent philosophies on the committee. We know what the problems are and just to go into another phase of studying an old problem and rehashing and reviewing the bromides necessary to correct the illness is a waste of time. The clock has run out on the American-flag merchant marine.

SEAPOWER. Would you address yourselves, too, to the problem of having all our nuclear submarine building capability on the East Coast, and of the decision by Mr. [former Defense Secretary Robert S.] McNamara a few years back not to allow Navy ships to be built in the Navy yards, and all of the complexities that now have us at a point where there just aren't enough yards to go around? If your legislation passes, and if the Navy ever gets the legislation to support a construction program for a 600-ship Navy, there won't be yards available to build the ships. There has to be some integration. It looks as though if there are, say, 15 nuclear submarines in the program next year, we still wouldn't get them until 1990, because they couldn't be built unless there were some radical changes in shipbuilding.

MURPHY. Well, I went into this in great detail with Secretary McNamara because the Brooklyn Navy Yard was in the area that I represented at one time. One of the parameters for the evaluation of Navy yards was that there would be a carrier building capability and a nuclear submarine building and maintaining capability on both coasts, in public yards. I have requested a hearing this month with the Secretary of Defense to address the Navy's five- and ten-year construction needs, because the Department of Defense will come in and say it cannot support cargo equity as the shipyard construction capability in the United States would be pre-

empted by tanker construction and consequently would be overpriced for Navy shipbuilding. Frankly, I think that is just someone's excuse for not supporting a cargo equity bill. We do have, I feel, the necessary shipbuilding industrial base. It is a question of allocating resources. We have very interesting personalities in the naval shipbuilding areas that I think exacerbate this particular problem.

SEAPOWER. On the same theme of national defense: from your own military experience both in World War II and Korea, and from your unique perspective as chairman of the Merchant Marine and Fisheries Committee, you obviously understand the importance of logistics to our national defense effort. Now, do you think our national security establishment understands logistics and has made adequate provision for logistics in the event of a future conflict?

MURPHY. I know they understand logistics. What they are faced with is defining a future conflict, the dimension of it, and the reaction this country must make to it. We do not have the ability today to meet any moderate threat strategically in the Eastern Mediterranean, Persian Gulf, or Western Pacific. We do not have the capability to react within 30 or 60 days with a two-divisional movement in those areas. We know that the Russians have a far greater sealift capability for this purpose. Statistically, we've studied Vietnam, which is as late as you can get as far as an intermediate-type war is concerned, and we know that sealift carried about 95% of the logistic requirements of our defense forces to that theatre. Airlift simply cannot do it all; airlift can do it on a very limited basis for a very limited period of time.

SEAPOWER. You may recall a few years ago Mr. McNamara was pushing his airlift philosophy and was trying to form a major operative airlift to Europe on a training basis. I don't know how many days it took to get the aircraft prepared to make the lift, but that was the biggest part of the whole operation.

MURPHY. An analysis of an airlift, such as the Israeli effort, would indicate that aircraft have some serious limitations. We better get on with the business of building up a U.S.-flag merchant marine to work with the Military Sealift Command in meeting our defense requirements.

SEAPOWER. Well, what measures do you think are necessary to rebuild our resupply capabilities?

MURPHY. It is not just a question of having six ships in the MSC fleet that are MSC-flag ships. I think that the Navy and MSC can use and should have available a mix of relatively fast containerships, Ro-Ro [roll-on/roll-off], LASH [lighter aboard ship], and dry cargo vessels; some with heavy lift equipment or at least with the capability of having heavy lift equipment transported on board, to meet fleet needs. We went through Operation Steel Pike, and the difficulties that showed up there remain today. In fact, our capability has deteriorated since that exercise in terms of fleet support.

SEAPOWER. Is the Navy heeding your views at all insofar as trying to include this type of shipbuilding in their program?

MURPHY. The Navy is an executive [branch] agency and is responsive to executive department philosophy. It has a role to play in the formulation of policy in its area, but I think it is trading off sealift requirements for other advantages.

SEAPOWER. Do you think MSC's "Build and Charter Program" is going to help? And, if so, would you like to see that program expanded? That's the one where they have the private builder build the ships with the guarantee of cargoes.

MURPHY. That is a viable program. They currently have 14 U.S.-lines on long-term charter and various other types of charters. They have 30 small tankers. But when we look at it in an overview we find that they can carry, with this whole mix, only about 5% or 6% of the Defense Department's needs in peacetime. So we know that it is a seriously inadequate sealift. We are not at all happy about the Defense Department's utilization of foreign-flag shipping. So it's not just limited to the federal government. We have to address ourselves to this and are in the process of doing just that.

SEAPOWER. I have only one last question and that is this: Is there any question you wish we had asked and would like to answer?

MURPHY. We've covered the waterfront. In addition, we are going into an area that the President has spoken about—the environmental impact of oil spills, and the construction standards of American ships and other ships that will call in our ports in the future. We will address ourselves to legislation in those areas in the near future as well.

SEAPOWER. In that connection, and taking a look at the Coast Guard budget for this year, one of the things that astounded me was that in many areas they received very, very little more than they got last year—even their shipbuilding was off a little bit, as I recall—and yet they have been given so much more in the way of responsibilities. Have you made that point to [Transportation] Secretary [Brock] Adams, and tried to encourage more funding and greater flexibility for the Coast Guard?

MURPHY. I made that point very clear to Coast Guard officials during the authorization bill mark-up and specifically questioned them as to that point—can they properly fulfill their mission in the new 200-mile zone with the existing equipment and personnel—and I got a very equivocal answer. And they answered very equivocally to the Appropriations Committee when asked the same question. We know that they do not have the proper equipment and sufficient personnel to perform that mission. But, again, the Coast Guard is a part of the Department of Transportation, which is subject to Office of Management and Budget oversight; the Coast Guard does not speak for itself. Our committee constantly has had to expand and broaden the Coast Guard program and budget, as we've had to this year in the area we've mentioned.

SEAPOWER. We know they've had to be conservative in their statements, and they've probably been over the barrel in this respect.

Mr. Chairman, that concludes our questions. Thank you very much for your time, and for your thinking on these various subjects, which I know will be extremely interesting reading for our Navy Leaguers, and for a lot of other people as well.

MURPHY. It's been my pleasure. Thank you for coming by. I'm glad we had the opportunity to spend some time together.

TRIBUTE TO JUDGE ISAAC PACHT

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. WAXMAN. Mr. Speaker, it gives me great personal pleasure to join with his numerous friends in honoring Judge Isaac Pacht on the occasion of his being inducted as an honorary fellow of the Hebrew University of Jerusalem and of the creation of a scholarship fund bearing his name in the university's faculty of law. Judge Pacht will receive the tributes of his friends and community at a dinner on Sunday, August 14, sponsored by the attorney's division of the American Friends of the Hebrew University.

Isaac Pacht was a judge of the Superior Court of the State of California from 1931 to 1936, president of the California State Board of Prison Directors from 1940 to 1950, past trustee of the American College of Trial Lawyers, chairman of the California Commission on Criminal Law and Procedure, and a member of the California Board of Corrections. He has been a distinguished trial lawyer for the past 64 years, and is a senior member of the law firm of Pacht, Ross, Warne, Bernhard & Sears. He is a member of the American Bar Association, the Beverly Hills Bar Association, and the State bar of California.

While leading a full and active professional life, Judge Pacht has found the time to contribute widely to his community's welfare. He was the first chairman of the United Jewish Welfare Fund, president of the Los Angeles Jewish Community Council, chairman of the Los Angeles Community Relations Committee, and is now vice president of the Western States Region of the Friends of the Hebrew University and a member of the Society of Founders of the Hebrew University. Judge Pacht was president of the Jewish Orphans' Home of Southern California, now known as the Vista Del Mar Child Care Service and a director of that organization since 1927, founder of the Los Angeles chapter of the NAACP, and past president of the Los Angeles Community Chest.

Born in 1890 in Millie, Austria, Isaac Pacht came to the United States as a child. Educated in the New York public schools, he received his law degree at the Brooklyn Law School of St. Lawrence University in 1911. He moved to Los Angeles in 1912 and was admitted to the California bar in 1913. He married Rose Rudolph on February 12, 1912. Isaac and Rose enjoyed 63 years together. Their three children do credit to their parents. Rudolph, a lawyer; Lucy Winifred Kurioff, a writer; and Jerry, now a judge of the Superior Court of the State of California, have followed in their parents' footsteps as community leaders.

The city of Los Angeles and the State of California are fortunate to have Isaac Pacht as a resident these many years. I ask the Members to join me in recognizing the many benefits with which he has endowed our community.

SMOKY

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. CARTER. Mr. Chairman, I have today received a letter from Chairman MELVIN PRICE, of the Armed Services Committee, which I wish to share with my colleagues.

Last week I introduced a resolution of inquiry, House Resolution 709, to direct the Secretary of Defense to furnish this

body with the name, and in the case of a member or former member of the armed services the service serial number, of each individual who was present at the explosion of the atomic device known as "Smokey" which was detonated at Camp Desert Rock, Nev., on August 31, 1957.

Chairman PRICE has now notified me that he agrees that the names of the 2,232 persons who were there should be disclosed to the Center for Disease Control in Atlanta so that an epidemiological study can be completed. As my colleagues will note, Chairman PRICE is writing to the Department of Defense to ask that the names be released to CDC.

I want to commend Chairman PRICE for his very compassionate cooperation in this matter, and I certainly hope that we will get the names from the Department of Defense shortly.

Mr. Chairman, I also want to note that the ranking minority member of the Veterans' Affairs Committee, JOHN PAUL HAMMERSCHMIDT, also has been most helpful in attempting to assist these men who served their country honorably and who now have leukemia or other cancers. Representative HAMMERSCHMIDT has written to the VA Board of Veterans' Appeals in support of Mr. Donald E. Coe from my district who was at Smoky and who has leukemia. I want to publicly thank Representative HAMMERSCHMIDT for his support.

I enclose Chairman PRICE's letter for the RECORD:

COMMITTEE ON ARMED SERVICES,
Washington, D.C., August 2, 1977.

Hon. TIM LEE CARTER,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. CARTER: This is in response to your letter concerning the resolution of inquiry, H. Res. 709, which you have introduced and which has been referred to this committee. The resolution directs the Secretary of Defense to furnish the House of Representatives with the names, and where appropriate, serial numbers of individuals present at the explosion of an atomic device known as "Smokey" at Camp Desert Rock, Nevada on August 31, 1957.

I am particularly aware of your concerns in this area because, as it happens, I was present as a witness to the "Smokey" nuclear test. I have already answered an inquiry from Dr. William H. Foege, Assistant Surgeon General and Director of the Center for Disease Control in Atlanta, Georgia. Fortunately, I have had no ill health effects in the intervening 20 years which would appear to be attributable to the possible exposure to radiation.

I certainly believe that this survey of the participants at "Smokey" should be carried through, and I know of no reason why the Department of Defense should withhold the names of the participants from the officials doing the study.

Accordingly, therefore, I am today writing to the Department of Defense and requesting that the names, and where appropriate, serial numbers of those who took part in the Desert Rock exercise be made available to the people conducting the study as soon as possible. It should not be necessary to act on the resolution to get these names promptly released. However, should there be any unnecessary delay in releasing the names, we would be prepared to consider the resolution. I am sure the Department of Defense will be prepared to cooperate in this endeavor.

Sincerely,

MELVIN PRICE, *Chairman.*

THE CRUELTY OF MANDATORY RETIREMENT

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SARASIN. Mr. Speaker, the policy of mandatory retirement is one that cruelly destroys the twilight years of many Americans today, taking its toll both on the human and social levels. As the Honorable CLAUDE PEPPER succinctly defined it, "Mandatory retirement is a cruel camouflage masking age discrimination and forced unemployment." Older workers who still have the will, talent, and energy to be socially productive are driven into a premature retirement, often resulting in an old age of poverty and aimlessness. The House Select Committee on Aging reported information indicating that people who retire at 65 have a lower life expectancy than individuals who continue working. We have no way of knowing what the impact of mandatory retirement is on our society as a whole for the loss of the intellectual contributions of these senior citizens is immeasurable.

In response to the injustice of such a mandatory policy, H.R. 5383 has been introduced, seeking to address the problem of across-the-board mandatory retirement. This bill is now pending in the Committee on Post Office and Civil Service and I hope will reach the floor of the House soon after the August recess.

Regarding this issue, then, I would like to take this opportunity to direct the attention of my colleagues to a letter that I recently received from Mr. Robert D. Kilpatrick, president of the Connecticut General Insurance Corporation. Mr. Kilpatrick outlines a recent change in his company's retirement policy that stands as a laudable example of the kind of attitude toward our working elderly that should be shared by all employers. For such an attitude, in encouraging the elderly to work for as long as they are willing and able to, benefits not only our older working force, but the entire Nation. The letter follows:

CONNECTICUT GENERAL INSURANCE CORPORATION,
Hartford, Conn., July 29, 1977.

Hon. RONALD A. SARASIN,
House of Representatives,
Washington, D.C.

In light of all the current discussion about the inequities of mandatory retirement, Congressman Sarasin, I'm pleased to tell you about the decisive step Connecticut General Insurance Corporation has taken on the issue.

Beginning August 1, we are eliminating mandatory retirement for all of our employees who are not officers or field managers. This move affects some 7,600 salaried and hourly employees of Connecticut General Life Insurance Company around the nation and 4,300 employees of the Aetna Insurance Company, our property and casualty affiliate.

The trend toward liberalized retirement has generally emphasized leaving a career at earlier ages. We feel that emphasis overlooks a very important group of people: the employees who want to continue working beyond age 65. Even extending mandatory retirement to age 70 doesn't take into account the tremendous energy and ability some people maintain well into their senior years. Some of our employees want to continue their careers with the company beyond what used to be considered "normal" retirement age and we recognize what a valuable resource they are.

Hence, our retirement range continues to begin at age 55, but now extends for as long as the employee wants to continue working and maintains fully satisfactory performance. By eliminating mandatory retirement I believe we offer the individual employee a greater freedom of career choice . . . because other career opportunities are always open, irrespective of age. At the same time we retain experience and knowledge that would otherwise be lost. We strengthen our organization and ourselves as individuals when the interests of employees and the corporation work in support of each other. In this case, as long as performance is satisfactory, retirement is open-ended and the choice is entirely the employee's.

Knowing of your interest in this area and of pending bills on the subject in Congress, I wanted to personally acquaint you with this major shift in our company's retirement policy.

R. D. KILPATRICK,
President.

THE DEATH OF PRESIDENT MAKARIOS

HON. DALE E. KILDEE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. KILDEE. Mr. Speaker, the death of Archbishop Makarios III of Cyprus should be mourned by us all. President Makarios was a great statesman and religious leader. His loss is not only a loss to the Cypriots, but also to all of those who seek peace and stability in the world. His leadership has been an extremely important stabilizing force in the eastern Mediterranean and Middle East. I fear that his death inevitably complicates the problem of arriving at a just settlement on Cyprus which protects the rights of both Greek and Turkish Cypriots.

President Makarios was one of those great men who overcomes humble beginnings but does not forget them. He was born into the family of a poor shepherd in the village of Pono Paniya, Paphos. In 1950 he became the youngest man ever elected archbishop of Cyprus.

During the 1950's his concern for his people pushed him into the forefront of the anticolonial Cypriot independence movement. Although there was violent opposition to British rule, the charisma of Archbishop Makarios tempered the radicalism of both the right and the left. Despite this, the British exiled him to the Seychelle Islands in 1956.

When Cyprus achieved independence in 1960, Archbishop Makarios was elected as its first president. The international and domestic problems which confronted

the new government were tremendous, and President Makarios devoted his entire energies to finding solutions to them. He made every effort to keep Cyprus on an independent road in international relations and to reduce the communal tensions which existed internally. Without the respect which has been given to President Makarios, these tasks will be much more difficult for the new President.

In 1878, Archbishop Sophronios expressed a wish which was a guiding principal for his distinguished successor. He said:

> We hope that all shall be instructed without distinction of race or creed; that law is the king of all; that all shall have equal rights and responsibility before the law, for equality of rights implies also equality of responsibility; that all shall be used to treading the good road, that is to say, the road of truth, duty, and liberty.

I feel a personal sadness because of his death. Every person seeking peace and justice certainly shares in that sense of sadness and loss.

CONVENIENT TIMING OF "REVELATIONS" REGARDING 1948 TEXAS SENATE CONTEST

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. PICKLE. Mr. Speaker, recent allegations by a former South Texas Democratic precinct chairman that he fraudulently gave Lyndon Johnson the victory in the 1948 primary election contest with Gov. Coke Stevenson should be taken with a large grain of salt.

The background of the accuser who says he winked at voting irregularities, is very suspect, to put it mildly. His claims that he was doing this now to "clear his conscience" are ironic because the charges as told should increase any burdens that he takes to his grave. It is also interesting to note that he has just "seen the light" since all of the participants he professes were in on the fix are dead. There is also considerable reliable information that the accuser has been working on a book about the 1948 election for many years and his sensational allegations have certainly given him a free publicity boost.

I might also point out to the instant experts and revisionist historians that the 1948 run-off for the Democratic nomination for the Senate was a bitterly fought battle. Although the historical focus has been over the election contest at Box 13 in Jim Wells County, in fact, this was just one of numerous disputes over the vote counts. No court has ever found that there was fraud in this torrid, hard-slugging in which both sides fought tenaciously over every vote.

I was an active participant in behalf of Lyndon Johnson during this election and as far as I know, Mr. Johnson did not go anywhere near Jim Wells County after the election to meet with the accuser and others. It seems very logical to me that this would be the last thing that Mr. Johnson would have done.

The former precinct chairman is very bold in making these spurious charges about others who are all deceased. I must say, too, that if the role played by the Associated Press correspondent in this story seems to me to indicate he is not being totally objective. It is more like an adversary proceedings.

Lyndon Johnson was one of the greatest Presidents this country has ever had and history will record his legislative accomplishments along side of that other great modern day president, Franklin D. Roosevelt.

The rehashing and digging up of old unsubstantiated accusations will not stain the memory of Lyndon Johnson.

NEW CONSUMER ALMANAC PROVIDES VITAL INFORMATION

HON. FREDERICK W. RICHMOND

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. RICHMOND. Mr. Speaker, American consumers have long been the victims of a severe vacuum of meaningful information regarding every day products which constantly affect our lives. While particular consumer-oriented periodicals can be the source of useful data on specific products, until now there has been at best only a smattering of general consumer information.

Government and business institutions still have much to do for the American consumer. It has only been through the individual efforts of consumers and consumer advocacy organizations that we have begun to learn what our rights are as consumers, and what the truth is behind advertising claims.

I would like at this time to single out one organization in particular, Consumer News, Inc., for their determination and resourcefulness in providing American consumers for the first time, with an authoritative and thorough guide to vital consumer concerns. This new book, entitled "Help: The Useful Almanac" is overflowing with information that not only can save individual consumers hundreds of dollars each year, but may also save lives. Chapters in this book deal with household products and services, money and taxes, transportation and communication, energy and the environment, and the very quality of life in our cities.

Of particular interest to me, as the only urban member of the House Agriculture Committee and Chairman of the Subcommittee on Domestic Marketing, Consumer Relations and Nutrition, are the sections on food and nutrition. With the dietary habits of Americans constantly being influenced by slick commercials and promotional campaigns which have little regard for the quality, safety and usefulness of products being sold, the American consumer stands in grave need of accurate, helpful information. "Help: The Useful Almanac" clearly outlines the differences between junk food and nutritious foods, the hazards of sugar, fat, salts and other additives, reveals Government standards of filth and contamination of food, and provides an endless amount of useful information for the consumer.

I commend this book to my colleagues attention and hope that they will be able to share this vital information with consumer organizations and concerned individual consumers in their districts. Only by enlightening ourselves to the truths which we must face and challenge in our consuming society, will we be able to make intelligent and responsible decisions which affect not only our lives, but the lives of our children and their children.

CUMMINS ENGINE CO., INC., SUPPORTS AGENCY FOR CONSUMER ADVOCACY

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BRADEMAS. Mr. Speaker, I have recently received a letter from Mr. Henry Schacht, chairman of the Cummins Engine Co. of Columbus, Ind., in which he expresses the full and complete support of his company for the Agency for Consumer Advocacy proposed by President Carter.

Because the arguments presented by Mr. Schacht are significant and timely, I insert the full text of this letter at this point in the RECORD:

CUMMINS ENGINE CO., INC.,
Columbus, Ind., July 18, 1977.

Hon. JOHN BRADEMAS,
U.S. House of Representatives,
Washington, D.C.

DEAR REPRESENTATIVE BRADEMAS: Cummins Engine Company supports H.R. 6805, which would establish an Agency for Consumer Advocacy.

We believe that it is in the interest of all participants in the economy that the rules of the marketplace be fair. The best assurance of fairness is that the rules be formed on the basis of full information and balanced argument.

The number of federal agencies dealing with matters affecting the consumer is too great for consumers as individuals or even as classes to monitor and influence effectively. The current representation of consumer interests through private or pro bono litigation, while sometimes highly effective, is often prohibitively expensive and is generally haphazard.

The proposed Agency, on the other hand, will be able to develop a broad view of consumer needs, assign reasonable priorities, and pursue those priorities strategically. Such an agency would go far toward ensuring that the consumer interest is heard in the right place at the right time.

We are, of course, aware of the various arguments against the Agency for Consumer Advocacy. We do not find them compelling. The cost would be slight. The additional paperwork would be negligible in its impact upon anyone but the parties to the proceedings. And the danger that the Agency will cause administrative delay is balanced by the likelihood that administrative proceedings will be expedited by the presence of an aggressive party whose interest is to improve rather than retard governmental regulatory efficiency. Indeed, we expect that the net

effect of the Agency's involvements will be to eliminate much unnecessary regulation and to reduce administrative delay.

In sum, we regard the Agency for Consumer Advocacy as a promising experiment in improving the quality and accountability of the governmental process.

Sincerely,

HENRY SCHACHT,
Chairman.

THE CAMBRIDGE BANNER COMMENTS ON DOUBLE DIPPERS

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BAUMAN. Mr. Speaker, recently the Banner in Cambridge, Md., commented on the issue of double dippers, those who have retired from the military and are working for the Government in some other capacity. Quite frankly, the term "double dippers" is a demeaning term, and was coined by those who oppose the right of former military retirees to work in other Government positions. I commend to my colleagues consideration of the various arguments of the Banner, pointing out that this is really discrimination against the retired military:

DOUBLE-DIPPERS

In defense of "double-dippers"—and it is high time someone rallied to their defense—we ask these simple questions:

Is military retirement pay deferred income for long, arduous and frequently dangerous service performed for the country, or is it a form of welfare payment?

Should jobs in the federal government be filled by the best-qualified, regardless of age, race, sex, religion or previous condition of servitude?

A mass of misinformation is being circulated by those who should know better concerning the alleged injustice of retired servicemen holding civilian jobs in the government. House Appropriations Defense Subcommittee Chairman George Mahon (D-Tex.) says it is "simply unfair for some people to draw two salaries when other people can't get one." His subcommittee voted last week to require retired servicemen who get civilian jobs in the government (the so-called "double-dippers") to give up their retired pay.

According to the subcommittee's own study, 95 per cent of the double-dippers are retired enlisted men and reserve officers, not the fat cat generals and admirals who shed their uniforms one day and step into cushy civilian jobs in the Pentagon the next. (Retired regular officers are already required to surrender a portion of their retired pay when they take a federal job.)

The average combined salary and pension for an enlisted man is $19,500 and for an officer $34,000—comfortable, indeed, but not princely in these times, and a far cry from the $57,000 annual salary drawn by Rep. Mahon and his congressional colleagues (who also enjoy a retirement system and other fringe benefits that make those of the armed forces appear miserly).

If Congress goes along with Rep. Mahon's subcommittee, the government will save an estimated $26 million in military retirement pay for fiscal 1978. What it will cost in terms of disillusionment and lowered morale within the ranks of both active and retired servicemen is incalculable.

Can anyone blame soldiers, sailors and airmen in today's armed forces if they turn to unions in the face of the constant chip, chip, chipping away of what have long been considered the earned benefits of a service career? We would deeply deplore such a move, but at the same time we could understand it.

ADDRESS BY DRYDEN PENCE, GOVERNOR OF ARKANSAS BOY'S STATE

HON. JOHN P. HAMMERSCHMIDT

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. HAMMERSCHMIDT. Mr. Speaker, last summer and again this year, an outstanding young Arkansas native, Dryden Pence of Forth Smith, has served as an intern to the Select Committee on Aging, Subcommittee on Housing and Consumer Interests.

Among Dryden's many honors and civic involvements, he attended Arkansas Boy's State earlier this year, and was privileged to be elected Governor.

In that capacity, Dryden was called on to address the Arkansas State Convention of the American Legion, the sponsoring group whose many civic contributions include the great learning experience in Government and opportunity for personal growth that is Boy's State.

Dryden's speech for that occasion is a stirring one of faith in the future and fiber of our country. I commend it to the attention of my colleagues:

ADDRESS BY DRYDEN PENCE

Members of the head table, distinguished members of the American Legion, ladies and gentlemen, I'm honored to speak before you today and hope that this convention will be an enjoyable experience for all concerned.

Upon my arrival home from Boy's State many people came to me and told me how proud of me they were, but without exception everyone of my friends also asked me, "How in the world could you, of all people, pull off something like the governership of Boy's State?" I had one standard answer, "I believe in what I was doing and I realized that I couldn't do it alone".

It wasn't just Dryden Pence running for governor—it was all of Robinson County. It was 104 men working together as one unit trying to win. I was just lucky enough to be the one they wanted to support. What more can I say . . . I won . . . because of unity and the whole-hearted efforts of a great bunch of guys to whom I will be eternally grateful.

Boy's State is an experience that teaches us about our State and local governments. It teaches us how to be leaders, good citizens and men.

A few weeks ago I was sitting in Washington National Airport and I looked out of the massive glass windows and noticed a towering and beautiful structure . . . the Capitol. It provided an interesting contrast with the most advanced and modern aircraft man has to offer in the foreground, and the most important building to the free world in the background.

As I sat there I thought deeply of our country and what it had seen in the past, and what was yet to come. I pondered over the why and the how of our great Nation and tried to look back into the past into the hearts of men, who too, believed in what they were doing and realized that they couldn't do it alone. These men, the Founding Fathers, the patriots, if you will, the dreamers . . . the thinkers . . . the fighters . . . the believers. These were the men who wrote down what they believed in for future generations, who spoke about what they dreamed to gather support for their cause, who took up the sword to fight for liberty and freedom and who shed their blood for the rights of men—men like us whom they would never know.

This is the basis of our country. Men who gave of themselves 100% . . . who fought against insurmountable odds, for what? Freedom . . . freedom, liberty, choice—all the things that many people take for granted, these men fought for, with such zeal and conviction that even their enemies were impressed.

To me, our country is more than buildings. It's more than highways. It's more than material things. It's people and ideas. People who care, people who love, people who have personal rights and freedoms and they have these freedoms because they believe in America.

America born from the toil and trials of men. America given birth to by not just words, but ideas. America conceived by justice and consummated by liberty. America a land of people who cried for freedom and were not afraid to die for it.

This was the America of the patriots and it is still the America of today. Many people say that our country is dying. Many people say that with the onslaught of propaganda, brainwashing, technology and cybernation, that America is fading rapidly under the burden of the excess paper turned out by the bureaucracy at a rate that boggles the mind.

They say that the younger generation can't cut it . . . that we're soft and that America and our way of life is rapidly running down a socialistic tube and individual freedoms are lost and that the end of our land is in sight. To these people I politely say don't count your chickens before they hatch.

Because it's still there . . . the words, the ideas, the thoughts, the flame of liberty . . . it's still there under all the paper and garbage. And do you know what? It's still burning. Why? Because it works. The system works. Sure it has it's faults, but it works. The thought, the drive, the feelings, and the ideas are still there. And they're, ironically enough, on paper for us all to see. They sit in the Archives—the Declaration of Independence. The Constitution, and the Bill of Rights. They're there in plain view and let no man hold us blind to that sight or understanding.

The feeling for this country is still there. The love is still solid. You men are an example of that. You men are patriots. When the time came and your country needed you, you came. You left your land, your homes, your loved ones and gave all you had like the patriots, you put it on the line—and for what? Your country and the countless unborn generations in this Nation and others.

Someone once said that eventually we all fight wars so there will be peace. No one really wins in war. We all lose something. Maybe for you it was a friend who was there one minute and then gone the next. What was it for? It was for America. I don't know what it was like and I pray I never will. But it's because of those who gave their lives before me that people my age do not know the bitter taste of war. What was it for? It was for America—a land 200 years young, a land of people who care. We stay alive because of people who are willing to put their lives on the line. Like the patriots: "Is life so dear or peace so sweet as to be purchased at the price of chains and slavery?" Forbid it, Almighty God. "I know not what course others may take, but as for me, give me liberty or give me death". Or "I only regret that I have but one life to give for my country".

Ideals like that of the patriots Patrick

Henry and Nathan Hale—where are they? They're still there. You men by your deeds are patriots. You men by your lives are truely what makes this country great. And the remarkable thing is that you pass it on. You teach not by affliction but by conviction. You truly are shining examples. Thomas Jefferson said, "if a Nation expects to be both ignorant and free it expects what never was and will never be."

Through your programs like Boy's State, you teach us the value of the word freedom and to you I give my personal thanks.

A new patriotism is forming in our country. A new feeling for life and a new feeling for ourselves. I look at our land with the optimism and energetic eyes of youth and yet with the reality of growing up overnight in troubled times.

Where are the new patriots? They're here. And you can spot them a mile off. They're the ones who stand a little straighter when they pledge allegiance. They're the ones who sing a little louder when they sing the national anthem. They're the ones who walk a little faster to meet the local politicians. They're the ones who take action and who say no when it's in to say yes, or who stand their ground even if it's unpopular. They're the ones who say, "I'm an American and I'm proud of it."

They are the new patriots and I believe and have faith that good things are in store for this country.

We will see brighter days. We will feel the warm sunshine of truth. We will bask in the light of Justice and Liberty. Because we do care.

America is not dead, no sir—far from it. The drums are just starting to roll. The curtain is just beginning to rise. All the knowledge, thought and learning of over 200 years of freedom is poured into one generation and we will reach new goals. We will succeed in solving our own problems. Why? Because we believe in what we are doing. We believe in America. And we realize that we cannot do it alone.

New patriots, young and old—hand in hand, will go on together freely.

Thank you.

THE FRESHMEN GET OLDER EVERY YEAR

HON. STEPHEN J. SOLARZ

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SOLARZ. Mr. Speaker, I would like to share with my colleagues a brief and sad notice I saw the other day in the New York Times which brings out the human side of some legislation now pending in the Subcommittee on Postsecondary Education. The legislation, H.R. 3542, would permit senior citizens to attend any college or university free of charge on a space available basis. The brief notice was the obituary of a wonderful woman, Bertha Farmer, who was one of the first to take advantage of a similar program which I helped institute at the City University of New York. Mrs. Farmer died only a month after hearings were held in New York on the bill which would have made available to senior citizens all over the country the same opportunity that meant so much to her.

Mrs. Farmer kept in touch with me over the years that she attended school, and I remember her joy and pride when she told me that she received an A+ grade in her first college course. Her spirit is truly an example to us all and her determination is symbolic of the desire to continue to learn felt by many of our senior citizens.

Here is Mrs. Farmer's obituary:

BERTHA R. FARMER, 87; ENTERED COLLEGE AT 83

Bertha Rosenthal Farmer, who at the age of 83 enrolled as a nondegree student at Baruch College, died Saturday in the American Nursing Home, at 60 East Fifth Street, where she had lived since suffering a stroke eight months ago. She was 87 years old.

"I truly believe that life begins at 84," Mrs. Farmer said in an interview when she enrolled at Baruch. "I have an active mind and I like to keep it that way. I think you're never too old to learn, and what better way to stay alert and aware of what's going on than by going to college?"

After graduating from high school in 1907, Mrs. Farmer worked as a typist and bookkeeper to help support her widowed mother. For 23 years she worked as a self-taught typesetter with her husband, Anthony, in his printing business in Richmond Hill, Queens. After he died in 1940, Mrs. Farmer continued the business for 10 years. She later worked as a proofreader.

Mrs. Farmer attended Baruch College under a special City University program that enabled the elderly to pursue college studies free of tuition.

IN TRIBUTE TO ARCHBISHOP MAKARIOS

HON. BOB TRAXLER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. TRAXLER. Mr. Speaker, at 11:15 yesterday evening, the world lost a truly great leader, Archbishop Makarios, President of Cyprus since 1960. This revered man has tried to improve the quality of life of all Cypriots over the last 17 years, despite pressures that would have forced many lesser men to give up.

I know and understand the plight of the people of Cyprus, especially those Cypriots who maintain their ties with their heritage in Greece. Since the time of the tragic invasion of Northern Cyprus by Turkish troops 3 years ago, Archbishop Makarios had worked to restore unification to a nation that has been torn away from its Greek roots.

Archbishop Makarios was a Greek ruler who understood the need to be firm in order to keep his nation alive, but while being firm he still remembered how to be gentle in dealing with the problems faced by the 700,000 citizens of Cyprus. His benevolence was constantly remembered by his people who would customarily provide him with well over 90 percent of the vote in the presidential elections in which he was a candidate.

Mr. Speaker, in a time when the United States is vitally interested in the issue of human rights, we certainly must pause to honor the memory of a man who knew the value of human dignity, and who despite personal illness for the past several years, continued his struggle to protect the independence of his island nation.

We must reaffirm at this time our support for the Greek people of Cyprus, and let them know that the United States will not allow the efforts of Archbishop Makarios to be pushed aside by those who would seek control of Cyprus at all costs.

The world has lost a great man. Such a loss will always be a tragedy for the entire world. I would urge my colleagues today to pause in honor of the memory of Archbishop Makarios, the late President of Cyprus.

ALASKAN NATURAL GAS—PART VII—A CANADIAN REACTION

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. MURTHA. Mr. Speaker, the decision by the National Energy Board of Canada in favor of the Alcan proposal to transport American gas from the State of Alaska to the lower 48 States has sparked a controversy in Canada. Even though the new proposal by the NEB would benefit Canada, many observers are asking serious questions about it.

I insert into the RECORD an article written on July 12 by the financial analyst for The Albertan in Canada. I believe it raises a number of important points:

[From The Albertan, July 12, 1977]

PIPELINES: THE U.S. VIEWS

Let's suppose you are one of President Carter's energy advisors.

Your assignment is to review the National Energy Board's recommendation in favor of the Alcan-Dempster route for moving North Slope gas to American markets and Delta gas to Canadian markets.

The results of your review will have a strong bearing on what the president proposes to Congress this fall.

Your basic terms of reference are relatively simple. The lower 48 states need the gas available in the upper 49th. It can be brought down by an overland route through Canada or liquified and moved by tanker over water.

The U.S. would prefer the overland route for a number of reasons.

Your immediate concern is to determine whether the U.S. should concur in the NEB preference for the Alcan route over the Mackenzie Valley route.

To start with, you wonder why Alcan over Mackenzie Valley when the NEB concedes throughout its report that the latter is superior to the former in its scheduling, its economics, in the quality of its back-up research, in the weight of the financial resources behind it.

From your Washington base, however, you can appreciate the political considerations. No use bucking a deck stacked by political activists in the Mackenzie Valley if you can make an end run through the Yukon.

But that's a Canadian problem. So you are looking at the Alcan route solely in terms of how adequately it satisfies American requirements. And what are you seeing?

You are seeing a recommendation that the U.S. government guarantee the financing. Well, that's not unreasonable.

The line is carrying gas, at least initially, from an American source to an American market. Guarantees would probably be needed

even if the whole of the route was in American territory.

But wait. What's this? Another recommendation that Canadians have at least a 51 per cent equity ownership?

You would expect Canadians to insist on operating the line, at least that part of it which runs through Canadian territory, just as you would expect them to want to build it.

They'd want the maximum economic benefits of its construction. It does seem a bit much, though, to expect the U.S. to underwrite the line but to be confined to a minority interest in it.

And what's this about a $200 million bond? Canadians will build and operate the line but the NEB apparently expects Americans to cover any social and environmental damage incurred in the process.

That's the equivalent of handling Canadians a blank cheque. You make a note that at the very least the U.S. would want to say something about that.

So far you are not particularly surprised by the NEB recommendations. You'd expected the Canadians to drive a hard bargain. With some give and take, you think a deal might be done.

But then you come across the NEB recommendation that Delta gas be moved through the line by way of the Dempster connection.

The NEB calculates that moving the line through Dawson, so the connection can be made, will add six cents per thousand cubic feet to the carrying charges.

Even so, those charges are still some 24 cents less than the overwater route.

The extra cost doesn't bother you that much. The reduction in U.S. gas to make way for Canadian gas does. You want the maximum flow into U.S. markets.

But the Canadians are proposing to take up as much as 25 per cent of the pipeline's capacity to carry Delta gas in the middle 1980s.

You don't like that one bit. You had capacity to sacrifice in the Mackenzie line because the throughput would have been greater. But not in the Alcan line.

Moreover, you can't be sure the Canadians won't pre-empt more capacity, at your expense, as their own needs grow.

Didn't they renege on oil exports?

And it's at that point you begin to wonder if maybe the overwater route isn't the better one after all.

MRS. HOWARD P. WINSTON—OUTSTANDING FLORIDA CITIZEN

HON. LOUIS FREY, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. FREY. Mr. Speaker, I would like to take this opportunity to recognize one of Florida's outstanding citizens, Mrs. Howard P. Winton, of Melbourne, Fla. She recently received the auxiliary to the American Optometric Association's 1977 Appreciation Award at their 15th annual meeting.

Jeanne Winton is lauded as a member who has made outstanding contributions beyond customary expectations toward advancing the objectives of the auxiliary. She is to be praised for her excellent service on behalf of the visual welfare of the public, the community at large, and the optometric profession through its auxiliary.

Our congratulations to Jeanne, and the auxiliary, with our thanks on behalf of Florida for dedicating so much of their time and effort toward the health and welfare of the people of the Sunshine State.

DR. THOMAS DOOLEY'S ROLE IN VIETNAM: ANOTHER EARLIER STRUGGLE FOR "HUMAN RIGHTS"

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. STRATTON. Mr. Speaker, on Saturday, October 19, 1968, a paid advertisement appeared in the New York Times discussing American involvement in Vietnam in terms of the deep convictions of the late Dr. Thomas Dooley and the pledges in behalf of "human rights" made in President Kennedy's Inaugural Address.

That advertisement and its deeply moving message were the work of Dr. Millard Harmon, a close personal friend of Tom Dooley and, like him, one of the U.S. Junior Chamber of Commerce's 10 Outstanding Young Men in America for 1956.

Today Dr. Harmon is a resident of Delmar, N.Y., in my congressional district. Recently he took the time and trouble to prepare another advertisement, featuring the original New York Times ad of 1968 and reflecting on America's traumatic experience in Vietnam, including the lasting value of Dr. Dooley's work and even more his perception of the importance of that special freedom, "freedom from deliberately planned terror." That advertisement appeared in the Lake Placid News of Lake Placid, N.Y., on June 30, 1977.

In the firm belief that Members will find Dr. Harmon's message of special interest and value, particularly in the light of America's current campaign for human rights, I include the full text of the June 30 advertisement:

[From the New York Times, Oct. 19, 1968]

MESSAGE BY MILLARD HARMON

(This message is a protest (nonviolent) against the press, political candidates, and church leaders who have not taken time to weigh our present Vietnam involvement against the events of the mid-fifties and John Kennedy's pledge of 1961.)

Dr. Thomas Dooley wrote compassionately on Vietnam in the mid-fifties. ("Deliver Us From Evil," Farrar, Straus & Cudahy, 1956.) Having known him, it is difficult to forget his dedicated concern for the people of Southeast Asia. The following questions should be asked:

1. Why have our press and news media given so little coverage to the Vietcong's systematic slaughter of mayors, teachers, scholars and children in South Vietnam? Dr. Dooley had good press representation while he lived, but since his death there seems to be no one speaking on behalf of the individual South Vietnamese and his suffering in the hands of deliberate Vietcong terror.

2. Why has our government been so prone to talk about U.S. involvement in Southeast Asia in terms of "Domino Theories" or "U.S. Security Concerns" rather than the degradation of human dignity as represented by the Vietcong attempt to impose rule by deliberate terror? South Vietcong action is no less a threat to humanity than the ovens of Buchenwald.

3. Why have many people professed themselves as experts on Southeast Asia while admittedly having become interested or concerned during the past few years? It appears that these people are not well informed about events of the mid-fifties which brought about U.S. commitment to the Vietnamese.

4. Why are candidates at both the national and local levels this election year seemingly overreacting to a vociferous minority demanding an American withdrawal from South Vietnam?

Technological advancements have brought us close to realizing dreams of concerned men through all ages:

1. Freedom from hunger. With today's communication, transportation skills and agricultural revolution, no one should die of hunger. We are close to relaizing this freedom.

2. Freedom from disease. No one today should die from the uncontrolled spread of disease or pestilence. The successful assault upon malaria represents the coming of age of this freedom.

The seven allies presently fighting in Southeast Asia, and the thousands of casualties suffered, are attempting to guarantee the third freedom for all humanity:

3. Freedom from deliberately planned terror. No one should live in the shadow of constant fear of deliberate, planned death.

It is true that these three basic freedoms should be guaranteed by as large a community of nations as is possible—all believing in the preciousness of human life. In time the U.N. may accept this charge. In 1961 the U.S. became the nucleus of such concerns when, on January 20, John F. Kennedy said:

"(We are) unwilling to witness or permit the slow undoing of those human rights to which this nation has always been committed, and to which we are committed today at home and around the world.

"Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe to assure the survival and the success of liberty."

The torch of responsibility and concern has been flung to others who have not been as articulate. But the words of 1961 still have their honorable ring, and carry the pledge of the government John Kennedy represented. Today Vietnam is the test of our resolve as a nation to tread the difficult path anticipated by that 1961 pledge.

When military power is made ineffective for political reasons, we can expect no concessions at the peace table. The potential tragedy of 1968 is the possible loss of faith by both friend and foe in the United States' ability to honor pledges to threatened areas of the world.

[From the Lake Placid (N.Y.) News, June 30, 1977]

A BACKWARD GLANCE AT VIETNAM

(By Millard Harmon)

PLEASE NOTE.—In Dallas, Texas, in 1956 Millard Harmon, along with Thomas Dooley and others, was honored by the U.S. Junior Chamber of Commerce as among the Ten Outstanding Young Men of the Nation. As a result of this shared honor, Dooley and Harmon became friends. Because of this friendship, Harmon was able to gain a perspective upon the events of the late 1950's that few people have. This perspective reveals background seldom mentioned in the official Vietnam strategy reviews, or the self flagellation of the press—i.e, most of the Vietnam refugees from the north were Catholic—Dr. Dooley was Catholic—as was Presi-

dent Kennedy. This common bond, plus concern about one's fellow man, was more basic in establishing U.S. policy in South East Asia than any contrived government release dealing with a "Domino Theory."

In 1968, frustrated by the lack of a clear presentation of the "why" of American involvement, and with many of his academic colleagues involved in "peace marches", Dr. Harmon took a calculated risk. He purchased, at considerable cost, over a half page of the New York Times to put forth a plea for a review of the basic reason for our involvement—the desire for there to be "freedom from deliberately planned terror"!

The risk was specific—with a position so contrary to the student and faculty view on the campus where he served as Director of Summer Session, his office might have been closed down by demonstrating students and faculty.

Fortunately, no one on the campus noticed the New York Times paid advertisement of October 19, 1968, and thus no disruptive action was taken by faculty or students.

The enclosed paid message is a sequel on U.S. commitment in Vietnam as viewed by Dr. Harmon.)

And so it's over . . .!

And few people would suggest that either the process or the results were satisfactory.

And toward the end, with over a decade of killing, blood and unfulfilled hopes, viewpoints were locked in concrete, with no hope of modification. Souls were not free to reexamine the reason for America's commitment—both in precious stores, as well as the more precious blood of a youth too soon taken from the carefree life of home and school.

And yet—with the emotional experience of the returning G.I. gone from our consciousness—the somber deplaning of those prisoners returned by Hanoi fading in our memory—and still being haunted by the fate of the MIA, perhaps this is the place and now is the time to turn our attention to those early days when our commitment was first made.

A proper focal point might be May 7th, 1954, when the key fortress of Dien Bien Phu fell to the Communists. It was shortly after this that Dr. Thomas Dooley found himself thrown into contact with those Vietnamese leaving the Communist north for what they expected to be sanctuary in the south.

The dreadful plight of these simple, strong people, was indelibly marked upon the mind of Dr. Dooley as he became involved in the evacuation of 800,000 souls from the north. And because he was articulate and had personal experience in that part of the world that few Americans knew, he found himself serving as the focal point of extensive briefings and counsel to top military personnel as well as those elected and appointed officials carrying the responsibility for guiding the direction of our commitment in South East Asia.

Those of us who knew Dr. Dooley were captivated by his personality, his sincerity, and his desire to serve thousands of suffering people of South East Asia.

From that May 7th, 1954 date, Dr. Dooley found himself deeply drawn into the life and culture of those people whom he had adopted as his own. As time passed, his counsel was increasingly requested by our country's leaders. Perhaps it was his indomitable personality—perhaps it was his innate honesty—or his outstanding success in gaining (through donations) an array of medicines and equipment supporting his humanitarian thrust into that difficult and desolate (to the white man) part of the world.

Dr. Tom found himself closeted with President Kennedy shortly following the 1960 election. Dooley, too, was a part of that generation "born in this century, and tempered by the fires of two world wars." He was now placing his skill, power and intellect into the balance of a new war—a war against disease and pestilence, against death through terror and against deliberate, planned violence.

What Dr. Thomas Dooley brought to South East Asia was the humble integrity and value structure of midland America. He brought the tenacity to succeed, as it was developed with the settling of our West. A difficult task (in his Vang Vieng dispensary) was accomplished immediately—the impossible took a little longer. He also brought youth—and along with it the expectation that right will triumph if only reasonable men put their minds to the task. Truly, this bright, sensitive personality was thrust deep within the Asian society known by few Westerners, and he won the hearts of those whose suffering he served.

What Dr. Thomas Dooley brought back to his country was an expertise and understanding of South East Asia sharpened through personal experience. This, with his charming personality, and his extensive writing, opened to him the doors of the most high.

His message was simple—the delightful, strong people of South Vietnam must not be allowed to suffer under the threat of constant death from political assassins. It was President Kennedy who agreed, and arms and moral strength of the United States were committed to protect the peace loving South East Asians from their politically active and aggressive neighbors.

And time passed.

Dr. Dooley lost his youthful strength to the great leveler—cancer.

The simple precept that a man and his family should not live in constant fear of being killed in his bed at night by political assassins was not an appropriate platform behind which to mobilize the strength of the United States, and a more plausible theory was developed to carry this thrust—the Domino Theory.

Political aspects of protecting the dignity of a man and his family 10,000 miles from the shores of our own democracy became riddled with the corruption that comes with massive money, massive supplies, massive manpower. The black market and the corruption that often comes with power exposed itself in Saigon for all to see.

And the fighting G.I. was not told of how the commitment first began with a humble doctor's exposure to death through political assassination on a massive scale.

And the enemy continued to fight in his own particular way—making combatants out of children, wreaking havoc and death where he determined, with little fear of retaliation in his home life sanctuaries.

History tells us many things about the Vietnam war. Perhaps such understanding will come to us with sufficient distance between us and the war so that the terror and the spilled blood will be deadened in their starkness. Truly, we must learn something from the treasure that was spent.

But—let us not fail to recognize that the original reason for committing our blood and treasure was valid. An idealistic American brought himself to the center of a human problem in South East Asia, and as a foremost expert on that part of the world attempted to bring an end to a great tragedy. A tragedy that, time has shown, was just beginning.

Dr. Tom, where ever you are, rest in peace—knowing that you did what you had to do to attempt to make the world a better place for a courageous, beautiful, tenacious people.

It was not to be!

IMPORTED MEAT LABELING ACT OF 1977

HON. BERKLEY BEDELL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BEDELL. Mr. Speaker, during my brief tenure in the Congress I have had numerous discussions with farmers in my district about the question of imported meat. Largely as a result of their input, I have studied this issue in considerable detail, and I share their concerns about some of the potential problems for our society resulting from meat imports.

In considering this issue, it is important to recognize that it affects both producers and consumers. Producers have a right to full confidence in the promise their Government made in the 1964 Meat Import Act that foreign countries would not be allowed to dump their livestock products in American markets, and to assurance that foreign meat is held accountable to the same standard of wholesomeness as its American counterpart. And consumers have a right to full information about the nature of the food products they wish to purchase, at the grocery store or at a restaurant, and to assurance that such products have met strict inspection standards.

In my view, the imported meat issue should be addressed in several ways. What is needed is a combination of strict inspection standards for imported meat and meat products, effective labeling of such items, and international agreements governing the international exchange of food products.

Earlier this year, I joined in sponsoring legislation which would insure that meat imports meet the same standards of wholesomeness that we impose on American food products. At present, we have no guarantee that foreign inspection systems are as effective as ours. It is time for the USDA to implement a program which would insure that the accuracy of foreign testing programs is thoroughly verified, and which would then deny the importation of meat from countries which consistently fail to meet standards prescribed by the Secretary of Agriculture. Such a program would be financed by the assessment of fees against the exporting country.

I believe that such an inspection program is necessary and fair. However, I think it should be accompanied by stronger labeling requirements for imported meat and meat products. In my judgment, such requirements are essential if we are to insure that the American people have all the necessary information upon which to make a rational choice of what meat products they wish to buy.

Today, I am introducing legislation which would establish such a labeling program. It would amend the Federal Meat Inspection Act to require that imported meat and meat food products be labelled "imported" at all stages of distribution until delivery to the ultimate consumer. It would also require certain

eating establishments, which serve imported meat, to inform customers of this fact.

The amount of foreign meat that is imported into the United States each year is substantial—estimated at about 8 percent of U.S. domestic production in 1977. And, for the most part, such meat is absorbed into the domestic economy with little attention.

I believe that the American people are entitled to know all the essential facts about the products they buy, whether they be an automobile, a television, or a cut of meat. Current labelling requirements for imported meat and meat food products are simply not adequate, where such requirements even exist. Foreign meat imported into the United States is normally transported in frozen blocks of about 50–60 pounds. Existing law does require that these blocks of meat be labelled according to country of origin. However, after processing in the United States, no further labelling as to country of origin is required.

The fact of the matter is that the current labelling practices are of no practical value to the American consumer. When he purchases meat in a grocery store or at a public eating establishment, he has no way of ascertaining whether that product was produced in the United States or abroad. I believe that he has a need, and a right, to know such information in advance of his purchase.

Many Americans, if given the choice, would prefer to buy meat which has been raised and processed in the United States. Imported labelling is a viable mechanism for providing such an opportunity.

Mr. Speaker, in conclusion, I want to emphasize that my labelling and inspection proposals are designed to complement and not impede the current Geneva trade talks which are considering the establishment of universal standards of quality for food products traded internationally. I fully support these negotiations. My proposals do not conflict with the objectives of the Geneva talks. On the contrary, their enactment would merely demonstrate a strong congressional commitment to insuring that imported meat and meat products meet strict standards of wholesomeness and that essential labeling information as to the country of origin would be available to the American consumer as he makes his choices in the marketplace.

Following is the text of my bill:

H.R. —

A bill to amend the Federal Meat Inspection Act for the purpose of requiring that imported meat and meat food products made in whole or in part of imported meat be labeled "imported" at all stages of distribution until delivery to the ultimate consumer, and to require certain eating establishments, which serve imported meat, to inform customers of this fact.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 20(a) of the Federal Meat Inspection Act (21 U.S.C. 620(a)) is amended by inserting "(1)" after "(a)", and by adding at the end thereof the following:

"(2) Any imported meat or meat food product referred to in paragraph (1), and any meat food product made in whole or in part of such imported meat, or its package or container, shall be labeled as 'imported' or 'imported in part', as the case may be. This paragraph shall not apply if the meat or meat product, or its package or container, is marked and labeled to show the country of origin as required under regulations referred to in paragraph (1).

"(3) If any person other than the ultimate consumer cuts meat or a meat food product into pieces or breaks a package or container containing meat or a meat food product and such meat, product, package, or container is marked or labeled as required by paragraph (1) or (2), such person shall affix a label to each piece of such meat or product or to each package or container in which any such meat or product is placed to provide the information required by paragraph (2). In applying this paragraph and paragraph (2), for purposes of this Act the term 'label' includes 'labeling' as defined in section 1(p.).".

SEC. 2. (a)(1) The owner of any eating establishment described in paragraph (2) of this subsection shall provide that individuals purchasing food from such establishment be informed of the fact that such establishment serves meat or meat food products imported from a foreign country, or meat food products containing meat imported from a foreign country. The owner shall provide that these individuals are informed of such fact—

(A) by displaying, in a conspicuous place in such establishment, a sign indicating such fact; or

(B) by indicating such fact on the menus offered to such individuals.

(2) The eating establishment referred to in paragraph (1) of this subsection shall be any restaurant, cafeteria, lunch counter, or other facility (including any such facility located on the premises of any retail establishment)—

(A) which engages in operations affecting commerce; and

(B) which sells (for consumption on the premises) meat or meat food products which have been imported from a foreign country, or meat food products containing meat imported from a foreign country.

(b) For purposes of this section, an eating establishment engages in operations affecting commerce if such establishment serves or offers to serve any individual engaged in commerce, or a significant portion, as determined by the Attorney General of the United States under section 3(a), of the food and other products which such facility offers for sale has moved in commerce.

(c) Any owner of an eating establishment who knowingly violates subsection (a) of this section, or whose employee or other agent knowingly violates such subsection, shall be fined an amount not to exceed $100 for each day such subsection is violated.

(d) For purposes of this section—

(1) the term "commerce" means travel or transportation between any of the several States, or between any foreign country and any State, or between points in the same State but through any other State or any foreign country;

(2) the term "owner" means a corporation, partnership, association, any other legally organized entity or an individual; and

(3) the term "State" means any State of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and the territories and possessions of the United States.

SEC. 3. (a) The Attorney General of the United States shall prescribe a regulation defining the term "significant portion of food and other products", as used in section 2(b) of this Act, within 30 days from the date of the enactment of this Act.

(b) The provisions of this Act shall become effective 90 days after the date of the enactment of this Act, or 30 days after the effective date of the regulation described in subsection (a) of this section, whichever occurs later.

PROTECTION FOR ALL

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ABDNOR. Mr. Speaker, a recent article in the Washington Post describes the valuable protection the Hatch Act provides for the public and Federal worker alike and why this protection should be preserved. It is an article meriting the attention of all Members of the House and Senate as we work on radical changes to this law:

WHY THE HATCH ACT IS WORTH KEEPING

(By Marjorie G. Fribourg)

In a famous White House memo in 1971, John Dean asked, ". . . how can we use the available federal machinery to screw our political enemies." Only the Hatch Act, which spells out that government workers are not to take an active part in campaigns, kept the Watergate crowd from being able to use vast numbers of unwilling government workers to go after Nixon's enemies. Having worked well for the protection of both the nation and the employees, the Hatch Act now faces being demolished or updated, depending on your point of view.

The House has passed H.R. 10, knocking down the safeguards in the act. The Senate is holding hearings on the bill, and while opponents may have blocked action this fall, some union leaders still hope to push the bill through. If they don't succeed, H.R. 10 will be high on the Senate agenda early next year.

Hence, some clear spring evening a platoon of postmen could be combing your neighborhood ringing every doorbell, handing out campaign literature and collecting contributions. Ostensibly, they will have volunteered their services and in any case are trying to make sure that their candidate defeats the incumbent congressman who either dared disagree with the President or dared fight the demands of a government workers' union.

Picture it: Your mailman comes calling to get your signature on a petition to put the challenger on the ballot—something you don't want to do or to refuse. Elsewhere, a clerk for the Social Security office distributes posters for one of the administration's favorites, making her neighbors wonder if her on-the-job decisions are also partisan. A scientist from the Bureau of Standards is out fund-raising and calls on a manufacturer who has a product under examination—not by the campaigner, that would be illegal—but by another member of the agency. The manufacturer also doubts the integrity of the system.

A rumor has started simultaneously in every federal agency: Promotions will be given to those who go out and canvass for the cause; job descriptions will be reworded after election to match the individuals who helped the party. Legions of the 2.8 million civil servants have decided they had better be cooperative.

If anything like this ever happens—and it could without the Hatch Act—we will have returned to the patronage system instead of the merit system.

I'M HATCHED

Labor union activists have battled the Hatch Act for years. They come to the Hill to tell congressmen that postal and federal agency staffs are being treated as second-class citizens. It is not enough that they can vote, express their views and give contributions to political parties. "Voluntary political participation is one of the basic rights of American citizens."

Their challengers don't think it's the federal workers who want to be rid of the act. When a civil servant says, "I'm Hatched," he is not complaining. He is protecting himself from political arm-twisting, announcing, "You can't force me to do what is illegal." (Sen. Abraham Ribicoff's Governmental Affairs Committee has been getting a flow of personal notes from people with government jobs who don't want the change.)

It is the unions that will profit, gaining clout if H.R. 10 passes. Today, the president of an association tells his congressman he speaks for so and so many potential voters. Next November, he may be able to summon an instant campaign committee, persuading federal personnel to wave placards, address envelopes or drive the faithful to the polls, and somewhere in the United States swaying the outcome of an election.

The Republican minority on the House committee that processed the bill was deeply concerned over union power. One of them, Edward J. Derwinski (R-Ill.), has charged that union leaders want enough influence to force the government to let its employees strike—giving unions enough muscle "to bring the government to its knees." It's not the unions, however, but future administrations that will have the greatest opportunities to be abusive.

Even with the Hatch Act, division chiefs in the General Services Administration six years ago collected ticket money for a gala "Salute to the President" dinner. They claimed that GSA placed a great deal of emphasis on "organization responsiveness"; and they never checked to learn that the affair was partisan. In other words, they did what was expected of them.

We are heading into these problems because the sponsors of H.R. 10 have treated the Hatch Act as if it were merely an overreaction to problems with the New Deal's Works Progress Administration, an unnecessary, unprecedented and novel device. That impression is misleading. Americans have gone through a long, harrowing saga to get the Hatch Act.

THE SPOILS SYSTEM

It started in 1791. Worried that government workers would be used as political tools, a group led by Georgia's Rep. James Jackson tried unsuccessfully to limit the political activities of inspectors to casting their own ballots. But, in spite of subsequent warnings by President Jefferson, by 1830 public servants were picked or fired on the basis of party loyalty. And all resolutions designed to keep federal employees from using threats, money or official abuse to affect elections were voted down.

By 1876, the milking of federal workers for campaign funds was so shocking that Congress prohibited all except the highest-ranking appointees from "giving or receiving from any other employee of the government any money . . . for political purposes. . . ." That did not save a number of them from getting a letter a few years later requesting 1 per cent of their salaries with the explanation that ". . . there will be no objections in official quarters to such voluntary contributions. . . ."

President Garfield had to be gunned down in a railroad station by a disappointed officeseeker before the spoils system was partially replaced with a merit system. (In the course of getting the bill passed, Congress discovered that in one section of the Treasury 500 of the 900 employees were completely useless except at election time.)

The Pendleton Act restated the prohibitions passed in 1876 and outlawed collecting political contributions in government buildings. By 1907, it was being evaded. President Theodore Roosevelt—a knowledgeable former civil service commissioner—issued a directive: Persons in the classified civil service could vote and express their views, but should take no active part in political management or political campaigns.

GOP CHARGES

It was all inadequate. In the 1930s, all the old abuses appeared in a new situation. The federal government had created projects designed to hire the unemployed but not under civil service. By 1938, there were legions of people relying on the WPA for their existence. Charges appeared that they were being shamelessly coerced to support Democratic candidates.

Bills had been introduced in previous Congresses to stop federal officeholders from misusing their positions for partisan ends, but mostly the suggestion came from statesmen on the minority side of the aisle. They did not get very far.

1938 was a congressional election year. Any attempt by the Republicans to do anything about the allegations against Democrats could have been countered as a partisan attack. Instead, the attack came from a Democrat, Carl A. Hatch—a gentle, mild-mannered New Mexican and the center of an influential group in the Senate. That summer, Hatch presented an amendment to be added to the appropriation for relief works. In brief, no person receiving pay from these funds was to use his authority to interfere with a political convention, a primary or an election.

Senate Majority Leader Alben Barkley of Kentucky objected: "The fact that a humble man or woman happens to be employed by the government . . . is not a sufficient reason for . . . denying to any such person the same right that anybody else in the United States enjoys . . .," he told Hatch.

When at last they voted, the measure was defeated, 37 to 40.

The Senate then increased the funds made available to Sen. Morris Sheppard's Committee on Privileges and Elections, which would be investigating the unsavory tales.

On July 16, 1938, the committee sent its investigators to Kentucky. It was true that Barkley's opposition in the primary took contributions from state employees. It was also true that, in parts of the state, Barkley's supporters conducted a systematic canvass of all WPA workers.

Project workers were asked by foremen to sign a statement that they would support Barkley's candidacy. Barkley buttons were handed out. Men known to hold views contrary to the candidates were, in a number of instances, discharged. Always the reason given was nonpolitical. Always political motives were denied.

When Barkley was questioned, he emphatically denied knowledge of any improper practices. "In every speech I made," he said, "I declared, insisted and urged that every federal, state and local employee possessed, and should exercise, the right to vote as they pleased."

The investigators noted these remarks and conceded that it had found nothing to show that Barkley had any knowledge of any of these activities. Officeholders in Washington often claimed to be, and often were, ignorant of the activities of their supporters back home, as the committee knew.

OBJECTIONS IN THE HOUSE

Autumn found the investigators checking out complaints in Pennsylvania. There, on more than one occasion, the supervisor of a women's sewing project circulated among the timid seamstresses, offering to sell them $1 and $1.50 tickets to a political rally or clambake. The foreman of a crew of unskilled laborers on a highway project did the same to his crew.

With all this in the record, Hatch renewed his crusade in 1939 and won the help of a singularly valuable gladiator—Vice President John Nance Garner. Together, they lined up support for legislation that would keep government employees from using their authority for the purpose of affecting elections.

The measure passed the Senate and went to the House Judiciary Committee where, according to Hatch, "unfair, unjust and unreasonable criticisms were made." Representatives were afraid the bill might apply to their own campaign speeches and dinners, "a most ridiculous interpretation."

Hoping to save his bill, Hatch went to the committee and agreed to language changes. After the meeting, the act read: "No officer or employee in the executive branch of the federal government, or any agency or department thereof, shall take any active part in political management or in political campaigns." The President, his Vice President, his cabinet, his staff and his appointees on the policy-making level were exempt.

In other words, Hatch wanted Theodore Roosevelt's directive turned into law and extended to cover federal workers who were not part of the classified or merit system. (It has been estimated that at that time only 32 per cent of the government force were classified.)

Hatch faced other complications. The Democratic Party would soon have to decide whether to offer Franklin Delano Roosevelt a third term. Political analysts expected that the President's cause would suffer if federal employees were barred by the Hatch Act from being delegates to the convention.

Toward the end of July, the measure came back from the House. Hatch strolled into the Senate and asked that it be put to a vote. The Vice President agreed and announced hurriedly that, if no one objected, it would be so ordered. Then they heard Sherman Minton's sharp, "Wait a minute."

The Indiana senator looked over the House changes to see if the bill should be sent to conference.

This time Hatch, who was usually calm and affable, exploded.

"There is nothing to confer about," he insisted. "A vote to send it back to conference . . . is a vote to send the bill to the graveyard . . . Let there be no pious declaration of being for the noble objectives of the bill, but. . . ."

Instead of being antagonized, Minton understood Hatch's concern for his bill. Gently chiding that he had no dagger up his sleeve, he capitulated, letting the measure come to a vote.

It passed the Senate. Then the President made everyone wonder whether he would sign it. Roosevelt told reporters at his press conference that it was too vague and hard to interpret. He wanted to study it and get some advice on it. According to journalist Marquis Childs, Hatch began preparing a speech to deliver if the President vetoed the bill.

Hatch never had to read his veto speech. Roosevelt signed the act into law.

But even then, the Hatch Act was not safely on the books. It was twice challenged before the Supreme Court. The fight was not over until the justices ruled that "Congress has the power to regulate within reasonable limits the political conduct of federal employees in order to promote efficiency and integrity in the public service." By then, a century and a half had gone by since congressmen first tried to prevent federal officers from interfering with elections.

Since 1791, there have been repeated, frustrating struggles to protect both the integrity of elections and the rights of govern-

ment workers. Nobody could have dreamed that, after all that, the issue would come up again—that it was still debatable.

The need for the Hatch Act is even greater now than when Hatch proposed it. The size of the civil service has more than tripled. Roughly 1 out of every 75 Americans works for the executive branch of the U.S. government. Every time we face a major national problem—war, depression or catastrophe—we add to the federal staff. If anyone ever succeeds in molding these millions of men and women into a well-disciplined political machine, no challenger will ever again be able to beat it.

The subcommittee under Rep. William Clay (D-Mo.) that processed H.R. 10 believes that it is so skillfully written that it will protect the public, the employee and the merit system. While the bill states that federal employees are encouraged to be politically active, exceptions are made. Foreign intelligence agents, men and women who enforce the laws and those awarding government contracts, subsidies or licenses will remain Hatched. No one will be able to staff a political committee with Internal Revenue agents or with mortgage credit inspectors from HUD.

NO WAY TO DRAW LINE

Someone asked Hatch, when his bill was being written, whether there weren't some government workers who couldn't coerce anyone and shouldn't be restricted. He answered that there is no way to draw a line. Almost every agency affects the lives of multitudes.

He would not have been impressed with the few hard-to-enforce rules in H.R. 10 stating that neither coercion nor abuse of authority (both almost impossible to prove) are not to be used for election purposes. Such rules are no substitute for a healthy nonpartisan spirit in a government office.

Another provision lets government employees run for public office if they take leaves of absence from their jobs. As one young attorney explained it, "If I take leave, run for the city council and am defeated, I can come back. By then, I have found out that only one of the three men in the office who lives in my district campaigned for me. If there is a chance to recommend him for promotion over the others, and I feel obligated to him because he helped me, you've stepped back into the patronage system."

The argument gets more heated when lobbyists examine the protection that workers are supposed to enjoy from being pressured by their superiors.

True, no one may campaign while on duty or in uniform or in a government building and no supervisor may solicit contributions from a subordinate or use his authority to help a political cause.

What the authors of the bill fail to consider is that coercion may be subtle. You do not have to go after a worker with a club or threaten to have him transferred. All a boss has to do is be visibly more cordial to those who showed up at a fund-raising dinner or rally and the maverick gets the idea. Life in the office will be more pleasant if one fits in with the crowd politically. If "great" assignments seem to go to the political conformist and "lousy" ones to the apathetic, that does it. More and more staff members show their eagerness to perform chores for the party after hours. They can no longer get out of it by saying, "I'm Hatched."

Obviously, a balance has to be struck between the needs of the workers voluntarily to exercise the rights of citizens and the needs of the government to preserve its integrity. The Hatch Acts strikes that balance. Judging from the 150-year struggle required to get, if we ever lose it, we won't get back. We had better hold on to it.

EPA: DILEMMA FOR THE SMALL BUSINESSMAN

Hon. John E. "Jack" Cunningham

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. CUNNINGHAM. Mr. Speaker, I would like to share with my colleagues the following article from Linen Supply News of July 1977. It demonstrates one more case where the small businessman is at the mercy of the Federal bureaucracy. Specifically, the Environmental Protection Agency (EPA) has proposed regulations that would require chemical pretreatment of the waste water discharged from commercial laundries into the sewer system.

As the article points out, the cost of the pretreatment equipment will force the price of laundry services up. And, with higher prices many customers will be forced to find other ways to clean that do not require them to pay for the costly pretreatment of the discharge water.

The situation is sadly ironic when one realizes that the EPA will have commercial laundry customers doing more laundry at home, and small businesses starting their own laundry services. Sad because of the many laundries that will be forced to close, and the resulting unemployment. Ironic because the amount of untreated discharge water will increase, more detergent will be used, and the amount of energy required for laundering will increase by a staggering amount. By requiring the pretreatment of the discharge water from commercial laundries, the EPA will increase the workload of publicly owned sewer systems—the very thing they are trying to decrease.

I hope the Congress will examine these proposed regulations and urge the EPA to reconsider their position. We in Congress should encourage small business, and at this time that means collaring the EPA:

KNOW AND TELL YOUR GOVERNMENT WHY PRETREATMENT IS A WASTE

(By Dorothy Struminger)

Working with the Environmental Protection Agency (EPA) to exempt our industry from proposed regulations that would require pretreating waste water discharge is among LSAA's most important projects. Our position is that publicly owned treatment works (POTW) provide the best means of handling our waste water. And we feel strongly that our success in this project could mean the difference between many of us remaining in business or closing our doors.

Because we present logical, legitimate, and valid arguments for exemption we feel our chances for realizing that goal are excellent. Here are our reasons.

First: Our industry, as one member of a group classified as "auto and other laundries" by the EPA, is not covered under the law—the Federal Water Pollution Control Act amendments of 1972. We are not listed in the "manufacturing" category nor have we been deemed a significant waste producer by the EPA administration. Nor does the textile service industry add contaminants. We add nothing—either as raw material or as process chemicals—that is an objectionable contaminant. Contaminants come to us on the soiled linen and garments of our customers and are, therefore, not "our" contaminants, but generated in the community and beyond our capacity to control.

Second: We are a unique industry, in that if we were forced out of business, the linen and garments used by the community would continue to be washed or cleaned, but in other ways. The soil contaminants would not disappear with our businesses—they would remain to be handled by the community. Therefore, these contaminants are quite properly removed from sewer systems by city water treatment plants. The cost should not be shouldered solely by the textile maintenance industry. Pretreatment standards are not justified for our industry because our principal process is laundering.

Third: Our industry offers a public service that provides economic and social benefits to the communities we serve. LSAA staff studies show that home-sized washers and dryers use 98 per cent more energy, 70 per cent more water, and 900 per cent more detergents than do our industry's large, mass production equipment.

If we were required to install pretreatment equipment for our waste water, this cost would have to be passed on to our customers. In many cases, these customers would not continue our service but would install their own equipment. Enforcement of waste water pretreatment regulations for these many, small-size individual customers would not be practical and, therefore, would probably be non-existent. The net result would be greater energy, water, and detergent consumption, which would not be in the public interest.

Further, the economic impact of coverage under pretreatment regulations—a loss of jobs in our industry—would include thousands of non-skilled workers who would join the ranks of the unemployed, become an economic burden upon our society, and increase our welfare rolls. Our industry is also a unique industry in that we are a human needs' industry, offering an easily "substitutable" service while still providing an important public health benefit.

We ask our members, the EPA, and all concerned citizens to realize that asking our industry to spend money on pretreatment equipment is senseless. Local POTWs are quite capable of handling our waste water discharge. Therefore pretreatment is economically redundant, and a misuse of capital, water, laundry supplies, and energy.

Each member of our industry must understand why we request exemption if we are to succeed with this most important prcject. We ask that you communicate these reasons to your government representatives.

COAL CONVERSION PROGRAM

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. WALGREN. Mr. Speaker, it is appropriate to note at this point a matter of some concern to persons who strongly support the thrust of the coal conversion program as a necessary and integral part of our national energy plan. The bill we are enacting has in it wider exemptions for the conversion of existing plants than did the legislation initially proposed. Despite the good reasons for this, I think it important that we not fail to note again our intention that this program be made to work. An important as-

pect of achieving the aims of the bill is the manner in which exempted existing plants operate.

Operators should be encouraged to the extent practicable to modernize existing major fuel-burning installations to conserve petroleum fuels and natural gas where conversion to coal is not practical. This could be done by converting conventional steam plants to modern high-efficiency combine-cycle plants to reduce fuel consumption and to improve overall system efficiency. This conversion involves the integration of a combustion turbine/heat recovery boiler system with the components of an existing plant. The new boiler replaces the old oil or gas fired boiler.

Operating efficiency can be expected to be 20 percent to 40 percent higher than that of the steam plant before conversion. Repowering should be a part of the considerations involved in the exemption process both from the standpoint of its administration and of the utilities interested in long-term planning based on plant exemption. Such consideration would insure that the aims of the bill are met.

THE GRADUATE EDUCATIONAL ACCESS ACT

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. OBERSTAR. Mr. Speaker, within a very short time, the U.S. Supreme Court is going to announce its decision in the case of The Regents of The University of California against Allan Bakke. This is the case of an applicant to a California medical school who is claiming reverse discrimination after being denied admission. If the decision of the California Supreme Court is upheld, and many observers believe that it will be, then the Nation's graduate schools may be left without any viable means of increasing their enrollment of minority, low income, and culturally disadvantaged students.

The bill that I am introducing today, the Graduate Educational Access Act, will provide the Nation's graduate schools with the opportunity to actively seek out and identify potential applicants of all races who may have an aptitude for, and show an interest in, pursuing a professional career, but who are not presently receiving the proper education which would enable them to do so. The graduate schools will then have an opportunity to help correct and prevent this situation long before these individuals apply to graduate schools and are forced to compete with better qualified applicants.

In order to obviate the need to admit one individual to graduate school ahead of another who is more qualified, simply because of racial or economic considerations, the Graduate Educational Access Act will help make it possible for graduate schools to secure future classes that are truly representative and truly the best qualified.

At the present time, there are some programs which provide counseling, and aid in the graduate school admission process to minority, low income, and culturally disadvantaged individuals. However, what good is counseling about how to fill out an application when that application is doomed to rejection from the very start?

What little exists in the way of compensatory education programs is not generally available until years of neglect have taken their toll and the damage has been done. The Nation's graduate schools need to take an active role in the educational preparation of their future applicants at the earliest possible stage.

This approach would be a change from the present system in which the Nation's graduate schools sit back passively and wait for their potential students to be fed to them by the Nation's elementary, secondary, and undergraduate schools.

The idea is not necessarily to give money to the graduate schools so that they in turn can feed money to local elementary, secondary, and undergraduate institutions which would enable these institutions to bolster their existing programs. Rather, the emphasis is on the close relationship that the graduate school itself should have with its potential applicants on a substantive academic level.

The individual graduate schools would be given great flexibility in determining the specific methods which would serve their needs best. One need not envision a program in which law or medical professors are in direct contact with elementary school students. Perhaps a graduate school will find that its most effective contact with elementary schoolchildren would be through a project with local school authorities aimed at improving the curriculum at local elementary schools. Other possible methods might include special summer, weekend, or night sessions for interested students at all levels. Maybe some graduate schools will find that their graduate students can play an important role in the process. The field is wide open for innovation and HEW could serve as a national clearing house for such methods, so that it will be easy for individual graduate schools to learn from each other's experience.

There are several important reasons why the graduate schools, as distinguished from other institutions, should be given this opportunity. First of all, many graduate schools have already expressed their desire to increase their enrollment of minority, low income, and culturally disadvantaged students. They have attempted to accomplish this through special admissions programs which are riddled with constitutional, educational, and ethical difficulties. The Graduate Educational Access Act will simpy provide these graduate schools with the alternative means necessary to achieve their own goals.

Second, the graduate school knows better than anybody else exactly what kinds of skills its students should have. The graduate school will have an early opportunity to develop and sustain the analytical reading, mathematical, scientific, and other skills which it deems most important for a graduate student to have.

Third, the graduate school will be able to give the potential applicant an early introduction to its particular field, whether law, medicine, education, business, public administration, nursing or whatever. However this will not be a program to be used for pushing the desirability of graduate school over vocational training or any other post-secondary, or post-graduate education. Nobody will be forced to go to graduate school if they don't want to. This program is only aimed at providing access for those who want to go.

And, of course, if the graduate school utilizes certain testing techniques in its admission procedures, then an early introduction and experience with these types of tests could be most helpful in insuring that when the applicant does take an admissions test, the score is a more or less accurate reflector of intellectual ability, rather than test-taking ability.

Mr. Speaker, we are faced with the fact that early and continuous educational deficiencies in the academic careers of many minority, low income, and culturally disadvantaged individuals has resulted in blocking access to post graduate education for these individuals. With this bill we can begin the fight to provide that access.

CAMPAIGN MONEY AND PUBLIC TRUST

HON. WILLIAM L. ARMSTRONG

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ARMSTRONG. Mr. Speaker, the lead editorial in the Washington Post on Sunday, July 31, expresses eloquently many of the concerns I have about proposals to finance congressional elections with taxpayer funds.

Those who favor these proposals say public financing of House and Senate races would somehow help restore public trust and confidence in Congress.

I wonder how much trust and confidence the average taxpayer would feel in a Congress which, after voting itself a fat pay raise and increasing already generous staff allowances and fringe benefits, now reaches into the taxpayers' pockets to pay its re-election expenses.

I would not do justice to the Post editorial if I attempted to paraphrase it, so I will simply urge all Members to read it:

CAMPAIGN MONEY AND PUBLIC TRUST

President Carter used familiar and fashionable language the other day in endorsing S. 926, the pending bill for partial public financing of Senate campaigns. He said the bill would "help restore the public's confidence and trust in officials" by removing "the appearance of obligation to special interests." Now, that sounds soothing—but this is no time for the Senate to relax. There is more than cosmetics involved here, and the effects of this legislation in its present form might not be as restorative as the advertising suggests.

Consider the matter of "special interests," which has become shorthand for corruption. Any two people could argue all day

about which interest groups—bankers or doctors or unions or whatever—are "special" in the pejorative sense, and what their political role should be. Regardless of where one comes out, two points seem clear to us.

First, the most corrosive kinds of interest-group money, the huge, often covert donations such as those revealed in recent years, either have been illegal for decades or were curbed by the disclosure rules and contributions limits enacted in 1974.

Second, the role of political-action committees and big donors would not necessarily be reduced a whit by S. 926. Public matching of small private gifts would give Senate nominess less need to court big contributors. But the bill does not cover primaries, where some elections are settled and early, big donations can have the greatest effect. Moreover, as the Supreme Court emphasized last year, the First Amendment gives individuals and groups the liberty to spend as much as they want on independent, parallel campaigns for candidates. Last fall, while Mr. Carter's election drive was being publicly financed, labor unions were spending, by one estimate, over $11 million independently on his behalf. So when Mr. Carter says that public financing for presidential campaigns "worked very well last year [pause . . . laughter]" without any of the candidates "being obligated to anyone," we get the joke—but not the argument.

The advocates of public financing also claim that it would open up the system and, in Mr. Carter's words, "help enable deserving candidates to run for office even if they are not rich." This also sounds good—but also raises large questions about the nature of political competition and the proper role of government.

It's true that competition is inhibited by the high and rising cost of getting political messages into the marketplace at all. If a candidate can't afford advertising, voters have no way to gauge whether he is "deserving" of support. Especially in primaries, one can justify more public-service broadcasts, publicly financed mailings and perhaps modest matching grants. But public-financing's advocates have much more in mind. They want to assure challengers not just basic access but equal funds. S. 926 would promote parity by setting spending limits as a condition of public aid. And if one candidate foregoes that aid and exercises his right to spend more in private money, his opponent would get extra subsidies.

What's wrong with this? For one thing, it reflects a simplistic view of the role of money in campaigns. More dollars don't always mean more votes. In the past five years, 17 men have come to the Senate the hard way, by beating incumbents, nine of those 17 won even though they were outspent. Beyond that, S. 926 would legislate a value judgment: Big spending is bad. But if a candidate with wealth or access to large sums does spend millions, as long as his financing is lawful and fully disclosed, who should decide whether that's fair or wholesome? Since the record suggests that lavish spending is not necessarily decisive and can itself become a campaign issue, why not let the voters make these judgments on a case-by-case basis?

That leads to the rock-bottom question: To what extent should government regulate political activity? Public financing of presidential campaigns, of course, also poses that question and in time may help to answer it. In our view, that experiment worked well enough last year to be continued in 1980. It was, however, limited to contests for one nationwide office. And it did affect the structure of politics, especially the nature of fund-raising and the role of political parties, in ways that are not yet entirely clear. The problem of dealing fairly with third-party and independent candidates remains unsolved and may be unsolvable.

Finally, the whole regulatory effort launched in 1974 has produced not just administrative burdens and snarls but also a worrisome degree of official involvement in the details of political practices. That, more than anything else, suggests that Congress should not rush into public financing for Senate and House campaigns across the land. A law meant to return politics to the people would defeat its own purpose if it turned out, instead, to be dictatorial and stultifying.

JOHN O. HOLLY: IN MEMORIAM

HON. LOUIS STOKES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. STOKES. Mr. Speaker, I rise on this occasion to bring to your attention and to the attention of my colleagues in the U.S. House of Representatives the eminent career of the late John O. Holly of Cleveland, Ohio.

Mr. Holly died December 19 of last year at 71 years of age. With his death, he left a legacy of accomplishment which will live on in the hearts of all those who knew him and who reaped the benefits of his outstanding work in the area of civil rights.

Mr. Speaker, John Holly was a political and civil activist of the first order. He devoted his entire life to the social and economic betterment of Cleveland's black community. Long before the inception of the great civil rights movement of the 1960's, John Holly was organizing and protesting against the rampant racial discrimination in our city.

Mr. Speaker, in order that my colleagues in the House can realize the full extent of Mr. Holly's impact on Cleveland, I would like to submit for the RECORD excerpts of an article by Booker T. Tall which appeared in the Saturday, July 2, 1977 Cleveland Call and Post newspaper. I am particularly grateful to Call and Post publisher W. O. Walker for featuring the biographical highlights of John Holly's life since so many of our young people in Cleveland are unaware of the extent of his exemplary career:

JOHN O. HOLLY (1903–1974)

In Cleveland, Ohio John O. Holly is hailed as a National leader, Mr. President, "Black Moses," the Exalted Ruler and a pioneer in the field of Civil Rights, as well as a distinguished leader in political, fraternal and religious activities throughout Ohio for nearly a half century.

John Oliver Holly founded, organized and directed for over 30 years one of the most effective grassroot community organizations for removing racial barriers to employment opportunities in the history of the city of Cleveland and the state of Ohio.

A native of Tuscaloosa, Alabama, Holly's name is synonomous with the organization he founded in 1935: The Future Outlook League. The principles and program of the F.O.L. have served as a model for Black community organizations throughout the state. In its heyday, there were branches in Akron, Alliance, Canton, Mansfield, Painsville, Springfield and Youngstown, Ohio. The Future Outlook League slogan, "Don't buy where you can't work" has served as an example and guide for Black Community Organizations throughout the United States.

In 1935, with a nucleus of 13 Cleveland business and church leaders, The Future Outlook League was organized under John O. Holly's determined leadership. The first targets of this embryonic organization in the '30's were the hundreds of community based businesses that did not hire Blacks except for the very few that were in menial jobs. John O. Holly was sent to jail for defying a court order banning orderly picketing. This however, did not deter John O. Holly in his efforts to advance his people.

Before Holly organized the Future Outlook League in February 1935, nearly 80 percent of the African-American population were unemployed. Fifteen percent of those working in menial jobs had a gross family income of less than $1000 per year. Minority businesses numbered less than 50 worthy of mention out of a Black population of 80,000.

Many of the Black professionals including medical doctors in Cleveland at that time were forced to accept work on the Federal W.P.A. project. Notwithstanding more than 3000 business places operated in the Central area of Cleveland, the Cleveland Black Community boundaries for the most part, less than 100 of these businesses employed Blacks in any capacity, and for the most part, these few jobs were menial. For example, there were seven neighborhood theatres in the area and not one Black employee; there were 35 food-chain stores in the area and only 3 black employees. The entire transit system employed only one Black employee.

Added to the problem of employment discrimination for Black adults, the youth problem was worse: Nearly 30,000 between the ages of 8 and 21 were forced to roam the streets because of no job opportunities nor adequate recreational facilities.

A survey at the time indicated that Blacks of the Central area were spending 200,000 dollars per week in these establishments which refused to hire them.

These men were the conditions in Cleveland when Holly gathered 13 sympathizers on the evening of February 11, 1935 at his home on 5209 Julia Avenue and began organizing to do something about this despicable pattern of racial discrimination. This was to be the first official meeting of the League. These thirteen were: Mr. and Mrs. Thomas Graham, Mrs. Eva Gibbs, Mrs. Beatrice Cole, Mr. William H. Reed, Atty. Harvey Johnson, Mrs. Mary Gassaway, Mrs. Viola Wilson, Mr. Albert Porter, Mrs. Laura Peynado, Mr. Grover Davis, and Mr. & Mrs. John Holly. This group christened the club. "The Future Outlook League." They elected Mr. John O. Holly temporary chairman; Cora L. Graham, temporary secretary and Grover Davis, temporary treasurer.

The next meeting was held a week later, with the original thirteen reduced to seven. Seven against the world! No funds, no membership, no plan. All they had was determination and a vision.

Mrs. Leola Holly gave the treasurer his first job of bookkeeping when she gave a dance on February 23rd, which flooded the organization treasury with five dollars and twenty cents. With all this capital behind it the success of the club was assured. The next meeting drew seventeen persons.

The aims and purposes of The Future Outlook League were as follows:

1. It is to establish, build and preserve all legitimate Negro business and create employment for Negroes.

2. To use every legitimate weapon at it's command in advocating and forcing merchants whose business is wholly or partially supported by Negroes, to employ Negro help in proportion regardless of the size of the business.

3. To advocate a closer union as a race, regardless of religion or politics, to help make possible better living conditions in the future, and cooperate wholeheartedly with

every other organization working for the uplift of the race.

"The League is not satisfied with creating jobs for Negroes, but it also makes it its business to see that the hours are regulated that the salary meets with the standard of any other clerk, that their working conditions are likewise and that they are given a chance to improve their knowledge in whatever business they are employed."

"We are constantly on the lookout for merchants who will try to make it hard for our young girls by forcing them to do unfair duties. We have forewarned that any merchant who attempted such discriminations will not only be boycotted, but the League will place a picket in front of the store and force him out of business. We have had to repicket several merchants because they tried either to cut their employees wages or make them work longer hours."

"We want the Negro youth to realize that he is not inferior to any other race on God's green earth. We want him to feel he has a right to make an honest living and stand up and fight until death for that which rightfully belongs to him."

On March 4, The Future Outlook League became a permanent organization. Mr. Holly was elected president: Tom Graham, vice-president; Cora Graham, secretary; Leola Holly, assistant secretary; Grover Davis, treasurer and Atty. Harvey Johnson, counselor. A committee consisting of Dr. A. A. Hops, William H. Reed, Atty. Harvey Johnson, Charlie Morris and John Holly were appointed to draw up the laws of the organization.

A few meetings later during which time the body discussed the laws with the committee, (and during which time the membership was increased by the addition of M. Milton Lewis, Robert Warren, T. W. Lewis, William Gorman and C. M. Smart) the constitution of the F.O.L. was adopted on April 3, 1935.

On November 29, 1935, the League under Holly's leadership published a report on its first seven months of existence. This is what had grown out of the idea of one man less than 12 months before:

F.O.L. membership: 14,633.

Persons placed by F.O.L. 395.

Over the next 10 years, The Future Outlook League obtained employment for over 15,000 persons at its peak; the F.O.L. handled over 10,000 personal problems of every description per year. Juvenile delinquency decreased over 50 percent.

The integration of Banks, Utility companies, Department stores, Industry, housing and the development of Black owned Businesses were predicated upon the primary objectives of John O. Holly and the Future Outlook League. . . .

John O. Holly also exerted his organizational genius and leadership ability in other fields, including the political process. In 1937, he was a candidate and nominated for City Council in Cleveland from the 12th ward, and while losing in that contest, was subsequently (1952-1956) elected Delegate-at-Large to the Democratic National Convention, serving as Vice-chairman of the Ohio Delegation. In 1954 he was a Democratic candidate for Congress from the 21st Ohio District, failing of a nomination by 1700 votes, but pioneering the Movement that later achieved the election of the present Honorable Louis Stokes, Congressman from this 21st District of Ohio.

Mr. Speaker, on July 3, 1977, I had the distinct honor of delivering the principal tribute at a memorial service for the late John Holly. Citizens from all walks of life, both black and white, gathered to commemorate his life and work.

In keeping with the solemnity of that event, Mr. Speaker, I would like to take this opportunity to call on my colleagues in the House to join me in a posthumous tribute to this great American. John O. Holly was our standard-bearer in the civil rights movement. With his death, his work has passed on to a new generation of black leadership. The responsibility is ours to carry on the struggle for equality and human dignity in which John Holly was so nobly engaged. There can be no greater tribute for this great man.

In conclusion, Mr. Speaker, I would like to read from a Cleveland Call and Post editorial at the time of Mr. Holly's death entitled "Rational Revolutionist":

A great man can be buried but a great idea will live on. Or so, those of us who saw John O. Holly and his great idea originate, flourish, and eventually ebb, hope the future is still ours to achieve.

GEORGE FALK—A TRULY OUTSTANDING AMERICAN

HON. JAMES H. SCHEUER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. SCHEUER. Mr. Speaker, on May 15, 1977 a special award was presented to an extraordinary American—Mr. George Falk of Far Rockaway—Queens, the heartland of my congressional district. Rabbi Walter S. Wurzburger, President of the Rabbinical Council of America presented the Kether Shem Tov Award to one of the outstanding Jewish leaders in America today.

I have known George for many years and consider him to be one of the most dynamic and creative leaders I have come across in more than a decade of public service. I would like to draw the attention of my colleagues to this remarkable man and his extraordinary accomplishments.

Printed below is a text of the presentation speech by Rabbi Wurzburger and the acceptance speech of George Falk. The following quote from Rabbi Wurzburger's speech explains why George Falk deserves our recognition:

George Falk does not want accolades. He doesn't want tributes. As a matter of fact, he told me this evening before the dinner, "don't waste your time and mine by praising me." What he wants is action in behalf of the goals and ideals to which he is deeply committed.

I commend both of these speeches to my colleagues' attention.

ADDRESS BY RABBI WALTER S. WURZBURGER

Mr. Chairman, Mr. President, distinguished rabbis, Congressman Wright, ladies and gentlemen.

You may recall, early in the evening, Rabbi Lookstein promised that he will be the shortest speaker. I promise you to be the most impossible speaker—impossible because your chairman has allotted to me exactly five minutes not for one but for two speeches. Even the generosity of a George Falk, who donated to me three minutes of prime time will not really enable me to discharge my responsibility to deliver two distinct messages. But since tonight is Yom Yerushalayim, the anniversary of the liberation of Jerusalem, a solution to my dilemma suggests itself. The Jewish mystics note that the hebrew term for Jerusalem is in the plural. There is the terrestrial Jerusalem and the celestial Jerusalem. Yet, they are one and indivisible. Similarily for me there is no conflict between my seemingly two distinct assignments—of bringing a message in behalf of the rabbinical Council of America and conferring the Kether Shem Tov award to my beloved friend, George Falk. The two tasks are really one. My close personal friendship with both the president of the union and the Kether Shev Tov awardee is a reflection of the strong and close relationship that binds together the Rabbinical Council of America with the union of Orthodox Jewish Congregations of America. We both strive and struggle together for the achievement of our joint objective. The battle we wage together is for the unity of Jerusalem.

We hear a great deal about concern that our own government as yet has not recognized Jerusalem as the capital of the state of Israel. I am always more concerned about what we Jews think about our problems. Have we really recognized the primacy of Jerusalem? Are we fully aware that the reunification of Jerusalem imposes upon us a mandate to unite the Jewish people. The psalmists sing so beautifully, "God builds Jerusalem when all the dispersed of our people shall be gathered in." For us Jerusalem is the symbol of the unity of the Jewish people, it is the city that makes all of us associates. We all struggle together to bring about the *vision of L'Shana Haba B'Yerushalayim.* (Next year in Jerusalem.)

Jerusalem is the city of Jewish unity. Jerusalem, so the Talmud tells us, was not divided among the various tribes within Jerusalem there is no room for tribalism, sectarianism, institutionalism or partisan concerns. We have a sacred and solemn responsibility to draw into the orbit of Jerusalem every possible Jew.

The present moment presents us with unique opportunities along these lines. A few decades ago it seemed that the forces of secularism were invincible. But, thank God, the tide has turned and today orthodoxy has emerged as the most vibrant, dynamic and growing movement in the world Jewish community. We now enjoy unprecedented opportunities to bring our message to Jews all over the world. Today, we must take leadership, it is gratifying that we have made so much progress. But need I remind you that as you travel throughout the length and breadth of this continent, you will come to community after community where there isn't a single orthodox Jewish institution. I can show you campus after campus where there is no Torah presence. At a time when our young people are hungry for the word of God, we are not there. The Jewish community is agitated over the unification movement of a Reverend Moon, over missionary efforts. I say to my fellow Jews, don't worry about missionary activities, worry about the erosion of the Jewish soul, the erosion of Jewish commitment. To meet this challenge the entire orthodox community must be united. Can there be room for divisiveness at this historic moment?

We dare not be silent, we dare not sit still, we must be restless, restless until God establishes Jerusalem and makes it as a praise in the Earth. Yes, we must be restless and emulate the divine discontent, and if I may say, it is this attribute that endeared so much to me personally, our distinguished Kether Shem Tov Awardee, George Falk.

George is a man who is restless, he loves Jerusalem, loves the Jewish people, and he cannot stand it when lethargy and divisiveness prevent us from reaching our objectives. He can't take it when we abandon our youngsters. This is why he has recently established in Jerusalem a seminar center. This is why George Falk will every pesach orga-

nize sedorim in Jerusalem to take care of Russian Jews who never before in their lives have seen a seder. That's George Falk. George Falk does not want accolades. He doesn't want tributes. As a matter of fact he told me this evening just before the dinner, "don't waste my time and your time by praising me." What he wants is action in behalf of the goals and ideals to which he is deeply committed. He is a creative, dynamic Jewish leader, innovative in his approach, who gives to his communal leadership the same kind of drive and energy he devotes to his commercial enterprises. He has attained an eminent position as an industrialist because of his imagination, perserverance and determination, but those very qualities have made him also a dynamo charging the Jewish community to restless, relentless movement toward the great goal—the realization of Jewish destiny.

Indeed, we thank God for having made it possible for us to be led, inspired and moved by George Falk. And in the words of the Psalmist, we say to him, "may the Lord bless you from Zion, and may you behold the God of Jerusalem all the days of your life."

ADDRESS BY MR. GEORGE FALK

Esteemed Rabbis, Honorable Congressman Wright, co-honorees, Rabbi Pelcovitz, and Phil Stollman, awardee, members of the dais, dear family and friends.

While I appreciate the wonderful words spoken by Rabbi Wurzburger, whom I admire so much, I look upon them as a goal for the future rather than praise of the past. I hope that I shall be able to live up to the image Rabbi Wurzburger tried to portray of me. May I thank you, Harold Jacobs, our beloved and highly esteemed president and the directors of the union for having bestowed this great honor upon me.

Standing here tonight, my heart is filled with memories of a lifetime. . . . Forty years ago this month I came to the wonderful shores of the United States of America as an immigrant and refugee from persecution looking for freedom and opportunity. I am grateful to say I have found them both in our great country. . . . It might take an immigrant to appreciate the great privileges and freedom America offers its citizens. The American values of life, its philosophy, the Bill of Rights, which is the backbone of our country, are treasures to be cherished.

The Pilgrims founded this country, escaping oppression, looking for freedom from want and fear and . . . eventually this great bastion of democracy was thrust into being. We, in our generation, about 170 years later were privileged to witness the arising of another true democracy, the state of Israel. There, miraculously, the oppressed and persecuted and nearly annihilated Jews gathered together to bring a state against all odds into being.

I look back 34 years, when on June 6th, I was one of the many proud American soldiers who stepped on the shores of Normandy. It was a special privilege for me to wear the uniform of an officer of my newly adopted country and a terrific feeling to return to the shores of Europe to liberate it from tyranny.

Our elation of victory was soon diminished by seeing the horrors of war . . . after the break through, we marched on through St. Lo and Avranche, and I started looking for my people, fellow Jews, but I could not find them. They were deported—destination unknown. We got further and further into France and the story was the same all over . . . destruction, horrors of war, synagogues demolished, Jews deported—destination unknown. I remember so vividly my Jewish New Year on the battlefield in Luneville where we found a desecrated synagogue and performed services. We marched on with the feeling of victory and elation on one hand and the feeling of sadness on the other. We crossed the Rhine, the human story was even worse.

The final realization came when we came to the gates of Dachau and saw the famous sign, "Arbeit Macht Frei"—work gives freedom . . . but what we did find were human skeletons, some still alive, most dead, horrors so far unknown to mankind. I became determined then and there that I would dedicate my life to the causes of my people and its institutions and always cherish our beloved America.

How different is our lives here in the United States for all of us today. We have here a network of hundreds and hundreds of vibrant congregations all across the land with hundreds of thousands of members. We, the generation of the Holocaust, understand only too well that we need more than isolated congregations. What we need is the force that unifies us all and that is what the Union of Orthodox Jewish Congregations is all about. There is strength in unity and unity in strength. The union speaks for and represents the American Orthodox Jewish Community whenever and wherever the need arises.

There is a tremendous depth and intensity from the inter-action among our sister congregations . . . anyone who has attended one of our retreats or shabbatons has truly experienced living judiasm.

But our real strength lies in our youth. The youth especially benefits from the awareness of the larger American Jewish Community in regional and national NCSY seminars. The dynamism instilled by the many vibrant but isolated local NCSY chapters is reinforced in these seminars by their peers from all across the land.

Tonight is the tenth anniversary of the Liberation of Jerusalem by the Israeli people. A city founded by King David thousands of years ago once again became a free Jewish city where everyone is free to worship according to his belief . . . Jews, Christians and Moslems alike . . . how different is today's unified Jerusalem from the Jerusalem under Arabic rule . . . we must all be determined that Jerusalem shall always remain the Capital of Israel, a state not only with defensible and safe borders but recognized as an equal and appreciated for its contributions to the family of nations.

I am especially proud that the union has decided to bind its ties even closer to Israel by opening a seminar center in Jerusalem to cement the relationship of the union and its youth, an American organization, with the people of the state of Israel. I am delighted Phil Stollman has joined me and the union to bring this seminar center to its reality.

I thank Mrs. Wright and Congressman Wright, one of the most important and illustrious leaders in our country for honoring us here tonight with their presence. We are proud to be Americans of the Jewish faith, and we are grateful for the help and understanding that this great country of ours has given to the state of Israel. Israel is the only true democracy in the Middle East and the best and most reliable friend and ally of the United States.

Yet, we again are faced with enemies who would like to see history repeat itself and seek not only our destruction, but the destruction of the free democratic world. Let us not fear these threats, but let us stand up with pride and determination as tora-true Jews and proud Americans to carry on our vibrant struggle for survival. Let us give our fullest support to our beloved United States and the state of Israel without which our Jewish life today is unthinkable.

I would like to pay special tribute to my parents, Bernard and Sara Falk, in blessed memory, who were such wonderful parents and showed me the right road to life and the true meaning of derech erez.

May I introduce my family,

First, my father-in-law, Max Baer who has just celebrated his 95th birthday. He is the patriarch of our family, loved and admired by all.

To my darling wife, Ilse, I say thank you for the love, deep spirit you have given our family, especially for giving me the guidance, the goals and encouragement to live a full and beautiful life. Ilse, you have taught me that material success is only fulfilling when it is coupled with a capacity to share to alleviate suffering . . . and to further higher aspirations of man.

To my sons, Bernard and Elliott, I say you are wonderful sons. You have made us proud parents. While you, Elliot, are still happily free and unattached, Bernard you are joined by your wonderful wife, Vicki, who is such a treasure and you have made us now the happy grandparents of Colin Etzion.

My special gratitude goes to Rabbi Simcha Cohen, our chairman, and the staff of the union for the outstanding work they have done. There are no words to express my thanks to you for organizing and preparing a most wonderful affair.

My thanks, once again, If I may to you, Congressman Wright. I am deeply touched to be able to sit with you on the dais, knowing what you stand for, what you represent, not only as a congressman and a majority leader but also as the representative of the proud and great State of Texas . . . May I, sir, as a personal token present you tonight with the flag of Jerusalem on its anniversary of liberation. Please, sir, accept this flag in the same spirit and emotion as I am presenting it to you. Thank you very much and thank you all for coming here tonight.

THE SOCIAL SECURITY NATIONAL LOTTERY BILL

HON. EDWARD P. BEARD

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BEARD of Rhode Island. Mr. Speaker, I am introducing a bill today that will establish a national lottery for the specific purpose of providing financial support for the social security program. Over the past 2 years, we have heard much about the fiscal future of this retirement program and the need to insure that funds will be available to carry into the 1980's and beyond. I believe that attempts to finance social security from general tax revenues will only create heavier burdens on the general populace.

The experience of many western European countries with national lotteries is well-documented and in all these nations, the great bulk of receipts from their lotteries are earmarked for social programs. I think the American people are ready for such a lottery and would welcome it.

My bill provides for the establishment of a six-member lottery commission to administer, operate, and issue regulations for the purchase of tickets and the distribution of prizes.

There are currently many legislative reforms proposed for expansion of social security benefits but plans to restructure the financing aspect are mired in indecision. I firmly believe that a national lottery would be the most effective way

to provide the funds needed for any expansion of benefits and I commend this bill to the membership of this House.

CHALLENGING MEDIA MONOPOLIES

HON. HENRY A. WAXMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. WAXMAN. Mr. Speaker, the issue of broadcast-newspaper cross-ownership poses many far-reaching questions regarding the delivery of news and information services. Should one corporation be permitted to control both the print and broadcast media in a given community? Is the public interest—and the public's right to know—better served by prohibiting these arrangements? Does diversity of media ownership necessarily enhance the media's contribution to an informed public? Or is service actually improved by virtue of harnessing a broadcast facility's profits to subsidize expanded newspaper coverage?

The House Subcommittee on Communications is currently studying many of these issues in its review of the Communications Act of 1934. The concerns raised by cross-ownership are ones deserving of the fullest consideration by the Congress. Deirdre Carmody of the New York Times recently surveyed this controversy. I am therefore pleased to insert in the RECORD her recent articles:

[From the New York Times Magazine, July 31, 1977]

CHALLENGING MEDIA MONOPOLIES

(By Deirdre Carmody)

By 1975, the Steinman family had gained a dominant hold over the news media in Lancaster, Pa. Through the years, their holdings had grown to include the morning, evening and Sunday newspapers—the only three in Lancaster—television station WGAL, radio stations WGAL-AM and FM and 60 percent of the city's cable television network. The Steinmans, clearly, had gained extensive power over the Lancaster community's understanding of itself and the outside world, but for many years, nobody seemed to care.

Then one day two years ago, the Steinmans woke up to find their dominant position under attack. A local group called Feminists for Media Rights had teamed up with a Washington, D.C., public-interest law firm called Citizens Communications Center to to challenge WGAL-TV's right to renew its license, and they had brought their case to the Federal Communications Commission. The feminists charged that WGAL did not run enough programs on women's issues, and Citizens Communications argued that the Steinmans were abusing their multiple ownership by, for instance, promoting WGAL programming in the entertainment sections of their newspapers, to the disadvantage of other stations in the area.

A decade or so before, the F.C.C. might have turned a deaf ear to such complaints, but as the Steinmans were to learn somewhat painfully, times have changed. The F.C.C. scheduled a hearing in the case, but before it could be held, the Steinmans, fearing that "forced divestiture [was] close at hand," decided to break up their media complex. Last December, they sold their radio stations, and this spring they agreed to dispose of the television station by 1981.

But that wasn't all. To satisfy the complaint of the feminists, the Steinmans made a deal that may affect the programming on WGAL-TV for years to come. In return for withdrawal of the license challenge, they agreed to a long list of administrative and programming changes. These included: weekly half-hour programs on women's issues, increased coverage of women's sports, more investigative reports and news stories about women on the evening news "free-speech messages" (30- or 60-second appearances by persons wishing to speak out on community issues), a grant of $150,000 to set up a nonprofit women's news service. And they agreed to try to find a buyer for the station who would continue these policies.

The Lancaster case, and the questions it implies about the right of publishers and broadcasters to conduct their affairs as they please, is part of a trend that is shaking up the whole communications industry. Encouraged by new court decisions and impatient with what they see as the ineffectiveness of the Federal Communications Commission, public-interest lawyers, often acting in concert with minority groups, have in recent years brought hundreds of challenges to media ownership. Their principal objectives have been to break up media monopolies and to give the public a greater voice in the regulation of the airwaves.

On March 1, Citizens Communications Center, the tiny public-interest law firm that is in the vanguard of this "broadcast reform" movement, won its most far-reaching case. The Court of Appeals for the District of Columbia decided that newspaper publishers may not own broadcasting facilities in the same city, and vice versa. To Citizens, this was a heady victory: The National Association of Broadcasters estimates that if the court's order is carried out, the F.C.C. will oversee the divestiture of 160 such combinations.

The broadcasting industry and the fraternity of newspaper publishers, along with the F.C.C. have asked the United States Supreme Court to review the case. "In economic terms alone, the impact of the decision would be massive," the N.A.B. told the Supreme Court in its request for review of the decision. "The value of newspaper and broadcast properties subject to divestiture is estimated to exceed $2 billion." If the Court of Appeals decision is allowed to stand, the N.A.B. added, it could "compel a sweeping restructuring of the country's communications media."

This is, of course, exactly what Citizens wants. Its lawyers argue that democracy is based on the free expression of as many voices as possible. The fewer voices you have in the community, they say, the less the chance for dissent.

The guessing is that it will be a long time before the cross-ownership matter is finally resolved. It is a complex issue, and since it involves both newspapers and the broadcasting industry, it presents a perplexing dilemma: On the one hand, Congress is constitutionally forbidden to regulate newspapers, while, on the other hand, it has been mandated by law to regulate the broadcasting industry.

In the case of newspapers, Congress and the courts have repeatedly said that the Government can in no way abridge freedom of the press as guaranteed by the First Amendment. And to tell a newspaper publisher that he cannot own a broadcast station is in direct violation of the First Amendment, according to proponents of cross-ownership.

"Under the divestiture rule [the March 1 ruling by the Court of Appeals] we're reduced to the status of illegal aliens and felons," says Joe M. Dealey, president of The Dallas News and chairman of the committee set up by the American Newspaper Publishers Association to study the cross-ownership question. "They are the only people besides publishers who are not allowed to own television stations."

But whereas Congress cannot regulate newspapers, the licensing of broadcasters has been justified under the First Amendment because of the physical limitations of the electromagnetic spectrum. Because the capacity of the air-waves is finite, someone must decide who will be allowed to use them and who will not. This is the function of the F.C.C., as mandated by the Federal Communications Act.

Behind the dramatic confrontation over cross-ownership lie some vexing questions of communications policy. For instance, the F.C.C. is supposed to supervise broadcasting activities to see that they accord with the public interest. But what is the public interest? Who are the public? What criteria should determine who has access to the airwaves? To what extent should broadcasters be required to reflect the tastes and interests of their listeners?

A few years ago, Citizens represented a coalition of the listeners of radio station WNCN in New York City. The station had announced it would abandon its all-classical format for rock-and-roll, and the listeners were up in arms. They won the case, but what about all the New Yorkers who would have preferred rock? And, for that matter, what about those in Lancaster who might not have shared the views of the Feminists for Media Rights? Who is to say whose tastes and opinions should prevail? How should a station deal with all the various majorities and minorities with special cases to plead?

And on a more basic level, how much public regulation of the airwaves is consistent with free speech? Even granting the limits imposed by the electromagnetic spectrum, should a Government agency—or, for that matter, a court—really address itself to questions of what a broadcaster does or does not choose to put on the air?

To understand these questions fully, it is necessary to return to March 25, 1966, when the United States Court of Appeals for the District of Columbia handed down one of the most significant decisions in the history of broadcasting. The case involved WLBT, a television station in Jackson, Miss., whose population is 45 percent black. Civil-rights groups had repeatedly accused WLBT of discriminating against blacks in its programming. In March 1964, two civil-rights leaders and the United Church of Christ, which had become a persistent public advocate on such issues, went to the F.C.C. and urged it not to renew WLBT's license. They brought their protest on behalf of themselves and as representatives of "all other television viewers in the State of Mississippi."

The F.C.C. dismissed their petition, declaring that it could consider such an action only if an individual's legally protected rights had been invaded by the station or if the station had caused him direct injury. Viewers whose individual rights had not been violated, the commission said, had no standing to bring protests before it.

The petitioners took their case to the Court of Appeals, where Warren E. Burger, now Chief Justice of the United States, ruled that "responsible representatives of the listening public" did indeed have the right to challenge the renewal of a broadcaster's license. He ordered the commission to hold a hearing on whether WLBT should have its license renewed, "We can see no reason," he stated, "to exclude those with such an obvious and acute concern as the listening audience."

By ruling that viewers and listeners could challenge a broadcaster's right to hold a license, the Burger ruling opened up a new area of communications law. It also gave the public-interest lawyers an effective new weapon with which to take on the communications industry.

Though it has consisted of no more than four or five lawyers at any time in its existence, Citizens Communications Center is considered the foremost of these firms, and its history is, in effect, a capsule history of the broadcast reform movement.

Since its creation eight years ago, Citizens

has filed scores of license-renewal challenges on behalf of its clients. It has brought actions that have resulted in breaking up media monopolies, provided more employment opportunities for minorities in broadcasting and opened up the F.C.C. to citizen involvement. It has reached out-of-court settlements with broadcasters that have facilitated the public's access to the airwaves and resulted in more programming for minorities.

Citizens was founded by Albert Kramer, who in 1969 was beginning to lose interest in doing bank mergers at Washington's prestigious law firm of Covington & Burling. Kramer was concerned about the general lack of citizen participation in F.C.C. proceedings and felt that there ought to be some kind of national law center for citizen groups that wanted to participate in the regulatory process.

He resigned from Covington & Burling and obtained a $25,000 grant from the Midas International Foundation and a desk and part-time secretarial help at the Robert F. Kennedy Memorial Foundation. At first, the work was mostly informational. Volunteers had to be taught how to monitor stations to look for abuses; how to meet with the management of stations, and what questions to ask; how to find their way around station files. Kramer spoke at conferences, gave seminars and supplied background information on legislation.

Many of Citizens' early clients were black civil-rights groups which complained that broadcasters were discriminating against blacks in programming or employment. The usual tactic was to have volunteers monitor a particular station to accumulate enough evidence for Citizens to file a petition with the F.C.C. asking it to deny renewal of that station's license on the grounds that in areas where much of the listening public is black, it is in the public interest to have at least some of the programs aimed at black audiences.

"In the next two or three years, a pattern grew up," says Susan Dillon, who joined the firm in the early days. "A coalition was set up several months before the licenses in that state expired and then they would call us. We would do research; an attorney would go to a city to find out more about the complaints there and would spend night after night writing. Then he would come back, and we would type it up and ship it in to the F.C.C."

The "petition to deny" (a station's license), as it is called, became a trademark of Citizens in the early years of its existence. It was actually a way to harass the broadcasters, because it put the burden on the station to show why the petition to deny was invalid and why the license should be renewed. Once the petition was filed, Citizens would usually offer to withdraw it in return for certain concessions from the station.

Few of the petitions to deny actually resulted in hearings by the F.C.C. Out of 3,014 license renewals handled by the F.C.C. in 1976, only 23 were designated for hearing. It is rarer still for the commission to take away a station's license. F.C.C. figures show that in the past five years the commission has approved an average of 98.8 percent of AM radio-station license renewals; 99.4 percent of FM radio-station license renewals, and 97.7 percent of TV license renewals.

It is statistice like these that have led critics of the F.C.C. to say that it simply has not fulfilled its function of regulating the broadcasting industry over the years.

"In the past," says Tracey Westen, director of the communications-law program at U.C.L.A., "the F.C.C. was always right as long as it gave the broadcaster what it wanted. Then along came Citizens. . . . Through its litigation, Citizens has forced the F.C.C. to clarify its standards. Its litigation has determined the very structure of the industry."

"What we began to develop was a framework where two things happened," says Albert Kramer of his reign at Citizens. "First, the regulatory processes themselves began to be opened up to a lot of groups who never before had participated in the regulatory process. They became adversaries, and the commission had to respond.

"And then it forced the broadcast media to sit up and take notice that there was a major segment of the population that was ethnic, racial, poor, female, intellectual or aged, who had been virtually ignored."

"My bottom line is that we never lost a case," says Frank Lloyd, who succeeded Kramer as executive director in 1973. "It didn't matter that we won or lost. At the end, by the time two or three years of litigation had passed, the broadcasters had usually upgraded themselves out of lawsuits. While we may have technically lost, we had usually won most of what we wanted."

One notable victory came in 1971 after Citizens tried to block a complicated transfer of broadcast properties which Capital Cities Broadcasting Corporation was trying to effect. Capital Cities agreed that if Citizens would withdraw its opposition, it would provide $1 million for minority programming and set employment goals for blacks and Hispanics in Philadelphia, New Haven and Fresno. The company also agreed to set up advisory councils made up of blacks and Hispanics in order to give them a voice in determining programming in those cities.

By 1971, Citizens had received its first Ford Foundation grant—$200,000 a year for two years—and was housed in the cheerful, four-story red-brick town house at 1914 Sunderland Place just off Dupont Circle (and within walking distance of the F.C.C.), where it is still located.

There was a ragged appearance about the place and a spirit of camaraderie as the lawyers often worked 17 and 18 hours a day to meet filing deadlines. Kramer, who was wont to work in a T-shirt, work pants and socks and simply put his head down on the desk when he needed sleep, was the kind of person who inspired personal loyalty, and his staff was devoted to him. There were many bone-wearying days, but there was also a certain amount of conviviality, as when the staff would order pizza and make a salad in a big green bucket and then sit around eating and telling stories.

By 1973, Al Kramer was exhausted, and he left Citizens to lobby against a license-renewal bill supported by the broadcasting industry. (He later went back to private practice and is now director of the Bureau of Consumer Protection at the Federal Trade Commission.)

After Lloyd, a Harvard Law School graduate who had a mixed background in communications law, became executive director, the firm shifted from its leadership and organizing role to become more of a test-case firm. Lloyd remained until earlier this year, when he, too, joined the Carter Administration in the Office of Telecommunications Policy.

The new director is Nolan Bowie, a 33-year-old graduate of the University of Michigan Law School who was an assistant special prosecutor in the Watergate prosecution force. Bowie is black, as are associate member Edwina Dowell and several other members of the staff, making Citizens a majority-black firm. The other lawyer is Charles Firestone, a Duke law graduate who worked for four years in the F.C.C. general counsel's office and who is in charge of litigation at Citizens. (Firestone will soon leave to become the new director of the communications-law program at U.C.L.A.) The staff is directly responsible to its board of directors, which is headed by Henry Geller, former general counsel at the F.C.C.

Citizens' most notable recent battle was with Joe Allbritton, now publisher of The Washington Star, who in 1975 was trying to acquire control of the company that owned The Star and WMAL–TV, AM and FM radio in Washington. Citizens, vehemently opposed to what is considered a blatant case of cross-ownernhip, filed a challenge with the F.C.C. contending that under a recently enacted ruling by the commission, ownership of these properties should not be transferred to Allbritton. After much dealing, Citizens withdrew its challenge when Allbritton agreed to sell off the radio and television stations.

It is the broader cross-ownership case, however, that may turn out to be Citizens' most important confrontation. It goes back to 1970, when the F.C.C. announced that it would look into the question of whether cross-ownership of newspaper and broadcast facilities in the same city was in the public interest. More than 200 comments on the subject, plus 25 major studies, were filed with the F.C.C. Later, three days of hearings were held. Finally, five years after raising the question, the F.C.C. issued its first report in 1975, which banned future cross-ownerships of newspaper and broadcast facilities in the same city, but allowed almost all existing combinations to stand. (The order required only divestiture of what the commission called "the most egregious cases"—seven newspaper-television combinations and 16 radio-newspaper combinations in cities where there were no other newspaper or broadcast facilities; in other words, where these cross-ownerships were the only source of information in that city.)

Citizens, acting on behalf of its client, the National Citizens Committee for Broadcasting, took the matter to the Court of Appeals for the District of Columbia and asked the Court to reverse the part of the commission's order that preserved existing newspaper-broadcast cross-ownerships.

"The problem in all these areas is that the fewer voices you have in the community, the less chance you have for diversity and dissent," said Nicholas Johnson, a former chairman of the F.C.C. and head of the National Citizens Committee for Broadcasting. "The whole theory of a democracy is that you have as many voices as possible."

That is beside the point, argued the F.C.C. "A mere hoped-for gain in diversity" was not adequate cause for the disruption of operations and the economic dislocation that would necessarily follow such a massive reorganization of the country's media. The commission apparently was persuaded by the broadcasters' point that in many cities economics is such that the breaking up of media monopolies will actually impede the goal of diversity. Television stations generally are far more profitable than newspapers, and it is possible that some newspapers might expire after divestiture, since they would lose their periodic transfusions of television profits.

The F.C.C., in reviewing the evidence submitted to it, had come to the conclusion that significant diversity of voices in broadcasting and the press existed in most communities anyway. The F.C.C. also went on to say that there was no evidence that breaking up newspaper-television combinations would necessarily result in more diversity.

But interestingly enough, the court, reviewing the same massive evidence that had been presented to the F.C.C., differed on two major points. In the words of Chief Judge David Bazelon:

"There is virtually no evidence regarding the likelihood that divestiture would produce the harmful effects feared, or how serious such harm would be.

"And the record no more establishes that cross-ownership serves the public interest than it injures it. After years of study, the record was essentially inconclusive."

On March 1, the court ruled that the commission's decision not to require divestiture of existing cross-ownerships was inconsistent with its longstanding policy that "nothing can be more important than insuring that there is a free flow of information from as many divergent sources as possible.

"We believe . . . ," Judge Bazelon wrote, "that divestiture is required except in those cases where the evidence clearly discloses that cross-ownership is in the public interest."

Since then, the F.C.C., the National Association of Broadcasters, the American Newspaper Publishers Association and some of the major cross-owners have asked the Supreme Court to review the case. They argue that newspaper-broadcast combinations have a long record of meritorious service and that there is no evidence that breaking up these combinations is going to result in greater diversity of information. They also contend that the court exceeded its bounds and usurped the policymaking role of the F.C.C. in requiring divestiture.

Whatever the court decides, it is clear that the door Chief Justice Burger opened back in 1966 when he said that listeners could challenge the practices of broadcasters is now wide open. The listening public, in effect, has been mobilized, and Citizens has become an accepted participant in the continuing process of regulating who controls the airways.

In one sense, this may be seen as a splendid example of democracy at work, a reaffirmation of the democratic dream that the have-nots of society can march into court, challenge the power structure and win.

On the other hand, democracy often pushes forward on clanking wheels, and few victories are free of nagging doubts. There are many, within the communications industry and without, who are made nervous by the prospect of the courts' telling a Federal commission how it should conduct its business, however overprotective of broadcasters the F.C.C. may have become. And they are made even more nervous by the prospect of increased public and Government control over the media. They fear, in the end, that the movement to break up cross-ownerships may yet turn out to be another wave of high-minded reform that turns out to have an unforeseen, destructive undertow.

ACCOMPLISHMENTS OF THE HOUSE

HON. GOODLOE E. BYRON

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BYRON. Mr. Speaker, as Congress concludes its work prior to the August recess, I think this is an appropriate time to reflect on the record of Congress thus far. We can justifiably take pride in the accomplishments of the House this year, not only in terms of the number of bills which have been passed on the floor, but also because of the important work being conducted in many of the House committees and subcommittees. While these efforts are sometimes well publicized, such as the outstanding work done by a number of committees in reviewing the President's energy package, in many cases committees have undertaken comprehensive reviews of major issue with little public awareness of the importance of their deliberations. This is the case with the Subcommittee on Communications, which is in the midst of a vital, but laborious, review of Federal communications policy.

This is a critical area that is ripe for legislative attention. The availability of the best system of communication is crucial to America—both in our personal lives and to our society as a whole. Our system of democratic government and our personal freedoms are based on the free exchange of information in our society and the free expression of ideas. Our modern communications technology is essential in this regard.

The preservation of our communications system and its continued progress are matters which should be high on the list of congressional priorities. The availability of a low cost, universal, and dependable telecommunications system is of particular importance to the rural areas of the country, such as those I represent in central and western Maryland. Furthermore, the health and safety of many senior citizens is dependent upon access to needed services that their telephone provides. The poor and unemployed must rely heavily upon the use of the telephone in order to seek or receive notice of that much needed job.

It is clear that severe alterations in the cost or availability of telephone service would have a great impact on these sectors of society, which have the fewest alternatives of replacement choices for their telephone service.

For these reasons, earlier in this session, I cosponsored H.R. 1811, the intent of which is to assure the continuation of readily available, widely affordable telephone services for the citizens of this country. The Consumer Communications Reform Act of 1977 addresses fundamental issues which have made possible the growth and progress of our nationwide system. This system is unsurpassed in the world in terms of service quality, percentage of incomes paid for service and, more importantly, the percentage of the country's population who can reach each other by telephone.

We have arrived at this position by virtue of the wisdom of our predecessors in the Congress who established the national policy, "to make available—to all the people of the United States a rapid, efficient, nationwide—communication service with adequate facilities at reasonable charges." To my knowledge that policy has not changed. What has changed are the actions of the regulatory body which was established by the same law that set forth this policy.

In the past decade, the Federal Communications Commission has undertaken a course of departure from the practices of the previous 30 years which had achieved the congressional objective. The FCC has done so without bringing forth a definitive case for its action so that the Congress may rule upon the desirability of these, in effect, changes in policy. The FCC has embarked upon a course of injecting so-called competition into the telecommunications industry without having determined the economic and social impact of that action. Its own proceeding, established after the fact, to determine such impacts remains open and without definitive conclusion. Meanwhile, the implementation of the procompetitive activities continue in an industry in which Congress long ago determined competition to be wasteful and not in the public interest.

It is time for the Congress to lend its wisdom to this vital matter and establish anew the national telecommunications policy which best serves the interests of all the citizens of the country. Congress should act promptly to spare this society the pitfalls of piecemeal experimental regulation.

I commend my colleagues serving on the Subcommittee on Communications of the Interstate and Foreign Commerce Committee for their diligent work of reviewing the Communications Act of 1934. In addition, I hope my colleagues in the Congress will examine closely the facts as they are developed and participate actively in the formulation of the policy under which regulators will carry out the will of the Congress.

Finally, I urge that my colleagues act swiftly on House Resolution 422, a resolution which sets forth a description of the very matters I have described and would require that the FCC defer implementation of any further new policies until the Congress has completed its study of the matter and determined what the national policy shall be.

NATIONAL SICKLE CELL MONTH

HON. CARDISS COLLINS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Ms. COLLINS of Illinois. Mr. Speaker, I have introduced House Joint Resolution 561 which would empower the President to designate each September as National Sickle Cell Month.

It is important that this disease be brought periodically to the attention of the American people. One out of every 400 black Americans are afflicted with sickle cell anemia, a genetic blood disease which hampers the blood cell's ability to carry oxygen within the body. While this disease is not always debilitating, anemia and pain occur in the body's joints during crisis periods.

One out of every 10 black Americans carry the sickle cell trait, which is not the disease itself. However, if both a husband and wife carry the trait, their offspring have a 25-percent chance of being born with sickle cell anemia.

The majority of adults who have sickle cell traits are not aware that they are carriers of the gene. Thus, it is particularly important that there be an ongoing screening and testing program. followed by appropriate counseling and reach.

I urge my colleagues to act on House Joint Resolution 561, which has Senate Joint Resolution 71 as its Senate counterpart, so that President Carter can assure Americans that we will not ignore this debilitating illness which affects so many citizens.

DISPLACED HOMEMAKERS' JOB PROGRAM

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. ROSENTHAL. Mr. Speaker, I am today introducing legislation which would establish a special jobs program for displaced homemakers. The measure seeks to help those who have served this Nation by caring for their families and communities only to find themselves with no means of support at the dissolution of their marriage. It creates public service employment, on-the-job training programs, and peer group counseling centers under title III of CETA.

The displaced homemaker phenomena is a relatively new and growing one. It is the tragedy of the millions of individuals, mostly women, who have devoted their lives to their families only to find themselves incapable of supporting themselves when the need arises. After years of working in the home, they enter the labor market middle-aged and inexperienced in business. Practices of age and sex discrimination reinforce personal insecurities and combine to keep displaced homemakers unemployed for extraordinary periods of time.

This is not a minor problem. The divorce rate in the United States is the highest in the world and is increasing as it gains social acceptability and legal accessibility. According to the National Center for Health Statistics, the divorce rate has more than doubled in the last dozen years. The Bureau of the Census reported that in March 1976 there were 4.4 million divorced women in the United States who had not remarried. In addition, there are over 10 million widows in America today. Furthermore, 2.4 million women are separated from their spouses.

It may be common to assume that such women can simply remarry, but that just is not true. Differences in male and female life expectancy and the social unacceptability of older women marrying younger men result in a scarcity of eligible men. In early 1976 there were five widows to every widower and half as many divorced men as women living in America.

All of these factors lead to the startling conclusion that, as women age, they face a great probability of being left alone. As of March 1976, while 79.4 percent of the women between 40 and 44 were living with their husbands, only 67.4 percent of the women between 55 and 64 were. In that same age group, 17 percent of the women lived alone.

The forms of support commonly assumed available to such women just do not exist. According to the report of the National Commission on the Observance of International Women's Year, only 14 percent of divorced women are awarded alimony and of those only 46 percent collect it regularly. Most of these women are ineligible for social security benefits because they are too young but they do not qualify for Federal assistance once their children are grown.

Most displaced homemakers can not even receive assistance from State relief programs; at least 25 States will not give any assistance to individuals who have no employment disability. Furthermore, most State programs are woefully inadequate, often providing nothing more than one-time relief.

The unemployment rate for the middle-aged women is considerably higher than it is for men of the same ages. Moreover, there are a large number of women between the ages of 35 and 59 who are not even counted in the unemployment statistics because they have given up their job searches in discouragement; in 1976, there were 216,000 women as compared to only 73,000 men who felt job seeking was a futile exercise. There were also more women who cited ill health as an excuse for not having a job, but would take one willingly if it came.

For the displaced homemaker, as for all middle-aged women, the duration of unemployment tends to be extraordinarily lengthy. Twenty-five percent of all women in the labor force between the ages of 45 and 54 are unemployed for 15 weeks or more per year. For single women the unemployment period is even longer.

With so many factors going against her, it is to be expected that the displaced homemaker lives in poverty. According to the Census Bureau, one-third of all female heads of household live below the official poverty level. The median income for divorced women in 1974 was only $5,600 and for separated women it was only $3,622.

The displaced homemaker is in need of special help because the currently existing employment and training programs are simply not reaching her. When Congress in 1973 passed the Comprehensive Employment and Training Act it stated that its purpose was "provide job training and employment opportunities for economically disadvantaged, unemployed, and underemployed persons." While the displaced homemaker certainly fits that label, she has not been the recipient of very much help from CETA.

Title I of CETA, which provides for training programs, has tended to serve the young. For example, unpublished data from the Manpower Employment and Training Office of the Department of Labor reveals that only 7.6 percent of the participants under title I were over 44 years old.

Titles II and VI provide public service jobs to "persons who reside in areas of substantial unemployment who have been unemployed for at least 30 days." Many CETA sponsors consider these women to be ineligible for such positions because they have never been employed. Furthermore, because of the direct employment approach of title II and VI, sponsors have tended to look for "job ready" individuals, which usually means recently laid off males between the ages of 22 and 44. The Manpower Employment and Training Office's data show that in the first 3 quarters of fiscal year 1977, the percentage of women under both titles II and VI was under 40 percent. Moreover, only 7.6 percent of title I participants, 16 percent of title II participants and 16.8 percent of title VI participants were over the age of 45.

A cross tabulation of the ages and sex of the participants of CETA done for the Department of Labor reveals the inequities. The following table shows the small percentage of CETA funds that are reaching middle-aged women. Compare these figures to the percentage of these women in the population as represented by the Census Bureau.

Percentage of participants in CETA from 4/75 to 2/76, cumulative

Women aged:	Title I	Title II	Title III	Title VI
30–44	6.4	6.9	.01	7.6
45–54	2.3	4.4	no data	3.1
55–64	1.9	1.0	.02	1.0

Women aged:	Percentage of total unemployed work force	Percentage of population
30–44	10.1	13.9
45–54	2.3	7.8
55–64	2.9	6.5

Most displaced homemakers have been unassisted by comprehensive employment and training programs which seek to help either the young or the unemployed skilled worker. As a recent Congressional Budget Office report states:

> . . . the percentage of program slots filled by minorities and the economically disadvantaged were higher in programs that emphasized skill development and work experience (CETA titles I, III and IV). On the other hand, the percentage of white, male prime-aged (22–44) workers were higher in programs designed to create jobs directly (CETA titles II and VI and Job Opportunities Program).

Where does that leave the displaced homemaker who is neither young or recently laid off?

It was the original intent of Congress to aid such individuals in the CETA program, specifically under title III which assists "special target groups." Section 301(a) of the act makes title III funds available for "segments of the population that are in particular need of such services, including youth, offenders, persons of limited English-speaking ability, older workers and other persons which the Secretary determies have particular disadvantages in the labor market." But the Congress then went on to specify Indians, youths and migrant and seasonal farmworkers as particular target groups worthy of having their own programs. With no established title II program for them, the displaced homemaker was again left out.

An amendment to title III, creating a special program for the displaced homemakers would enable them finally to get the employment and training funds they need and deserve.

The concept of placing the displaced homemaker problem under title III is not a new one. In 1976, under the experimental national program for select-

ed population segments, title III funds were released to special prime sponsors who had drawn up an innovative program which aimed at one of four special target groups—youth, women, older workers or the handicapped. Some 25 prime sponsors were awarded grants for programs specializing in women. These programs are currently being evaluated by the Department of Labor, but a random survey of ten program directors revealed that CETA could be used to help the displaced homemaker.

While most of these programs have not been aimed exclusively at the displaced homemaker, they have helped them to a limited degree. Most of these centers have found that the two-step approach, which my amendment sets forth, is needed to get these women working.

The first step is a job preparedness program. Most displaced homemakers have either been out of the labor force for years or have never been in it. Besides lacking actual occupational skills, they lack the basic skills necessary for obtaining and maintaining a job. Such simple but necessary tasks as writing a resume can become major impediments. But more importantly, they often lack the self-esteem and assertiveness required to get a job in today's competitive job market. This "psychological approach" has also been used in two existing displace homemakers centers in Oakland, California and Baltimore, Md.

Such programs have proven very helpful in improving women's self-esteem and preparing them with a skill. Their success has been limited, though, in terms of employment and it has been difficult to find jobs for the women they enrolled. Hammond, Indiana, for example, has placed only 50 percent of its graduates in on-the-job training programs. In Monmouth County, N.J., less than one-quarter of the first 22 graduates have been placed. And many other programs have far lower placement rates. This may be due to the fact that these programs trained women in areas where there were no jobs readily available. That is why a public service employment approach is needed.

The experimental programs also are inadequate because they are both temporary, and limited in their scope. Furthermore, they vary in their approaches and eligibility requirements. For example, the Fairfax County, Va. program only trains women in computer technology, housing management and small applicance repair. And the Monmouth County program has no actual job placement program. The city of Wilmington, Del. enrolled no women over the age of 45.

Existing displaced homemaker centers provide valuable models for the solution of the displaced homemakers problem. Out of financial necessity they have been forced to utilize already existing agencies and services. The centers which would be funded under my amendment would continue to do that to avoid a duplication of services.

More importantly, existing centers have shown that displaced homemakers can work together to help themselves. But they suffer in that they do not have the capability to create jobs directly. And they have had problems working with CETA as it now exists. The Baltimore center, for example, has been negotiating with the local prime sponsor since February, but so far they have received no funds. Until those funds are made available, no amount of peer support will be able to compensate for unemployment. It is a cruel hoax to prepare these women, who have already lost their families and suffered greatly, for jobs which do not exist. Title III of CETA should be amended to help the homemakers of America who, thus far, we have honorcd only on Mother's Day, and ignored in their times of plight.

KEEP THE HATCH ACT

HON. ROBERT E. BAUMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BAUMAN. Mr. Speaker, in the last few weeks editorial comment from two of the major news sources in Salisbury, Md., have vigorously opposed appeal of the Hatch Act. Both the Salisbury Times and WBOC television have published editorials opposing Hatch Act repeal, detailing the many good reasons why this law should not be changed. At this point I submit these editorials for inclusion in the RECORD:

[From the Sunday Times (Salisbury, Md.), June 26, 1977]

KEEP THE HATCH ACT

The House voted 244 to 164 the other day to let federal employes take part in partisan politics, which shows that even a bad bill can pass if it has the proper promoters.

In this case, the AFL–CIO and its public employe unions, backed by President Carter, are trying to rewrite the Hatch Act so that federal workers can run for office, make campaign speeches and raise money for partisan political causes. It's a terrible idea and should be rejected when it reaches the Senate later this year.

Why should government workers be used as political foot soldiers? Why should they be pressured to get out the vote for some influential congressman? Or raise money for the next senatorial campaign?

It's easy to forget why the Hatch Act was enacted in 1939. It was enacted because federal employes were being dunned, prodded and otherwise coerced into taking sides politically. The classic example was the 1938 Senate race in Kentucky, where workers on federal projects were told to back Sen. Alben W. Barkley for reelection. Some were fired when they refused.

The bill passed by the House does offer some protection by prohibiting federal law enforcement officers, field inspectors and workers who handle grants, contracts and licenses from taking part in partisan political activity.

But there is no reason why other employes, in other departments, should be considered fair game for political recruitment.

This bill has little merit and even less public support. The Senate should send it back where it came from at the first available chance.

[From WBOC–TV]

THE HATCH ACT

The unions and the business community will again be on different sides when the Senate Governmental Affairs Committee holds hearing on repeal of the Hatch Act. Under the guise of encouraging Federal employees to more fully participate in the political process, the bill would lift most of the restriction of the Hatch Act which has been in force since 1939.

It would in our opinion leave Federal employees open to the pressures of power politics and the spoils system of a bygone era. It would politicize the civil service and give Federal employee union bosses increased power. The dangers of political corruption are just as great today as in 1939, when after a series of hearings, sufficient evidence of political corruption and coercion of Federal employees was found to warrant the depoliticizing of Federal employees.

Since that time, the Hatch Act has been the subject of three separate challenges before the U.S. Supreme Court, and all were thrown out. In 1939, public employee unions were not large . . . and attempts at political coercion were localized and unorganized . . . but not today . . . for there are now 3 million Federal employees . . . and removing protection from political coercion is an open invitation to abuse on a massive scale.

Organized labor will be pounding the pavement in support of repeal of the Hatch Act . . . so it behooves members of the business community to make its strong opposition known to members of the Senate Governmental Affairs Committee. It just happens that Senator Roth of Delaware and Senator Mathias of Maryland are members of this committee . . . and we urge you to make your views known. Repeal of the Hatch Act could have a long range adverse effect on the business community . . . and now's the time to make our opposition known.

GI BILL IMPROVEMENTS ACT OF 1977

Hon. John E. "Jack" Cunningham

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. CUNNINGHAM. Mr. Speaker, because I did not become a Member of Congress until May 23, 1977, I unavoidably lost the opportunity to support a piece of worthwhile legislation which I would now like strongly to endorse before it comes to a vote of the full House.

The legislation, H.R. 8386, was reported out of the Veterans' Affairs Committee as a clean bill. I have been in contact with the community colleges and other institutions of higher education in the Seventh Congressional District of Washington. They have informed me that overly strict requirements passed by the Congress in good faith during the 94th Congress have worked a hardship both on deserving veterans and on the institutions of higher learning.

The "GI Bill Improvements Act of 1977" liberalizes policies of Veterans' Administration reimbursement for educational institutions so as to allow greater innovative services for our deserving veterans. It also allows institutions to recover more of their costs in administering the program.

Many Members have been very active in moving H.R. 8386 along, Mr. Speaker,

but special mention should be made of my colleagues from New York (Mr. WOLFF) and Ohio (Mr. MOTTL).

I praise their hardworking efforts on behalf of the veterans of our country in assisting them to obtain further education in order to qualify for productive jobs in the private sector of our economy.

Mr. Speaker, I would urge Members to join me in strong support of the "GI Bill Improvements Act of 1977" when it comes to the floor for a vote.

ILLEGAL ALIENS

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. EDWARDS of California. Mr. Speaker, as a member of the House Judiciary Committee, and as one who represents thousands of Mexican Americans, I am deeply concerned with the problem of undocumented aliens living and working in this country. I am also concerned about the hysterical tone of some of the comments, and some of the proposals offered, concerning this problem. I fear that racial discrimination, already a factor in our treatment of our Mexican American citizens, may increase toward those with Spanish surnames and/or brown skins.

Far too often, we from California and from the Southwest forget that the Mexican Americans were here first. We are the immigrants, not they. We also tend to forget the great contribution their culture offers ours and their history of sacrifice and achievement in this country. During the painful days of the Vietnam war, for example, I checked the killed-in-action list from my district. While my district's population includes about 16 percent Mexican Americans, the killed-in-action list had 32 percent Spanish surnames.

It is in the light of this background that I recommend that you read Bill Broom's recent two-part series on the undocumented aliens. For the first time, to my knowledge, he has attempted to dispel the myth surrounding this problem and to explore it without the prejudice or the inflammatory tones so often associated with the term illegal aliens.

I offer to you some of the facts that Mr. Broom presents:

That if Immigration and Naturalization Service estimates of more than 5 million Mexican-Americans residing illegally in this country are accurate, then one-fourth of the adult population of Mexico is hiding here;

That a check of 9,000 social service cases in San Diego revealed only 10 undocumented workers on the social service rolls;

That the so-called "illegal aliens" may pay far more in taxes and social security than they receive in benefits;

That the social pressures in Mexico are so great that the only way we could stop the flow of the undocumented workers is to build a "Berlin Wall" of our own along our southern border.

I will not say more about Bill Broom's series. I recommend that you read it, for we all shall be wrestling with this problem shortly.

I would, however, like to note that this is Bill's last series as bureau chief of the Ridder Washington bureau. Bill is leaving Washington Monday to become director of public affairs of the Philadelphia Knight-Ridder newspapers. Because Bill originally came here from the San Jose Mercury and News, my hometown newspapers, I knew he would do a good job here. He has done a better job than even I expected. Philadelphia's gain is our loss.

Mr. Speaker, I ask that Bill Broom's distinguished series on the undocumented workers be placed in the RECORD:

HIGH COST OF ILLEGAL ALIENS CHALLENGED

(By William Broom)

EL PASO, TEX.—The U.S. Immigration and Naturalization Service, now estimates there are 8 million illegal aliens inside the United States after earlier guesses that the number was 2 million to 12 million.

Of these, said a 1976 report for INS, 5,222,000 are calculated to be Mexicans.

Another federal government report (Houston-North for the U.S. Labor Department) quarrels with the estimate.

Noting that the 1970 Mexican census recorded 23,229,320 men and women between the ages of 15 and 59, the age group from which most of the 5,220,000 Mexican illegals would be drawn, the Labor Department report wryly notes:

"The implication that between one-fifth and one-quarter of all Mexican residents in that age group are illegally in the U.S. appears to us most improbable."

The Houston-North report also noted that 4,100,000 legal aliens registered with the U.S. government in 1974. It commented "it is unlikely there are twice as many illegals in the nation as legal immigrants who register."

While the numbers game remains unresolved, state and local politicians have had a field day sounding alarms that the undocumented aliens cost taxpayers billions of dollars in social and welfare services.

A 1974 Texas State Senate estimated the cost in that state was $45 million annually. Los Angeles County supervisor Pete Schabarum said last week his county provided $50 million in medical services to undocumented aliens each year.

But the Houston-North survey and another conducted for the past two years by Vic Villalpondo for San Diego County raise serious questions about the validity of those estimates.

Houston-North remains the only major, exhaustive study on the economic impact of the present of undocumented aliens in the United States. Said the report:

"Our data on their participation in public programs thus suggests that their principal direct economic impact is on the labor market (and perhaps upon the balance of payments) but not on the public treasuries."

The study reported that:

1. Illegal aliens make "substantial tax contributions" in the form of withholding and Social Security taxes which are not refunded and in other tax contributions, such as sales taxes.

2. They send the bulk of their earnings to their families in Mexico, thus creating a dollar drain for the United States, which is returned in Mexico's purchase of U.S. products and services.

3 Aliens are inconsequential users of social and welfare services, because it exposes them to possible deportation.

"All available evidence," says the official U.S. survey, "indicates that these migrants paid into the U.S. government treasury taxes far more than they collected in benefits from tax-using programs."

A similar study by Prof. Wayne Cornelius of Massachusetts Institute of Technology, found Mexican undocumented aliens were "considerably less likely than aliens from other countries to make use of tax-supported programs and services."

In a paper presented to the annual conference of the Southern Economic Assn. Nov. 17, 1976, Mexican economist Jorge Bustamante concluded: "what has been called a national crisis is unmeasured and ill-defined. We still do not know how many undocumented immigrants there are or what impact they have on either the U.S. or the Mexican economies.

The Houston-North report for the Department of Labor found that 77 per cent of the undocumented aliens surveyed paid social security taxes, 73 per cent paid federal income taxes, less than 4 per cent had children in U.S. schools and five-tenths of one per cent received welfare benefits.

Villalpondo's survey found only 10 out of 9,132 welfare recipients in San Diego County to be undocumented aliens. In Los Angeles County, 56 among 14,000 welfare recipients were undocumented, and Villalpondo found they actually were eligible.

"A case for an international court of law could be made by the Mexican government if it could determine the accumulated amount paid by Mexican workers in U.S. income taxes and Social Security," said Bustamante.

"No one so far has been able to adequately represent without bias in statistical terms, the flow of Mexican undocumented immigration as a whole," said Julian Samora, author of "The Wetback Story."

What is certain, however, is that arrests at the border and within a few miles of it have sharply escalated. More alarming, the few economic studies available indicate that the pressures inside Mexico pushing workers toward the United States are building and will continue to build.

One of the leading authorities on this subject is a tall, quiet Texas economist based at the University of Texas here.

"The economic inducements to migrate from Mexico to the United States are strong and are getting stronger," said Prof. Dilmus D. James. "Furthermore, the magnitude and momentum of the "push" forces are so great, a net reduction is unlikely before the end of this century even assuming favorable economic and political conditions."

Dr. James and his research associate, Prof. John E. Evans of the University of Alabama, found that Mexico's booming population and internal political and economic problems "conspire against" any hope of decreasing the migration of Mexicans to the United States to seek work.

In a recent research paper, Evans and James concluded:

"Hoping that declining population growth, the petroleum boom in Mexico, industrialization of the northern border of Mexico, or other single trends or policies will rescue the situation . . . is akin to hoping that a brick in the toilet tank will save the day for conservation."

They said "the eventual solution rests on an entire constellation of mutually reinforcing programs operating in concert to absorb labor productively and channel the fruits of growth to the disadvantaged strata of Mexican society."

As a starter, the economists recommended "a flexible, workable and humane policy dealing with Mexican migration to the United States."

While the official and unofficial studies surveyed for this report disagree on numbers, there is little disagreement on a central reality:

The pressures for export of labor inside Mexico are rising and irresistible. Unless it

is properly channeled by both the U.S. and Mexican governments, relationships between the two friendly countries will suffer, the Mexican aliens will be subjected to greater exploitation, and American workers will be adversely affected.

"We need a realistic and enforceable immigration policy geared to the nation's need for labor skills," said Sen. Alan Cranston (D-Calif) recently. "If more foreign labor genuinely is needed, it ought to be allowed in legally, not under the fence where it can too easily be exploited."

But the Carter administration and its predecessors have found the task much more complex than that.

"I don't know any legislation that can resolve the problem of undocumented aliens," said Rep. Don Edwards (D-Calif), "when the richest country in the world and an underdeveloped country live side by side along a 2,000-mile border."

AMNESTY FOR ALIENS IGNORES PROBLEM'S CAUSES

(By William Broom)

WASHINGTON.—The Carter administration is heading toward a solution of the illegal immigration problem that deals with symptoms rather than causes.

Its early proposals will be announced this week. They are widely believed to involve amnesty for aliens who have lived at least 5–7 years in the United States without discovery and additional assistance to the U.S. Immigration and Naturalization Service for stopping aliens at the border.

These will be welcomed by the Border Patrol and some segments of the American public, but public officials, residents of the border and other authorities interviewed for this series view the Administration's offerings as flawed measures that will not deal with the central problem—the internal condition of Mexico that requires her to export surplus jobseekers to the United States.

Mexico has an unemployment rate estimated variously at 60 percent along the U.S. border to 35–40 per cent nationally. Additional thousands are underemployed.

Her birth rate is one of the highest in the world, and there is widespread cultural and religious resistance to the government's half-hearted efforts at birth-reduction programs.

Distribution of income is badly skewed. Ten per cent of the population receives 50 per cent of the annual income.

Most economists who have studied the problem believe that Mexico will need wise and understanding assistance from her No. 1 trading partner, the United States, to overcome those problems.

Among residents of the U.S.-Mexico border, there is recognition of that central fact.

Long-time employees of the U.S. Immigration and Naturalization service, a Chicano activist and university economists interviewed for this article all mentioned the "push-pull" economic effect as the central issue to be solved.

"Push" they defined as the lack of jobs and the extremely low salaries paid to Mexican workers which require them to work outside their homeland or starve. "Pull" was the obvious wealth of U.S. job opportunities at wages extremely low by U.S. standards but high by Mexico's.

Nevertheless the Administration is pushing toward a program embodying some elements of amnesty, tougher laws on smuggling aliens, and employer penalties.

There has been little said about dealing with the primary source of the problem—the internal condition of Mexico.

"The United States is looking at illegal Mexican migration as if it were simply a domestic problem," said Dr. Jorge A. Bustamante, a Mexican economist who has advised his government on the problem. "It isn't considering the impact of its unilateral decision on our economy, our levels of unemployment, and above all, on the border regions."

In a recent newspaper interview, Bustamante insisted the Carter administration's responses to the problem are based on false premises. He said there are far fewer Mexicans in the United States than official estimates and that most of them are not taking jobs away from Americans but doing low-paid menial work that Americans refuse to do.

U.S. citizens interviewed for this series tended to produce assessments strikingly similar to Bustamante's.

The director of a Chicano activist group in El Paso, a veteran Border Patrolman, and a university economist specializing in Mexico's economy, all volunteered that the pressures inside Mexico that propel workers toward the United States must be relieved and that all other measures would fail to reduce illegal immigration unless that happens.

"We won't see an end to the problem without a mini Marshall aid program to create jobs in Mexico," said Ray Reaves, the Border Patrol's top expert on alien-smuggling.

One of the Border Patrol's most voluble critics in El Paso is Freddie Morales, 23, director of Chihuahuita neighborhood center. But he agrees in principle with Reaves.

"The only way to stop them from crossing is to throw up a cactus curtain, Berlin on the border, which could seriously damage relations with Mexico," said Morales. "If the United States wants to show Latin Americans they care, they will work out a program that will allow limited emigration for work.

"The United States cannot solve Mexico's ills, but it can try to do as much as it can to help create jobs in Mexico."

The near impossibility of controlling the border was acknowledged by Dale Swancutt, chief patrol agent for the Border Patrol in El Paso.

"Those who advocate hiring more border patrolmen, helicopters and electronic equipment are not being realistic," said Swancutt. "It is not possible to control this border. You'd need a virtual army. The American public wouldn't accept such a police state. We've got to talk in terms of long-range programs and federal legislation."

Reaves and Swancutt believe that the Patrol needs legislation and manpower to deal with smugglers.

"If we could put the smugglers out of business," said Swancutt, "we'd have a major step toward control.

"Prosecution is not a deterrent. In many cases, jail is preferable to home in Mexico. Jail is a place where they can learn English, a trade and get an education into how to make a false claim of U.S. citizenship."

In a landmark study prepared for the North American Economics Assn. meeting in Atlanta last fall, two U.S. economists concluded there is little hope Mexico's economy can absorb its rising population before the year 2000.
